FACILITY:  SHOW utility
ABSTRACT:
      These are the error messages used by the SHOW command
ENVIRONMENT:
      VAX/VMS operating system, privileged user mode utility,
      operates at non-AST level.
AUTHOR:   Gerry Smith                      11-Oct-1982
MODIFIED BY:
V03-008  AEW0001      Anne E. Warner      07-Aug-1984
          Add message show$ mscpnold for when the MSCP-Server
          code is not loaded and the user tries to SHOW DEV/SERVED.
V03-007  PRD0091      Paul R. DeStefano   06-Apr-1984
          Restored all V3 message values by moving all new
          messages to the end of the file. Changes first
          character in Show Cluster messages to lowercase.
V03-006  PRD0082      Paul R. DeStefano   25-Mar-1984
          Added additional messages for Show Cluster.

This image displays a grid of 100 terminal window screenshots, arranged in 10 rows and 10 columns. Each window shows a different system utility or diagnostic tool. The most prominent and clearly legible windows include:

- SHOWTERM LIS**: Located in the upper right quadrant, showing terminal status information.
- SHOWMISC LIS**: Located in the middle left, showing miscellaneous system information.
- SHOWPROC LIS**: Located in the middle center, showing process status.
- SHOWSYS LIS**: Located in the middle right, showing system status.
- SHOWMAIN LIS**: Located in the lower middle left, showing main system information.
- SHOWMSCP LIS**: Located in the lower middle center, showing message control panel status.
- SHOWMSG LIS**: Located in the lower middle right, showing message status.
- SHOWQUE LIS**: Located in the lower right, showing queue status.

The remaining windows in the grid show various other system utilities, including file management, device control, and system configuration tools, all presented in a monospaced font typical of early computer terminals.
