31 0031 1 FACILITY: BASIC-PLUS-2 I/O and Error Handling
32 0032 1
33 0033 1 ABSTRACT:
34 0034 1
35 0035 1 This module contains BAS$$SIGNAL_IO, which is called following
36 0036 1 any I/O error. If requested, it examines the RMS control blocks
37 0037 1 and signals the proper BASIC error. Another entry point,
38 0038 1 BAS$$STOP_IO, guarantees never to return to the caller.
39 0039 1
40 0040 1 ENVIRONMENT: VAX/VMS user mode
41 0041 1
42 0042 1 AUTHOR: John Sauter, CREATION DATE: 08-DEC-78
43 0043 1
44 0044 1 MODIFIED BY:
45 0045 1
46 0046 1 1-001 - Original. JBS 08-DEC-78
47 0047 1 1-002 - Revise to take CCB via R11 and only need one explicit
48 0048 1 argument. JBS 11-DEC-78
49 0049 1 1-003 - Compute user PC. JBS 19-DEC-78
50 0050 1 1-004 - Put code in proper PSECT. JBS 21-DEC-78
51 0051 1 1-005 - If this is OPEN and there is no error code in the RAB, extract
52 0052 1 the error code from the FAB. JBS 27-DEC-78
53 0053 1 1-006 - Change the prefix for BASIC stack frame offsets to BSF$.
54 0054 1 JBS 08-FEB-1979
55 0055 1 1-007 - Don't force the error code to SEVERE by calling LIB$STOP
56 0056 1 from BAS$$SIGNAL_IO. JBS 20-FEB-1979
57 0057 1 1-008 - Use BASIOERR.REQ to define the I/O error codes. JBS 20-FEB-1979
```

```

: 58      0058 1 : 1-009 - Take numbers outside of the normal range of error codes
: 59      0059 1 :      to mean BASIC (rather than RMS) errors. JBS 06-APR-1979
: 60      0060 1 : 1-010 - Don't use BAS$K_ON_CHAFIL since it does not get defined.
: 61      0061 1 :      JBS 06-APR-1979
: 62      0062 1 : 1-011 - Don't pass RMS information unless we are asked to compute the
: 63      0063 1 :      BASIC error code from it. JBS 06-APR-1979
: 64      0064 1 : 1-012 - Add the error codes for INDEXED I/O. JBS 09-APR-1979
: 65      0065 1 : 1-013 - If there is a FAB connected to the RAB, and the RAB does not
: 66      0066 1 :      show an error, get the status from the FAB. This is for
: 67      0067 1 :      the $EXTEND macro issued by the virtual memory support.
: 68      0068 1 :      JBS 24-MAY-1979
: 69      0069 1 : 1-014 - If the ISB indicates that this is a to-memory operation,
: 70      0070 1 :      transfer control to BAS$$STOP or BAS$$SIGNAL.
: 71      0071 1 :      JBS 24-MAY-1979
: 72      0072 1 : 1-015 - Correct an error in the translate table. JBS 30-JUL-1979
: 73      0073 1 : 1-016 - Make the SQO error give "Illegal Operation". JBS 02-AUG-1979
: 74      0074 1 : 1-017 - Add BAS$$SIGNAL RMS. JBS 09-AUG-1979
: 75      0075 1 : 1-018 - Change BAS$$SIGNAL RMS to BAS$$STOP RMS. Only the comment
: 76      0076 1 :      above was actually wrong. JBS 22-AUG-1979
: 77      0077 1 : 1-019 - if 0(fp) is 0 then CALC USER PC should bail out before it gets a
: 78      0078 1 :      access violation. FM 15-MAY-81.
: 79      0079 1 : 1-020 - Map RMS$ TNS onto BAS$K_LINTOOLON, and RMS$_SPE onto BAS$K_ERRFILCOR.
: 80      0080 1 :      PL 27-Oct-81
: 81      0081 1 : 1-021 - Remove map of RMS$_LBL, since that status is never returned by RMS.
: 82      0082 1 :      SBL 11-Nov-1982
: 83      0083 1 : 1-022 - change ERRFILCOR to EXRMSSHR, seeing as we only signal it when the
: 84      0084 1 :      system runs out of RMSSHR. MDL 5-Jan-1984
: 85      0085 1 : 1-023 - map RMS$_RNL to BAS$K_NO_CURREC. MDL 3-May-1984
: 86      0086 1 : --
: 87      0087 1 :
