IF BAND PLL FREQUENCY SYNTHESIZER

Small package and IF band MASK ROM PLL (SIMPLL Series)

The Fujitsu MB15S series is an exclusive Intermediate Frequency (IF) band Phase Locked Loop (PLL) frequency synthesizer with pulse swallow operation. It can operate at a maximum of 300MHz.

The reference divider and comparison divider have fixed divide ratios, so that it is not required to set the divide ratios by a µcontroller externally. Since the dividers are designed by means of a MASK ROM method, a customer can choose them optionally. SOP and SSOP 8–pin plastic packages are available.

It operates with a supply voltage of 3.0V typ. and dissipates 3.5 mA typ. of current realized through the use of Fujitsu's Bi-CMOS technology.

FEATURES

- Operating frequency : 300MHz max.
- Low power supply current: I_{CC} (total) = 3.5 mA typ. (Vcc = 3V)

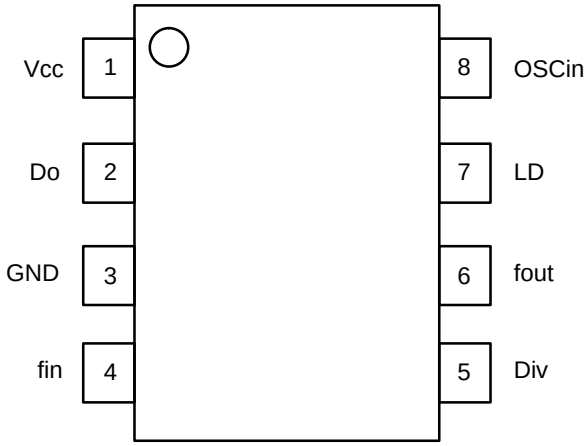
ABSOLUTE MAXIMUM RATINGS (see NOTE)

Rating	Symbol	Value	Unit
Power Supply Voltage	V_{CC}	–0.5 to 5.0	V
Input voltage	V_I	–0.5 to V_{CC} + 0.5	V
Output Voltage	V_{OUT}	–0.5 to V_{CC} +0.5	V
Output Current	I_{OUT}	0 to 5	mA
Storage Temperature	T_{STG}	–55 to +125	°C

NOTE: Permanent device damage may occur if the above **Absolute Maximum Ratings** are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

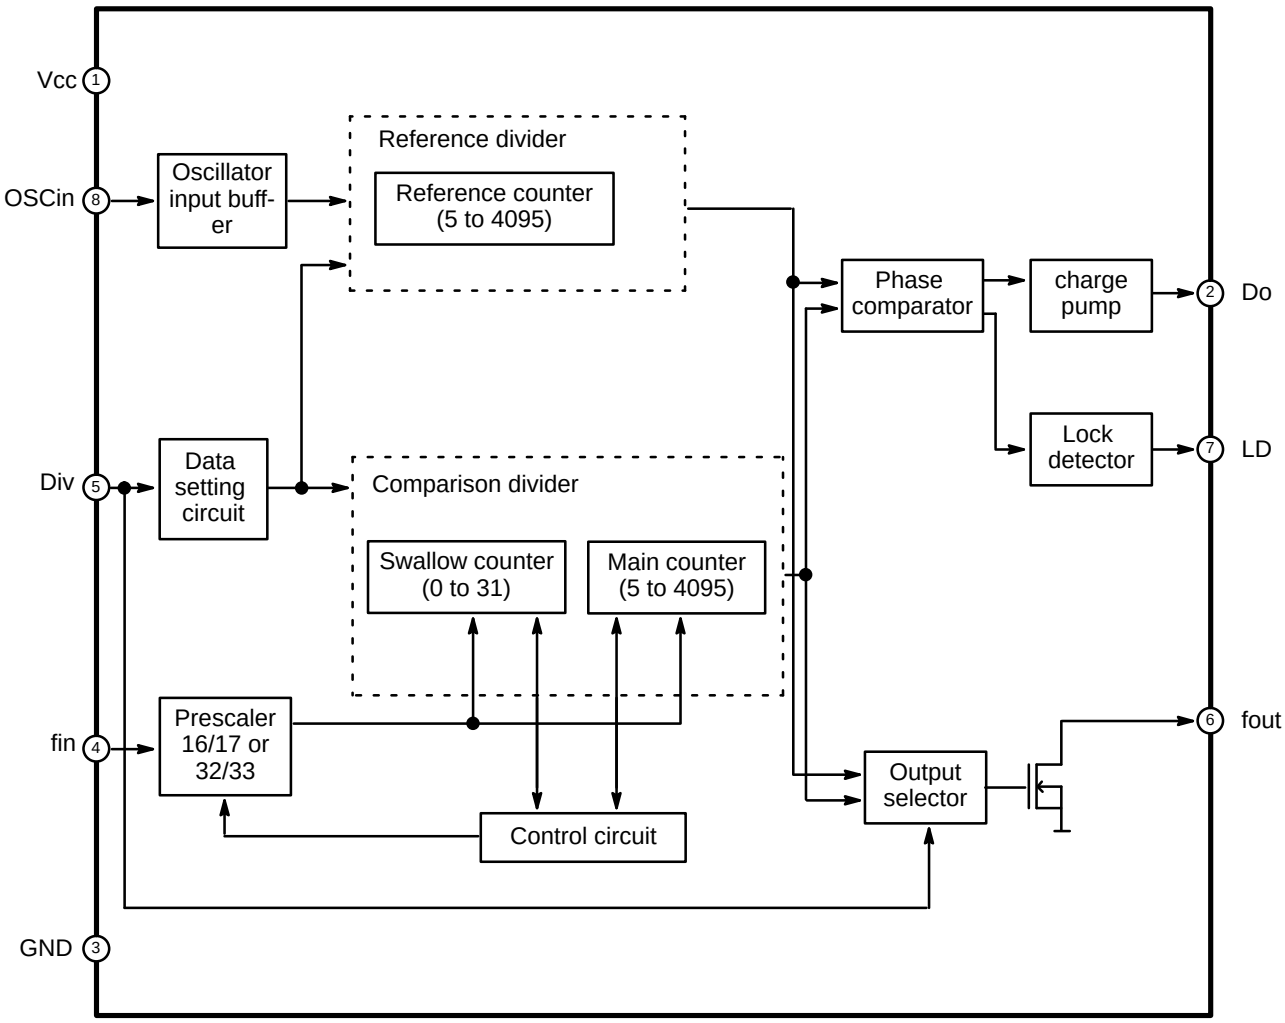
PIN ASSIGNMENT



PIN DESCRIPTIONS

Pin No.	Pin Name	Descriptions
1	Vcc	Power supply voltage input.
2	Do	Charge pump output
3	GND	Ground
4	fin	Prescaler input. Connection should be with AC coupling.
5	Div	Divide ratio switching input. Two kinds of divide ratios are selectable by Div input ”H” or ”L”.
6	fout	Test purpose output. This pin is an open drain output so that should be left open usually.
7	LD	Lock detector output.
8	OSCin	Reference counter input. Connection should be with AC coupling.

BLOCK DIAGRAM



FUNCTIONAL DESCRIPTIONS

Divide ratios of the internal counters can be set optionally according to customer requirements. Two different frequencies can be selected by Div input ”H” or ”L”.
The divide ratio can be calculated using the following equation:

$f_{VCO} = \{(P \times N) + A\} \times f_{OSC} \div R \quad (A < N)$

f_{VCO}: Output frequency of external voltage controlled ocillator (VCO: up to 300MHz)

P: Preset divide ratio of dual modulus prescaler (16/17 or 32/33)

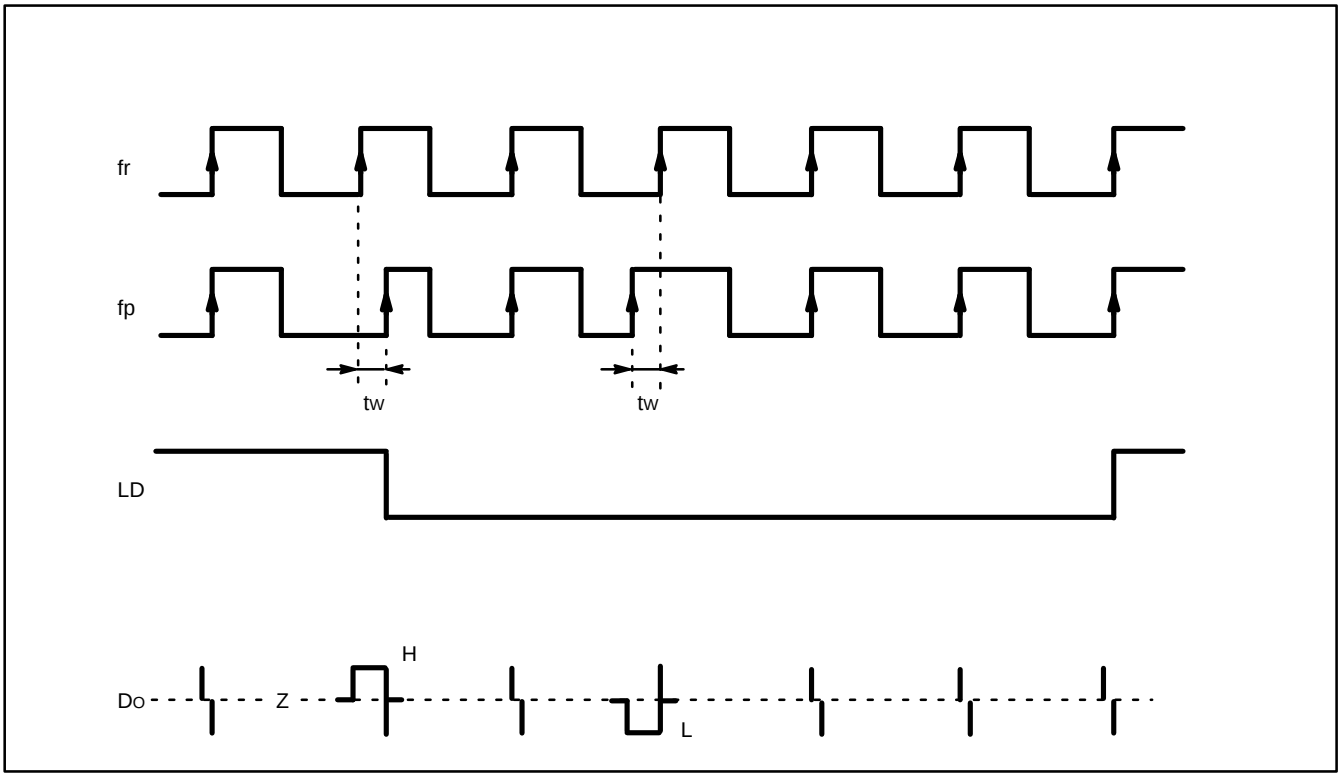
N: Divide ratio of the main counter (5 to 4095)

A: Divide ratio of the swallow counter (0 to 31)

f_{OSC}: Reference oscillation frequency (up to 23MHz)

R: Divide ratio of the reference counter (5 to 4095)

PHASE DETECTOR TIME CHART



Note:
- Phase difference detection range = –2π to +2π
- Spikes on Do pulse during locking state are output to prevent dead zone.
- LD output becomes low when phase difference is tw or more.
- LD output becomes high when phase difference is tw or less and continues to be so for three cysles or more.
- tw depends on OSCin input frequency.
  (e.g. tW635ns to 1250ns when foscin = 12.8 MHz)

HANDLING PRECAUTIONS

- This device should be transported and stored in anti-static containers.
- This is a static-sensitive device; take proper anti-ESD precautions. Ensure that personnel and equipment are properly grounded. Cover workbenches with grounded conductive mats.
- Always turn the power supply off before inserting or removing the device from its socket.
- Protect leads with a conductive sheet when handling or transporting PC boards with devices.
