

Mini-Micro Systems

A CAHNERS PUBLICATION

JUNE 15, 1984/\$15.00

Computer Digest

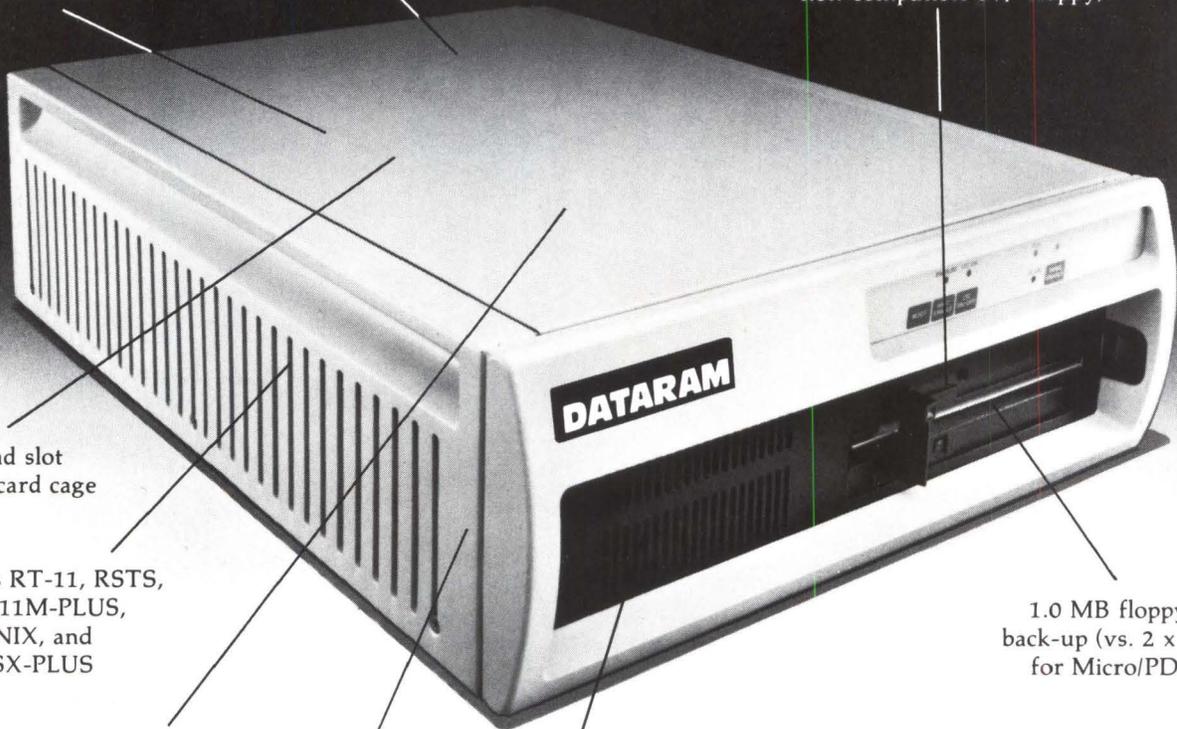

The source book for system integrators

Like DEC's.

\$8,845 system price*

256 KB minimum...
up to 4 MB!

Media and software
compatibility with
DEC's RX02 8" floppy
(vs. Micro/PDP-11's
non-compatible 5¼" floppy)

8-quad slot
Q-BUS card cage

Supports RT-11, RSTS,
RSX-11M-PLUS,
UNIX, and
TSX-PLUS

Two fans in card cage
area (vs. one in
Micro/PDP-11)

1.0 MB floppy disk
back-up (vs. 2 x 400 KB
for Micro/PDP-11)

RL02-compatible
5¼" Winchester disk;
10 MB, 20 MB, or
40 MB capability

Cartridge tape
capability

Only better.

You can buy DEC's Micro/PDP-11 with its impressive array of features...or you can get Dataram's A22 —an LSI-11/23 based minicomputer that gives you a whole lot more...for a lot less dollars! Like an 8" RX02-compatible floppy. 40 MB 5¼" Winchester and ¼" cartridge tape capability. And two fans that provide push-pull air flow in the card cage area. For more information, forward this coupon to us, or, for faster response, call (609) 799-0071.

Send information. Contact me immediately.

ABLE's ATTACH customers enjoy their spaghetti in the dining room, not the computer room.

ABLE's ATTACH, the breakthrough multi-host terminal switching system for DEC UNIBUS computers that eliminates the spaghetti-like mess of cables in your computer room.

One ATTACH host board and a *single* cable replaces 16 DEC interfaces, and their associated "spaghetti." And it still supports up to 128 terminals on your system without the endless tangle of cables that tie-up your computer room.

One ATTACH host board does the work of many multiplexers. The immediate advantage is a dramatic reduction in mounting space and expansion cabinetry, resulting in significant cost savings. And ATTACH can be located up to a kilometer away from your computer room.

Cook up a system to meet your present data communication requirements with ATTACH. At the touch of a keyboard, terminals can be dynamically *switched* among any combination of VAX and PDP-11 UNIBUS systems. And,

ATTACH is compatible with RSX, RSTS/E, VMS and UNIX operating systems.

Expanding your capabilities, or adding terminals is easy with ATTACH. As your requirements grow, simply add modular ATTACH units to your system.

Whether you have 28, or 128 or more terminals, ATTACH has the right recipe for cost-effective connectivity.

ABLE Computer's ATTACH is the most efficient terminal interconnection system on the table.

Contact the ABLE representative near you, or call ABLE toll-free at 800-332-2253.

The communication specialists

1732 Reynolds Avenue, Irvine, California 92714. In the Irvine area: (714) 979-7030. Or, TWX: 910-595-1729.

DEC, PDP, RSTS, RSX, UNIBUS, VAX and VMS are trademarks of Digital Equipment Corporation. UNIX is a trademark of Bell Laboratories. ATTACH is patent pending.

Now you don't have to be rich to be powerful.

Riches and power don't always go together. Take Plexus, for instance. The world's most powerful UNIX*-based supermicros.

Powerful because multiple processors share the UNIX load. So processing power is distributed to where it does the most good.

Terminal I/O. Disk I/O. Data communications. And, of course, data processing.

Our unique architecture also lets us bring you the world's first UNIX Network Operating System (NOS). So you can combine Plexus systems in an Ethernet network for even more power.

NOS gives you real time, continuous access to files. From anywhere in the network.

Files are also updated on the same basis. So everyone in the network works with up-to-the-minute data. Automatically.

No waiting for file transfers. And that's a decided improvement over everything else that's out there.

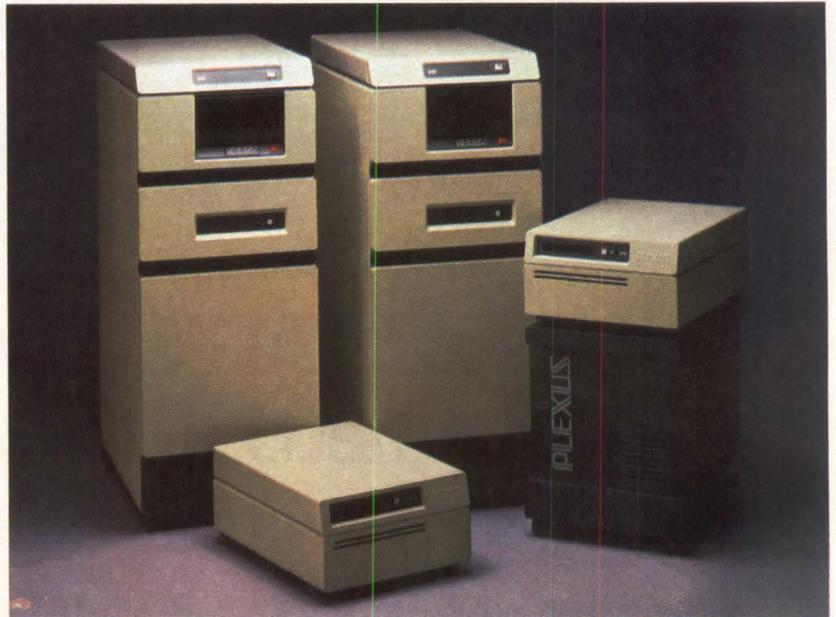

You also get to save money on powerful UNIX-based software, including COBOL, FORTRAN, Pascal, BASIC, and C. Database management and word processing, too. As well as hundreds of third party UNIX packages.

Plus our own software and main-

tenance support. And even a software referral service for your OEM programs.

Does all this make us expensive? Absolutely not.

In fact, Plexus systems cost thousands of dollars less than the minicomputers we outperform.

To get a better idea of just how good that performance is, come get a demonstration. Call 800-528-6050, ext. 1444. In Arizona, 800-352-0458, ext. 1444. Or write Ralph Mele at Plexus Computers, Inc., 2230 Martin Avenue, Santa Clara, CA 95050.

You see? You don't have to be rich to be powerful. Just smart.

PLEXUS
Built for speed.

People who buy UDS modems aren't playing games!

You can often judge a personal computer user by the hardware he selects. If the modem comes from UDS, chances are he has a serious investment in computer and software, a serious data communications requirement and serious computer-based decisions to make.

UDS modems offer true pro-quality performance to the serious microcomputer owner. Data rates range from 0 to 9600bps. Depending on data rate, synchronous and asynchronous models may be selected for half- or full-duplex communications. Their prices put them within easy reach of the serious user.

If data communication has progressed beyond the game-playing stage in your microcomputer system, it's time to investigate UDS. The efficiency, reliability and potential for faster data transfer can add real professional capability. Contact Universal Data Systems, 5000 Bradford Drive, Huntsville, AL 35805. Telephone 205/837-8100; TWX 810-726-2100.

IT WILL GROW ON YOU.

CONFIGURABLE ACCORDING TO USER NEEDS. As many as six processors can be installed in each enclosure. CPU-intensive jobs utilize multiple Applications Processors. Systems with heavy disk usage can distribute this load among several File Processors. The number of user ports can be increased by adding more I/O Processors.

MODULARITY EXTENDS TO DISK STORAGE. Compact 50 or 140 Mbyte Winchester modules simply plug in . . . four per cabinet. Optional external SMD drives are also supported. File backup utilizes Winchester cartridges, 1/2-inch magnetic tape, or both.

MegaFrame™. Now OEMs can offer a high-performance UNIX™-based system that can't run out of performance.

OEMs can now deal cost-effectively with the problems encountered when user applications produce computing demands that outstrip the capabilities of conventional systems.

Convergent Technologies' MegaFrame is a revolutionary new UNIX-based super-minicomputer—so innovative in its architecture that it represents the ultimate in multiuser systems design. It grows exponentially from a system offering minicomputer-level performance to an enormously powerful engine serving as many as 128 users with 36 parallel processors, 24 megabytes of RAM and gigabytes of disk storage.

No other system can match the MegaFrame's potential for field expansion. It enables manufacturers and systems builders to keep pace with today's requirements for more and more computing services... but *not* at the cost of discarding hardware or performing expensive CPU upgrades.

MegaFrame's architectural breakthrough. Dependence on traditional single-CPU shared-logic architecture is the root of systems bottlenecks.

Convergent's response: a novel system utilizing *multiple* specialized processors to distribute workloads for optimum performance—even if user needs are unpredictable or subject to rapid change.

MegaFrame's virtual memory Applications Processors each have a 32-bit CPU, up to 4 Mbytes of RAM and run a demand-paged version of UNIX System V. Up to 16 of them can operate in parallel.

The File Processors effectively function as back-end machines providing DBMS, ISAM and other disk-related services. Up to six File Processors each with four disks can operate in parallel.

Terminal and Cluster Processors can also be added—the latter serving front-end communications needs. They off-load communications from the other processors by running protocols such as SNA and X25 networks.

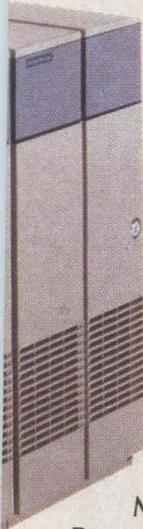

MegaFrame's daisy-chained cabinets offer total expansion potential of up to 36 slots. OEMs configure the system needed for specific applications simply by adding the correct number/combination of processors.

Flexibility in applications development. Inclusion of one or more Applications Processors allows running UNIX System V. All standard UNIX tools are provided, along with COBOL, FORTRAN-77, BASIC interpreter and compiler, plus Pascal.

The "least-cost solution" to serving a wide range of UNIX-systems needs, MegaFrame has won acceptance from OEMs in the U.S. and abroad. The uniqueness of its modular design, its versatility in providing upgrade-path options and its price/performance advantages give it market-share potential of outstanding dimensions.

The system that will grow on you starts at a very attractive price: about \$20,000 for a system that effectively supports 16 users. Send now for a comprehensive Information Package including reprints of magazine articles. It explains how MegaFrame's growth potential can impact favorably on your plans for growth in the UNIX market.

Convergent Technologies, Data Systems Division, 3055 Patrick Henry Drive, Santa Clara, CA 95050. Phone: 408/980-0850. Telex: 176-825.

Convergent Technologies

Where great ideas come together

MiniFrame™: the entry-level multiuser UNIX system.

Starting at under \$5,000 for a single-user system, Convergent's MiniFrame offers outstanding capabilities for small to medium sized organizations running large UNIX-based applications. Utilizing an MC68010 microprocessor operating at 10Mhz, with no wait states, it provides impressive CPU speed—comparable to VAX™-11/750 running the AIM™ Benchmark. MiniFrame features virtual memory management, with demand-paged implementation of UNIX System V. It runs as many as eight terminals, with up to 50 Mbytes of integral mass storage. MiniFrame and MegaFrame are object-code compatible, allowing OEMs to offer a *complete family* of systems unrivaled in price/performance characteristics.

MiniFrame and MegaFrame are trademarks of Convergent Technologies, Inc. UNIX is a trademark of Bell Telephone Laboratories, Inc., VAX is a trademark of Digital Equipment Corp., and AIM is a trademark of Aim Technology.

The Perfect Complement

Now you can capture the NCR, IBM® PC/XT and compatible tape backup market with a complete Tape Subsystem Kit.

DEI® offers the complete package ... software, controller board, drive, cable and data cartridge.

The DEI *File Selectable™* Streaming Tape Subsystem Kit is your complete answer to getting into the pent-up, but emerging demand for tape backup for NCR, IBM PC/XTs and compatibles. Just wrap the appropriate cover and you're ready to enter today's fastest growing market.

You may have hesitated getting into the dynamic tape backup market because of the uncertainty of buying parts from numerous vendors. DEI has eliminated that problem because an order from us provides you the complete subsystem kit.

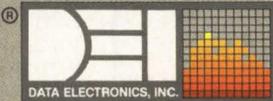

When using a PC, good practice dictates

periodic storage from RAM to hard disk, and this same practice calls for periodic saves from disk to tape.

When the end user transfers an average 16KB file (8 pages) from disk to a *mirror-image* streaming tape drive, it takes at least two minutes. In fact, to backup a single key stroke would take two minutes!

For the industry standard 10MB hard disk, saving a file of 3 MB or less on our *file selectable* streamer will virtually always be faster than a mirror image streamer. With DEI's subsystem you can backup and work with individual files or you can backup the entire disk.

Start complementing your sales by calling your DEI representative today!

How to use the Computer Digest

The *Computer Digest* contains five sections and a directory of computer manufacturers. Each section contains a market-overview article and a product table. The five digest tables are:

- Single-board microcomputers
- Single-user microcomputer systems (including portable computers);
- Multiuser microcomputer systems (including supermicrocomputers and multiple microprocessor-based fault-tolerant systems);
- Minicomputer systems (including superminicomputers);
- OEM computers (computer configuration options).

Each table, arranged alphabetically by company name, was compiled from mail- and telephone-survey information.

The directory of manufacturers, found in the back of the digest, is a consolidated alphabetical listing of all the computer vendors. Each entry provides the vendor's mailing address and telephone number, as well as a circle number for the reader service card.

To use the *Computer Digest* effectively, use the tabs to locate sections. To find addresses or phone numbers, use the directory of manufacturers. To check product prices and specifications, tab to the appropriate section and find the alphabetically listed vendor.

To comment on the *Computer Digest* or suggest future product coverage, contact the Editor in Chief, *Mini-Micro Systems, Computer Digest*, 221 Columbus Ave., Boston, Mass. 02116.

The *Computer Digest* data research and editing staff includes assistant editors Adrienne DeLeonardo and Steve Frann, editorial assistants Eileen Milauskas and Sheila Rao and production assistants Carole Smith and Anabela Nunes.

How do you sell power? You don't. Power sells itself. That's why you need to know about CDI/100, the powerful information management system.

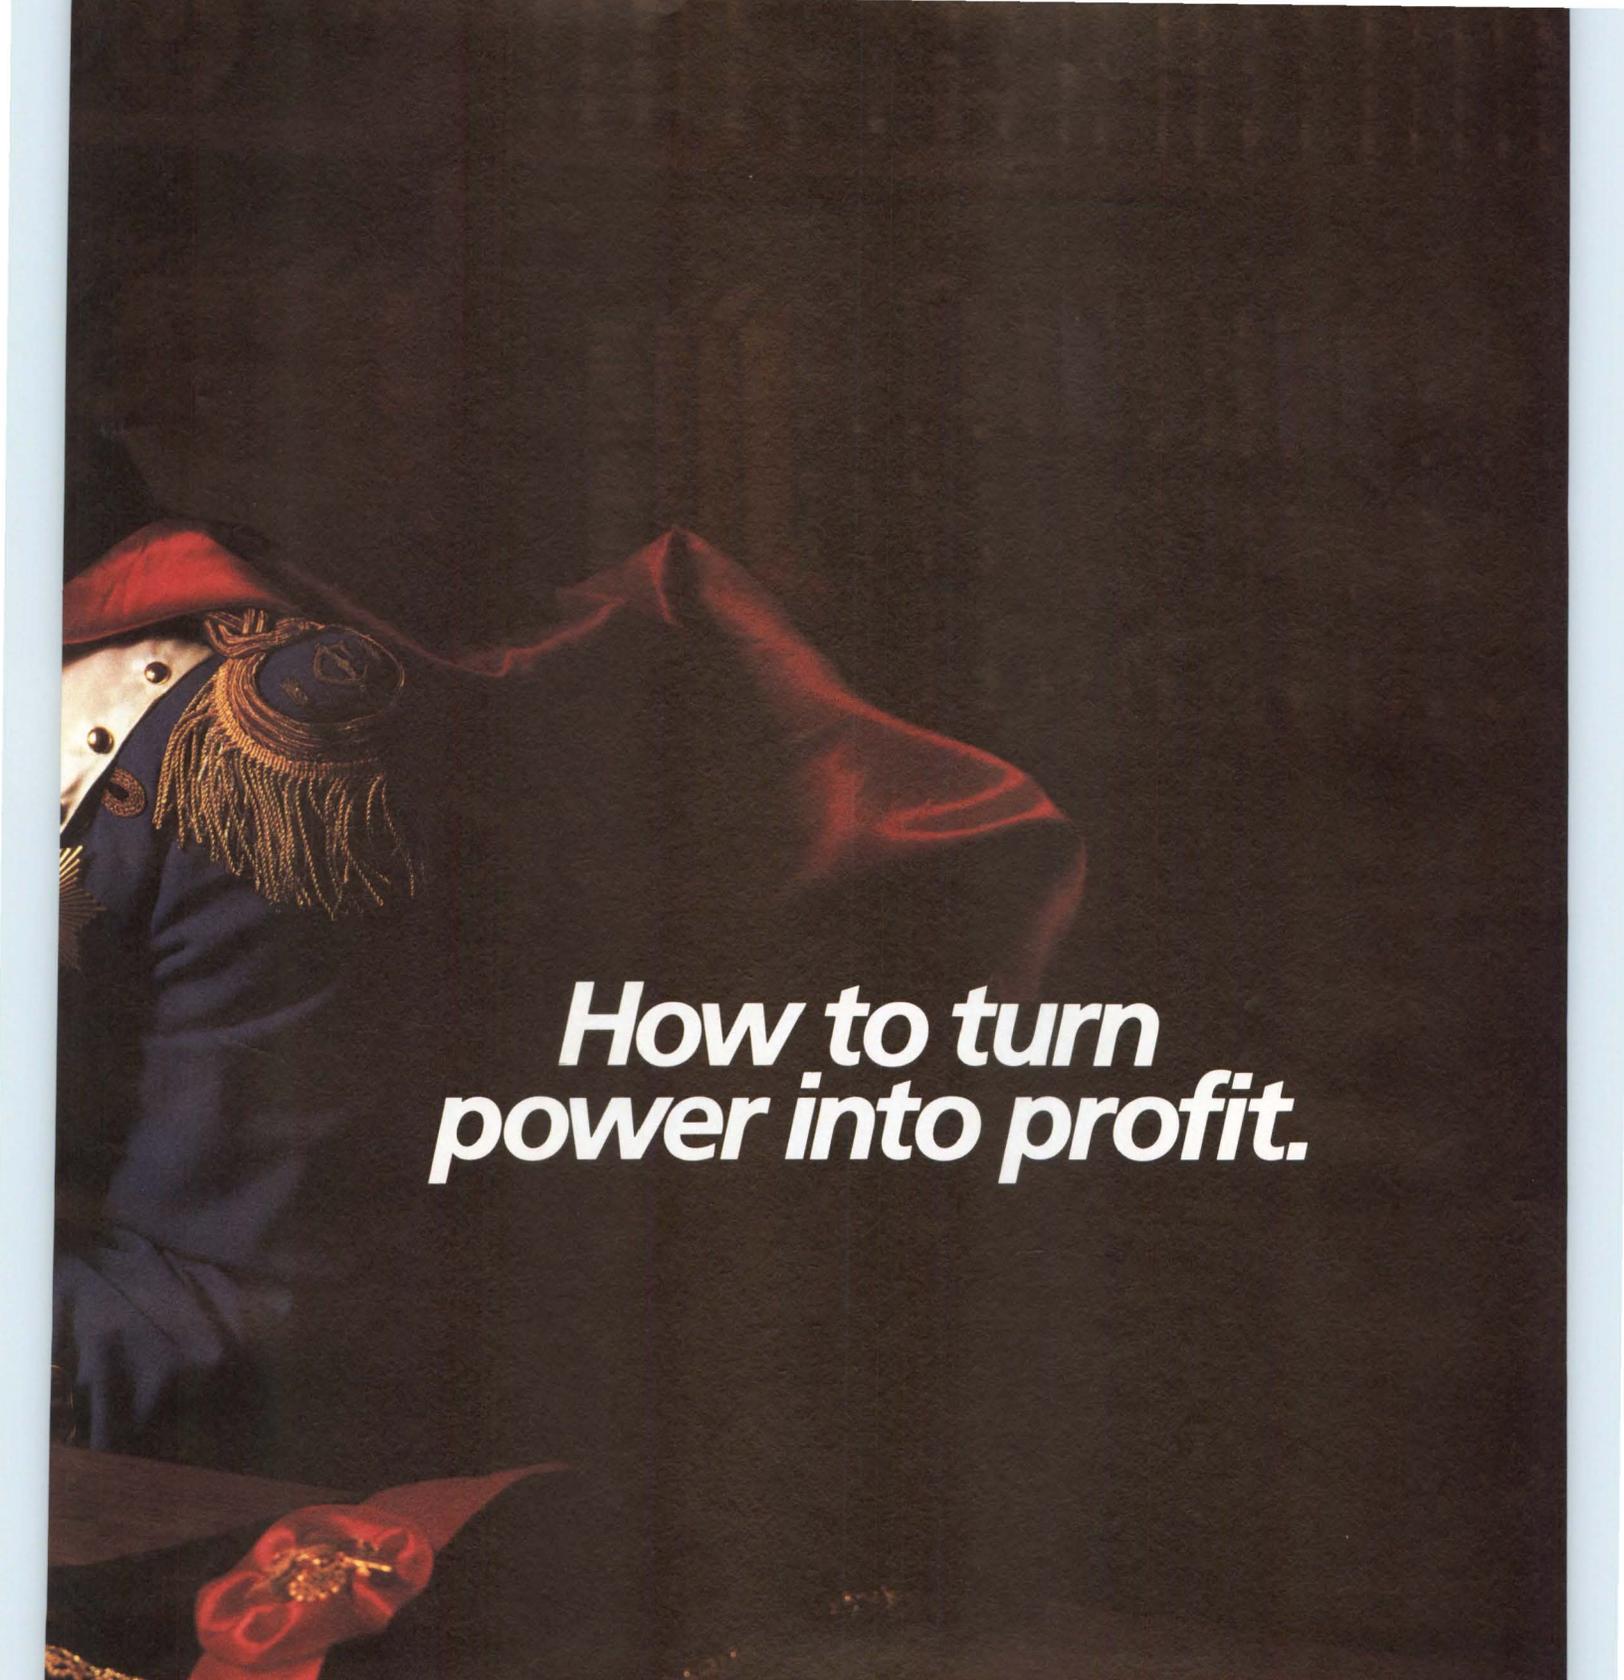

Suddenly your customer, whether novice or sophisticate, has the power to control and

focus the computer, to get it to do what it was meant to. And the dynamic menu system makes it all so easy.

Our relational data base management system features variable length fields as well as a unique, open-ended file structure. The

result is tailored formatting with virtually limitless record keeping and information management capability.

And CDI/100 allows the operator to use a host of existing application programs, maximizing the computer's efficiency and

How to turn power into profit.

effectiveness.

Try CDI/100 for yourself. If you haven't received one of our free trade kits, call 1-800-426-8931 today. Go ahead, put CDI/100 through *your* paces. We think you'll be pretty enthusiastic. And enthusiasm, like power, sells itself.

You won't get over what this 350 CPS printer does for under \$2,000.

When you see what the CI-3500 Serial Printer can do, you might not believe it's priced under \$2,000. Besides giving you data processing printing at 350 CPS, the CI-3500 delivers letter quality printing at a rapid 87 CPS—more than twice the speed of most daisy wheel printers.

And you also get the capability for high resolution graphics, up to 240 X 144 DPI.

The office friendly CI-3500 is as flexible as it is versatile, especially for a table top, workstation printer. For example, a convenient interface cartridge system allows you to change your printer interface simply by changing cartridges.

A DEC-LA100® compatible cartridge is standard, but additional cartridges are available for interfacing with other systems, such as the IBM PC.

A similar font cartridge system accommodates multiple fonts and character sets, so you can avoid costly PROM installations.

The CI-3500 Serial Printer for under \$2,000. Whatever you need in a printer, you won't get over what it will do for you. To find out more, just write or call CIE Terminals, 2505 McCabe Way, Irvine, Ca. 92714-6297. (714) 660-1421.

Or call toll-free 1-800-854-5959. In California, call 1-800-432-3687.

Digest consolidates computer product information

This, our first *Computer Digest*, is the second of three special *Mini-Micro Systems* issues to be published this year. Like the Spring *Peripherals Digest* you received in April and the Fall *Peripherals Digest* that will arrive in November, the *Computer Digest* presents new and reliable computer product information complemented by our staff-written market-overview articles.

In 1977, when this magazine began publication as *MMS*, three characteristics separated minicomputers from microcomputers: bit size, processor performance and price. Applying those criteria today causes only confusion. A criterion that still works, however, is processor type. If a microprocessor performs the central processing function, the system is a microcomputer; if the system uses a bit-slice architecture, it's a minicomputer.

The *Computer Digest* contains an OEM computer section, a mini-computer section and three microcomputer sections: single-board, single-user and multiuser. Although the first two microcomputer sections are self-explanatory, the third is not. The category "multiuser microcomputers" includes computers based on multiple microprocessor designs. This means that readers will find the new multiuser supermicrocomputers and fault-tolerant systems in that section and find superminicomputers in the minicomputer section.

In the last section, OEM computers, the coverage shifts from products to configurations—options offered by computer manufacturers that sell products to OEMs. The OEM computer section answers various configuration questions, such as whether board and cage versions are offered, what expansion boards are available and whether the manufacturer offers a printer.

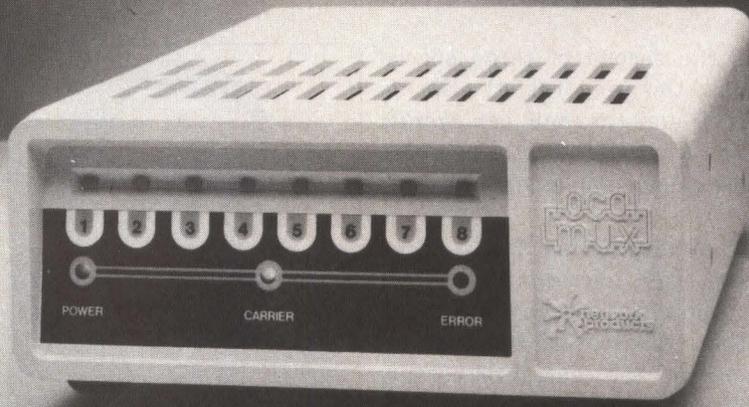

Like both *Peripherals Digests*, the *Computer Digest* is a source of computer product information for system integrators. It will be published once a year, and we hope readers will find it a welcome addition to the computer coverage in the regular monthly issues of *Mini-Micro Systems*. As always, we welcome your suggestions. If you have an idea on how to improve our product coverage, please let us know.

Gould...Innovation and Quality in Superminicomputers

We've drawn the line on computer price/performance.

Gould has set new supermini-computer performance standards with its CONCEPT/32™ family of 32-bit machines. The cost-effective, wide-ranging capabilities of Gould minicomputers make Gould Computer Systems the dominant source for the compute power you need, at a price you can afford.

The competition just doesn't tow the line in either price or performance. Whatever the requirement. The Gould CONCEPT/32 family offers the widest range of superior performance while

keeping the price in line. Our low-end CONCEPT 32/27 incorporates high density packaging for lower cost. The mid-range 32/67 combines a minimal footprint and cost with superior computational power. For heavy duty scientific and engineering applications, the Gould CONCEPT 32/870 offers mainframe performance at a fraction of the cost. And if you're worried about where your application falls on the line, don't be. Upward compatibility and software transportability allow you to move up our line as far as you need to go.

Gould has drawn a new price/performance line. One that shows it takes more than 32-bits to make a supermini. A line the competition can't cross. Call or write for more information.

UNBEATABLE VALUE

WAVE MATE SUPER BULLET

8MHz Z-80H Single Board Computer. Outperforms All Micros & Most Minis

DON'T PAY MORE TO GET LESS

You get more for your money with the Wave Mate Super Bullet. Much more than any micro on the market. It outperforms most minis, too. You just can't find a better value. OEMs and systems integrators are finding that they pay *less* for Super Bullet and offer *more* to their customers. This makes better business sense, and bigger margins, too!

THE ONLY 8MHz Z-80H MACHINE OF ITS KIND

Super Bullet is unique. Wave Mate's exclusive enhancements of the basic Z-80H architecture offers 8MHz operation with flexible DMA facility, enhanced C-BIOS,

fully interrupt-driven I/O and high-speed floppy disk controller. The CPU is utilized with a full complement of Zilog-compatible peripheral chips. Never so much sophistication and flexibility on a single board.

POWER/FLEXIBILITY

For years, the Wave Mate Bullet SBC has been recognized as the most sophisticated and cost-effective Z-80A, CPM-based single-board microcomputer on the market. A truly unbeatable price-performance package for the single user. Now, the "Super Bullet" adds a new dimension to Wave Mate's state-of-the-art technology. Our new 8-bit, 8MHz

machine beats every 16-bit micro we've tested it against and there's documentation to prove it. "Super Bullet" has been designed especially for multi-user systems.

MULTI-USER ORIENTED

You get both CP/M 3.0 and MP/M II operation. You get an exclusively enhanced Z-80H-based CPU at a full 8MHz. You get 256K RAM and four serial ports. High-speed floppy disk with track-buffered controller. Plus SCSI port and LAN option. All of the above and more with the tested and proven Super Bullet. It's an unbeatable value.

Interface buses dominate single-board computer market

*Four major buses—
Multibus, Q-bus, STD-bus and VMEbus—
compete vigorously for single-board computer integration*

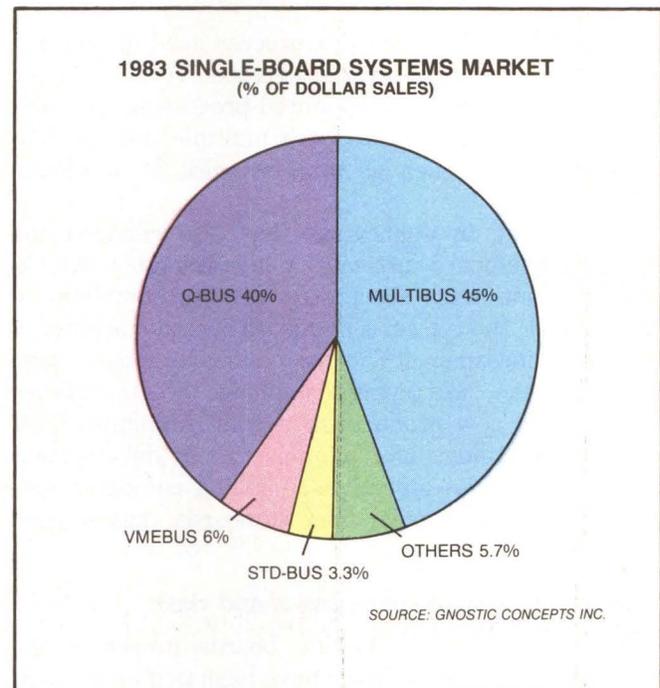

Rick Dalrymple, Senior Editor

With their fortunes tied to the success of the bus standards they support, single-board computer vendors have discovered it pays to sell the bus standard first and the product second. For example, STD-bus proponents are touting the latest plank in their low-cost platform, 16-bit single-board computers based on the same microprocessors previously found only on more expensive Multibus products. Meanwhile, new vendors have been rapidly joining the VMEbus bandwagon. In fact, the new VMEbus-compatible product directory lists 96 companies offering various VMEbus products.

Four bus standards dominate the single-board computer market: Multibus, Q-bus, VMEbus and STD-bus. With more than 100 mostly proprietary bus designs in use, it is clear that not every application is best served by adopting one of the popular buses. However, during 1983, nearly 95 percent of the money spent on single-board computers went to products conforming to one of the four dominant bus standards. And looking at the forces reveals why only a few bus standards will probably continue to control this market.

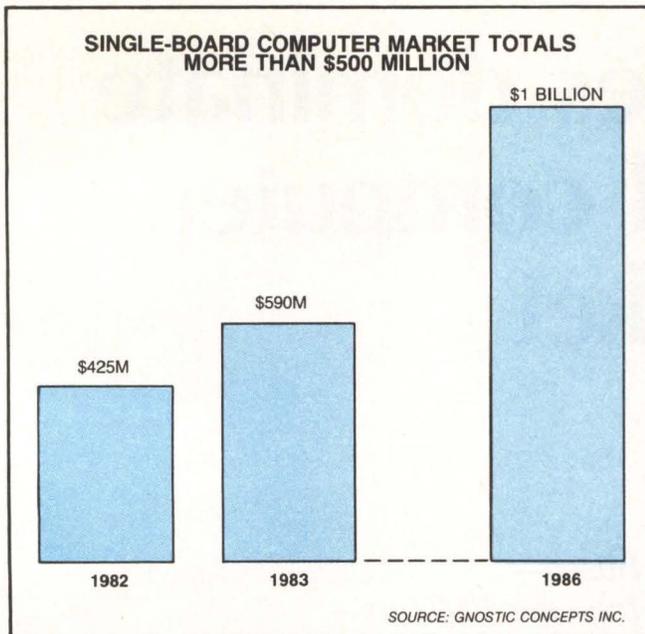

A fundamental shift in usage

Over the last few years, there has been a fundamental change in the way system integrators use single-board computers. "Today, the market has shifted from dedicated computing toward reprogrammable applications," observes Tom Kinhan, general manager of the OEM Modules Operation at Intel Corp., Hillsboro, Ore. Kinhan points out that early single-boards were suit-

able only as dedicated controllers, not computers. "However, with the powerful microprocessors found on today's products," says Kinhan, "single-boards can now outperform yesterday's minicomputer."

No longer limited to control, single-board computers are being used as building blocks in the construction of sophisticated computer-based systems. Some are found in configurations in which several single-board computers are linked to perform a complex task, such as for

electron-beam lithography, a process used in the production of very-large-scale-integrated (VLSI) devices. Others are found in distributed-processing environments in which there are both multiple masters and multiple slaves, such as in a network of automatic tellers.

The change in applications has also changed the typical single-board customer. Whereas engineers looking for a solution to a specific problem still contribute to this market, the typical customer is now the technically astute businessman. "The customers we meet," says Intel's Kinhan, "are trying to minimize the time it takes to get their new products to market, minimize their capital investment and minimize their development risk." With those objectives, building computer systems based on popular bus standards makes good sense.

Minimizing development costs and risks

For manufacturers, buying boards preserves the capital that otherwise would have been tied up in board manufacturing and test equipment. With the adoption of popular bus standards, some other major up-front investments are avoided as well. For example, significant design time is saved because bus standards provide those mechanical, electrical and protocol specifications that establish a single-board computer's communication links to its peripherals and other computers. Thus system integrators are free to concentrate on the system configuration.

Another important cost-saving factor centers on wide peripheral board selection. Each of the four

popular bus standards has spawned a group of manufacturers offering such boards as add-on memory, printer spoolers, analog-to-digital and digital-to-analog conversion logic, graphics processors and disk and tape drive controllers. Rather than create an expensive, time-consuming custom board design, system integrators choose those board-level products that best fit the price/performance requirements of the system design. System integrators can also select backup products to serve as second sources of supply or to provide an alternative should the first choice develop problems.

These same cost-saving items also reduce risk. Shorter design cycles increase the probability of getting to market with the right product at the right time. Broader selection and product availability provide the options necessary to avoid a "critical path" roadblock. Risk is reduced not only for the system builder but also for the system end user.

New product in a familiar package

The rapid pace of computer technology has shortened the life cycles of many computer-based products—a problem shared by end users and system builders alike. Both groups would like to take advantage of new technology without redesigning or replacing systems. Now, to a large extent, bus standards are making this objective possible. In just the last 12 months, products that significantly expand the processing capability of the Multibus, STD-bus and Q-bus have come onto the market. Because they conform to these popular standards, they offer an upgrade path for existing systems.

These new products are following a familiar pattern: improved price/performance in the same size package. The result in the case of single-board computers is that the Q-bus, introduced in the early 1970s, and the STD-bus and Multibus, introduced in the mid-1970s, are still viable bus standards. Only when a system integrator moves to a 32-bit bus must these three standards be, at least partly, left behind.

STD-bus goes 16 bits

Whereas the Multibus was designed to accommodate both 8- and 16-bit processors, the STD-bus was not. The STD-bus standard has adapted well over the years and, this year, new products have taken the STD-bus into the world of today's 16-bit processors.

The STD-bus was designed for control systems and instrumentation. Its small form factor—4½ by 6½ inches—finds favor in industrial control. Then, as control applications moved to distributed systems, the STD Manufacturers Group responded by working out an arbitration scheme that allowed master and slave boards. However, if 16-bit boards had not come along, STD-bus customers would have been forced to adopt

the Multibus. Promoting 16-bit STD-bus boards are companies such as Ziatech Corp., San Luis Obispo, Calif., and Colex America Inc., Dallas.

Excited about the prospects for the STD-bus is John Mills, product marketing manager of Analog Devices, Norwood, Mass., which sells both STD-bus and Multibus products. Says Mills, "These new 16-bit boards put the STD-bus on an equal footing with the current generation of Multibus products." Mills says he sees some Multibus customers taking a new look at the STD-bus.

"What we offer the customer," states Ziatech marketing manager Jim Eckford, "is a 16-bit product that is half Multibus' size and half Multibus' typical price." Eckford sees his product finding a home in compact dedicated applications such as blood analyzers, oil-well loggers and machine tools.

Even without converting Multibus customers, the STD-bus continues to see brisk sales. One reason is new customers. According to Analog Devices' Mills, "Control engineers are less afraid of building their own systems." He sees this group buying single-board computers to replace systems built by process-control vendors. Another reason for continued sales in STD-bus products is the use of complementary-metal-oxide-semiconductor (CMOS) devices. CMOS devices are starting to price those using transistor-to-transistor logic out of the market. CMOS' low power and high immunity to noise fit well in STD-bus industrial-control applications. The STD Manufacturers Group is working on a CMOS STD-bus specification, and CMOS STD-bus cards are on the market.

Multibus leads the pack

Of the leading bus standards, Multibus enjoys the largest market share. Multibus vendors are not expecting the STD-bus to cut much into their sizable customer base. "Sure, they have a temporary advantage," admits Norman Kool, vice president of engineering at Multibus products vendor Forward Technology Inc., Santa Clara, Calif., "but that advantage may last only three to six months." Kool says that his company and other Multibus vendors will introduce a new generation of Multibus single-board computers. An example of what that new generation may hold in store are Intel Corp.'s expectations that small computer systems interface controllers and the Centronics parallel printer interface will find their way onto Multibus boards.

Q-bus gets a shot in the arm

The Q-bus, oldest of the bus standards, began as a minicomputer bus. Although developed by Digital Equipment Corp., which offers Q-bus board products as an alternative to buying "boxed" computers, the

Q-bus market is mostly populated by DEC-compatible manufacturers. DEC recently introduced new Q-bus products—to the delight of the other Q-bus manufacturers, which feared that customers would start to view the Q-bus as a fading bus standard.

For example, DEC's new LSI-11/73 and the 11/23 replacement board from Alcyon Corp., San Diego, both slide into the DEC PDP-11/23 CPU slot, offering a fully compatible upgrade path for 11/23 users. DEC also offers a board-level version of the new MicroVAX I. The product comes on two boards and sells for less than \$10,000. The MicroVAX implements the MicroVAX architecture, a strict subset of the VAX architecture that contains a 4G-byte virtual-address space, a 32-bit word size and full memory management.

"These products give DEC customers alternatives," notes Bob Maiorana, product marketing manager at DEC's Hudson, Mass., facility. Maiorana claims that DEC's LSI-11/73 will outperform 68000-based products. "Our customers must ask, 'What is the cost of the time and labor required to shift from Q-bus-based products to some other bus?' We think they will figure that it is good business to stick with the Q-bus."

VMEbus makes its mark

What is it like to start a new bus standard? Ask the early vendors promoting the VMEbus. The VMEbus has evolved from the VERSAbus, developed in 1979 by Motorola Inc., Phoenix, Ariz., for its 68000 family of chips. In 1980 the VMEbus was adapted to the Euro-card format in Europe. In 1981, it received the additional support of Mostek Corp., Signetics Corp. and Thompson CSF, which announced VME support chips. The International Standards Organization announced the formal VMEbus specification in October 1981, and a manufacturers group was formed a year later.

The high-performance 16-/32-bit VMEbus offers 20M- to 40M-byte-per-second data-transfer rates, flexible data and address paths, multiprocessor support, non-multiplexed and asynchronous data transfers, a powerful interrupt structure and support for quick failure detection.

With its growing market share and swelling number of vendors, the VMEbus seems to be well on its way. The only cloud on the horizon is Intel's announcement that it will introduce Multibus II boards in the fourth quarter of this year. Many vendors are waiting until then to see what Multibus II has to offer. But, with 96 vendors offering VME products, Intel and its Multibus II partners will have a tough time catching up. □

Executive 10/78

Executive 10/102

Executive 10/102G

Nowadays, technology is advancing so rapidly that today's latest breakthrough may be replaced as soon as tomorrow by something even more revolutionary.

PEACE OF MIND A NEW DIMENSION.

To the rapidly-changing world of high technology, Esprit—the company with more experience in terminal technology than any other—would like to introduce a new and un-changing dimension: peace of mind.

Designed right into every terminal in Esprit's complete line are the features, the functions and the flexibility that make it not only user-friendly but systems-friendly. In other words, the kind of comfort, quality and trouble-free technology that can provide real peace of mind.

Backed up with an extensive nationwide service force and our own special toll free service number (800-645-4508)—so you can reach us about anything that concerns you—to insure your own peace of mind.

PEACE OF MIND FOR THE NEXT GENERATION IN TERMINALS.

One look at the Esprit ESP 6310™ and you'll recognize the next generation of terminals. With performance and features far superior to other terminals in its price category. And the kind of quality you can feel comfortable with.

DESIGNED FOR PEACE OF MIND.

From the sleek and stylish lines of its ergonomic design to the sculptured lines of its low-profile

keyboard with its 11 user-programmable function keys—shiftable to 22—in non-volatile memory back-up, that can be programmed directly or down-line loaded from the host computer.

From its high resolution, green phosphor display with a well defined character font, in a large 7 x 11 dot matrix, in an 80 column x 25 line format to its screen saver feature which deactivates the screen after 20 minutes of inactivity.

From its tilt and swivel monitor to its smooth scrolling and line graphics capabilities.

Our ESP 6310 provides enhanced performance and incorporates emulations of the TeleVideo 925/910 PLUS*, ADDS Regent 25/Viewpoint* and Lear Siegler ADM3A*, as well as the popular Esprit series.

But at \$695, it's priced below many terminals with far less features.

That means even our low price is designed to give you peace of mind. And so for your own peace of mind, please fill out the coupon below or call.

**Half-Height
Family of
High-
Capacity
5.25" Floppy
Drives From
Philips**

Our drives are more reliable... by design.

We met Europe's exacting standards and became the leader in 96 tpi 5.25" flexible disk drives.

Now we're bringing you our field-proven technology, Philips' patents, and manufacturing experience in our latest 5.25", Half-height 96 and 48 tpi drives.

- **Design simplicity** — our drive design uses 20% fewer mechanical and electrical parts. They run longer (10,000 hrs MTBF), cooler, and use less power.
- **Dynamic disk registration** — Philips' proprietary double-clutch clamping cone ensures diskette interchange, repeatable centering, and prevents media damage even after 50,000 insertions.
- **Dip switch configurable** — easy programming in production environment, decreased chance of configuration change, and no jumpers required.
- **Precise, split-band actuator** — highest track positioning accuracy in the industry for increased data recovery.
- **Manganese/zinc, glass-bonded, ceramic heads** — high resolution, low noise R/W signal, and extended media/head life.

Rigorous testing will prove our drives are unsurpassed in performance.

And unequaled in reliability.

All made possible by Philips' technology and 100% tested premium components.

Q Why is
FARADAY
the logical
choice for IBM®
PC compatibility?

A A complete
family of
PC compatible
products.

PC compatibility has never been easier thanks to Faraday's complete family of board-level computers and supporting software.

Faraday's full line of products provides the OEM with 100% PC compatibility, MS-DOS™ operating software and support products to assist in design implementation.

Faraday's family of products includes:

- FE6400: The first standard format board-level computer that is hardware/software/form factor compatible with the IBM PC.
- FE6410: An IBM PC compatible CPU board with integrated floppy disk and monochrome video controllers.
- MS9200: The MS-DOS operating system, fully compatible with PC-DOS and complete with hard disk utilities.
- FE5140: An IBM PC compatible double density floppy disk controller board.
- Future products include a compatible BASIC, an integrated monochrome video controller board, and a family of custom VLSI integrated circuits designed for use in IBM PC compatible products.

Because of Faraday's capability to manufacture in high volume at low costs, the company is an important supplier to major OEMs. By incorporating Faraday's standard format products, OEMs are reducing their design costs as well as their time to market.

So if you're an OEM and need IBM PC compatibility for your product, choose Faraday. Faraday will help take you to market with a competitive product faster than anyone today and in the future.

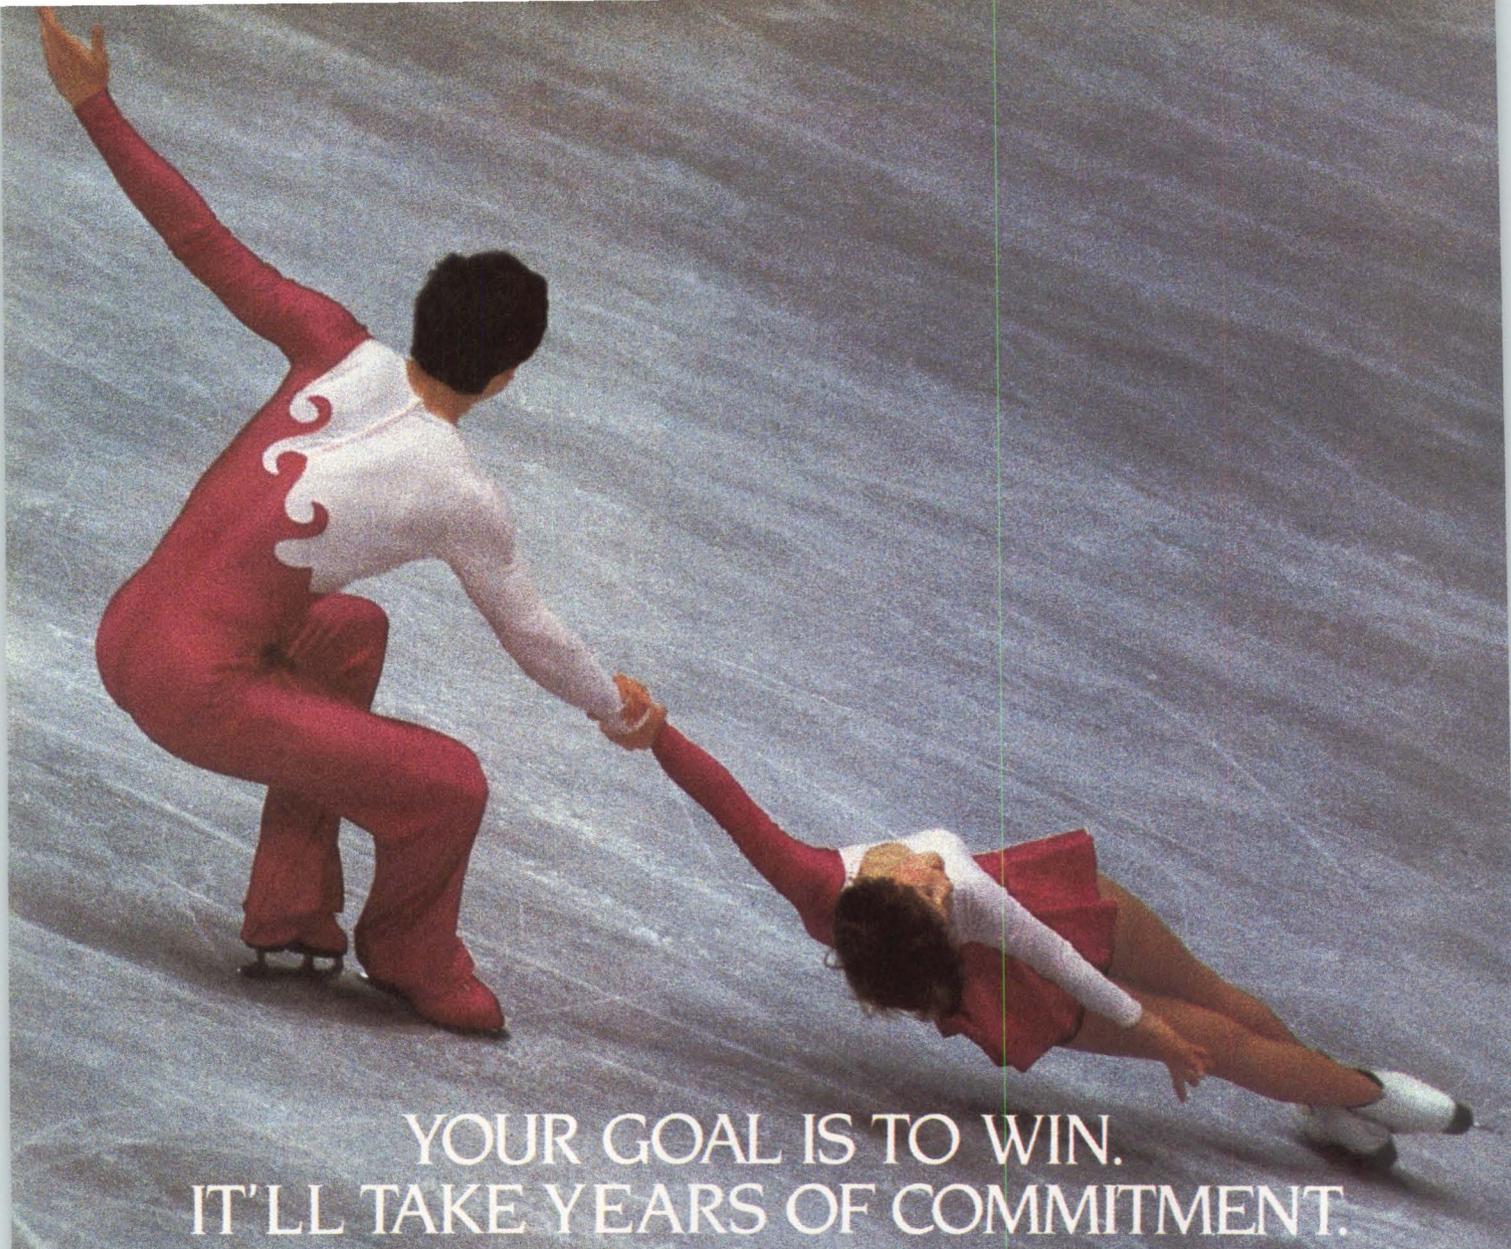

Contact Faraday Electronics today at
743 Pastoria Ave., Sunnyvale, CA 94086, (408) 749-1900.

MS-DOS is a trademark of Microsoft Corporation. IBM is a trademark of International Business Machines.

 **FARADAY**

The OEM PC Compatible Company.

YOUR GOAL IS TO WIN.
IT'LL TAKE YEARS OF COMMITMENT.

YOU'LL NEED A PARTNER WHO CAN CUT IT.

How We Look At The Future. Designing information systems for the business office of the future is a lot like planning the flawless performance in ice skating.

Choosing the right printer partner can be critical.

Are the same strong goals for success shared? Is the necessary talent, commitment, and dedication to meeting and exceeding those goals present?

As a major designer and manufacturer of state-of-the-art printers, worldwide, Okidata knows the importance of goals and commitment. And living up to them.

What We're Doing Today. For Tomorrow. Right now, our dedicated

research and new product design teams are pushing and testing the limits of present technology to find better ways to build better printers.

Through an on-going and expensive commitment to robotic assembly, we're assuring smoother and faster-than-ever product flow.

And, elsewhere, we're streamlining our customization and modification turnaround times to respond even more quickly to your rapid startups.

We'll Be There When You Need Us. In OEM system building, just like in the Olympics, commitment is everything.

If your audience will be looking to you for more flawless performances in the future, we're the printer com-

pany who'd like to join you. In fact, we're already working on it. Call 1-800-OKIDATA. Or write OKIDATA, Mt. Laurel, NJ 08054.

COMMITTED TO DEC?

So are we. And, we're committed to the individual systems buyer, too. We give the little guy the edge he just can't get anywhere else. We understand the system builder's time constraints, and we're flexible enough to work with them.

We bring the latest technology to our added value DEC systems long before anyone else. And, we relieve you of the complex, time-consuming task of searching for and evaluating new high-performance products and system possibilities.

Plus, we give you considerably faster turnaround. With the Cambridge Digital "Edge" you can get many fully integrated, PDP or VAX systems in as little as 10 days. And, your system will be up and running upon delivery with your entire complement of fully supported software and peripherals. The best, most advanced products on the market today. All tested and ready to go.

So, whether you want a fully integrated pre-packaged system or you want to mix and match system components, Cambridge Digital can give you the performance you need in an economical package, ready to go the day you get it. That's what the Cambridge Digital "Edge," is all about.

To receive our DEC PDP-11 based system catalog including a description of the seven guarantees you get when you get The Edge, call or write. Main Office, Dept. 7401, P.O. Box 568, 65 Bent Street, Cambridge, Massachusetts 02139. Telex 92-1401/COMPUMART CAM. 800-343-5504. In Mass. call 617-491-2700. New York District Office 516-935-3111.

INTRODUCING THE WORLD'S FIRST 10 MB SHOCK ABSORBER.

IN A CLASS BY ITSELF

Ranger is the first truly environment-independent Winchester. With its unique shock and vibration resistant suspension and proprietary head retraction system, Ranger can go just about anywhere and perform under conditions never thought possible for a hard disk. Air freight it, throw it in the back of your car, even send it through (shudder), airport baggage handling - it's tough enough to take it and keep on performing.

See us at NCC, Booth #H352.

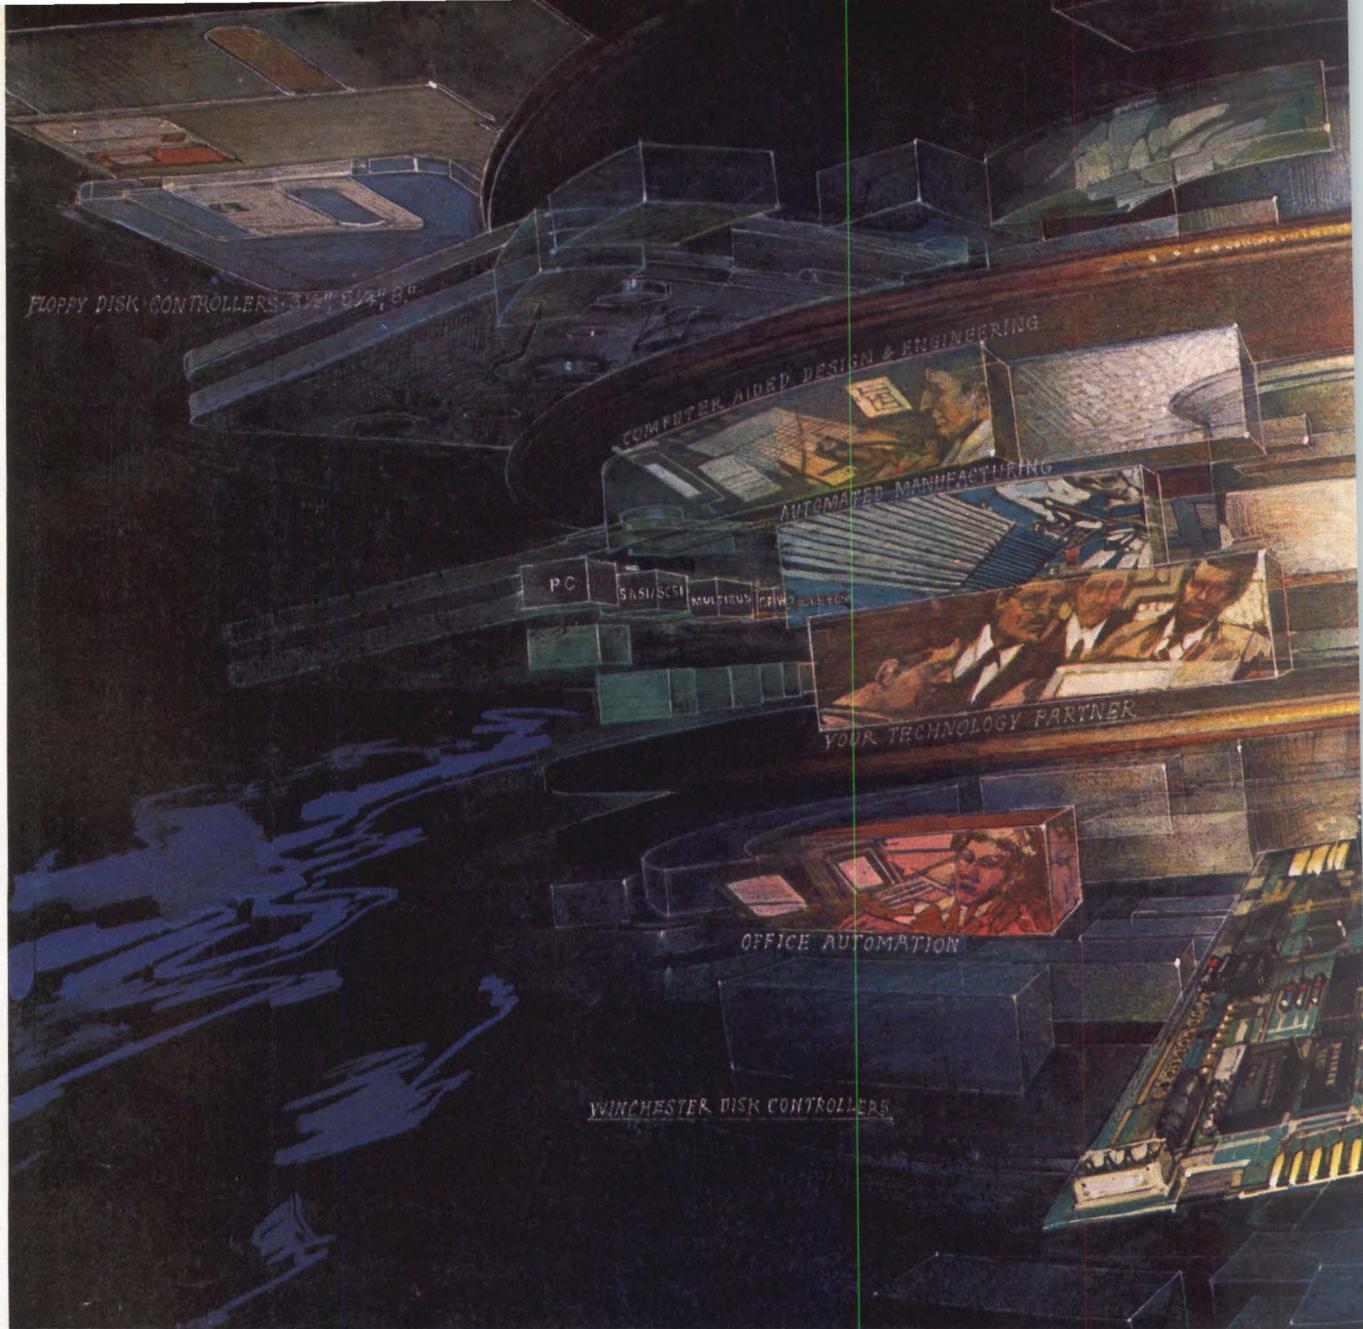

DESIGNER LIBERATION

For the first time, Winchester-backed portable PCs and other data acquisition, communication and processing devices are a practical reality. And because Ranger packs its 10 rugged MBs into a miniscule 3.5" 2-lb, ST-412/506 compatible package, you can enhance data capability or design-in new features while tightening up on product size and weight.

Take aim at bringing rugged Ranger reliability to your product design. Write us at: 1111 Space Park Dr., Santa Clara, CA 95050. Or for quicker action, please call 408-986-8676.

WHAT'S IN STORE FOR DISK STORAGE? THE FUTURE...

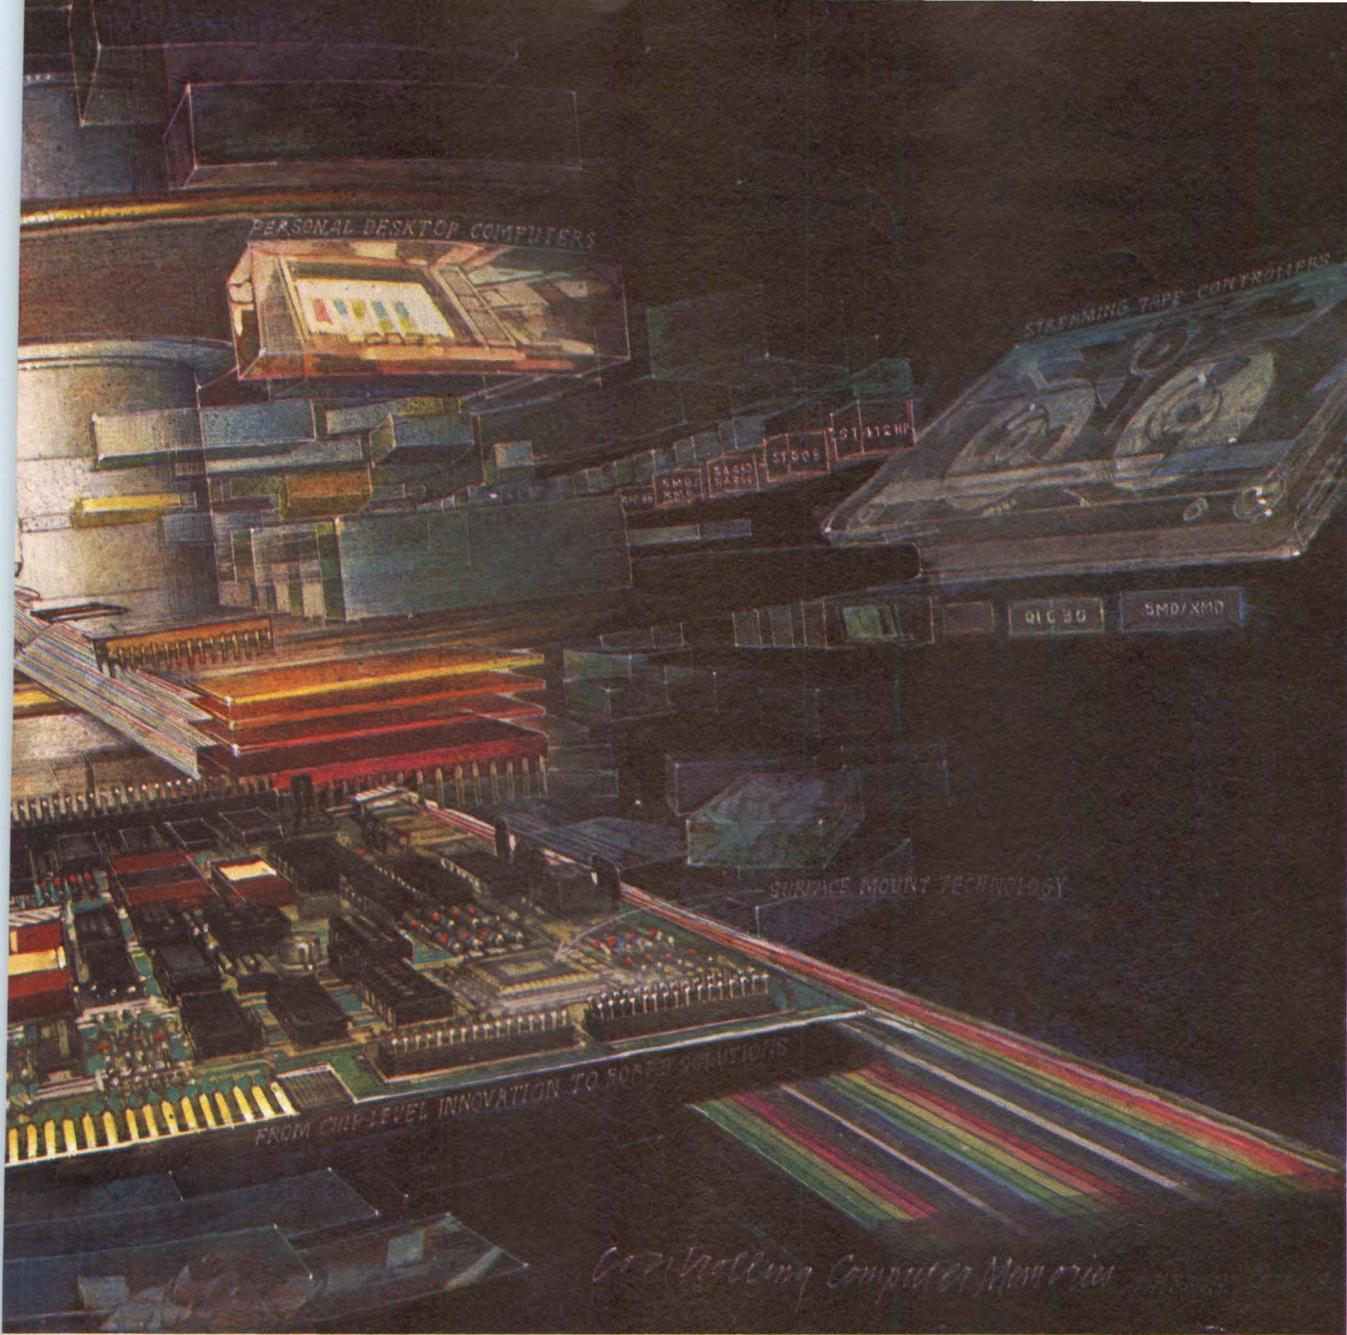

Your future is ensured when you make Western Digital your partner in storage management technology. We've led the way with non-stop innovation, from the first single chip floppy disk controller nearly a decade ago to the broadest offering of chip and board-level floppy, Winchester and tape controllers today.

Systems in Silicon.

What makes us unique are our extensive VLSI capabilities. Designing and manufacturing our own proprietary chips enables us to 1) pack more performance into our controllers than is possible using general purpose LSI, 2) continuously integrate more and more functionality into fewer and fewer devices, 3) and provide you with an unending path to lower cost and higher performance as we ride the experience curve.

Chip-to-board synergy.

Solutions are what we offer systems builders. Having us build you a board-level disk controller

based on our chips does more than get you to market more quickly. It enables you to make us your technology partner at the systems integration level.

Whether you choose one of our standard boards, with more than a dozen combinations of host and drive interfaces, or have us design and build a custom, proprietary version for your system's special needs, our engineers work as a virtual extension of your own engineering capabilities.

Leading edge manufacturing.

To meet your high volume needs, we've invested in new, state-of-the-art automated board manufacturing and test facilities in the U.S. and Europe.

To keep you competitive, we're constantly integrating more functionality onto our board-level products, driving down cost while we boost performance. Our investments in surface-mount technology, and commitment to stay at the leading edge of this revolutionary approach to board manufacturing, will accelerate the integration process, enabling us to pack dramatically more into dramatically less space.

Take control of the future.

More leading manufacturers of personal computers and office automation systems buy storage management controllers from Western Digital than from any other company. Make us your source for disk and tape controllers and you get more than high technology products. You get a corporate commitment to do all we can to see you succeed. Take control of the future. Call our Controller Hotline, 714/863-7827. And ensure *your* success.

...STARTS HERE.

For the complete story of our storage management capabilities and a poster-size reproduction of the illustration above, send your business card to Western Digital, SM Literature, 2445 McCabe Way, Irvine, CA 92714.

WESTERN DIGITAL
C O R P O R A T I O N

We've Earned The Right To Be #1 By Being First So Often

When it comes to being **FIRST** with technology-leading products, **Advanced Digital** wears its #1 button with pride. We were **FIRST** to introduce an 8-Bit, single board S-100 computer. . . We were **FIRST** to introduce a 6MHz, 128KByte single board computer. . . We were **FIRST** to introduce a 6MHz, 128KByte Slave Processor board. And our record for being **FIRST** continues with. . .

- The introduction of **SUPER EIGHT** – an 8MHz master with Winchester and Floppy disk controller on one board.
- The introduction of **SUPER SLAVE II** – A dual slave processor that will support two users under TurboDOS.
- The introduction of our new **SUPER 186** – the **FIRST** 16-Bit, single board S-100 computer that performs at twice the speed of older technologies. Loaded with features such as on-board floppy disk controller and up to 1MByte of RAM, the **SUPER 186** is designed to function as a bus Slave or Master. Advanced Digital's **SUPER 186** permits you to take advantage of vast libraries of sophisticated applications software.

Advanced Digital boards are IEEE 696 compatible, run under a variety of operating systems such as CP/M 2.2,* CP/M 3.0, Concurrent CP/M, MP/M,* OASIS,* and TurboDOS*

(Top row L to R: Super Slave 128, HDC-1001, Super Slave 64, Bottom row L to R: Super Quad, Super 186, Super Six)

and are available with CPU speeds of 4, 6, or 8MHz. On-board memory capacities range from 64KBytes to 1 MByte.

When it comes to selecting your S-100 boards, go with Advanced Digital – The Company that earned the right to be #1.

See your local computer dealer or contact Advanced Digital today. . . We'll help you become #1.

SyQuest Removable and Fixed Disk Drives Doing more in more applications.

SyQuest Winchester drives—with removable cartridge or fixed media—are working in more applications than any other half-height Winchester. They are giving microcomputers and add-on storage systems a competitive edge. Increasing the utility of portables. Adding another dimension to telecommunications systems. Giving database systems unlimited off-line storage. Helping local networks and multi-user systems share resources.

Increasingly, OEMs and systems integrators are specifying SyQuest half-height drives. Because they get reliable Winchester performance—with fixed disk drives or cartridge disk drives. They fit almost anywhere and are designed to work most anywhere. They use standard Winchester controllers and interfaces.

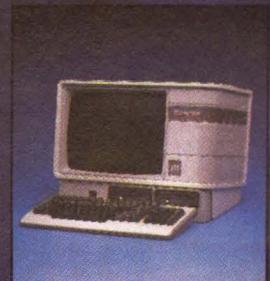

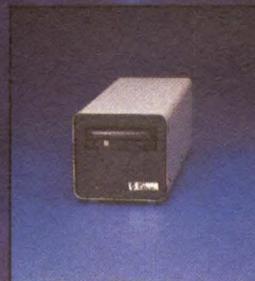

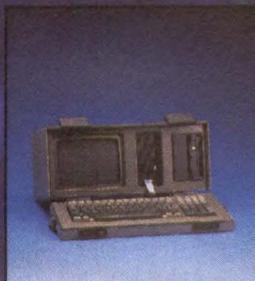

SyQuest can help your system applications do more for less. For product information, circle our reader's service number. For delivery and pricing information, call us direct.

WORLD CLASS

PHILIPS GP 300 PRINTERS

GP 300, GP 300L

High speed (300 cps) output for drafting, and 120 cps for high resolution letter quality.

Text: 9 x 9 matrix;
Letter quality: 18 x 25 matrix. High resolution graphics, dot addressable.

Fully integrated paper handling provides letterhead, second sheet and envelope printing; features both tractor and front feed.

The GP 300L prints colors, graphics and over 95 type fonts available; 144 x 144 dots per inch resolution.

***Our Prices Make the Competition Look Cheap... But Then
So Does Our Quality. And Our Performance.***

Philips GP 300 printers. World-class quality and performance. The products of innovative German engineering and craftsmanship. The first true multi-speed, multi-function, integrated letter quality and graphics printers available in the USA.

Compare Philips GP 300 printers with any other printers. At any price. Compare our quality. Compare our versatility. Compare our performance. You'll see that we've redefined "top-of-the-line." Contact us today for complete details.

World-Class Electronics from Philips.

WHERE TO MEET THE MOST OEM'S AND SYSTEMS INTEGRATORS FACE TO FACE TO FACE...

Meet them at a Mini/Micro.

It's the one computer trade event that focuses entirely on computer design needs. That means you, as an exhibitor, can deal face to face with a prime concentration of OEM's, designers, systems integrators and software developers. On your own turf, but in their backyard; Mini/Micros are held regularly in the prime markets.

What's more, many Mini/Micros run concurrently with high-tech electronics shows like Electro, Midcon, Southcon and Northcon. That means extra value for you, because attendance statistics show that 27% of these attendees go to Mini/Micro as well.

So if you're after OEM's and systems integrators, be at a Mini/Micro. For complete information, call toll-free: 800-421-6816. In California, 800-262-4208.

Meet OEM's and systems integrators where they live.

Sept. 11-13 1984	Mini/Micro Southwest Midcon	Dallas Dallas
Oct. 2-4 1984	Mini/Micro Northwest Northcon	Seattle Seattle
Feb. 5-7 1985	Mini/Micro West	Anaheim
Mar. 5-7 1985	Mini/Micro Southeast Southcon	Atlanta Atlanta
May 23-25 1985	Mini/Micro Northeast Electro	New York New York

MINI-MICRO SYSTEMS/June 15, 1984

Personal computer spotlight shifts to portables

To gain a foothold in an emerging market, major computer manufacturers introduce portable, transportable and hand-held microcomputers

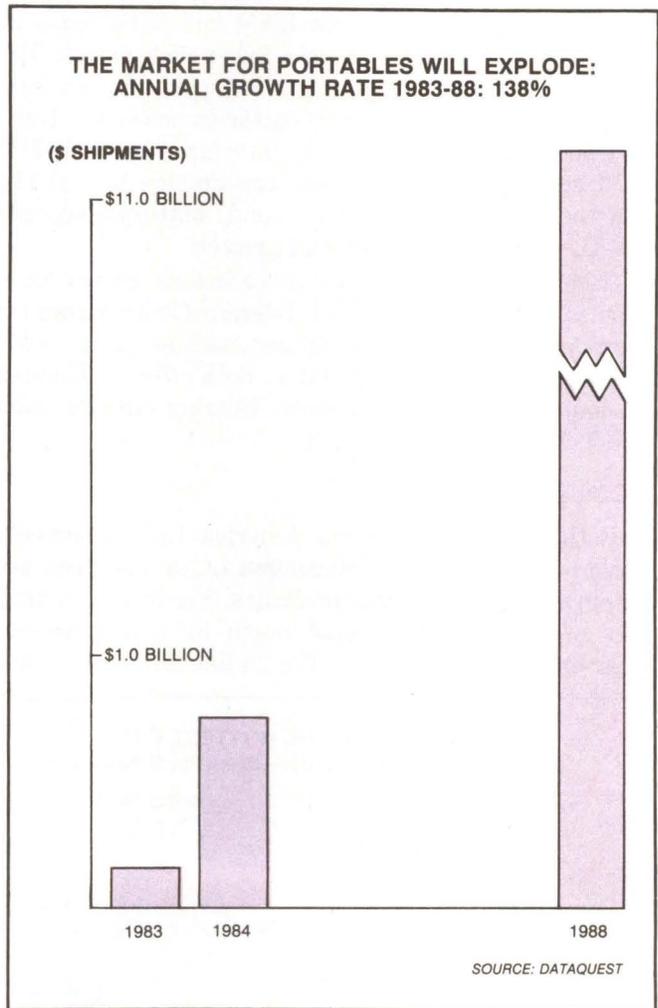

Tom Moran, Associate Editor

The major manufacturers of single-user microcomputers are now poised for a market share battle in two new fast-growing market segments—portable and transportable microcomputers. The portable computer market is gaining momentum because of improved displays, smaller storage devices and falling component prices. Significant recent introductions by major players include Apple Computer Inc.'s Macintosh, IBM Corp.'s Portable Personal Computer and Hewlett-Packard Co.'s Portable HP110.

In the past two years, the portable computer market has divided into three areas—transportable computers, "true" portables and hand-held units. A transportable computer typically weighs more than 20 pounds and offers a CRT, one or two 5¼-inch floppy disk drives, a detachable keyboard and varying amounts of standard bundled software. These powerful machines appeal to users more because of integration than mobility. A transportable usually stays on a user's desktop or is carried between home and work.

True portables, also called "briefcase," "knee-top" or "lap-size" computers, typically weigh 4 to 20 pounds and offer flat-panel displays, battery operation and less RAM and secondary storage than their bulkier cousins. Their keyboards range from "full-travel" devices to pressure-sensitive membranes, and many of these systems use non-standard software. However, technological innovations such as microfloppy disk drives, better flat-panel displays and less expensive RAM, ROM and bubble-memory devices are conspiring to create kneetop systems with almost as much functionality as transportables.

The third market segment, hand-held computers, includes very small, very light machines that lack full

keyboards and full displays. Hand-held units are distinguished from calculators by their ability to run at least one high-level language.

True portables grow fastest

Of these three market segments, the most dynamic growth will occur in the true portables, as lightweight machines gain power and versatility. By 1988, new full-function knee-top computers and their successors may largely supplant today's bulky transportable machines. Ken Lim, an analyst for market research company Dataquest Inc., San Jose, Calif., says, "We project a compound annual growth rate for true portables of 116.3 percent from 1983 through 1988. That's the largest growth rate we see for any of our segments, which covers home computers up to but not including mainframes."

In May, HP introduced the Portable HP110, a 9-pound complementary-metal-oxide-semiconductor (CMOS) system with a 16-line, 80-column liquid-crystal display (LCD), which runs the MS-DOS operating system, and Lotus Development Corp.'s 1-2-3 integrated software package in ROM. Because the HP110 has 272K bytes of static system RAM and 384K bytes of socketed custom ROM, it uses fewer disk drives. HP also recently introduced the 9114 portable 3½-inch microfloppy drive. Lead-acid batteries power the Portable and the 9114, which can be interfaced using the HP interface loop (HP-IL). Users can employ the HP110 and the 9114 with HP's 5½-pound, battery-powered, HP-IL version of its ThinkJet printer.

Other promising true portables include Sharp Electronics Corp.'s PC5000 and Teleram Communications Corp.'s T-5000. Although neither machine has as much ROM or RAM as HP's Portable, both offer 128K bytes of non-volatile bubble memory. Teleram officials claim the T-5000 has a 16-line LCD.

LCDs get larger

Both Sharp and Hitachi America Ltd. reportedly have prototype 24-line, 80-column LCDs that they are integrating into portable machines. Production quantities of these LCDs should begin to appear around year-end or in early 1985. The 24-line LCDs will offer

the same size screen as that of most desktop systems and thus will eliminate one problem of porting standard software packages to knee-top portables. Because of their ability to display entire paragraphs, graphs and spreadsheets without scrolling, systems with 24-line LCDs should severely impact sales of machines with 1- to 4-line LCDs. Price reductions on 8- and 16-line models will occur as manufacturers become more experienced in producing them.

Electroluminescent flat-panel displays such as those used in Grid Systems Corp.'s Compass unit are slowly becoming less expensive, but they consume so much power that systems incorporating them can be run only on AC power. Although Grid has recently reduced the Compass' price to about \$6,000 without software, the price is not low enough for the broad markets soon to be created by powerful knee-tops with standard software for \$3,000 or less. LCDs should continue to be the choice for briefcase-sized machines because of their low power requirements and relatively low price. However, they require adjustable viewing angles and ambient light to be legible and they perform slower than CRTs.

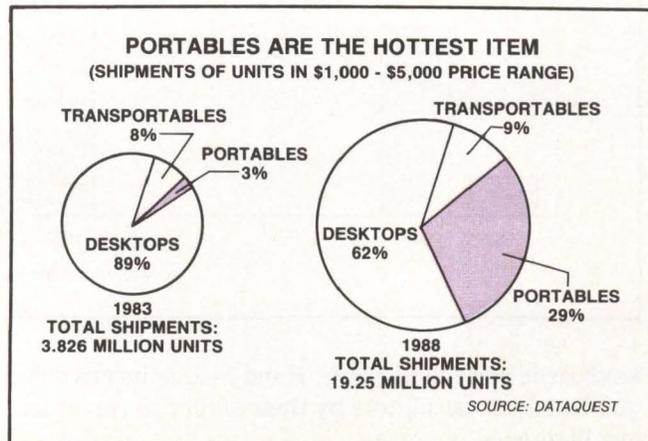

Above all, true portables will appeal to users because of their mobility, low price and functional integration of peripherals, whether the peripherals are modular or packaged in one unit. For the foreseeable future, powerful general-purpose machines will not shrink below briefcase size because flat-panel displays and full-travel keyboards must be large enough for easy reading and typing.

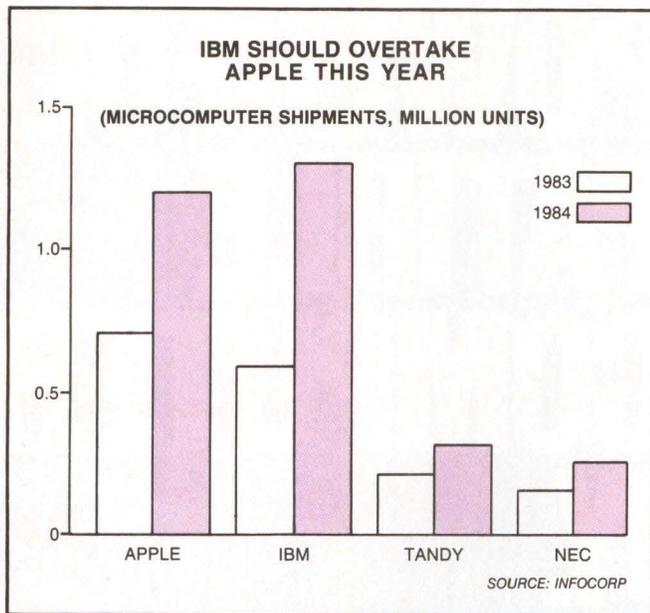

Macintosh sales skyrocket

Sandy Gant, analyst for InfoCorp, Cupertino, Calif., estimates that Apple will sell 350,000 Macintosh microcomputers in 1984. The 22-pound transportable unit should fare well because of its small footprint, high-resolution monochrome screen, 32-/16-bit 68000 processor and its mouse-driven, Lisa-like application software. Customers for the Macintosh will include first-time computer users, Apple II owners ready to migrate to a more powerful system, small businesses and departments of large corporations.

Apple's initial supply of Macintoshes disappeared rapidly, and dealers report a large number of customer inquiries. However, Apple has not been able to get its automated factory in Fremont, Calif., operating near its rated capacity of one finished system every 27 seconds. As a result, the company could lose customers to the next interesting machine to come along.

IBM's \$2,795 Portable PC puts IBM's seal of approval on the transportable computer market. "This product was introduced primarily in response to requests from our customers and dealers [who asked for] the IBM PC but in a more transportable, lighter version," says Rick Scott, spokesman for IBM's Entry-Level Systems Divi-

sion in Boca Raton, Fla.

Scott denies reports that the Portable PC would not be immediately available nor distributed through retail dealers. "We said supplies would be limited initially, but I would not want to be any more specific than that. Production will be increasing and already is." He says the unit will be available through the more than 1,400 authorized IBM personal computer retail dealers.

InfoCorp's Gant says the Portable PC will not directly affect other manufacturers' sales. "I think more transportables will be shipped."

However, on the verge of entering the transportable market, IBM began court proceedings against several makers of IBM-compatible machines it felt were infringing on its copyrighted ROM basic input/output system (BIOS) software. Several disputes were resolved by consent of the defendants on the same day IBM filed the lawsuits. Paul Saunders, a partner in New York law firm Cravath, Swain and Moore, representing IBM, stated that the agreements resulted in permanent injunctions against the defendants for the use of IBM-copyrighted materials. One of the affected companies, Eagle, Los Gatos, Calif., posted a \$7 million loss partly as a result of having to stop shipments while rewriting the BIOS.

IBM and the leading maker of IBM-compatible transportables, Compaq, agree that IBM did not contemplate taking action against Compaq. Ken Price, director of corporate communications for Compaq, says, "We felt from the very beginning that there was no reason for concern because we designed [our] ROM BIOS from scratch.

Compaq shipped \$111 million worth of systems in its first year, which, Price claims "no other corporation in

the history of American business has ever done. Yet some people attribute that to luck. The product filled a void in the marketplace which no one else at the time was offering—the combination of true compatibility, transportability, full function and delivery of those points."

According to Margaret Phanes, publicity director at Kaypro, which introduced the first transportable machine with an integral hard-disk drive, Kaypro is responding to the IBM PC standard by marketing a knee-top MS-DOS machine from Mitsui and Co. (USA) Inc. Designed in part by Microsoft Corp.'s Kazuhiko Nishi, who worked on the Radio Shack model 100, the machine should be shipped in October. Kaypro planned to show prototypes of the system at the National Computer Conference. The notebook-sized, IBM PC-compatible unit will plug into a desktop module with IBM-compatible expansion slots. Kaypro will introduce various versions of the desktop system, including one with two 5¼-inch floppy disk drives and one with a hard disk in place of one floppy drive.

Kaypro also plans to announce a transportable IBM PC-compatible that will incorporate a Winchester disk drive. Phanes denies that production delays of Kaypro's transportable design led to the marketing agreement with Mitsui. "In the summer, there was a shortage of drives, but we have brought several new suppliers on board, so we are not suffering from a shortage at this time." Phanes states that Mitsui was seeking a strong retail-dealer network to market its notebook-sized machine and felt that the company could benefit from the expanded product line. "If there's an industry standard, we want to support it, and we want to continue being a technological innovator," she says. According to Phanes, Kaypro's CP/M market is "alive and well." Phanes adds that Kaypro reduced the price of the Kaypro 2 to \$1,295 to target the electronic typewriter market. "We can do well when people spend their own money for a computer, especially small businesses." However, analysts agree that, although the 8-bit CP/M after-market will thrive on the large number of user installations, such systems will give way to 16- and 32-bit systems over the next five years.

Although many companies will begin to introduce systems as portables or transportables, Kaypro is reversing that trend and broadening its product line with a desktop system called Robie. Robie offers two 2.6M-byte (formatted), 5¼-inch floppy disk drives from DriveTec Inc., San Jose, Calif. Kaypro has purchased manufacturing rights to the high-capacity floppy drives, which it will begin to manufacture. □

DIMENSION. THE MOST POWERFUL, MOST COMPATIBLE PERSONAL COMPUTER YOU CAN BUY.

Introducing the capability the world has been waiting for. A single personal computer able to handle Apple,[®] IBM,[®] TRS-80,[®] UNIX[™] and CP/M[®] based software.

The Dimension 68000 Professional Personal Computer does it all. It actually contains the microprocessors found in all of today's popular personal computers. And a dramatic innovation creates the environment that lets these systems function merely by plugging in the software.

Add to this the incredible power of a 32 bit MC68000 microprocessor with up to 16 megabytes of random access memory.

Dimension has the power of a mainframe at a personal computer price. It's obviously the best value you can find. For more information ask your dealer or call us at (214) 630-2562 for the name of your nearest dealer.

ACI-2/SS		Z80A	64K (64K)	CP/M	Pascal, COBOL, FORTRAN	2,995	includes three RS232C and two parallel ports, one 8-inch, 1212K-byte diskette drive; opt. clock/calendar, 10M-, 20M-, 35M- or 50M-byte hard disk drives
ACI-1/SS		Z80A	64K (64K)	CP/M	Pascal, COBOL, FORTRAN	1,995	includes three RS232C and two parallel ports, one 8-inch, 596K-byte diskette drive; opt. clock/calendar, 10M-, 20M-, 35M- or 50M-byte hard disk drives
ACI-2/DS		Z80A	64K (64K)	CP/M	Pascal, COBOL, FORTRAN	3,695	includes three RS232C and two parallel ports, two 8-inch, 2424K-byte diskette drives; opt. clock/calendar, 10M-, 20M-, 35M- or 50M-byte hard disk drives
AMPRO							
AMPRO Series 100	any ASCII terminal	Z80A	64K	CP/M 2.2, ZCPR 3	BASIC, C, FORTRAN, Pascal, COBOL, Assembly	1,295 (800K); 1,495 (1.6M)	includes one 800K-byte or 1.6M-byte diskette drive, bundled software, two serial I/O ports, one parallel I/O port
ANALOG DEVICES							
MACSYM-150	12-inch, 8-color (24x80)	8086, 8087	256K (512K)	MP/M, Concurrent CP/M	BASIC, Pascal	7,500	includes two 5.25-inch, 320K-byte diskette drives, one 10M-byte hard disk drive, I/O ports
MACSYM-350	12-inch, 8-color (24x80)	8086, 8087	256K (512K)	MP/M, Concurrent CP/M	BASIC, Pascal	11,000	includes two 5.25-inch, 320K-byte diskette drives, one 10M-byte hard disk drive, I/O ports
APPLE COMPUTER							
Ile	12-inch, b&w or green (80x24)	6502	64K (128K)	Apple DOS, ProDOS, Pascal, CP/M, MS-DOS	BASIC, Pascal, Pilot, Logo, Assembly, COBOL, FORTRAN	1,295	includes system software, keyboard; opt. monitor, 148K-byte diskette drive, 5M-byte hard disk drive
III +	12-inch, b&w or green (80x24)	6502	256K (256K)	SOS, Pascal, CP/M, MS-DOS	BASIC, Pascal, Assembly, COBOL, FORTRAN	2,995	includes system software, keyboard; opt. monitor, 140K-byte diskette drive
MacIntosh	9-inch, b&w	68000	128K (128K)	proprietary	BASIC, Pascal	2,495	includes one 400K-byte diskette drive, systems software; opt. 400K-byte diskette drive
Lisa 2	12-inch, b&w (80x24)	68000	512K (1M)	proprietary, UNIX, CP/M, Pascal	BASIC, Pascal, COBOL	3,495	includes one 400K-byte diskette drive
APPLIED MICRO TECHNOLOGY INC.							
MS4000	12-inch, P4, P31 phosphor (80x24)	780A, 780B	16K (128K)	CP/M-80	BASIC, Pascal, FORTRAN	6,500	includes two 5.25-inch, 370-byte diskette drives and one 5M-, 10M-, or 20M-byte hard disk drive
AVATAR TECHNOLOGIES INC.							
TC1/10		Z80A	64K (64K)	CP/M	MBASIC, CBASIC, Assembly	1,595	converts asynchronous terminals into intelligent workstations with local processing capability; includes one or two 5.25-inch, 410K-byte diskette drives and one 12M-byte hard disk drive
TC100/110		8088-2, Z80A	128K (256K)	CP/M, MS-DOS, PC-DOS emulation	MBASIC, CBASIC, Assembly	1,995	converts asynchronous terminals into intelligent workstations with local processing capability; includes one or two 5.25-inch, 320K- or 360K-byte diskette drives and one 12M-byte hard disk drive

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration options
TC3278		8088-2, Z80A	128K (256K)	CP/M, MS-DOS, PC-DOS emulation	MBASIC, CBASIC, Assembly	1,995	converts asynchronous terminals into intelligent workstations with local processing capability; includes one or two 5.25-inch, 320K- or 360K-byte diskette drives and one 12M-byte hard disk drive
ATV SYSTEMS INC.							
ATV Jacquard 500	12-inch, white or green (80x24)		128K				two 250K- or 500K-byte diskette drives, applications software, two RS232C ports; opt. one or two 12- or 24M-byte cartridge hard disk drives
BEEHIVE INTERNATIONAL							
TOPPER II	12-inch, green (80x25)	Z80	64K	CP/M	COBOL, BASIC	3,595	includes two 5.25-inch, 512K-byte diskette drives
TOPPER	12-inch, green (80x25)	8085	64K	CP/M	COBOL, BASIC, WSL	2,995	includes two 5.25-inch, 512K-byte diskette drives
CALIFORNIA COMPUTER SYSTEMS							
Echelon-I	12-inch, monochrome (132x44)	8088, Z80B	256K (1M)	PC-DOS, MS-DOS, CP/M-86	BASIC, FORTRAN, COBOL	3,600	includes two 5.25-inch, 1.2M-byte diskette drives, one 100M-byte hard disk drive; opt. 8-color screen
Calstar II	12-inch, monochrome (80x25)	Z80B	128K (256K)	CP/M 2.2, OASIS	BASIC, FORTRAN, COBOL	2,795	includes two 8-inch, 2.4M-byte diskette drives, one 30M-byte hard disk drive, bundled software
Calstar III		Z80B	128K	CP/M, OASIS	CP/M, OASIS languages	4,395 (Q1); 2,856 (Q100)	
Mega-5516-1/2	14-inch, monochrome (132x24)	80186 8 MHz	256K (1M)	CP/M-86, MOS-DOS, Turbo-DOS	BASIC, COBOL, FORTRAN	5,500	includes two 5.25-inch, 1.2M-byte diskette drives, one 60M-byte hard disk drive, math-processor, Turbo-DOS slave board
CALLAN DATA SYSTEMS							
UNISTAR 100	12-inch, green (80x25)	68000 8 MHz	512K (2M)	UNIX System V	C, FORTRAN 77, Pascal, Ada, BASIC, COBOL, Assembly	11,450	includes one parallel port, two serial ports, one 5.25-inch, 616K-byte diskette drive and one 21M- or 43M-byte disk drive
CANON U.S.A. INC.							
AS-100M	12-inch, green (80x25)	8088	128K (512K)	CP/M-86, MS-DOS	GN-BASIC, AS-BASIC, RM COBOL, LII COBOL	2,995	includes dual 5.25-inch diskette drive
AS-100C	8-color out of 27 (80x25)	8088	128K (512K)	MS-DOS, CP/M-86	GN-BASIC, AS-BASIC, RM COBOL, LII COBOL	3,495	includes two 5.25-inch diskette drives
CASIO INC.							
FP-200	LCD, b&w (20x8)	80C85	8K (32K)	Casio BASIC	Casio BASIC	700	includes built-in spreadsheet, RS232C and Centronics ports, one 5.25-inch, 70K-byte diskette drive; opt. plotter
PB-700	LCD, b&w (20x4)	8-bit proprietary	4K (16K)	Casio BASIC	Casio BASIC		opt. 4-color plotter, Centronics port, microcassette, memory modules
CENTURY COMPUTER CORP.							
Vanguard 800		8085, 8088	256K (64K)	CP/M, CP/M-86, MP/M, UNIX	CP/M, MP/M languages	5,150 (Q1); 4,570 (Q100)	memory mapping, reset circuitry, real-time clock, dual processor
Vanguard 8000		8085, 8086	128K	CP/M-86, Concurrent MP/M	BASIC, COBOL, Pascal, C	3,000	includes real-time clock, memory mapping, six interrupt levels
CIFER PLC							
2887	12-inch, green or orange (132x30)	68000, Z80A	64K (256K, 1M)	UNIPLUS+, CP/M Plus	COBOL, FORTRAN, BASIC, Pascal, C, ALGOL, PL/1	4,750	includes one 5.25-inch, 800K-byte diskette drive and one 10M-byte disk drive
CLUB	9-inch, green or orange (132x30)	68000, Z80A	64K (256K, 1M)	UNIPLUS+, CP/M Plus	COBOL, FORTRAN, BASIC, Pascal, C, ALGOL, PL/1	4,750	includes one 5.25-inch, 800K-byte diskette drive and one 21M-byte disk drive

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration, options
CODATA							
3300		68000	320K (1.5M)	UNIX	FORTRAN, Pascal, BASIC, APL, COBOL	7,700	includes one 12M-byte hard disk drive, one 1M-byte diskette drive, 2 ports
COLEX AMERICA INC.							
820		Z80A	128K (512K)	CP/M 3.0	CP/M languages	3,995	includes two serial and two parallel ports, real-time clock, two 5.25-inch 800K-byte diskette drives; opt. CRT card
850		Z80A	128K (512K)	CP/M 3.0	CP/M languages	5,495	includes two serial and two parallel ports, real-time clock, one 5.25-inch, 800K-byte diskette drive and one 10M-byte hard disk drive; opt. CRT card
3250		68000, Z80A	512K (1.5M)	UNIX System III; opt. CP/M-80 2.2	FORTRAN 77, C, Pascal, BASIC Plus, RM COBOL, Ada	7,495	includes two serial and two parallel ports, one 5.25-inch, 720K- or 800K-byte diskette drive and one 10M-byte hard disk drive; opt. CRT card
COLUMBIA DATA PRODUCTS INC.							
1600-1	12-inch, 16-color (80x25)	8088	128K (640K)	MS-DOS 1.25, MS-DOS 2.0, CP/M-86	BASIC, Pascal, COBOL, FORTRAN, C, MACRO 86	3,170	includes two 5.25-inch, 320K-byte diskette drives, bundled software
1600-VP	9-inch, green or amber (80x25)	8088	128K (640K)	MS-DOS 1.25, MS-DOS 2.0, CP/M-86	BASIC, Pascal, COBOL, FORTRAN, C, MACRO 86	2,995	includes two 5.25-inch, 320K-byte diskette drives, bundled software
COMMODORE BUSINESS MACHINES							
C8096	12-inch	6502	96K (96K)	proprietary	BASIC 2.0		includes one 170K-byte to 2.1M-byte diskette drive
C Super Pet	12-inch	6502, 6809	96K (96K)	proprietary	exception BASIC, FORTRAN, Pascal, APL, COBOL		includes one 170K-byte to 2.1M-byte diskette drive
C B128-80	12-inch	6509	128K (1M)	proprietary	BASIC 2.0		includes one 170K-byte to 2.1M-byte diskette drive
VIC 20	16-color (23x20)	6502	5K (32K)	proprietary	BASIC 2.0		includes one 5.25-inch, 170K-byte diskette drive
COMMODORE 64	16-color (40x24)	6510	64K (64K)	proprietary	BASIC 2.0		includes one 5.25-inch, 170K-byte diskette drive
Executive 64	5-inch, 16-color (40x24)	6510	64K (64K)	proprietary	BASIC 2.0		includes one 5.25-inch, 170K-byte diskette drive
PET 64	12-inch, b&w (80x24)	6510	64K (64K)	proprietary	BASIC 2.0		includes one 5.25-inch, 170K-byte diskette drive
COMMODORE 4032	12-inch, b&w (80x24)	6502	32K (32K)	proprietary	BASIC 2.0		includes one 170K-byte to 2.1M-byte diskette drive
C 8032	12-inch, b&w (80x24)	6502	32K (96K)	proprietary	BASIC 4.0		includes one 170K-byte to 2.1M-byte diskette drive
COMPANION COMPUTER CORP.							
Metamorph	15-inch, b&w (80x66, 132x55)	8088	64K (256K)			3,495	includes 10M-byte disk, 3.5-, 5.25- or 8-inch diskette drives; DEC VT100, VT125 and Tektronix 401X emulation
COMPAQ COMPUTER CORP.							
Compaq Plus	9-inch, monochrome (80x25)	8088	128K (640K)	MS-DOS 2.0	BASIC 2.0, BASICA 2.0	4,995	IBM compatible; includes monitor interfaces to RGB color and composite video, one 5.25-inch, 360K-byte diskette drive and one 10M-byte hard disk drive
Compaq Portable Computer	9-inch, monochrome (80x25)	8088	128K (256K)	MS-DOS	BASIC	2,995	IBM compatible; includes one 5.25-inch diskette and one upgradable 10M-byte fixed disk drive, monitor interfaces for RGB color, composite video and TV set RF
COMPUCORP							
775	12-inch, (80x24)	Z80A	64K (256K)	Zebra, CP/M	BASIC, FORTRAN	7,620	includes two 5.25-inch, 655K-byte diskette drives; opt. monitor and printer
785	12-inch (80x24)	Z80A	64K (256K)	Zebra, CP/M	BASIC, FORTRAN	10,495	includes one 5.25-inch, 655K-byte diskette drive and one 5M-byte hard disk drive; opt. monitor and printer

Simplifier 700	12-inch (80x24)	Z80A	128K (256K)	Zebra, CP/M	BASIC, FORTRAN	4,795	includes one or two 5.25-inch, 328K-byte diskette drives; opt. monitor and printer
COMPUPRO							
816/Z		Z80B	64K (4.8M)	CP/M 2.2		4,995	includes three serial, one parallel and one Centronics port, two 8-inch, 2.4M-byte diskette drives and one 40M-byte hard disk drive, bundled software
COMPUTER AUTOMATION INC.							
MicroSyFA	15-inch, green, amber (80x24)	proprietary	64K (256K)	SyCLOPS	SyBol, CP/M-86	6,000	includes four 655K-byte diskette drives and one 5.25-inch, 10M-byte hard disk drive
COMPUTER SYSTEMS							
PC/8088	13-inch, monochrome (80x40)	8088	64K (256K)	DOS, MP/M	BASIC, Pascal, MACRO, COBOL, FORTRAN	1,988	IBM PC compatible; includes two 5.25-inch, 320K-byte diskette drives and 10M-to-100M-byte hard disk drives; opt. 25-inch display and RGB color monitor
CONTROL DATA CORP.							
CDC 110	15-inch, green (132x30)	Z80A	64K (64K)	CP/M	CP/M languages	4,600	1200/1200 internal modem, 3270 protocol converter, one or two 8-inch 1.2M-byte diskette drives and one to four 12.5M- or 25M-byte hard disk drives
Cyber 120-10	12-inch, green (135x24)	Eclipse, 8086	128K (768K)	AOS, CP/M-86, MS-DOS	CP/M languages	3,100	includes one or two 5.25-inch, 368K-byte diskette drives and one or two 15M-byte hard disk drives
CONVERGENT TECHNOLOGIES INC.							
AWS TURBO	15-inch, green (80x28)	8086 8 MHz	256K (512K)	CTOS, MS-DOS, CP/M-86, UNIX V	FORTRAN, BASIC, Pascal, COBOL, C, Assembly	7,000	includes one 5.25-inch, 630K-byte diskette drive, one 10M-, 16M- or 40M-byte hard disk drive
AWS COLOR	15-inch, 8 out of 64 (80x28)	8086 8 MHz	256K (512K)	CTOS, MS-DOS, CP/M-86, UNIX V	FORTRAN, BASIC, Pascal, COBOL, C, Assembly	8,000	includes one 5.25-inch, 630K-byte diskette drive, one 10M-, 16M-, or 40M-byte hard disk drive
IWS	15-inch, green (132x34)	8086 5 MHz	256K (1M)	CTOS, MS-DOS, CP/M-86, UNIX V	FORTRAN, BASIC, Pascal, COBOL, C, Assembly	15,000	includes one 8-inch, 500K-byte diskette drive, three 10M-, 20M- or 40M-byte hard disk drives
CORONA DATA SYSTEMS INC.							
Corona Portable PC	9-inch, green (80x25)	8088	128K (512K)	MS-DOS 1.25	GW BASIC	2,495	IBM compatible; includes bundled software, serial and parallel ports, four expansion slots, two 5.25-inch, 320K-byte diskette drives
Corona PC	12-inch, green (80x25)	8088	128K (512K)	MS-DOS 1.25	GW BASIC	2,995	IBM compatible; includes bundled software, serial and parallel ports, controller, four expansion slots, two 5.25-inch, 320K-byte diskette drives
Corona PCHD	12-inch, green (80x25)	8088	128K (512K)	MS-DOS 1.25	GW BASIC	4,495	IBM compatible; includes bundled software, serial and parallel ports, four expansion slots, two 5.25-inch, 320K-byte diskette drives
CORVUS SYSTEMS INC.							
Concept (256)	15-inch, b&w (120x72)	68000	256K (512K)	CCOS, UCSD P-System	FORTRAN 77, Pascal, BASIC, C	6,995	includes word processing network, one 5.25-inch, 720K-byte diskette drive and one 5.9M-byte hard disk drive
Concept (512)	15-inch, b&w (120x72)	68000	512K (512K)	CCOS, UCSD P-System	FORTRAN 77, Pascal, BASIC, C	7,695	includes word processing network, one 5.25-inch, 720K-byte diskette drive and one 5.9M-byte hard disk drive

READ. WRITE.

It is the highest performance, most reliable 5¼" cartridge disk drive in the industry.

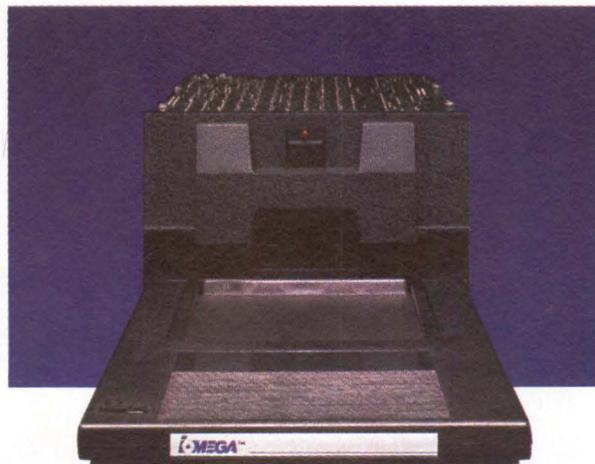

It features more resistance to shock and vibration than any other disk drive, fixed or removable.

Its cartridge is the least expensive among formatted 5-megabyte cartridges on the market today.

Its cartridge interchangeability from drive to drive is absolute. Its start/stop time is the fastest available of any high-performance disk drive.

It is the Beta 5 Cartridge Disk Drive from IOMEGA. And it is, in a word, superlative.

IOMEGA Corporation
1821 West 4000 South

8400T	14-inch, green (80x28)	8088	128K (640K)	Concurrent CP/M, CP/M, MS-DOS			includes seven expansion slots, programmable function keys; opt. 5.25-inch, 360K-byte diskette drives, detachable 10M- or 20M-byte hard disk drives or 5M-byte removable hard disk drive
DIGITAL EQUIPMENT CORP.							
Professional 325	12-inch, monochrome (132x24)	F-11	256K (256K)	P/OS, RT-11	BASIC, FORTRAN, DIBOL, Assembly	3,995	includes two 5.25-inch, 400K-byte diskette drives, bit-mapped graphics, one RS232C serial port; opt. CP/M card interface
Professional 350	12-inch, monochrome (132x24)	F-11	256K (256K)	P/OS, RT-11	BASIC, FORTRAN, DIBOL, Assembly	4,995	includes two 5.25-inch, 400K-byte diskette drives, bit-mapped graphics, one RS232C serial port; opt. 10M-byte hard disk drive, CP/M card interface
Decmate II	12-inch, monochrome (132x24)	6120	96K (96K)	COS 310	DIBOL	3,745	includes two 5.25-inch, 400K-byte diskette drives, one RS232C port; WCS-8 word processing system; opt. 10M-byte hard disk drive, graphics
Rainbow 100	12-inch, monochrome (132x24)	8088, Z80	64K (256K)	MS-DOS, CP/M-86/80	FORTRAN, BASIC, COBOL, Pascal, C	3,495	includes two 5.25-inch, 400K-byte diskette drives, one RS232C port; opt. 10M-byte hard disk drive, graphics, 13-inch color monitor
Rainbow 100 Plus				MS-DOS, CP/M-80/86	FORTRAN, BASIC, COBOL, Pascal C		includes two 5.25-inch, 400K-byte diskette drives, one 5.25-inch 10M-byte hard disk drive; opt. graphics, 13-inch color monitor

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration options
DIGITEX							
1100	green or amber (80x25)	6502	128K (896K)	OASIS, CP/M Turbo-DOS	BASIC, FORTRAN, COBOL, C, DATABUS, DATAPLUS	5,995	includes one 5.25-inch, 1M-byte diskette drive, one 5M- (removable), 20M- or 40M-byte hard disk drive; opt. 128K RAM disk
1200	green or amber (80x25)	6502	128K (896K)	OASIS, CP/M Turbo-DOS	BASIC, FORTRAN, COBOL, C, DATABUS, DATAPLUS	8,695	includes up to two 5.25-inch, 1M-byte diskette drives, one 5M- (removable), 20M- or 40M- byte hard disk drive; opt. 128K RAM disk
	green or amber (80x25)		128K (740K)	OASIS, CP/M Turbo-DOS	BASIC, FORTRAN, COBOL, C, DATABUS, DATAPLUS	6,995	includes one 8-inch, 1M-byte diskette drive, and one 10M- (removable), 10M-, 20M- or 40M-byte hard disk drive
DY-4 SYSTEMS INC.							
ORION-0422		8088	128K (1M)	MS-DOS 2.0			includes two serial ports, three card slots, two 5.25-inch, 720K-byte diskette drives; opt. 1M-byte RAM disk, 8087 coprocessor
ORION-0423		8088	128K (1M)	MS-DOS 2.0			includes two serial ports, two card slots, one 5.25-inch, 360K-byte diskette drive, one 20M-byte hard disk; opt. 1M-byte RAM disk, 8087 coprocessor
ORION-0512-S		Z80A	64K (2.4M)	CP/M 2.2			includes two serial ports, 4 card slots, two 8-inch, 2.4M-byte diskette drives; opt. 1.5M-byte RAM disk
ORION-0513		Z80A	64K (35.6M)	CP/M 2.2			includes two serial ports, 3 card slots, one 8-inch, 1.2M-byte diskette drive, 10M-, 20M- or 35.6M-byte hard disk drive; opt. 1.5M-byte RAM disk
EAGLE COMPUTER INC.							
PC PLUS-1		8088	128K (640K)	MS-DOS, CP/M-86	BASIC	2,395	IBM compatible; includes two serial and one parallel port, one 5.25-inch, 320K- or 360K-byte diskette drive; opt. b&w or color monitor
PC PLUS-2		8088	128K (640K)	MS-DOS, CP/M-86	BASIC	2,795	IBM compatible; includes two serial and one parallel port, two 5.25-inch, 320K- or 360K-byte diskette drives; opt b&w or color monitor
PC PLUS-XL		8088	128K (640K)	MS-DOS, CP/M-86	BASIC	4,295	IBM compatible; includes two serial and one parallel port, one 5.25-inch, 320K- or 360K-byte diskette drive and one 10M-byte hard disk drive; opt. monitor
SPIRIT-2	9-inch, green P31 phosphor (80x25)	8088	128K (640K)	MS-DOS, CP/M-86	BASIC A	3,295	IBM compatible and portable; includes color graphics, two serial and one parallel port and two 5.25-inch, 320K- or 360K-byte diskette drives
SPIRIT-XL	9-inch, green P31 phosphor (80x25)	8088	128K (640K)	MS-DOS, CP/M-86	BASIC A	4,795	IBM compatible and portable; includes color graphics, expansion slots, two serial and one parallel port, one 5.25-inch, 320K- or 360K-byte diskette drive and one 10M-byte hard disk drive
EPSON AMERICA INC.							
HX-20 Portable Computer	3.687-inch, LCD (20x4)	CMOS 8-bit 6301	16K (64K)		BASIC	795	includes 120x32 dot-addressable graphics, word processing, clock/calendar, RS232C port, external cassette, bar code reader and CX-20 acoustic coupler
QX-10	12-inch, monochrome (80x25)	Z80A	64K (256K)	TPM, CP/M	BASIC, Pascal, FORTH, Assembly, C, FORTRAN, COBOL	2,995	includes parallel interface, two 5.25-inch, 380K-byte diskette drives and one 10M-byte hard disk drive, bundled software; opt. serial interface
FACIT INC.							
6500 Series	15-inch, amber on brown (80x24)	Z80A	64K (160K)	FACIT-DOS, CP/M 2.2	BASIC	2,495	includes two 320K-byte diskette drives, two RS232C ports
FRANKLIN COMPUTER CORP.							
ACE 1000	(40x24)	6502	64K	FDOS			includes 80-color card, bundled software; opt. 5.25-inch 143K-byte diskette drive, 10M-byte hard disk drive and 12-inch green monitor

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration options
ACE 1200	(40x24)	6502, Z80	64K per processor	FDOS, CP/M 2.2	CBASIC	1,995	includes bundled software, serial and parallel ports, one 5.25-inch, 143K-byte diskette drive; opt. 10M-byte hard disk drive, 12-inch green monitor
FUJITSU MICROELECTRONICS INC.							
Micro 16s	12-inch, 8-color (80x25)	8086, Z80A	128K (1M)	MS-DOS, CP/M-86, Concurrent CP/M-86	COBOL, Personal BASIC, PL/1, Pascal/MT Plus, CBASIC, MACRO, Assembly	3,995	includes RS232C port, Centronics interface, two 5.25-inch, 320K-byte diskette drives, 10M- or 20M-byte hard disk drive, monitor port, A/D converter
GAVILAN COMPUTER CORP.							
Mobile	LCD (80x16)	8088	64K (160K)	MS-DOS, Gavilan applications environment	MBASIC Interpreter; opt. MBASIC Compiler, Pascal, C, MS-BASIC	3,995	one 3.5-inch, 360K-byte diskette drive, 300-baud modem, Gavilan integrated software package; opt. 50 cps thermal matrix printer, 5.25-inch file transfer drive
SC	LCD (80x8)	8088	64K (160K)	MS-DOS	opt. MBASIC Compiler, Pascal, C, MS-BASIC	2,995	one 3.5-inch, 360K-byte diskette drive, 300-baud modem; opt. 5.25-inch file transfer drive, Gavilan integrated software package, 50-cps thermal matrix printer
GRID SYSTEMS							
1100		8086, 8087	256K	MS-DOS, GRID-DOS	FORTRAN, Pascal, PLM, BASIC, COBOL	6,795	one 384K-byte diskette drive
1101		8086, 8087	256K	MS-DOS, GRID-DOS	C, ASM 86-88	5,995	one 384K-byte diskette drive
1109		8086, 8087	512K	MS-DOS, GRID-DOS		7,995	one 384K-byte diskette drive
HEWLETT-PACKARD CO.							
HP 150	9-inch, green (80x24)	8088 8 MHz	256K (640K)	MS-DOS	BASIC, Pascal, COBOL, MS-FORTRAN	1,270- 3,650	includes one to two 3.5-inch, 270K-byte diskette drives, 5M- or 15M-byte hard disk drives, two RS232C ports, HP-IB port, 2 accessory slots
HP-110 Portable PC	flip-up, LCD (80x16)	8086 5.33 MHz	272K	MS-DOS	MS-DOS based languages	3,000	dimensions: 10x13x3 inches, weight: 9 lbs, built-in modem, battery, AC adapter/charger, RS232C port, HP-IL port; opt. 270K-byte, 3.5-inch diskette drive
HONEYWELL INFORMATION SYSTEMS							
MicroSystem 6/10		proprietary, 8086	128K (512K)	GCOS 6, MOD400, MS-DOS, CP/M-86	GW BASIC, C BASIC, COBOL, FORTRAN, BASIC, Pascal, Assembler	6,370	includes two 650K-byte, 5.25-inch diskette drives, bundled software, keyboard, monitor; opt. 20M-byte hard disk drive, workstation, printer, integrated modem
IBM CORP.							
IBM PC	11.5-inch, monochrome (80x25)	8088; 8087 opt.	64K (640K)	PC-DOS, CP/M, PC-IX, UCSD System	BASIC, FORTRAN, Pascal, COBOL, APL	2,209	includes 160K-byte diskette drive; opt. 16-color monitor
Portable PC	9-inch, amber (80x25)	8088; 8087 opt.	256K (512K)	PC-DOS, CP/M, PC-IX, UCSD System	BASIC, FORTRAN, Pascal, COBOL, APL		
PCjr	(80x25)	8088; 8087 opt.	64K (128K)	PC-DOS, CP/M, PC-IX, UCSD System	BASIC, FORTRAN, Pascal, COBOL, APL		includes two cartridge program ports
IBM-PC/XT	11.5-inch, monochrome (80x25)	8088, 8087 opt.	64K (640K)	PC-DOS, CP/M, PC-IX, UCSD System	BASIC, FORTRAN, Pascal, COBOL, APL		includes 320K-byte diskette drive, 10M-byte hard disk; opt. 16-color monitor
3270-PC	14-inch, 8-color		256K (640K)	PC-DOS, 3270 functions	Level II COBOL, Pascal MT +, CBASIC, PL-1	5,585	two diskette drives, 3270 systems adapter; opt. 10M-byte hard disk drive, printer
IMS INTERNATIONAL							
5000DS	12-inch, P-31 or P-42 green (80x24)	8086, Z80	64K (256K)	CP/M-86, MS-DOS		4,200	includes two 5.25-inch, 410K-byte diskette drives, one 6M-byte hard disk drive
INTECOLOR CORP.							
E 3651	13-inch, 16-color (64x32)	8080A	32K	File Control System	Extended BASIC	2,945	includes bundled software, systems utilities, one 5.25-inch, 90K-byte diskette drive
E 8053	19-inch, 16-color (80x48)	8080A	8K (24K)	File Control System	Extended BASIC	5,745	includes two 8-inch, 580K-byte diskette drives

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration options
E 8063	19-inch, 16-color (80x48)	8080A	32K (48K)	CP/M	Microsoft Business BASIC, COBOL, FORTRAN	6,205	includes two 8-inch, 960K-byte diskette drives
INTERTEC DATA SYSTEMS							
Headstart Model 512	12-inch, green (132x25)	8086, Z80A	512K (1000K)	CP/M 2.2, MS-DOS, LAN DOS	MBASIC	3,495	includes one 3.5-inch, 500K-byte diskette drive; opt. 10M- to 200M-byte hard disk drive and 5.25-inch external floppy disk
ISI INTERNATIONAL							
ISB 80/85	12-inch, green (80x24)	8085, Z80A	64K (64K)	CP/M	C, Pascal, FORTRAN, BASIC	4,750 or 7,100	includes one or two 5.25-inch, 315K-byte diskette drives, one 10M-byte hard disk drive, STD bus, 10-slot card cage, 5 expansion slots
ISB-80DS-3020, ISB-80DS-3030		8085, Z80A	64K (64K)	CP/M	C, Pascal, FORTRAN, BASIC	4,750	includes two 8-inch diskette drives, one 2M-byte hard disk drive, STD bus, 16-slot card cage, serial port, 3 parallel ports, 10 expansion slots
LOGICAL BUSINESS MACHINES							
L-XT		8088	192K (320K)	MS-DOS 2.11	natural language, GW BASIC	5,985	includes one parallel and two serial ports, one 320K-byte diskette drive, one 10M-byte hard disk, bundled software
MAD COMPUTER INC.							
MAD-1 (floppy disk version)	12-inch, amber or green (80x25)	80186	256K (512K)	MS-DOS	GW BASIC	4,195	includes two 5.25-inch, 360K-byte diskette drives; IBM PC-, XT software-compatible
MAD-1 (hard disk version)	12-inch, amber or green (80x25)	80186	256K (512K)	MS-DOS	GW BASIC	6,295	includes one 5.25-inch, 360K-byte diskette drive and one 10M-byte hard disk drive; IBM PC-, XT software-compatible
MAI/BASIC FOUR INFORMATION SYSTEMS DIV.							
S/10	12-inch, green, blue (132x28)	Z80A	128K	CP/M, Business BASIC/Micro	Business BASIC	2,795	includes one or two 5.25-inch, 655K-byte diskette drives, one 10M- or 10M-byte hard disk drive
MDB SYSTEMS							
Micro/11		Q-bus compatible	256K (4M)	RT-11, RSX, RSTS/E, TSX Plus, UNIX	COBOL, FORTRAN, BASIC, Pascal		includes two 500K-byte diskette drives
MICRO CRAFT CORP.							
Dimension 68000		68000	128K (512K)	CP/M-68K	UNIBASIC, C BASIC, FORTH Plus	3,995	includes two 5.25-inch, 400K-byte diskette drives, 6 expansion slots, one RS232C duplex serial port, counter/timer, 10 programmable function keys, one terminal
MICRO-LINK							
Approach 1	13-inch, green (80x24)	Z80A	64K (256K)	CP/M	CP/M-based languages	3,650	includes two 5.25-inch, 370K-byte diskette drives, peripheral drivers
MONROE SYSTEMS FOR BUSINESS							
System 2000 (2211)	12-inch, amber (80x25)	80186	128K (896K)	CP/M-86, MS-DOS	BASIC	4,295	includes two 5.25-inch, 720K-byte diskette drives and one 10M-byte hard disk drive; 14-inch, 16-color screen available
2221	14-inch, 16-color (80x25)	80186	128K (896K)	CP/M-86, MS-DOS	BASIC	5,195	includes two 5.25-inch, 720K-byte diskette drives
2312	12-inch, amber (80x25)	80186	256K (896K)	CP/M-86, MS-DOS		6,325	includes one 5.25-inch, 720K-byte diskette drive and one 10M-byte hard disk drive
OC8820	9-inch, amber (80x24)	Z80	128K (256K)	CP/M-80, MS-10	BASIC, Pascal	3,895	includes two 5.25-inch, 640K-byte diskette drives
MORROW DESIGNS							
Micro Decision	12-inch, green (80x24)	Z80	64K (64K)	CP/M	BASIC, Pilot	1,899	includes two 372K-byte diskette drives, terminal, bundled software
MULTITECH ELECTRONICS INC.							
MIC 504	12-inch, green (80x24)	Z80A	64K	CP/M 2.2	CBASIC	2,250; 1,745 (w/o terminal)	includes two 5.25-inch, 700K-byte diskette drives; opt. 33M-byte hard disk drive

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration, options
MIC 501	12-inch, green (80x24)	Z80A	64K	CP/M 2.2	CBASIC	1,815; 1,310 (w/o terminal)	includes two 5.25-inch, 170K-byte diskette drives; opt. 33M-byte hard disk drive
NCR CORP.							
NCR Personal Computer	12-inch, monochrome (80x24)	Z80A, 8088	64K (512K)	CP/M-80, CP/M-86, MS-DOS	BASIC, Pascal, RM-COBOL	2,650	includes two 5.25-inch, 320K- to 340K-byte diskette drives, one 10M- to 30M-byte hard disk drive; opt. color monitor, graphics chip with dedicated memory
DM V 8/16 10MB	12-inch, green (80x24)	Z80A, 8088	64K (512K)	CP/M-80, CP/M-86, MS-DOS, UCSD-P	BASIC, FORTRAN, COBOL, C	5,140	includes one 5.25-inch, 500K-byte diskette drive and one 10M-byte hard disk drive; opt. 120-cps printer, integrated modem, 2- and 6-pen plotter, communications adapters
DM V 8/16 color	12-inch, 8-color (80x24)	Z80A, 8088	64K (512K)	CP/M-80, CP/M-86, MS-DOS, UCSD-P	BASIC, FORTRAN, COBOL, C	3,440	includes two 5.25-inch, 1M-byte diskette drives; opt. 120-cps printer, integrated modem, 2- and 6-pen plotter, communications adapter
DM V 8/16 Flex	12-inch, green (80x24)	Z80A, 8088	64K (512K)	CP/M-80, CP/M-86, MS-DOS, UCSD-P	BASIC, FORTRAN, COBOL, C	3,090	includes two 5.25-inch, 1M-byte diskette drives; opt. 120-cps printer, integrated modem, 2- and 6-pen plotter, communications adapter
NEC HOME ELECTRONICS							
PC-8200 portable	LCD (40x8)	80C85	16K (96K)	proprietary	N82 BASIC	799	includes 14 cassette programs and one or two 3.5-inch diskette drives
PC-8800	14-inch, b&w (80x25)	Z80A, 8086	64K (256K)	CP/M 2.2 MS-DOS	NBASIC, N88 BASIC	1,995	includes 5.25-inch, 720K-byte or 8-inch, 2.4M-byte dual diskette drive and 5M-, 10M- and 15M-byte hard disk drives, bundled software
ONYX SYSTEMS INC.							
Sundance	12-inch, green (80x24 or 132x24)	Z80A	64K	CP/M, OASIS	BASIC, COBOL	6,950- 9,450	includes tape backup, 7M-, 14M- and 21M-byte hard disk drives; opt. disk expansion box
OSBORNE COMPUTER CORP.							
Executive	7-inch, amber	Z80A	128K	CP/M PLUS	FORTRAN, Pascal, BASIC	1,600	includes two 5.25-inch, 200K-byte diskette drives, bundled software
Osborne 1	5-inch, green (52x102)	Z80A	64K	CP/M	FORTRAN, Pascal, BASIC	1,300	includes two 5.25-inch, 200K-byte diskette drives, bundled software
OTRONA ADVANCED SYSTEMS CORP.							
Attache	5.5-inch, green (80x24)	Z80A	64K	CP/M 2.2		2,995	includes two 5.25-inch, 360K-byte diskette drives and one 10M-byte hard disk drive, bundled software; opt. monitor, printer
Attache "S"	5.5-inch, green (80x24)	Z80A	64K	CP/M 2.2		2,695	includes one 5.25-inch, 360K-byte diskette drive, bundled software; opt. monitor, printer
Attache 8:16	5.5-inch, green (80x24)	8086	256K	CP/M 2.2, MS-DOS 2.0		3,795	includes two 5.25-inch, 320K-byte diskette drives, synchronous communications port, GPIB interface, bundled software; opt. 10M-byte hard disk drive
PERSONAL MICRO COMPUTERS INC.							
PMC-101		Z80A	128K (128K)	CP/M 3.0	MBASIC, C, CBASIC, FORTH, FORTRAN, MUMPS, Pascal, COBOL	1,000	includes four 5.25-inch, 400K-byte diskette drives and one 10M-byte hard disk drive, bundled software; works with optional terminal
PERTEC COMPUTER CORP.							
3205	14-inch, green (132x25)	68000	256K (1M)	OS/3200, CP/M	BASIC, COBOL	6,370	includes three RS232C I/O ports, two 5.25-inch, 2M-byte diskette drives, Model 100 intelligent workstation, keyboard; opt. hard disk drive up to 53M bytes
POINT 4 DATA CORP.							
Mark 1A	12-inch, green (80x25)	Z80A	64K (64K)	CP/M, MS-DOS		3,390	includes two 5.25-inch, 410K-byte diskette drives, WS-100 terminal, bundled software
PRO LOG							
ABL-1		Z80A, 8085	16K (64K)	CP/M-compatible		4,995	includes two 8-inch, 1.6M-byte diskette drives, auto-bios, terminal and printer port, 13-slot STD bus

SINGLE-USER MICROCOMPUTERS

Company Model	Display size, color/screen format (col. x lines)	CPU type	Minimum (maximum) memory size (bytes)	Operating system	Programming language	Unit price (\$)	Configuration, options
ABL-2		Z80A, 8085	16K (64K)	CP/M-compatible			includes two 8-inch, 3.2M-byte diskette drives, auto-bios, terminal and printer port, 13-slot STD bus
PRONTO COMPUTERS INC.							
Desktop 16/10	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		3,200	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive, 10 programmable function keys
Desktop 16/20	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		3,950	includes two RS232C ports, one Centronics port, two 5.25-inch, 800K-byte diskette drives and one 1.6M-byte hard disk drive
Desktop 16/110	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		5,190	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive and one 5.6M-byte hard disk drive
Desktop 16/200	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		6,190	includes two RS232C ports, one Centronics port, two 5.6M-byte removable hard disks, 10 programmable function keys
Graphics 16/25	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		4,950	includes two RS232C ports, one Centronics port, two 5.25-inch, 800K-byte diskette drives and one 1.6M-byte hard disk drive
Graphics 16/115	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		5,950	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive and one 5.6M-byte hard disk drive
Graphics 16/205	12-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		6,950	includes two RS232C ports, one Centronics port, two 5.6M-byte hard disk drives, 10 programmable function keys
Color Graphics 16/30	12-inch, 8-color (80x25)	80186	256K (1M)	MS-DOS 2.11		6,250	includes two RS232C ports, one Centronics port, two 800K-byte diskette drives, 10 programmable function keys
Color Graphics 16/130	12-inch, 8-color (80x25)	80186	256K (1M)	MS-DOS 2.11		7,250	includes two RS232C ports, one Centronics port, one 800K-byte diskette drive and one 5.6M-byte removable hard disk drive, 10 programmable function keys
Color Graphics 16/230	12-inch, 8-color (80x25)	80186	256K (1M)	MS-DOS 2.11		8,250	includes two RS232C ports, one Centronics port, two 5.6M-byte removable hard disk drives, 10 programmable function keys
Transportable 16/2020	9-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		3,950	includes two RS232C ports, one Centronics port, two 5.25-inch, 800K-byte diskette drives, 10 programmable function keys
Transportable 16/2110	9-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		5,190	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive and one 5.6M-byte removable cartridge
Transportable 16/2200	9-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		6,190	includes two RS232C ports, one Centronics port, two 5.6M-byte removable hard disk drives
Transportable 16/2300	9-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		7,190	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive and one 23.5M-byte hard disk drive
Transportable 16/2400	9-inch, amber or green (80x25)	80186	256K (1M)	MS-DOS 2.11		8,190	includes two RS232C ports, one Centronics port, one 5.25-inch, 800K-byte diskette drive and one 35.3M-byte hard disk drive
Q1 CORP.							
Q1/COMPANION	12-inch, green (80x24)	Z80A	64K	Q10S, CP/M	Q1, PL/1, MBASIC, CBASIC	3,250	includes two 5.25-inch, 350K-byte diskette drives; opt. hard disk drive, software, printer
Q1/68000 Desktop	12-inch, green (80x24)	68000	256K	IDRIS	C		includes one 5.25-inch, 700K-byte diskette drive, one 5.25-inch, 10M-byte hard disk drive; opt. software, printer
QDP COMPUTER SYSTEMS, QUASAR DATA PRODUCTS INC.							
QDP-300		Z80B CPU, Z80A DMA	128K (512K)	CP/M	CBASIC	3,495	includes two 8-inch, 2.4M-byte diskette drives, monitor, bundled software
QDP-300H		Z80B CPU, Z80A DMA	128K (512K)	CP/M	CBASIC	5,495	includes two 8-inch, 2.4M-byte diskette drives, 15M- to 32M-byte hard disk drive, monitor, bundled software
QUAY CORP.							
500		Z80A	64K (64K)	CP/M, UCSD	FORTRAN, BASIC, COBOL, Pascal	1,995	includes two 5.25-inch, 400K-byte diskette drives; opt. 5M- and 20M-byte hard disks

Quality 5¹/₄ Inch Drives.

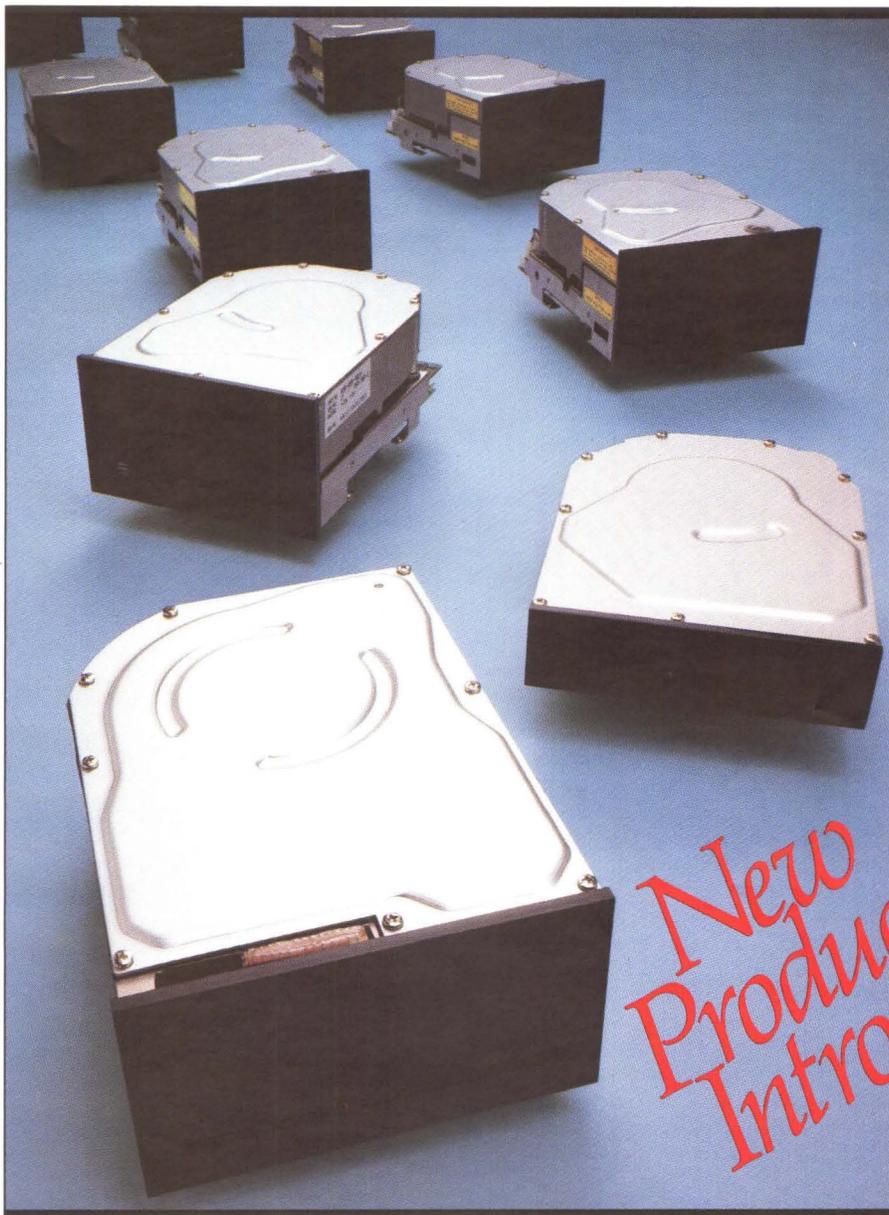

From FUJITSU.

Fujitsu quality has come to mean a lot of things to a lot of people. High performance, unparalleled reliability, and technical expertise, built on more than 15 years experience.

This consistent quality is reflected in Fujitsu's complete line of 5¹/₄-inch drives. The product line includes half high drives ideally suited for compact applications, standard ST506 drives for general applications, and high performance drives for applications where greater capacities and faster access times are required.

Fujitsu's complete 5¹/₄-inch product line. Quality that's exclusively Fujitsu.

For more information contact the Fujitsu America Sales Office nearest you. Northwest: (408) 946-8777, Central: (612) 835-7025, East Coast: (617) 229-6310, Southwest: (714) 476-0852, Europe: 44-1/493-1138.

Quality 8 Inch Drives

From FUJITSU

Look no further. Because anywhere you look, Fujitsu America covers your needs for quality, high reliability disk drives.

Broad selection—choose from four different drives with capacities ranging from 24 to 168 megabytes.

Rotary voice coil or Stepper actuator—whether you need high performance or economical drives, Fujitsu can provide either.

Fujitsu's rotary voice coil drives offer you high capacity, fast head positioning, and SMD transfer rates. Fujitsu's stepper motor drives offer you medium capacities and economy.

Unsurpassed quality—a Fujitsu hallmark. From design to final burn-in, every Fujitsu drive earns its 10,000 MTBF rating.

Field service support—access to Fujitsu America engineers and product specialists is as close as your telephone.

For more information on the Fujitsu line of 8-Inch Quality Drives, contact the sales office nearest you. Northwest: (408) 946-8777, Central: (612) 835-7025, East Coast: (617) 229-6310, Southwest: (714) 476-0852, Europe: 441/493-1138.

Quality High Capacity Drives

From FUJITSU

With every high-capacity drive from Fujitsu America you get something more than just faster access speeds, greater capacities and superior price/performance. You also get the Fujitsu quality and reliability that only comes from 16 years experience as a leading OEM disk drive supplier.

Fujitsu's quality is built into every disk drive through a completely integrated manufacturing operation. Ninety-five percent of all components used in the disk drives are Fujitsu manufactured. The other 5% are purchased according to Fujitsu's strict quality standards.

Fujitsu's 14 inch line offers the *lowest* cost per megabyte storage. The Fujitsu 10½ inch Eagle is a state-of-the-art drive for fast positioning time.

All Fujitsu drives are backed by excellent service and field support, available through Fujitsu America regional offices and Fujitsu's network of authorized regional distributors.

For more information or assistance in selecting the right Fujitsu disk drive for you, contact the Fujitsu America sales office nearest you. Northwest: (408) 946-8777, Central: (612) 835-7025, East Coast: (617) 229-6310, Southwest: (714) 476-0852, Europe: 441/493-1138.

The Buyer's Guide to Quality Disk Drives. From FUJITSU.

A major OEM peripheral procurement involves a substantial commitment of your company's resources. You should choose a supplier who is able to make an equivalent commitment in return.

Fujitsu America is one of the few disk drive suppliers with both the experience and the resources to stand behind such a commitment.

Fujitsu offers a complete family of disk drives, from 5¼ to 14 inch, with capacities ranging from 7 to 671 megabytes. Fujitsu drives provide access speeds among the fastest available today.

Of even more importance to you is Fujitsu's absolute dedication to product quality and customer support.

For more information on Fujitsu's complete family of quality disk drives, contact the Fujitsu America sales office nearest you. Northwest: (408) 946-8777, Central: (612) 835-7025, East Coast: (617) 229-6310, Southwest: (714) 476-0852, Europe: 441/493-1138.

Single-user microcomputers

Right now some of your competitors are changing their strategy.

If you are an OEM or Systems Integrator, some of your competitors have already erased past memories. They've found a new advantage and are changing their strategy. A way to get more performance and capacity for their money.

The Tulin half-height 5.25" Winchester disk drive.

Raw capacity is one reason. We offer you a choice of 40, 26.7 and 13.34 megabyte designs. For more capacity now. And the option of adding more later.

Another reason is superior technology. Dynamic features like a space-saving motor that fits completely inside the spindle. And a read/write preamp that's built right inside the head/disc assembly — for better S/N ratio and protection from RF interference.

And while our drives deliver a lot of power, they don't use much.

Only 16 watts.

This superior technology will do a lot more for you than raise your customers' eyebrows. It'll also boost reliability as well. Our rotary actuator has only one moving part. Which means less to go wrong. And for the read/write heads we designed a dedicated landing zone. Which provides additional data security.

To order your evaluation unit, write or call us now: Tulin Corporation, 2393 Qume Drive, San Jose, CA 95131, (408) 942-9025, Telex 499-4365.

Because a lot of companies are finding room for us in their plans. A good reason we should be a part of yours.

Hardware, software trends expand multiuser system performance

Multiuser systems gain favor via software compatibility, distributed processing and host communications

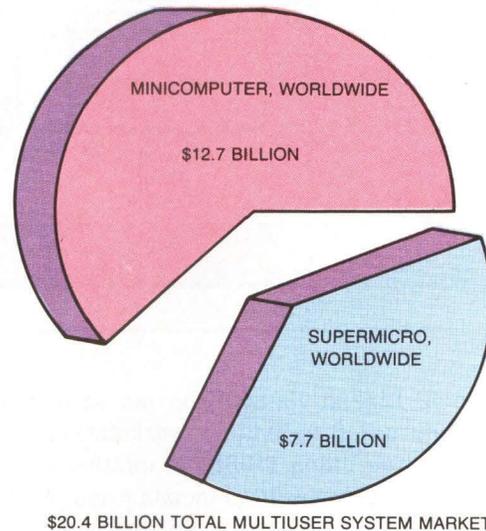

Chris Bailey, Western Editor

The hoopla surrounding the success of the IBM PC and the PC clones has overshadowed development in the multiuser market, but significant advances are being made. In the drive to produce powerful three- to 128-user systems that can be upgraded, several trends have become evident. One trend centers on the move toward software compatibility with popular operating systems like UNIX, MS-DOS and Pick. Another trend spotlights the increased performance made possible through the use of distributed-processing I/O processors, multiple-application processors or both. A third trend focuses on the growing awareness of the need for comprehensive communications with mainframes, minicomputers and other microcomputers as evidenced by the growing availability of communication facilities.

New systems incorporating these developments are winning significant market share and are expected to increase that share as more corporate users find their processing needs growing beyond the capabilities of single-user systems.

Thanks to very-large-scale-integration (VLSI) technology in the form of 16- and 32-bit microprocessors, a host of small system companies created the first multiuser microcomputers about three years ago. They integrated microprocessors, Winchester disks, streaming-tape drives, "standard" operating systems and application-software packages. Their immediate success encouraged more than 100 vendors to compete in this market segment. The reason? This year's revenues are expected to exceed \$7 billion.

1984 MARKET FOR MULTIUSER SYSTEMS IN \$6,000 TO \$50,000 PRICE SEGMENT

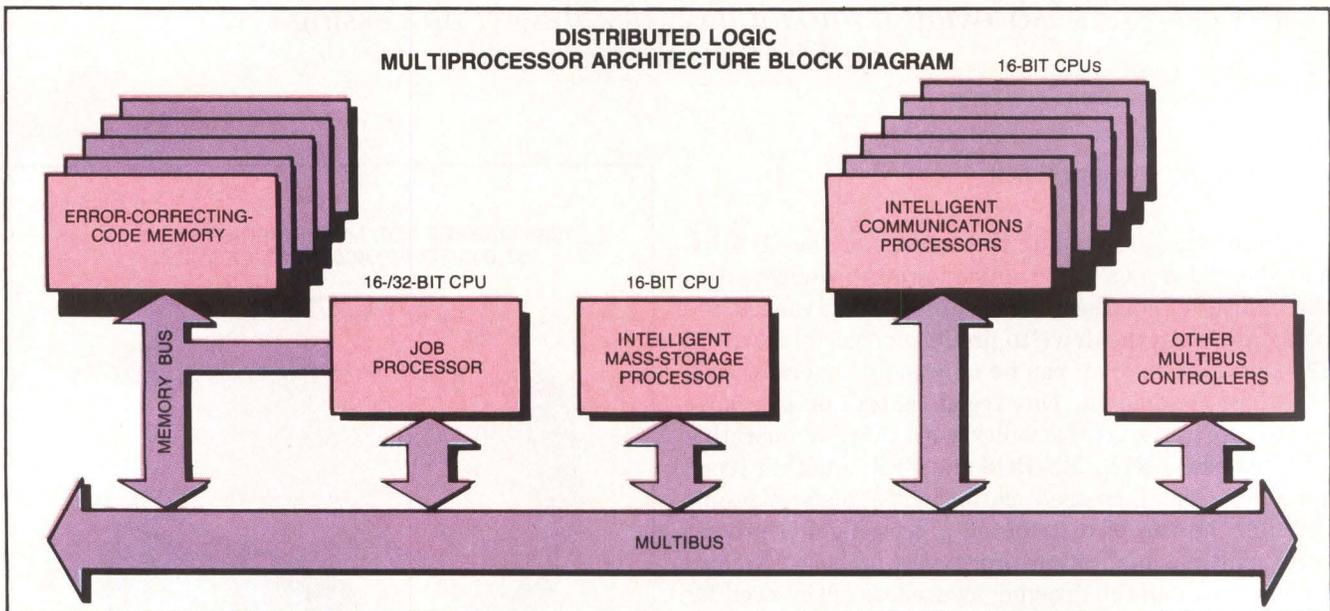

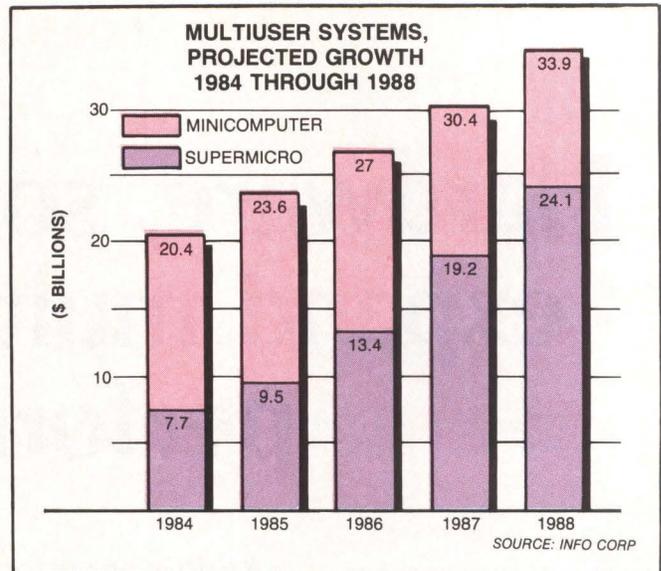

SOURCE: INFOCORP

With base prices in the \$10,000 to \$50,000 range and support for three to 64 users, multiuser systems should outpace the sales growth of minicomputer systems, capturing some 70 percent of the market by 1988. System integrators can distinguish the multitude of product offerings on the hardware side by checking the various processing modules. On the software side, system integrators should examine the system's opera-

ting system. So far, no single architecture has emerged triumphant, nor does any one "standard" operating system dominate.

The drive to squeeze more processing power from the central processing engine has taken several directions. Some system builders have developed loosely coupled networks of single-user stations, similar in function to local-area networks (LANs) but configured around a central file server. Other builders have enforced the single main processor with dedicated I/O processors—primarily 8-bit auxiliary processors such as Z80s. However, system builders are increasing their use of 16-bit processors, such as 8086s and 80186s, to increase I/O performance. Other manufacturers have installed a number of distributed and dedicated application processors, as well as supplied dedicated I/O processors.

TeleVideo Systems Inc. exemplifies the loosely cou-

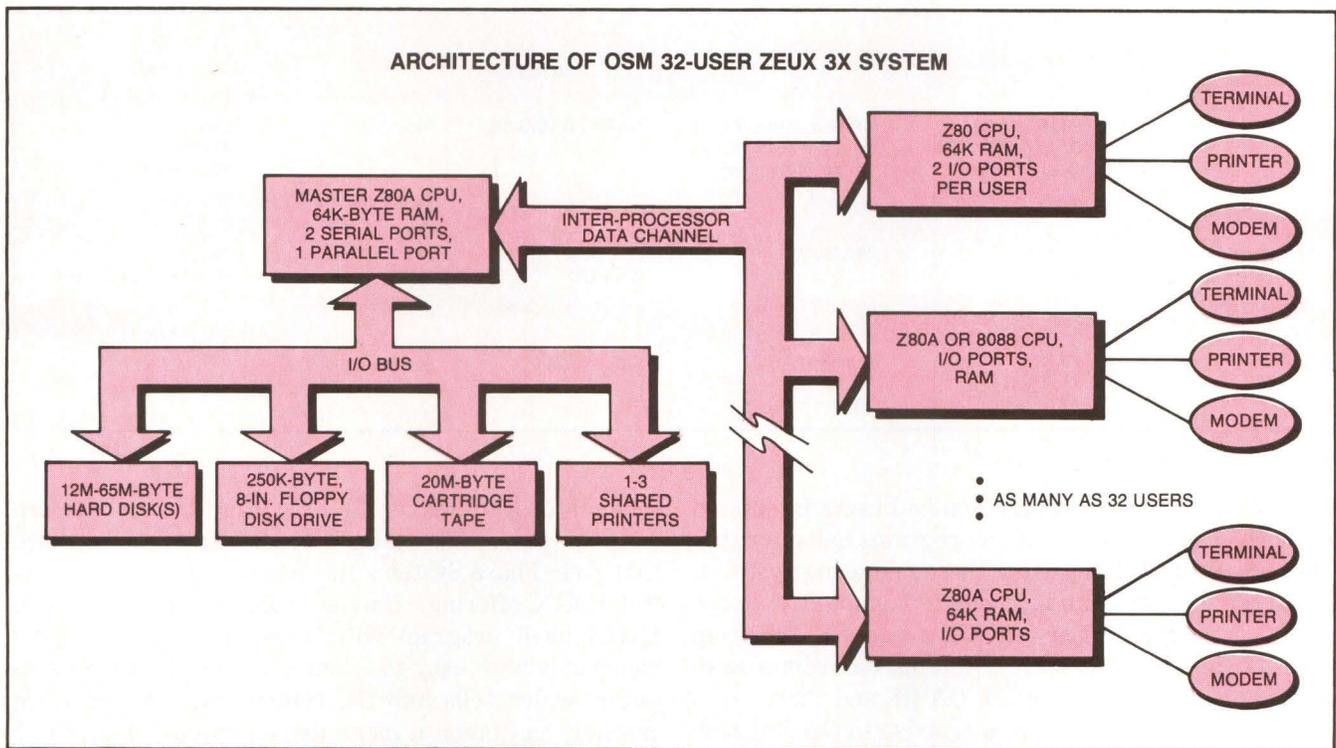

pled approach. Linked via 800K-bit-per-second RS422 links, as many as 16 individual workstations can be connected to a TeleVideo TS 816/40 multiuser system. Each workstation contains local memory and processing resources and shares a centralized disk system managed by the Mmmost networked operating system. Workstations can contain local mass storage or use the central disk resources. While Mmmost manages the central file server, each local workstation runs the CP/M operating system and provides the user interface. Supported workstations include 8-bit Z80 systems and 16-bit 8088-/8086-based systems. This approach appeals to users who wish to start with single-user stations and expand into multiuser capabilities.

One of the earliest to use the distributed-I/O-processor approach was Plexus Computers Inc. with

the P series of Z8000- and 68000-based systems. Although most system builders claim to use intelligent I/O processors, Plexus enhanced this idea by dividing the kernel of the operating system—in this case, UNIX—between various 16-bit processors. Dedicated 16-bit processors with dedicated memories support file operations, terminal I/O handling and application-program execution. This setup significantly speeds overall operation and provides the performance to support as many as 64 users in a fully loaded configuration.

A second approach, typified by the Zeus series of computers from OSM Computer Corp., involves Z80 or 8086 units in a centralized cabinet. Starting with a two-to four-user system, users can expand the system with additional processor/memory boards. This method bypasses degradation as the system becomes more fully

Multiuser microcomputers

loaded. Similar products have won market share because this multiuser capability is compatible with the popular single-user CP/M operating system.

Convergent Technologies Inc. has duplicated this approach with 16-bit technology. Convergent's Mega-Frame system uses 68010 16-/32-bit processors as applications processors and 16-bit 80186 processors as I/O handlers. For example, a fully equipped UNIX-based system includes eight 68010 application processors and supports as many as 128 users.

For Convergent, a key 68010 advantage centers on virtual-memory management. This memory-/disk-swapping technique allows each application program to address the full physical memory space of the processor—in this case, 16M bytes—even if the full memory space is not filled with physical memory.

Communications enhance data sharing

Because multiuser systems provide a convenient way of sharing data and resources among multiple users, software facilities that enhance those capabilities prove important. For example, electronic-mail packages can transfer messages among users of a departmental computer system and link to other systems. Specifically, the UNIX multiuser operating system supplies message switching and supports electronic mail.

For another example, communications software can link several departmental computers into a corporate-wide information system or can connect to remote host

mainframes or LANs. These systems feature simple asynchronous ASCII serial communications.

Other systems offer comprehensive communications packages that permit linking to mainframes and other hosts. For example, Fortune Systems Corp. offers IBM Systems Network Architecture (SNA) protocol packages and Wang Laboratories Inc. interfaces for connecting Fortune's systems to IBM mainframes and to Wang office-automation systems, respectively. Altos Computer includes in its ACS 586 system an integral communications computer systems board that supports IBM 2780/3780 synchronous, 3270, SNA/SDLC, X.25 and Ethernet protocols.

Software focuses on compatibility

Although advances in hardware occur daily, users' interest has shifted to software compatibility. This shift has affected the single-user workstation world as evidenced by the widespread cloning of IBM Corp.'s PC and of MS-DOS. This important marketing strategy also affects multiuser systems. Many multiuser vendors have attracted market share by offering multiuser capability with a CP/M-based or -compatible system.

However, as developments unfold in 16-bit-based systems, no single operating system dominates. This market is being approached from three directions. On one side, CP/M derivatives like CP/M-86 and MS-DOS are appearing in multiuser systems. System builders are appealing to the 8-bit upgrade market and are

attempting to attract dealers and end users interested in the thousands of application programs being written for single-user systems using these operating systems. From the scientific and academic community comes UNIX, a true multiuser operating system. And from third parties like Phase One Systems Inc. comes commercial operating systems like OASIS and Pick.

CP/M-86 and MS-DOS are attractive to this upgrade market because of the relative ease of transporting popular 8-bit programs to this environment and the popularity of the single-user, PC-DOS-based (MS-DOS-compatible) IBM PC. System builders like OSM, Molecular Computer and TeleVideo have produced multiuser systems using these operating systems.

From the other direction comes the push for UNIX. This AT&T Co.-developed operating system is a multi-programming, multiuser 16-bit operating system. UNIX has had many upgrades and revisions in the 12 years since its development. In addition, it was widely distributed in colleges and universities during the 1970s; thus, a large base of professional programmers exists. In addition, UNIX has evolved into a highly developed programming environment incorporating a number of programming languages and tools. It has been widely ported to a number of minicomputers including the Digital Equipment Corp. PDP-11 and VAX-11 series minicomputers.

UNIX has some disadvantages, however, for commercial business applications. Because of the sophistication of its original users, the system interface can be extremely intimidating to novices or casual users. Many commands give no response, thereby mystifying users. Other utilities use cryptic commands such as "awk" or "grep" that give little indication of their function. Lastly, many elegant shortcuts that make the system so powerful for trained programmers require software knowledge that most commercial users don't have.

To combat these objections, nearly all major UNIX supporters in the commercial business arena have

taken steps to make UNIX's user interface more friendly. A recent example is the Uniview interface that Four-Phase Systems Inc. has added to its commercial UNIX offering. Uniview replaces the traditional UNIX shell program with a set of menu-selectable commands with easy-to-follow prompts. Fortune Computer, which sells into the commercial Fortune 1,000 market, has taken a menu-driven front-end approach and has encountered no negative end-user response.

A potentially more important problem with UNIX when implemented in microprocessor-based systems is the disk-I/O bottleneck. The popularity of UNIX on DEC minicomputers was partially the result of the fast disk-I/O characteristic of these systems. In these popular products, pages of memory are continually being swapped to and from the 14-inch disk subsystems. In the first microprocessor-based UNIX systems, this posed a serious performance problem: the systems typically used first-generation 5¼-inch Winchester disks.

Fortune encountered this problem in its 16:32 product when attempting to support more than a few users. To overcome this problem, Fortune enhanced the operating system to speed file-handling algorithms and then switched to a second-generation Winchester disk drive, cutting the raw data-access time from 90 to 30 msec. Therefore, Fortune's upgraded systems can support as many as 12 users with one 68000 main processor.

Business applications are limited

Another major problem with UNIX is its lack of suitable business-oriented application programs. While UNIX probably has been ported to more hardware than any other operating system, much of the development work has been in the scientific and technical areas. Thus, the broad base of UNIX applications has little applicability to business. The first crop of UNIX-based supermicrocomputers, which appeared in 1981, was expected to result in a flood of UNIX-based

commercial applications, but the flood has not yet materialized.

Despite problems in the commercial business environment, UNIX is receiving widespread support from such major players as IBM, AT&T, DEC, Data General Corp. and Hewlett-Packard Co., which this year announced systems that support UNIX. With their backing and UNIX's intensely loyal following in the smaller supermicro computer companies, the long-awaited flood of applications may begin in the next 12 months.

Most of the established UNIX-based manufacturers offer at least a handful of basic application programs. Some, like Plexus, have searched out third-party software houses that have developed "bridge" software. These software programs ease the transportation to the UNIX environment of application programs written in a proprietary language or operating system. SIBOL from Software Ireland, for example, permits the recompilation of application programs written in DEC's DIBOL, so that they can execute under UNIX.

Other participants who see CPM-type operating systems as too primitive and UNIX as too technical prefer the OASIS or Pick operating systems. These

systems were designed for the commercial processing environment. OASIS, designed for Z80 8-bit systems, has been upgraded for use with 16-bit processors and has earned a small but satisfied user base. Pick has its roots in the Reality operating system designed for the 16-bit MicroData Corp. commercial minicomputers of the early 1970s. Organized around inherent database management, the system is a well-regarded multiuser business-oriented operating system.

That there is no clear de facto standard in the operating-system sweepstakes is evident from the many system builders that have opted to offer multiple operating systems on their computers. Taking the stance that the dealer, system integrator or end user can best choose the capabilities that best meet his needs, vendors may offer two or more choices. Some, like Altos, offer all of the popular systems, including CP/M-86, MP/M-86, XENIX (a version of UNIX), OASIS-16 and Pick.

Get the most out of the UNIX* operating system with Zilog's System 8000.

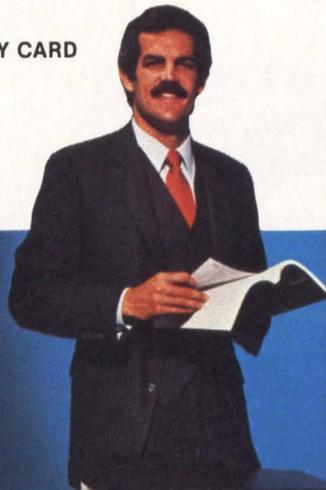

No other microcomputer for commercial and technical applications gives you access to the powerful UNIX operating system like Zilog's System 8000. Instead of designing a computer and then choosing an operating system to run on it, Zilog selected the UNIX operating system first—and then carefully and intentionally structured the architecture of the System 8000 to take full advantage of it.

Zilog's high performance, multi-user, UNIX System 8000 supermicros give you a proven way to quickly migrate your minicomputer software onto affordable micros. For instance, we offer compatible migration tools for Basic Four BBIII, DEC* DIBOL* and DG ICOS™ COBOL and Proxi™. And with the UNIX operating system, you can take advantage of one of the fastest-growing business opportunities in the industry.

Find out what it's like to free yourself from expensive minicomputers, and at the same time get a high level of service and support. Ask about our RSVP Referred Software Vendor Program, too, where you can find the applications software and tools you need. The System 8000 family starts at under \$15,000.

Get the whole story by calling our TOLL FREE number 800-841-2255. Or write: Zilog Systems Division, Corporate Publications, 1315 Dell Avenue, M/S C2-6, Campbell, CA 95008

Multiuser microcomputers

The TeleVideo IBM PC

The best hardware for

TeleVideo versus IBM. Make a few simple comparisons and you'll find there is no comparison.

RUNS IBM SOFTWARE.

With the TeleVideo® IBM Compatible line—PC, XT and portable computers—you'll get the most out of all the most popular software written for the IBM® PC—more than 3,000 programs.

Because every TeleVideo Personal Computer offers the highest level of IBM compatibility on the market and has the standard—not optional—features

RATED 99% COMPATIBLE*!

Features	Tele-PC	IBM PC	Tele-XT	IBM XT
Monitor	YES	OPTIONAL	YES	OPTIONAL
Screen Size	14"	12"	14"	12"
Tilt Screen	YES	NO	YES	NO
Quiet Operation	YES (NO FAN)	NO	YES	NO
Memory	128K	128K OPTION	256K	256K OPTION
Graphics Display (640 x 200 resolution)	YES	OPTIONAL	YES	OPTIONAL
Printer Port	YES	OPTIONAL	YES	OPTIONAL
Communication Port	YES	OPTIONAL	YES	YES
MS™-DOS/BASIC®	YES	OPTIONAL	YES	OPTIONAL
System Expansion Slot	YES	YES	YES	YES
RGB and Video Port	YES	OPTIONAL	YES	OPTIONAL
Typical System Price	\$2995	\$3843	\$4995	\$5754

compatibles. the best software.

your people need to take full advantage of every job their software can do.

Study the chart at the left. It proves that TeleVideo—not IBM—offers the best hardware for the best price.

Note that TeleVideo's ergonomic superiority extends from fully sculpted keys and a comfortable palm rest to a 14-inch, no glare screen that tilts at a touch.

THE BEST MICROCHIPS.

What is perhaps most impressive about the TeleVideo IBM PC Compatible can be found deep within its circuitry. We use the same 8088 central processing unit that runs an IBM PC. But we also employ new VLSI (Very Large Scale Integration) microchips that are designed and built exclusively for TeleVideo. These interface more efficiently with the powerful 8088 and yield numerous benefits.

For example, our tiny custom chips do the work of many of the larger, more expensive circuit boards in an IBM PC. So we can offer a computer system that comes in one attractive, integrated case, is ready to run and occupies less desk space.

A computer that edges out IBM's added-cost component system for reliability, ease of service and purchase simplicity.

Fewer circuit boards to cool also allowed us to eliminate the noisy, irritating fan IBM and most other PCs force you to put up with. And TeleVideo compatibles accept any IBM hardware options without modification.

THE BEST LINE.

But the Tele-PC is only one element of the TeleVideo IBM PC Compatible line.

The TeleVideo XT is the best hardware

THE BEST PORTABLE FOR THE BEST PRICE.

Features	TPC II	COMPAQ
High Capacity Storage	YES	NO
2nd Disk Drive	YES	OPTIONAL
Quiet Operation (No Fan)	YES	NO
Ergonomic Display	YES	NO
Communication Port	YES	OPTIONAL
International Power Supply	YES	NO
MS™ DOS 2.11	YES	NO
Graphics Display	YES	YES
Typical System Price	\$2995	\$3710

for users of popular IBM XT software who would appreciate an extra 10 megabytes of storage capacity along with the advantages listed on the preceding chart.

As the chart above demonstrates, our portable IBM compatible computer, the TPC II, is far and away better hardware than COMPAQ™ Better hardware—standard—at a better price.

THE BEST MANUFACTURER.

The TeleVideo IBM PC Compatible line is made by the world leader in multi-user computer systems and the number one independent manufacturer of terminals.

So not only can you count on the service and support of an established

industry leader, you can get it all—desktop, hard disk desktop and portable computers—from one single vendor.

Contact the TeleVideo office nearest you. You'll find that TeleVideo—not IBM or COMPAQ—has the best hardware for the best software. At the best price.

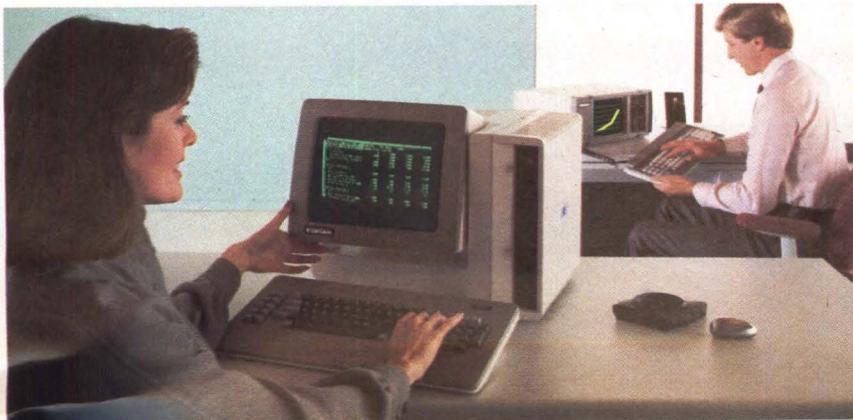

The TeleVideo Regional Sales Offices:

Southeast (404) 447-1231 • Mid-Atlantic (703) 556-7764 • Eastern (516) 496-4777 • Northeast (617) 890-3282 • South Central (214) 258-6776 • Rocky Mountain (408) 745-7760 • Southwest (714) 476-0244 • Midwest (312) 397-5400 • Northwest (408) 745-7760 • Southern Europe (33) 1.687.34.40 • Central Europe (31) 2503-35444 • International (408) 745-7760.

INTRODUCING

CONCEPT 1 ENCLOSURES

A NEW CONCEPT IN COMPUTER PERIPHERAL ENCLOSURES.

Concept 1 Enclosures is a versatile system of standardized molded enclosures for cost-effective packaging of systems and electronics. Concept 1 Enclosures have the field-proven performance and off-the-shelf availability to minimize engineering design time and manufacturing lead time. Plus, total versatility gives system integrators and OEM's the product flexibility to stay competitive at lower costs.

Functional Versatility—Concept 1 Enclosures accommodate 12" and 15" CRT sizes, have swivel/tilt bases, and are available with either standard or DIN keyboards. The 12" CRT enclosures can have either a 5¼" floppy drive or a 5¼" fixed or removable Winchester drive. Or two slim line ½-high drives.

Appearance Versatility—Concept 1 Enclosures are distinctive, with many color combinations and bezel configurations to "personalize" your system.

Packaging Versatility—Concept 1 Enclosures have a unique internal modular mounting system to hold various-sized control and function boards.

All Concept 1 Enclosures are molded in high-quality, OEM-grade plastic (Noryl® FN215 and Noryl® N190) and meet worldwide equipment and safety standards, including UL, CSE, VDE, BS, and IEC. Shielding for RFI and EMI also can be provided.

For special housing requirements, Data Packaging's 35 years of design, tooling, and high-volume manufacturing experience provides their customers with unique solutions to electronics housing problems.

Key in on Your Hot Prospects

with Mini-MicroSystems 13th Annual Mini-Micro Computer Market Report

This year Mini-Micro Systems readers will spend \$50 billion on minicomputers, microcomputers, peripherals, software and supplies. The 13th annual Mini-Micro Computer Market Report outlines 8,511 sites (buying centers) representative of the explosive value-added market. Data is available in the following formats:

MAGNETIC TAPE OF COMPLETE DATABASE

For those marketers who wish to receive all the information and be able to generate their own analysis, the complete database is available on magnetic tape. Data includes:

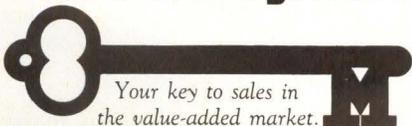

- 1983 Expenditures for minicomputers, microcomputers, peripherals, and software.
- 1984 Estimated Expenditures for minicomputers, microcomputers, peripherals, and software.
- Geographical Regions
- Type of Organization
- Minicomputers/Microcomputers purchased in 1983 and those installed in prior years:
 - Vendor name and model number
 - Units acquired
 - Major applications
- Minicomputers/Microcomputers planned 1984 purchases:
 - Vendor name and model number
 - Units planned to be acquired
 - Major applications
 - Sites planning to change major vendor
 - Fail-safe computer operations
 - Electronic office functions

- Boston (617) 536-7780
- Chicago (312) 635-8800
- Dallas (214) 980-0318
- Denver (303) 388-4511
- Los Angeles (213) 826-5818
- Mid-Atlantic (215) 293-1212
- in New York (212) 724-1790
- Orange County (714) 851-9422
- Northern California & Northwest (408) 243-8838
- Southeast (404) 955-6500

PRESELECTED LISTS AND MAILING LABELS

All selections are available as a listing or as cheshire or pressure sensitive labels. Cross tabulations of categories are also available.

- | Site Selection | Site Count |
|---|------------|
| ■ Total sites surveyed..... | 8,511 |
| ■ Sites by planned 1984 expenditure levels | |
| \$50,000-99,999..... | 4,829 |
| \$100,000-249,999..... | 3,582 |
| \$250,000-499,999..... | 2,218 |
| \$500,000 or more..... | 1,403 |
| ■ Sites planning to install integrated electronic office functions in 1984..... | 1,642 |
| ■ HOT PROSPECTS... Sites planning to change major vendors in 1984..... | 1,085 |
| ■ Value-added OEMs and third parties..... | 3,110 |
| ■ Value-added user sites..... | 4,813 |

13th ANNUAL MINI-MICRO COMPUTER MARKET REPORT

All data is available in a 200-plus page bound report for \$495. In addition to an executive summary, the report's tables include:

- 1983 Unit expenditures
- Type of Organization
- Geographical Regions
- Current Computer Vendors
- 1984 plans for:
 - switching vendors
 - unit expenditures
 - fail-safe computer operations
 - electronic office functions

MINI-MICRO SYSTEMS COMPUTER MARKET REPORT, 221 Columbus Avenue, Boston, MA 02116

CIRCLE NO. 48 ON INQUIRY CARD

How can you develop one system and offer your customers a choice of three?

Simple. Develop it around HP's new three-in-one microsystem. That way, you don't have to redesign your system to offer your customers a range of performance. Because the entire power range of HP's new A-Series computers fits into the same small, convenient package. At a slimmed-down starting price of \$6110*

So you can offer 1 MIPS performance. Or floating point hardware and microprogramming in either a 1 MIPS or 3 MIPS computer. Whichever one your customer chooses, you can fit it easily into the same space in your system.

Identical software keeps it simple.

When you change processors, you don't have to go back to the drawing board with your programs. Because, in addition to compatible hardware, these computers run identical software. That's the best kind of compatibility you can buy.

Our A-Series family consists of the Micro 26, Micro 27 and

Micro 29. The Micro 26 comes with integrated 14.6 Mb mini-Winchester disc and microfloppy. And it has 8 I/O slots, giving you plenty of room for our wide selection of I/O cards for instruments, measurement and control, and data-comm, to name a few.

The Micro 27 adds floating point hardware and microprogramming. And, for jobs needing up to three times the power, our 3 MIPS Micro 29 has got what it takes.

Our brand new operating system really performs.

That's one secret of our success. The new, full-function RTE-A real-time operating system provides the performance you need for your real-time automation applications. Ranging from dedicated machine control to monitoring instruments to supervising a network of computers.

This power, speed and I/O capacity also make our

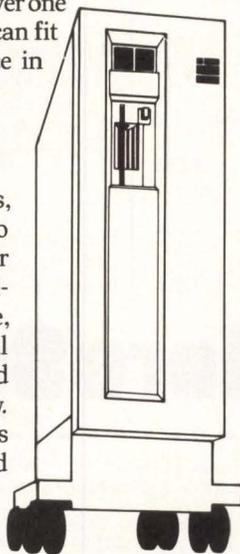

A-Series systems ideal for multi-user, multi-tasking environments.

Of course, these compact new computers are part of our newly expanded OEM program. This includes higher discounts and credits, extended warranties and free training. So you'll make more when you get to market. And you'll also get there faster with our new operating system and newly packaged microsystems.

If you'd like micro, mini or maxi performance in one micro package, call your local HP sales office listed in the white pages of your phone book. Ask for a technical computer representative. Or write for more information to: Hewlett-Packard, Attn. Greg Gillen, Dept. 08171, 11000 Wolfe Road, Cupertino, CA 95014. In Europe, write to Henk van Lammeren, Hewlett-Packard, Dept. 08171, P.O. Box 529, 1180 AM Amstelveen, The Netherlands.

*A600+ microsystem component, 128Kb memory, box, Winchester disc.

Prices are U.S.A. list in OEM quantities of 100 and include integrated peripherals, one interface card, RTE-A and 512Kb of memory for Micro 26 and Micro 27. Micro 29 includes 768Kb of memory.

Our new microsystems also come in this floor-mount or bench-top models.

**HEWLETT
PACKARD**

Micro:

1 MIPS for
\$7445

Maxi:

3 MIPS, plus floating
point hardware and
microprogramming, for
\$16,650

Mini:

1 MIPS, plus floating
point hardware and
microprogramming, for
\$13,140

Whatever the level of performance you pick, it fits in this little 7" x 19" x 25.5" package.

The only controlled circulation product review and evaluation magazine for business users and retailers of IBM PC and PC-compatible computers.

PC Products

100% products 100% business 100% users and buyers

PC Products Is An Entirely Different Kind Of "Computer" Magazine

PC Products is the only PC publication reaching both the IBM PC business user—and the retailer.

PC Products reaches the biggest audience of qualified business users of IBM PCs and compatibles. Every one of PC Products 100,000 subscribers has specifically requested the magazine. Every one of PC Products subscribers is either an IBM PC business user or retailer. And every subscriber is a potential

buyer of additional IBM PC or compatible products for business use.

Your Product Headquarters

PC Products is 100% products. Our editorial consists of software and hardware product evaluations, product reviews and product announcements. PC Products does not provide the latest industry news or the hottest company gossip.

You won't find vendor profiles or guru profiles. Instead, PC Products is directed exclusively to the needs of business users.

Call your PC Products Regional Manager for rates and data.

1100	16	LSI-11/23+	256K (4M)	RT-11	COBOL 81		one 655K-byte diskette drive, one 10M-byte hard disk drive, one terminal, one dot-matrix printer
1110	16	LSI-11/23+	512K (4M)	RSX-11M+	COBOL 81		one 655K-byte diskette drive, one 20M-byte hard disk drive, 3 terminals, one dot-matrix printer
NCR CORP.							
Tower 1632	16	68000	512K (2M)	Tower OS (UNIX-derived)	BASIC, COBOL, FORTRAN, Pascal, C	20,000-25,000	one 1M-byte diskette drive, one 46M-byte hard disk drive, 8 I/O ports, up to 4 terminals, one 125-lpm matrix printer
I-Tower	16	68000	512K (2M)	RM/COS	RM COBOL	30,000-35,000	one 1M-byte diskette drive, one 40M-byte hard disk drive, one 20M-byte streaming tape drive, 8 I/O ports
NOHALT COMPUTERS							
NH-1000	8, 16	Z80A, 8086	64K (1M)	NH-DOS (CP/M-, MP/M-compatible)	C, FORTRAN, PL1, COBOL, BASIC, Pascal, CP/M, MP/M	25,000	one 1M-byte diskette drive, up to 64 terminals, dual hard disk drives; opt. serial or parallel printer

Multiuser microcomputers

LMC's 32-Bit Virtual Memory MegaMicro Is The-State-Of-The-Art UNIX Microcomputer

LMC's 32-bit MegaMicro provides mainframe or super-minicomputer performance at prices competitive with today's far less powerful 8- and 16-bit microcomputers. This is made possible by use of the next generation of logic chips—the National Semiconductor 16000-series. LMC MegaMicros incorporate: the NS16032 central processing unit which has true 32-bit internal logic and internal data path configured on the IEEE 796 multibus; demand-paged virtual memory implemented in hardware; and hardware 64-bit double-precision floating-point arithmetic.

The LMC MegaMicro is supplied with HCR's UNITY* which is a full implementation of UNIX** and includes the Berkeley 4.1 enhancements to take advantage of demand-paged virtual memory. Also included are C and FORTRAN. Typical multi-user systems with 33 megs. of fast (30 ms. average access time) winchester disk storage, a half meg. of RAM, virtual memory, hardware floating-point arithmetic, UNIX, C, and FORTRAN 77 are available for \$20,000 (and even less with quantity or OEM discounts).

* UNITY is a Trademark of Human Computing Resources.
**UNIX is a Trademark of Bell Laboratories.

LMC MegaMicros The Logical Alternative™

CIRCLE NO. 32 ON INQUIRY CARD

Protection For . . . RS232, Modems, 20ma Loops, etc.

MCG Data Line Protectors **stop** "transients" from causing downtime and costly equipment failure.

High voltage transients, caused by lightning, by switching surges, relays, solenoids, and heavy machinery, etc. can be coupled into data lines directly. High voltage transients cause immediate and cumulative damage to semiconductor junctions that results in equipment failure. A direct lightning strike even many miles away can do serious damage.

MCG Data Line Protectors keep these transients from reaching your equipment. They interface between the equipment and the data line, and provide a sophisticated blend of high speed (less than 5 nanoseconds) and brute force protection.

MCG Data Line Protectors can be used with coaxial cable, single or twisted pairs, and will protect RS-232, -422, and -423, 20ma loops, and modems.

Best of all, MCG protectors offer cost effective insurance against "downtime" that cannot be obtained in a service agreement.

To request our complete DLP catalog, contact Bill Purcell at (516) 586-5125, or at the address below.

HERE TODAY HERE TOMORROW

Reliability.

The essential ingredient that OEMs and systems integrators need for today and tomorrow. Without it, you can't generate business.

Which is why CompuPro's System 816™ answers your needs.

Survival of the Fittest.

This micro is The Essential Computer. It not only outperforms the competition, but also operates in extreme environments for virtually an unlimited number of applications.

Just one look at our specs and you know the System 816 will be around for a long, long time. And because the System 816 is structured on the IEEE 696/S-100 bus you can select the appropriate components, independently, in any combination. Even use boards for graphics and other unique applications.

One of the Strongest Warranties.

And since only the strong survive, we housed

the System 816 in a rugged metal enclosure . . . and backed it with one of the industry's longest warranty coverages: From 12 to 24 months.

To find out more about how the System 816 outlasts and outperforms anybody else, call **(415) 786-0909** and ask for an OEM/systems integrator application package and our 1984 catalog.

You'll find CompuPro will be just as essential tomorrow as we are today.

“PRIMAGES...DARES TO DEFY THE COMMON WISDOM BY OFFERING A PRINTER BOTH FASTER AND LESS EXPENSIVE THAN ITS COUNTERPARTS, WITHOUT SACRIFICING QUALITY.”

DIGITAL REVIEW, May 1984*

In today's market, if you're going to defy the common wisdom, you'd better have an uncommon product.

Like the Primage I daisy wheel printer. Uncommon in that it prints letter quality manuscripts at a brisk 45 cps in multiple languages. Interfaces easily with all leading micros and PCs and utilizes patented new technology to improve reliability. Yet it costs less than printers with less capability.

And it helps to have an uncommon sheet feeder to make full use of the printer's speed. Like our PAGEMATE I, a jam-free, trouble-free sheet feeder. Designed as an integral part of the Primage I system, it too is revolutionary in design when compared to other sheet feeders. Yet it costs about half as much as they do.

Stop in at your local dealer for a demonstration of our remarkable system.

You'll be uncommonly surprised.

HALF SIZE.

Delta makes your deliveries DASH.

Delta DASH[®] delivers the same day to over 90 cities across the U.S and abroad, covering 10,000 communities. Why get that small package delivered tomorrow when you can DASH it today? DASH (Delta Air Lines Special Handling) delivers packages up to 70 lbs. . . to over 10,000 communities. So give us a ring at the Delta Marketing Office in the

city nearest you. Or call DASH at (800) 638-7333 for pick up or delivery.

For top priority shipments over 70 lbs., use Delta Air Express. It guarantees your shipment gets on the flight specified. For full details, call your nearest Delta Marketing Office.

DELTA AIR CARGO. READY ALL-AROUND.

MORE DRIVE.

IMI's new 2300H Series Winchester disk drives.

The 2300H Series is the most rugged disk drive made today, with a shock-proof design tough enough for desk top and portable applications. And IMI includes a full two-year warranty on parts and labor.

The 2306H and 2312H pack 6 and 12 megabytes of storage into half height 5¼" Winchester packages with all the capabilities of your full height drive, and more.

More reliability. Large scale integration allows for a single PC board with fewer components and connectors. Conservative 300 track per inch technology provides reliable operation over the full 4°C-50°C operating range.

More durability. IMI's exclusive shock isolation system utilizes improved damping materials and low mass head/flexure design. It's so tough you can literally drop it. Just try that with any

other disk drive, full or half.

More performance. The patented "dynamic seek complete" and closed loop stepper control circuitry virtually eliminate seek errors. Plus, the 2300H operates on a wider voltage range than a full height.

More features. Extensive self test micro diagnostics monitor power supply voltages, spindle speed, and verify the integrity of the positioning system during the power-up cycle. Auto power sequencing reduces starting currents.

Half size. The 2300H may be mounted in a variety of configurations in addition to the usual half height mini floppy standards. An optional full height bezel allows mounting in a full height chassis

location. Or, two 2300H drives can be stacked in a full height space, without compromising the shock isolation system. The 2300H is fully compatible with the ST506/412 interface.

For spec sheet and further information, contact:

International Memories Inc.,
10381 Bandle Drive,
Cupertino, California 95014,
(408)446-9779 TWX:910-338-7347.

We're at it again.

If you think a UPS is just for "lights out"...

think again.

A UPS, if it's a *true* UPS, offers more than just blackout protection. Because it's always "on-line," a *true* UPS protects your system and data against all kinds of irregular voltage conditions, including brownouts and blackouts.

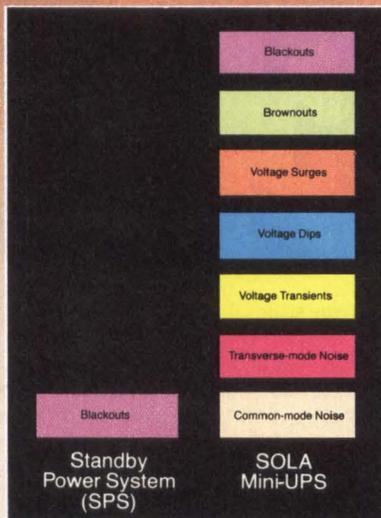

The difference between a *true* UPS and a standby UPS is like night and day.

A standby (off-line) unit is designed solely for blackouts. While some models do offer a limited amount of noise filtering, they do not provide continuous, conditioned power. And that leaves you vulnerable to the costly effects of brownouts, overvoltages, sudden power surges, transverse-mode and common-mode noise.

If your power protection needs are critical, you can't afford to "stand by."

For some applications a standby unit is sufficient. If that's the case, we offer our new standby power system (SPS).

But for more critical applications such as computer systems linked to security, medical life support, communications

and industrial process control, you can't afford to be without clean, conditioned, "no-break" power for even a few milliseconds. That's when you need the complete protection you get with our portable, plug-in, UL-listed Mini-UPS.

Sure, a standby costs less. But it only operates when voltage drops below a preset transfer point (typically -10% nominal). A Mini-UPS, on the other hand, pays for itself every day by providing conditioned power and instantaneous blackout protection around-the-clock.

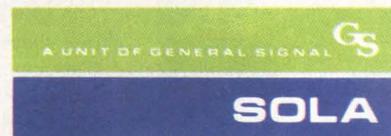

We introduced the concept of power protection more than fifty years ago.

In that time we've introduced some things you'd expect from the leader in power protection... like 100% quality testing and mandatory 72 hr. "burn-in" periods for all UPS units. We've also developed the nation's largest network of stocking distributors.

Think about it. Can you get by with anything less than *true* UPS protection? For more information on our complete line of UPS units, power conditioners, CV transformers, computer power centers and line monitors, contact:

Sola Electric, 1717 Busse Rd., Elk Grove Village, IL 60007. 312/439-2800.

See us at NCC '84, Booth #A-1702.

The Original Power Protectors

CIRCLE NO. 36 ON INQUIRY CARD

Superminis defy micro and mainframe intrusion

Recent superminicomputers challenge multiuser microcomputers in price and mainframes in performance

Minicomputers

The new VAX-11/785 is housed in the same cabinet as that used by the VAX-11/780 but delivers 50 percent to 70 percent more throughput, DEC says. Basic price is \$195,000.

David Bright, Assistant Editor

Typifying the trends among minicomputer manufacturers to drop price while increasing performance in a more compact package, Digital Equipment Corp. has expanded its VAX line of superminicomputers. The line now extends from the low-priced MicroVAX I at \$13,880 to the new top-end VAX 11/785 rated at 1.6 single-precision whetstones at a base price of \$195,000.

Also joining DEC in a round of new superminicomputer introductions are IBM Corp., Gould Inc., Harris Corp. and, making its debut in the computer market, AT&T Co.

But all the activity in superminicomputer products underlines the absence of new minicomputers. DEC

and the other minicomputer vendors are now concentrating on low-priced superminicomputers to meet the 16-bit multiuser microcomputer challenge. This trend does not mean that the traditional minicomputer is disappearing—all manufacturers expect substantial revenues from minicomputer sales to continue. But minicomputer vendors' flagship products clearly center on superminicomputers.

Supermini vendors run scared

The addition of IBM's 4361 and 4381 mainframes to its 4300 line last fall brought IBM into head-to-head competition with the leading superminicomputer powers such as DEC, Data General Corp. and Prime Computer Inc. "IBM is scaring the big guys," notes

Aaron Goldberg, senior analyst at International Data Corp. (IDC), Framingham, Mass. There is no longer any real price/performance gap between the leading superminicomputers and the comparative IBM mainframes, he says.

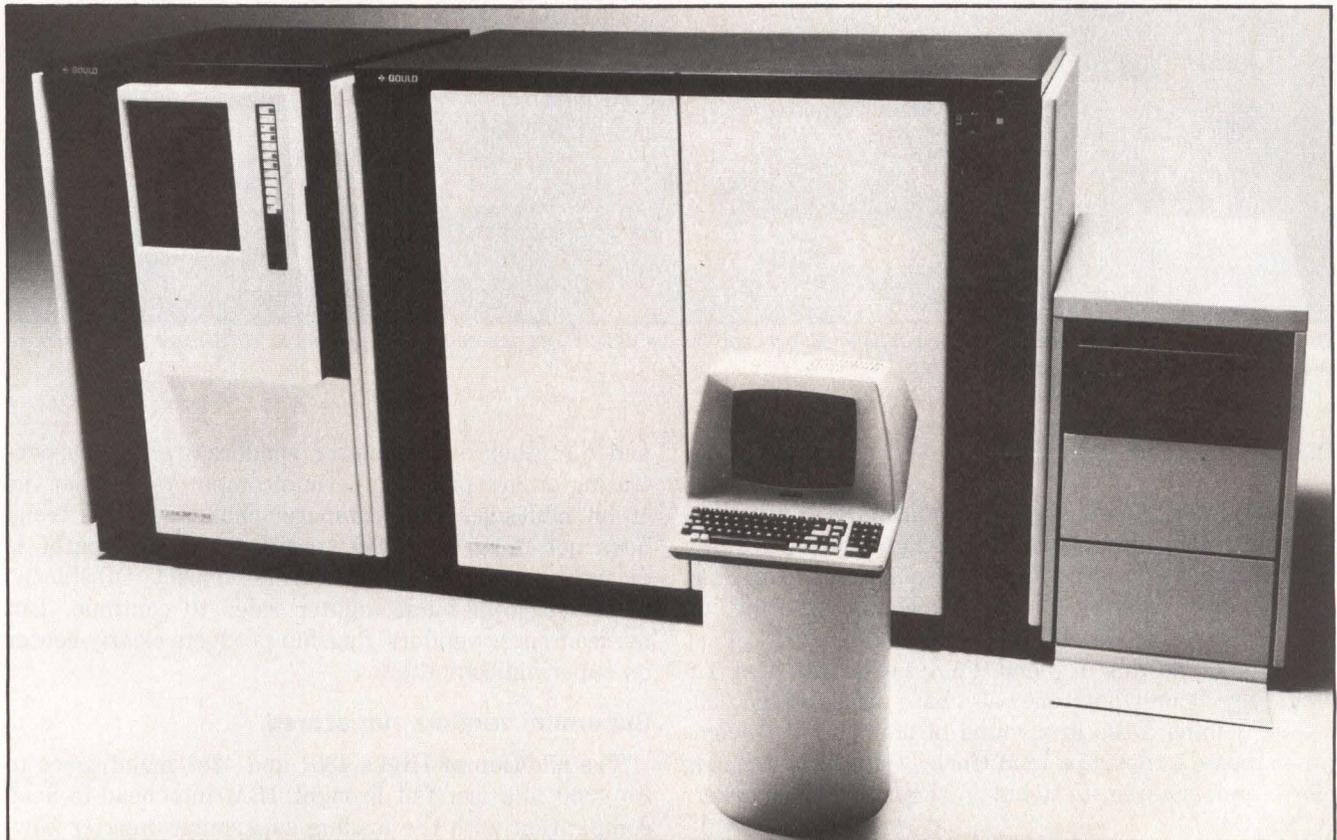

There is some argument about that. IBM rates its \$200,000 4361 Group 5 processor at 1.45 million instructions per second (MIPS) on a mixed Whetstone scale, putting it in the same range as the DEC VAX-11/785. DG, however, rates its MV10000 at 2.5 MIPS, with a basic price of only \$150,000.

Along with its claimed price/performance advantage, DG stresses the company's long-term viability, says Del Hunter, manager of OEM and computational system marketing. "You never have more image and more end-user clout than IBM does," he concedes, so DG hopes "the purchaser isn't going to have a problem convincing his management that [DG] is the proper choice." DG, DEC and other superminicomputer manufacturers also claim that their machines are designed to run interactively; IBM's are optimized for batch processing. "We typically can have less memory and less disk to support the same user community as an IBM can," Hunter asserts.

Many observers expect IBM to compete mostly in the commercial side of the superminicomputer market, because DEC, Gould and others have a strong hold on the scientific and engineering sectors. Those sectors account for only about 15 percent of the total, according to market research company First Boston Corp., so attacking the business side might be more lucrative. The general business sector of the superminicomputer market is the fastest-growing, with an average growth rate of 54.8 percent per year, according to research company Venture Development Corp.

AT&T, another giant that has recently entered the superminicomputer race, this March introduced its 3B20 and 3B5 series of superminicomputers running UNIX System V. AT&T has used these systems internally for several years. The company is initially selling the computers to OEMs. Analysts expect AT&T, with its considerable influence, to become a major force in the superminicomputer market. But most say it won't happen quickly because AT&T is new at selling computers and needs time to establish marketing channels.

"The company has announced an impressive set of products, and it clearly has the resources to implement almost any plan it chooses," observes Grant Bushee,

Future superminicomputers might use multiple processors to boost performance. Gould's new Concept 32/970, for scientific

applications, incorporates two CPUs to run 8.4 whetstones. Gould plans to add more CPUs to future machines.

executive vice president of research company InfoCorp. "However, AT&T has never been in the computer business except as a supplier of technology, and for this reason it is likely to be years before the company will be able to optimize its strategy and organization to assume a significant position in the market."

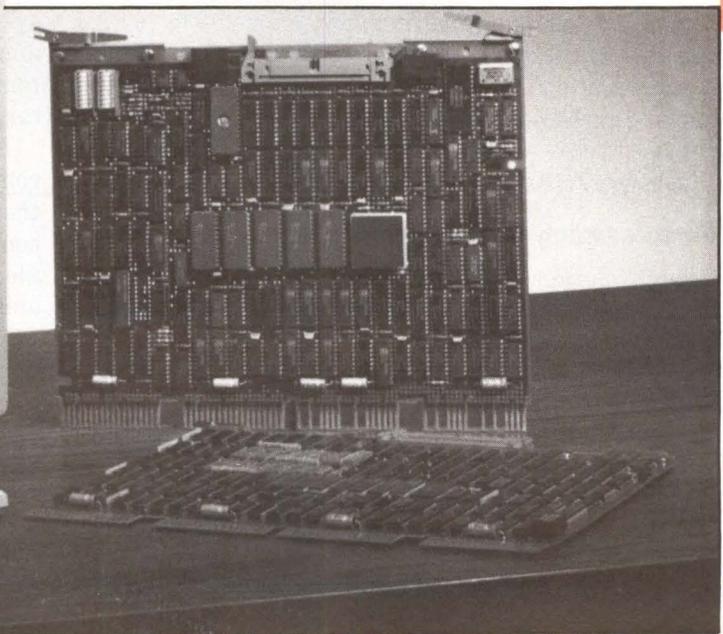

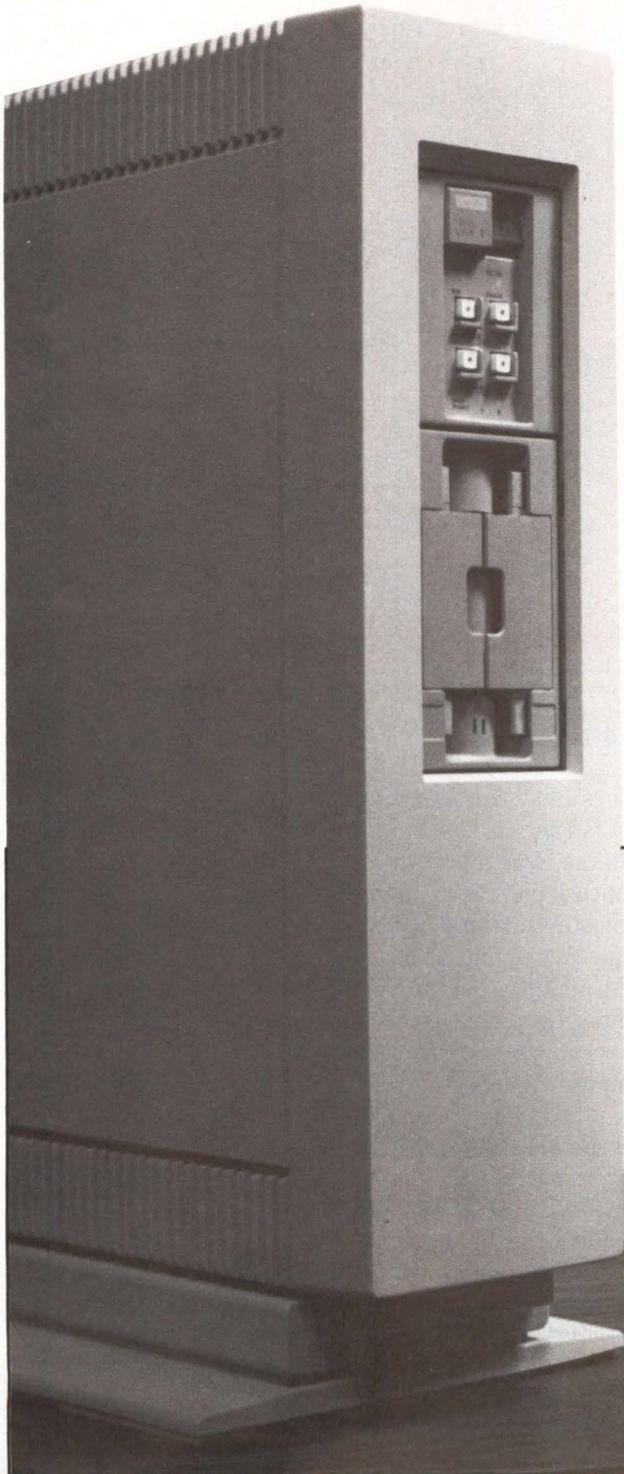

Adolph "Sonny" Monosson, publisher of the *Monosson on DEC* newsletter, disagrees. He expects AT&T's name to lure OEMs away from IBM, DEC and the rest of the field immediately. "They [AT&T] are going to have to fight the OEMs off," he insists. UNIX maven Jean Yates, president of market research company Yates Ventures, believes the AT&T machines' ability to run UNIX gives the company a definite advantage. She predicts that DEC "will take a real bruising," especially on its high-end VAXs. Monosson adds that AT&T's entrance into the market could have a secondary impact—IBM may retaliate against AT&T by announcing more competitive products, thereby putting even more pressure on DEC.

At about the same time as AT&T was dropping its bombshell, and a week before the VAX-11/785 announcement, fast-growing Wang Laboratories Inc. expanded its product line with its high-end VS 300 superminicomputer. Wang claims the new system provides three times the processing speed of its previous high-end VS 100 for only 1½ times the price. VS 300 prices start at \$170,000.

Superminis scale down to micros

Established superminicomputer vendors are attempting to fend off supermicrocomputers from Plexus Computers Inc., Fortune Systems Corp. and others by aggressively pricing current models and also by introducing down-sized microprocessor-based versions of

DEC's MicroVAX I, priced at \$9,995, is a two-board implementation of a subset of the 32-bit VAX architecture. The system averages 35 percent of the VAX-11/780's CPU performance, DEC claims.

Minicomputers

their minicomputer and superminicomputer technologies. A case in point is the Q-bus-based MicroVAX I, which DEC should ship in late spring. Prices for the MicroVAX I without storage begin at \$9,995. A system with 512K bytes of memory, two floppy disk drives and a 10M-byte Winchester disk drive costs \$13,880. In contrast, prices for Plexus' P/35 multiuser microcomputer start at \$27,000. The P/35 incorporates both the 68000 and Z8000 chips. A basic 68000-based, multiuser Wicat 150 from Wicat Systems Inc. lists for \$10,000.

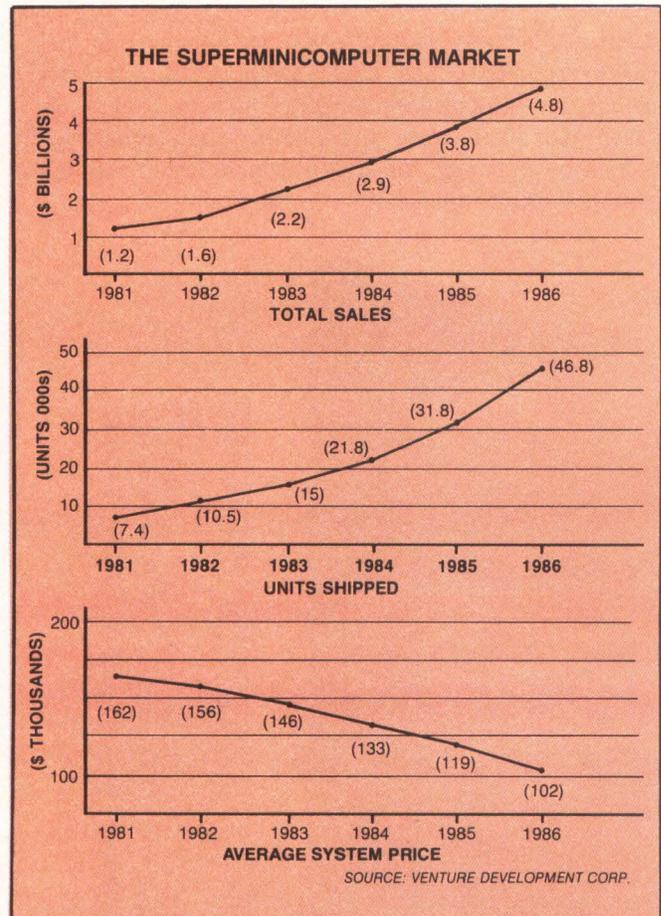

Another superminicomputer vendor using similar tactics is Perkin-Elmer Corp. Its \$9,950 3205 superminicomputer, introduced last year, is selling well. The unit is packaged in an eight-slot, 7-inch-high, rack-mountable chassis for OEMs and is also available in end-user configurations.

Prime is not worried about the supermicrocomputer invasion, claims Gale Aguilar, vice president of corporate business development and strategy. "We're down in the \$38,000 range with our full Primos operating system and [32-bit] architecture on the 2250, so we have not been encountering severe competition with the supermicros," he maintains. "We get a tremendous advantage with the full-function Primos operating system down at that low end."

The Harris 60, announced this spring, is another contender. The 48-bit, 30-inch-high Harris 60 supports as many as 32 users and delivers 0.85-MIPS performance. The Harris 60 marks the company's expansion from the scientific and technical market into business. The company stresses the machine's compactness. Harris's new CPU has two boards, whereas the company's larger machines have five. The Harris 60's CPU uses complementary-metal-oxide-semiconductor (CMOS) custom gate arrays, and memory, expandable to 12M bytes, is in the form of 256K-bit RAM chips. To save more space, the company incorporates a high-performance 8-inch Winchester disk drive that provides a 20-msec. access time—the same as that of a 14-inch Winchester. Prices start at \$69,500.

Vendors watch fault tolerance

Fault-tolerant computers are another area the traditional superminicomputer vendors are keeping a wary eye on. That market, which Tandem Computers Inc. single-handedly began in 1976, should grow from \$500 million in sales in 1982 to \$4.2 billion in 1987, predicts International Resource Development Inc. Until recently, Tandem, with 1983 revenues of \$418 million, virtually owned the market. But now several other companies, mostly start-ups, have jumped into the race with the intention of attracting converts from the minicomputer and superminicomputer markets. Most of those companies, such as Synapse Computer Corp., Stratus Com-

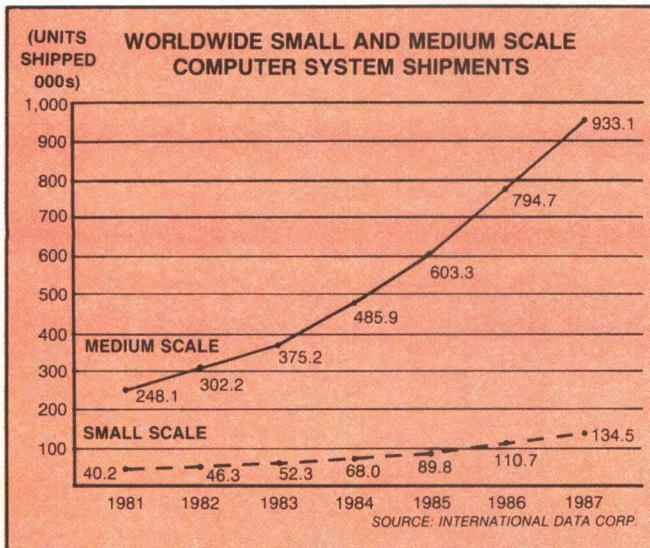

A 9 percent compound annual drop in prices is expected to help boost superminicomputer market sales by a 45 percent compound annual growth rate.

puters Inc., Auragen Systems Corp. and Parallel Computers Inc., use multiple 68000 microprocessors in their systems, which are targeted for transaction-processing applications. Prices of the Tandem and Synapse systems start at \$200,000 and \$300,000, respectively, and target VAX- and 4300-level systems.

Although most of the other systems appear to be competing primarily against minicomputers, many of the vendors hope to steal a portion of the superminicomputer market as well. Parallel Computer, for example, plans to compete against PDP-11s, the VAX 11/750 and the MV 4000, says Parallel president Charles Ryle, former marketing vice president of Tandem. Tandem markets its systems directly to end users, whereas Parallel concentrates on OEMs and system integrators. Ryle claims the low price of Parallel's bare-bones fault-tolerant system—about \$75,000—gives OEMs their first chance to offer such systems to their customers.

Some superminicomputer vendors are beginning to fight back by adding redundancy to their systems. DEC's VMS 3.3 enables VAXcluster customers to program fault tolerance into clusters with as many as 16

VAX CPUs. Honeywell Information Systems Inc. last year introduced the Resilient TPS system that incorporates two loosely coupled processors along with transaction processing software. P-E is one of the latest to add fault-tolerant capabilities to its systems. Its Resilient system uses a dual-processor configuration with switched peripherals and can be installed as a field upgrade to a P-E Series 3200 system. New software detects and corrects system failures, say company officials.

Gray areas exist in the definitions of superminicomputers, minicomputers, supermicrocomputers and even mainframes. It's sometimes more valid to classify a computer according to its market position and general capability. IDC classifies medium-scale computers as those that compete against the DEC VAX line, IBM 4300 series, DG MV products and Hewlett-Packard Co. HP3000s. Small-scale computers include the DEC PDP-11/34, IBM System/34, Altos Computer Systems Inc. ACS-68000 and Plexus P-60. Representing a superminicomputer trend toward compactness, the 30-inch-high Harris 60 supports 32 users and performs at 0.85 whetstones.

Vendors wait and see

Many superminicomputer vendors are cautious about plunging full-force into the market for fault-tolerant systems. At newcomer Pyramid Technology Corp., fault tolerance is "definitely not an objective," states marketing vice president Frank Madren, even though the market is expected to boom. Instead, Pyramid will concentrate on making "good, reliable equipment" without the software overhead and premium price of fault-tolerant systems. The company attracted considerable attention last summer when it introduced its 90X superminicomputer. The 90X was specifically designed to run UNIX V and was the first commercially marketed system to use the experimental reduced-instruction-set-computer (RISC) architecture. RISC uses overlapping registers and is said to run higher-level languages

faster than programs that compile to a large number of instructions because the CPU can operate more efficiently, with fewer wait states, especially while data is being transferred to and from memory. Pyramid seems to be the guinea pig for RISC; other vendors say they might latch onto it if it proves successful.

Another way for superminicomputers to increase performance is through the use of emitter-coupled-logic (ECL) circuits rather than the transistor-to-transistor-logic (TTL) circuits commonly used. ECL is faster but more expensive than TTL. Gould, Harris and Prime are the only superminicomputer vendors using ECL, according to IDC's Goldberg. DEC says its planned Venus super VAX will use ECL; Wang will not reveal whether its new VS 300 uses ECL.

At Gould's Computer Systems Division, Concept/32 product planning manager Hank Taylor says Gould's plan concerning ECL is to "push it to the limit." To further improve performance, Gould will build multi-processor systems. "It seems like the only way to go," he says, but acknowledges that the problem with running more than four processors is keeping them all active at once. Gould's recently introduced Concept 32/9780 system uses dual processors to achieve a performance rating of 8.4 MIPS.

Performance improves in parallel

Parallel processing to improve performance and to lead to artificial-intelligence applications is a continuing area of interest in both industry and academia. P-E and DEC have tested the waters with multiple-processor machines. P-E's modular 3200MPS supports a CPU and as many as nine tightly coupled auxiliary processing units. P-E says a 3200MPS with nine auxiliary units performs at 21 MIPS in single-precision whetstones. DEC's VAX-11/782 features two tightly coupled VAX-11/780 CPUs, and the VAXcluster, which loosely links as many as 16 VAXs via a 70M-byte-per-second coaxial cable, might be the forerunner of a high-performance, tightly coupled multiprocessor scheme that also provides fault tolerance.

Encore Computer Corp., formed last summer by former Prime president Ken Fisher, is developing at least three "large applied multiprocessor systems," sources say. One of the systems will reportedly use 10 to 100 processor modules connected by a common bus, run UNIX and compete in the high-end VAX market. Encore subsidiary Hydra Computer Systems, Natick, Mass., plans to introduce that system in early 1985. □

New 378 MByte Mercury
SCSI and ESMD interfaces

Northern Telecom's 8" Winchester.

Better memory.

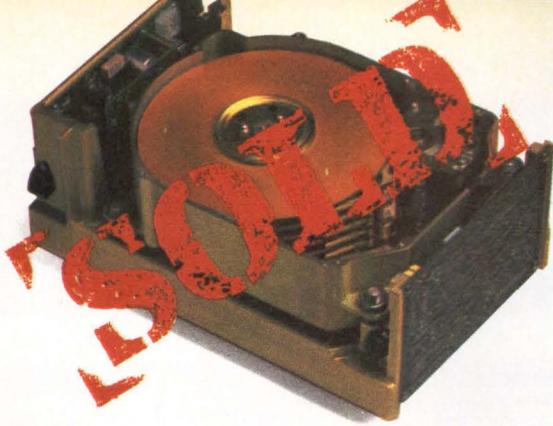

Better reliability.

Better service.

Better diagnostics.

Better availability.

Better read on.

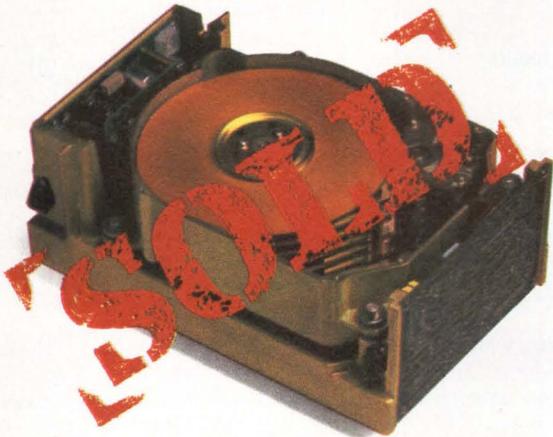

Better memory.

Northern Telecom's MERCURY* disk drive has 225 megabytes of memory, the largest 8" capacity in volume production today. The same components used in this drive are also in 90 and 180 megabyte versions. Even higher capacity versions available in the same basic design in future.

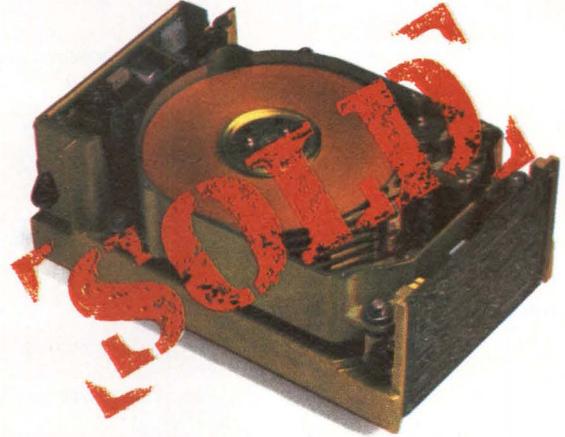

Better reliability.

Mercury disk drive can be mounted in any plane. Contains significant component reduction for simplicity of operation. Has oxide media, and mini-composite heads: simple and reliable. Embedded servo control. Plus, Northern Telecom's heritage.

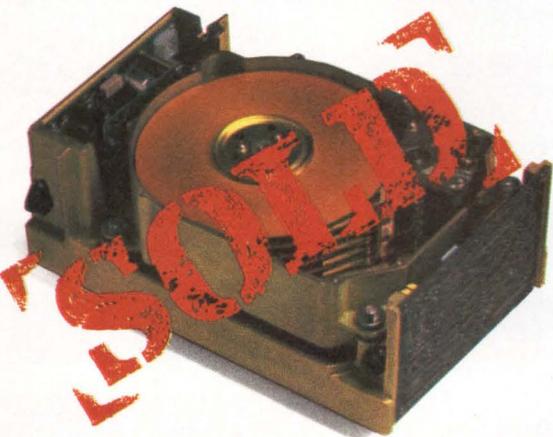

Better service.

No routine maintenance or field adjustments. Modular design for total interchangeability of all sub-assemblies. Plus, you have Northern Telecom's network of service centers—135 in the U.S. and 19 in Europe.

Better diagnostics.

Has both power-up and background diagnostics. Thirteen automatic pre-write checks. Automatic power monitoring capability. Speed regulation monitoring. And more can be brought to your computer panel by our intelligent interface.

Better availability.

Not announcing! But shipping 225 megabytes today! Have 75,000 square feet of manufacturing space. Plus another 75,000 square feet when you need it.

Better hurry.

Call today for your evaluation unit! Toll-free 1/800-521-FAST or your nearest district sales office: (714) 955-0450, (408) 297-6800, (313) 973-4534, (214) 239-0803, (617) 357-5159. Northern Telecom Inc., Memory Systems Division, 100 Phoenix Drive, P.O. Box D, Ann Arbor, MI 48106.

Software portability issues confront computer OEMs

*UNIX appears to be the unifying theme—
but how and when?*

Rick Dalrymple, Senior Editor

Many OEM customers find themselves married to their computer vendor. The knot was not tied by exchange of contractual vows; it was tied with software application programs developed under the computer vendors' proprietary operating system. This setup does not always work to the benefit of OEM customers, and, increasingly, they have been searching for operating systems that can run on a variety of computers.

In the commercial systems arena, operating system candidates include CP/M, MS-DOS, Pick, Oasis and UNIX. In industrial, scientific or engineering applications, the list includes RMX86, VRTX, the p-System and UNIX. But will UNIX emerge as the de facto standard? Perhaps, but the evidence so far suggests that a "standard" UNIX is not likely soon and, in many applications, it might never be the best choice to solve many current problems. (MMS, June, Page 125).

UNIX versions abound

Consider the versions of UNIX currently on the market. There are AT&T Co.'s UNIX III, V and VII;

the enhanced UNIX from the University of California at Berkeley, Microsoft Corp.'s derivative XENIX and the various "shells" around UNIX such as Cromemco Inc.'s CROMIX. Unfortunately, software developed under one of these versions of UNIX is not, strictly speaking, compatible with software developed with any of the others.

Consider also the UNIX compatibility problem at Digital Equipment Corp. For many years, DEC enjoyed a virtual monopoly on commercial hardware supporting UNIX because AT&T's original UNIX port was a DEC PDP-11. Later, the University of California at Berkeley designed its popular BSD UNIX enhancements to run on the DEC VAX. So, today, DEC offers one version of UNIX—V7M-11, a derivative of AT&T's outdated UNIX Version VII—on its PDP-11 family, and another—ULTRIX-32, based on Berkeley release 4.2—on the VAX line. The two versions have different tools and are not fully compatible at the application-source-code level. ULTRIX achieves performance levels comparable to DEC's proprietary VMS operating system because it employs virtual memory techniques and runs in a native-code environment. But these

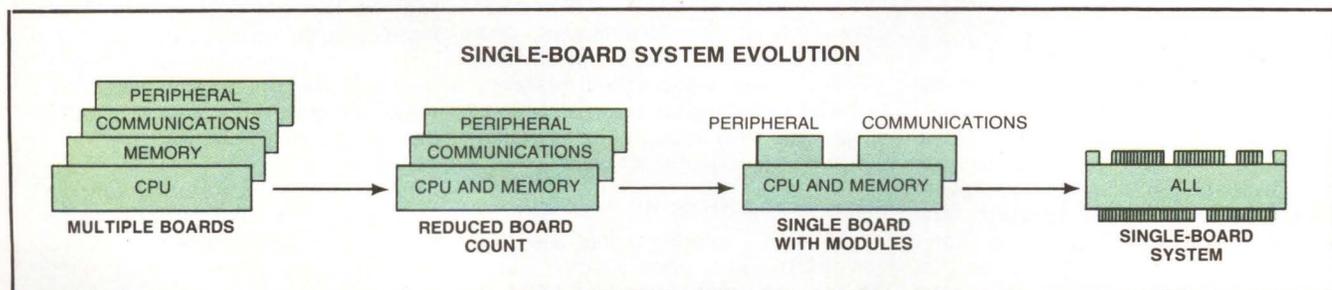

Fig. 1. Thanks to LSI and VLSI circuitry, the number of computer system functions that can be placed on a single board has been growing. Single-board computer manufacturers will soon be offering

single-board computer systems. This new level of system integration will lead single-board computer buyers to emphasize their software and added value.

performance-oriented features prevent DEC from porting ULTRIX to the PDP-11 family, which does not support virtual memory.

UNIX V bandwagon accelerates

Meanwhile, DEC is facing vigorous competition from several computer vendors running AT&T's UNIX Sytem V. Some of these machines have been designed from the ground up for UNIX. Many of the new competitors employ designs using the Motorola 68000 family of microprocessors. Because UNIX is the only "standard" operating system available for the 68000, UNIX has become the portable operating system for the current generation of supermicrocomputers. Several other major microprocessor manufacturers have pur-

chased UNIX V licenses; they include Intel Corp. for the 80286, National Semiconductor Corp. for the 16032 and Zilog Corp. for both the Z8000 and Z80000.

Hewlett-Packard Co. and Honeywell Information Systems Inc. have also jumped on the UNIX V bandwagon, as have several superminicomputer vendors. Unlike DEC's VAX users (who must choose between ULTRIX-32 and DEC's proprietary VMS), users of Data General Corp., Prime Computer Inc. and Wang Laboratories Inc. equipment will find UNIX V running as a software layer on top of their proprietary operating system. Even Perkin-Elmer (P-E) Corp. and Gould Inc. are finding ways to capitalize on UNIX's strengths. Although UNIX is poorly suited to real-time industrial applications, it is well suited as a tool for developing

Computer vendors seek closer ties to OEMs

Ron Shinn, Senior Editor

Original equipment manufacturers (OEMs) today range from concerns buying complete, integrated systems with operating systems and software development tools to concerns that start at the board level and build systems from the ground up. All OEMs add value, but that value varies from vendor to vendor, depending on the levels of integration and types of systems they provide.

Basically, OEMs sell into vertical-application markets with off-the-shelf solutions. But they add their particular expertise, which is primarily software development for commercial markets and hardware bits and pieces for the industrial markets.

Most computer vendors agree that OEM opportunities are an important part of their business strategies, and the vendors are actively working to improve relationships with the smaller, widely diffuse OEMs that will provide much of the market growth over the next several years.

Distribution strategies vary

Generally, OEM business is done directly with the vendor, not through independent distributors and retail dealers. This varies with the level of hardware/software integration provided; board-level-only vendors rely more on outside distribution than vendors offering fully-caged systems. For example, Advanced Micro Devices Inc., Sunnyvale, Calif., does a large percentage of its business through

distributors, but IBM Corp. has set up a large, multi-lateral direct sales organization.

Late in 1983, IBM formed its National Distribution Division (NDD) that, according to a company spokesman, has the "mission to establish a single-line marketing organization focused on delivering high product volumes at the lowest possible cost through alternate internal and external channels." There are three units within NDD: Systems Supplies, Retail Marketing and Distribution Channels. The latter is the OEM arm.

"We believe there are great opportunities in the OEM business," says an IBM spokesman, "and we expect to be more active in that channel than in the past. We intend to be competitive, and, in the terms and conditions presently available, we appear to be consistent with the way the industry does business."

The IBM spokesman said the Distribution Channels unit is now offering to OEMs products like the IBM PC series; Series 1; Systems 34, 36 and 38; the 4300 family; Datamasters; and CS9000s. These OEMs typically are IBM-qualified value-added resellers (VARs) providing turnkey installation. The IBM VAR typically adds value through applications software.

How TI and HP do it

At Texas Instruments Inc., the bulk of distribution is done directly, either to the software value-added OEM or to the large-system manufacturer. Almost 90 percent of all TI sales are

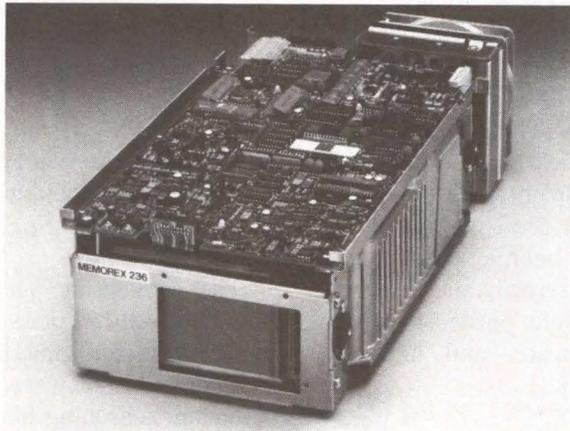

direct, and the company does not encourage dealer business.

Hewlett-Packard Co., Cupertino, Calif., takes much the same approach, maintaining a direct sales force focused on the Fortune 1000 suppliers. HP personal computer products, however, are sold through dealers. Because HP provides most of its sales and service directly, the software value-added OEM is an important part of its distribution strategy. Small software houses are given commissions on sales, and larger OEMs are given marketing and sales assistance. Generally, HP will supply the hardware, and the OEM adds software to complete the application solution. This approach to distribution is standard for large manufacturers.

Training for OEMs by most vendors is extensive. It's provided either on-site or, in many instances, at regional locations world-wide. The board-level-only vendors rely heavily on documentation provided as a training tool with the product. Larger companies use the seminar approach for their more complex products. Furthermore, larger companies provide a wide range of training, including marketing, sales and general business tutorials, along with hardware and software segments.

For service, most large vendors provide on-site, regional depot and factory contracts. Smaller vendors generally leave on-site and continuing service to OEMs and their customers. But most also offer telephone assistance to both OEMs and end users.

If you don't call us, you're paying too much.

Memorex® high-performance 8" disc drives are available right now. At the best prices you'll probably find anywhere.

Hundreds of dollars less than you'd expect.

On all three of our high-capacity models: 83, 116, and 166 megabytes.

So if you're evaluating 8" disc drives now, call us. If you don't, you'll never know how much you would have saved.

Call M. Webb, at 408-987-3308, for all the details. Or write:

real-time applications. So, both P-E and Gould are augmenting UNIX with hardware and software tools that allow users to create and test applications with UNIX and then execute the applications using a proprietary real-time operating system.

AT&T Information Systems has entered the computer market and, to no one's surprise, supports UNIX V. However, a surprise that could bring the UNIX V bandwagon to a halt is a move by IBM to market its own UNIX-like operating system. No such announcement has yet been made, but industry analysts caution that offering a proprietary UNIX-like operating system across the IBM line from micros to mainframes is a possibility. They further suggest that IBM's current support of UNIX on its PC family and CS9000 laboratory computer should not be interpreted as a UNIX endorsement (MMS, April, Page 137).

With a wide variety of UNIX hardware on the market, the next set of missing links are the horizontal application software packages such as database management and word processing. These software building blocks are now falling into place. Therefore, computer OEMs developing vertical applications and not using UNIX should now evaluate their options.

Writing a program once and then porting it from machine to machine has always been a sound concept. In practice, it has not been a trivial task. However, "porting software" is not the right phrase—"patching software" is perhaps more accurate—and, like quilts, there is beauty in the patchwork.

The beauty of patchwork

One of the key factors holding back wide market acceptance of UNIX-based systems is a lack of applications software. This situation has been improving rapidly. UNIX software packages listed in the /usr/group catalog have grown from 300 in the 1982 edition to 450 in the 1983 version and should exceed 700 in 1984. These swelling numbers are not necessarily coming from software developed under UNIX; many were initially written in proprietary languages and operating systems. Thanks to "bridge" software, though, and some clever software patching, these programs have been converted to run under UNIX on a target system (MMS, October 1983, Page 305).

"Bridge" software is created by first designing compilers that accept the operations and data structures of a source system's programming language (in some cases, the existing front end can be used). The next step is the development of a new code generator for the target system or an intermediate-level "pseudo machine." Several vendors now offer bridge software

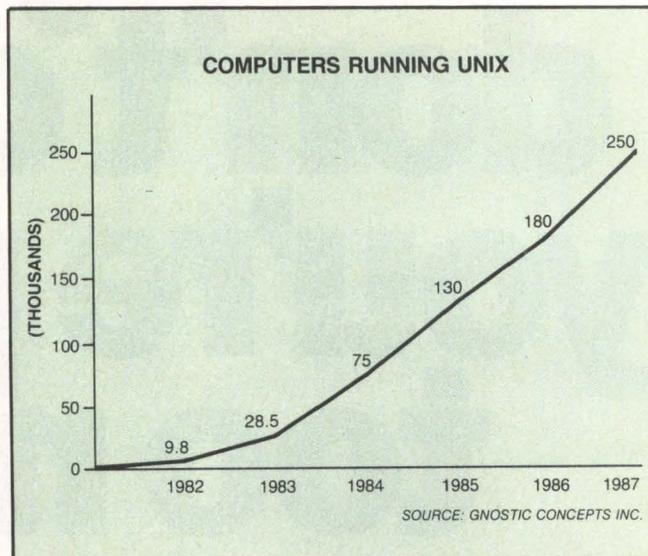

Fig. 2. The UNIX market started to take off in 1983, when 12 vendors shipped more than 1,000 units each, according to Gnostic Concepts estimates.

products that convert programs developed on a variety of minicomputers and microcomputers in languages such as Business BASIC, COBOL, CP/M, DIBOL and RPG II.

The conversion performed by the bridge software might be only 99 percent complete, though. Hence, the need exists for some additional patchwork. After conversion, the software developer must go through the program searching for calls that do not exist in UNIX. Sometimes, the solution lies in rerouting a call and sometimes in manually rewriting program statements. Each process is clearly superior to translating programs without a bridge compiler or completely rewriting them in UNIX.

Developing new software in UNIX

As P-E and Gould have noted, UNIX and its C language are very useful program development tools even if the final code will run under a different operating system. Over the last 18 months, several C compilers have emerged that convert UNIX programs into native-code for various target processors. As their numbers increase, software developers will find an ever-widening array of computer hardware on which to run their UNIX-based applications programs. □

More than A Memory A Commitment To Quality

Every department, every person in our organization is dedicated to one goal—to deliver the finest in disk memories.

At Century Data Systems, we see quality as a pervasive, company-wide attitude. And our customers share this perspective.

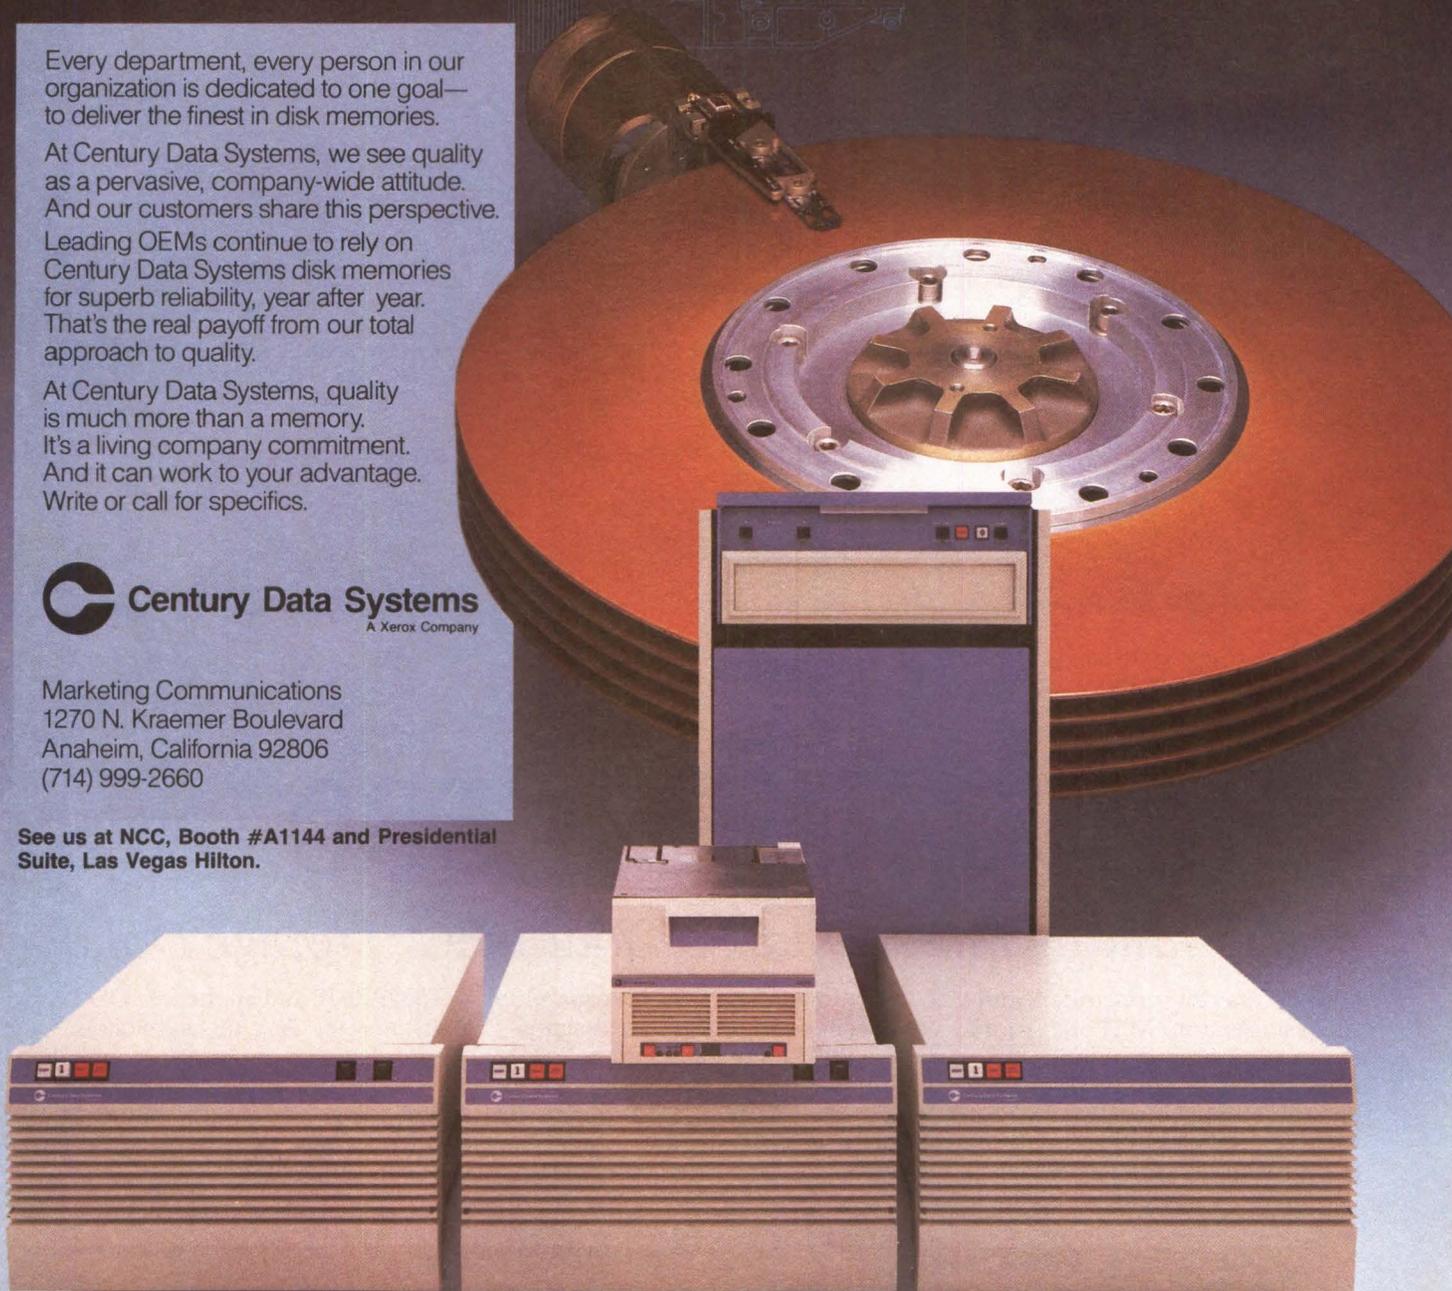

Leading OEMs continue to rely on Century Data Systems disk memories for superb reliability, year after year. That's the real payoff from our total approach to quality.

At Century Data Systems, quality is much more than a memory. It's a living company commitment. And it can work to your advantage. Write or call for specifics.

We're Talking More Value For Your DEC® Storage Dollar

DEC-compatible controllers and subsystems from MTI offer more features per product which translates into uncommonly high value for your storage investment. High-value features include more formatted Winchester storage per drive,

built-in bootstrap, 22-bit capability with built-in or software diagnostics. MTI products emulate RX02 for Floppy disks, RL01/RL02 for Winchesters and TSV05 for streaming tape. They are also compatible with DEC-supported software,

TSX-Plus™ and applicable DEC diagnostics. As a measure of our confidence in our proven controller products, we offer a full year warranty. For a competitive quote that delivers more value for your storage dollar, call us today.

**In technology,
production, nobody**

experience and stacks up to Archive.

At Archive, we ship nearly three times as many 1/4" streaming tape drives as the rest of the industry combined.

Of course, that shouldn't be too surprising. Because we've also had more technological breakthroughs than all those other guys combined.

For example, we were the first streamer manufacturer to successfully use LSI technology. This enabled us to reduce the number of parts in our newest drives by 40%. Which means there's even less of a chance that anything will go wrong.

Going back to our early days, one of the reasons we left the competition at square one is because we did our homework.

We made sure we had a thorough understanding of the physics and dynamics of the 1/4" cartridge, as used in a high-density, high-performance streaming mode. This

led to the development of our unique phase-locked-loop that follows the instantaneous speed variations that are inherent in the cartridge.

Equally impressive is the fact that Archive designs were the basis for the industry's standard QIC-02 interface and QIC-24 recording format.

As you can see, even the competition depends on Archive for experience. You should, too. For more information, write Archive Corporation, 3540 Cadillac Avenue, Costa Mesa, CA 92626. Or call (714) 641-0279.

Archive offers 8" 5 1/4" full-height and 5 1/4" half-height streaming tape drives.

TIME is MONEY

OEM 200 doesn't waste either.

You can't afford to waste time waiting for your printer to finish before your computer can move on to something else. The OEM 200 is designed for **THRUPUT**. The large print buffers, high speed space skip and fast paper advance combine to generate 'usable' speed, not simply impressive spec sheet figures!

With the OEM 200's unusually large buffers, you can print and process simultaneously.

NO WAITING.

Most printers have very small buffers - 2K or 4K at most. Our 150 CPS wide carriage OEM 200 comes standard with a 4K buffer which is expandable to 20K, 36K, or 68K. MPI offers the biggest buffers in the business!

The OEM 200 has other outstanding features like an optional SoftSwitch™ front panel keypad and a fast and impressive near letter quality mode. Our exclusive applications packages (AP-PAKS), providing enhanced graphics printing along with a vast selection of decorative type styles, are available for selected microcomputers.

At a suggested list price of \$1045, the OEM 200 won't take your life's savings either. **STOP WASTING TIME AND MONEY. BUY AN OEM 200 FROM MPI** — The American Printer Company!

Call Us For More Information At: **(800) 821-8848**

OEM computers

When was the last time

If it hasn't been recently, you've probably missed a lot of news. Like the multi-million dollar contracts we recently signed with major OEMs. Or our new small personal computer printers.

Our GLP Series printers are small enough to put just about anywhere.

If you haven't looked at us since last year, you also don't know how fast our product line's expanding. Both dot matrix printers and line printers. Thanks to our increased spending in research and development.

If you've waited over a year to look at us, you've missed even more. Like our affiliation with Control Data Corporation. And you should probably look again. Here's why.

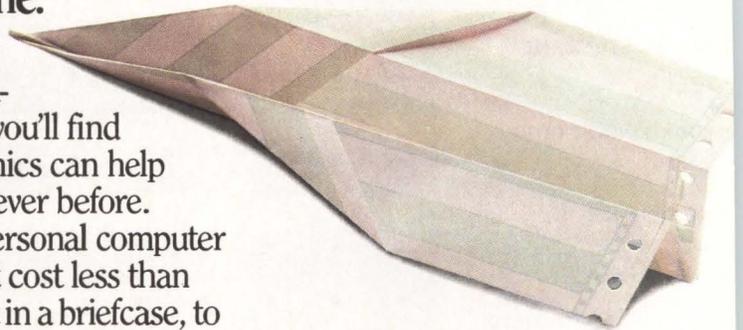

We've expanded our product line.

Whatever your application needs, you'll find that Centronics can help better than ever before. With new personal computer printers that cost less than \$300 and fit in a briefcase, to line printers that run at burst speeds up to 2400 lpm without even breathing hard.

In between we have something for just about every application imaginable. Whether it's word processing, business processing or data processing. New printers that give you high quality graphics. Proven printers that give you high quantity output and reliable performance.

We've added features and flexibility.

Not just in our newest printers, but in our existing printer families as well. Take the new additions to our Printstation 350 Series of dot matrix printers. They excel in cut sheet feeding, multi-part forms, fanfold or

Just about the only paper handling technique we don't offer.

envelopes. They even collate letters. While performing at a wide range of speeds. From beautiful correspondence and color graphics at 100 cps, to draft form at 400 cps.

Consider our Linewriters 400 and 800. Their new linear free flight hammer technology puts an end to clipped characters and constant hammer adjustments. And their modular design, no scheduled main-

At 55 decibels, our Linewriters are as quiet as a sleeping baby.

*As ranked by "The Datamation 100," June 1983 issue. Report on the leading U.S. DP companies.

you looked at Centronics?

tenance, and reduced failure rates result in the lowest line printer cost of ownership in the industry.

The rest of our products are worth checking out too. They're quieter, more reliable, easier to operate, even smarter.

We're big in small printers too.

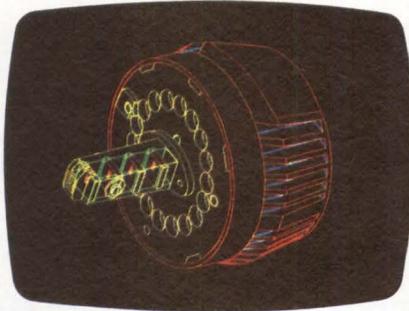

This year, we've incorporated the latest technologies into three new series of small

Our color graphics will make all your pie charts beautiful.

printers. The Printstation 250. The Horizon. And the GLP (Great Little Printer). Now your small business computer and personal computer users can put high performance right on their desks. With fea-

tures that include versatile paper handling, dual print modes, color graphics, and typefaces to meet any need.

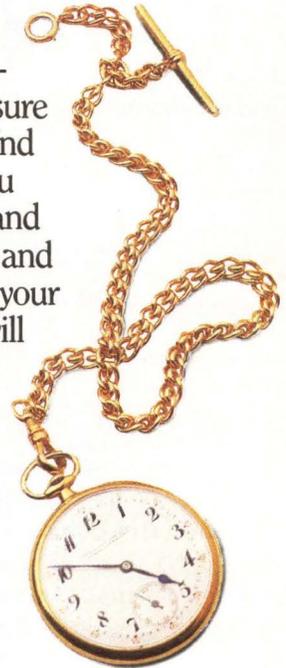

We're using the latest technology to design the latest technology.

Our OEM commitment continues.

Today, four of the five largest computer manufacturers* offer Centronics printers with their systems. Not just because we deliver a full line of products or help them customize interfaces. Not even because we've reduced ownership costs by designing multiple products based on common parts. Rather it's because we insist on working as a partner with our OEMs. Listening to their feedback. Incorporating their ideas into products you can count on. Dramatically increasing our commitment

to research and development. To assure the quality and reliability you need today and the features and innovations your customers will demand tomorrow.

Like a Swiss watch, our printers are built with quality and reliability.

Looking ahead.

At Centronics, we're constantly seeking new ways to look out for your business. And that may be the most compelling reason for you to look at us.

MICROSCIENCE BRINGS SOMETHING NEW, EXCITING TO NCC....

STRAIGHT TALK

NCC and Las Vegas. What a backdrop for an exciting, refreshing change of pace. The change is Microscience's introduction of two new half-height Winchester disk drives.

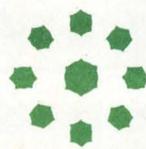

Amid all the hustle ... all the bustle ... all the songs ... all the dancing ... and all the noise, Microscience will unveil two new half-height Winchesters with a dramatic set of differences.

- High Reliability
- Economy
- High Performance
- Low Power Consumption
- Quality
- Quantity

Solid features you've been looking for. Delivery you can depend on.

It really will be a refreshing change.

More power than a Thunderchief.

When it comes to choices in tape transports, Innovative Data Technology puts unprecedented power and technology in your hands. Its Series TD-1012, TD-1050 and TD-1750 tape transports offer full 7- and 9-track IBM/ANSI/ECMA/ISO 1/2-inch magnetic tape compatibility and can be configured for a variety of data transportation, data logging and data back-up. Integrated with these tape transports are a complete line of controllers for: RS-232C, IEEE-488 (GPIB), Unibus/Q Bus, Intel Multibus, Parallel I/O and the new Small Computer Systems Interface (SCSI).

The TD-1012 operates at 12.5 ips Start/Stop and 100 ips Streaming, 1600 bpi (PE). Dual mode, 800 (NRZI) and 1600 bpi (PE), operation is offered at 45 ips Start/Stop for the Series TD-1050 and 75 ips Start/Stop for the Series TD-1750. The Series TD-1750 represents even more advanced engineering—an active tension arm technique that eliminates noisy vacuum columns—a first in 75 ips tape transports to take advantage of this technology. IDT's family of tape transports. They'll give you more power than a Thunderchief.

Peripherals Digest

Mini-Micro Systems Semi-Annual* Guide to Computer Peripherals

The Peripherals Digest is the indispensable selection guide to computer peripheral equipment for systems integrators and high volume end users. The Peripherals Digest consolidates, categorizes and interprets each offering with extensive data and comprehensive text.

Mini-Micro Systems magazine has helped define the value-added market for mini and microcomputers and related peripheral equipment on a monthly basis for over 15 years. The Peripherals Digest adds regularly updated reference coverage to our monthly news and features in Mini-Micro Systems.

The Peripherals Digest, a reference source to keep handy throughout the year.

For advertising information, please contact your regional sales manager.

*Second issue in April and November. Spring and Fall editions

MINI Z80B

SERVO 8 Single Board Computer

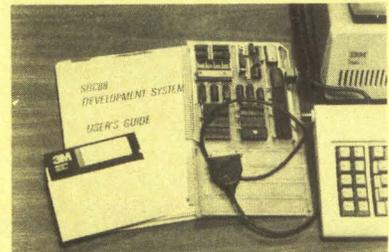

- 5.75" by 8", same as a minifloppy
- Fast, 6 megahertz with no wait states
- Controls both 5.25" and 8" floppy drives
- SASI bus controls 10 megabyte Winchester
- 64K RAM and 2K EPROM, both expandable
- 2 RS232 serial ports and Centronics port
- Runs CP/M and OASIS operating systems
- Special introductory price, only \$495.
- In stock, 5 day delivery — VISA M/C COD

New! DEC UDA50
Performance and function
for Q-Bus Systems
See Us at NCC '84 - Booth 3556

DML's DECLARATION Of Independence

DEC's-ation without representation is . . . well, you know the story. Particularly if you've been searching for 100% compatible DEC UDA50 alternative disk subsystems.

Search no more.

DML offers a family of high performance, DEC compatible subsystems and Winchester disk drives for the PDP-11 and VAX UNIBUS product lines that support DEC's Digital Storage Architecture (DSA); and now brings

the same high performance to Q-Bus systems.

Along with performance features like command stacking, seek overlap and 51-sector speed matching buffer, the DML alternatives are faster and offer more capacity. Plus, they cost a lot less — 25% less.

And, they are backed by a company that has manufactured and shipped thousands of Winchester disk subsystems, with OEM service and support internationally.

So, if you want to put an end to tyranny, try a little Boston Tea Party of your own. See what it feels like to be free. Call or write Gordon Orsborn, VP Marketing, Data Management Labs, 2180 Bering Dr., San Jose, CA 95131; (408) 946-9424.

The INSTANET™ remedy for local networking headaches

Roger:
The engineers want us to
show a network diagram
like this one.

Chris

Headache

It's too early to make a long-term commitment to baseband or broadband.

We don't want to get involved with more layers of protocol and more incompatibilities.

Fiber optic cable and coax are expensive and messy to install.

We're not ready to put in a whole network now.

We already own a good deal of datacomm gear.

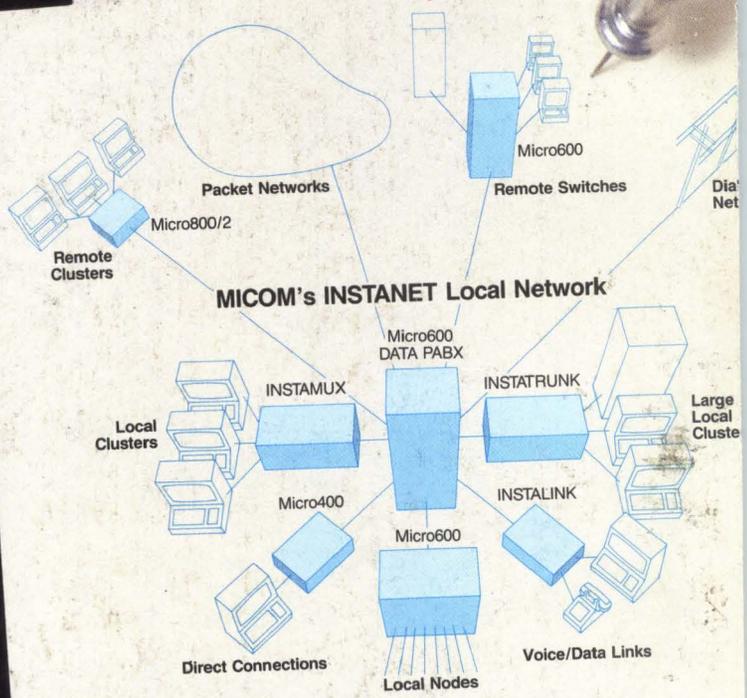

Division/Group DP Managers want control of their own local datacomm.

We need Gateways:

- To the switched phone network
- To Packet Data Networks
- To other local networks.

WE NEED IT FAST!

We don't want to spend an arm and a leg.

Not in my ad!
Roger
