TEMPREQ.REQ

These are temporary definitions which should eventually go into STARLET.REQ or LIB.REQ. One set of definitions is the IMDB\$ definitions which describe fields in an image header. These come from RESD\$:[SYS.OBJ]IMGACTCTX.R32 (in that file, the name is ICBS\$ instead of IMDB\$, though). IF THE IMAGE ACTIVATOR'S REQUIRE FILE CHANGES, THIS FILE MUST CHANGE ACCORDINGLY - OTHERWISE THE DEBUGGER WILL BREAK. If any errors with shareable images or failing to set the correct module occur, you should check these two files for consistency.

The only other definition in here is the BINSKALE bit for scaled binary descriptors. This should eventually make it into STARLET, at which time it can be deleted from this file.

Image Descriptor Block definitions. These definitions describe the Image Activator's Image Descriptor Blocks from which DEBUG gets its shareable image information.

MACRO

```

IMDB$ _FLINK      = 0,0,32,0 %  ! Forward link to next descriptor block
IMDB$ _CHAN      = 14,0,16,0 %  ! Image file channel number
IMDB$ _IMAGE_NAME = 20,0,0,0 %  ! Shareable image name
IMDB$ _STARTING_ADDRESS = 72,0,32,0 % ! Start address of image
IMDB$ _END_ADDRESS = 76,0,32,0 % ! End address of image

```

LITERAL

```

IMDB$C_MAXNAMLEN = 128;      ! Maximum length of an image name

```

! Binary scale bit in VAX standard descriptor with scale factor.

MACRO
DSCSV_FL_BINSCALE = 10, 3, 1, 0 %;! Bit set if scale is binary scale

! End of TEMPREQ.REQ
