The working set limit was 900 pages.
 590 bytes (2 pages) of virtual memory were used to buffer the intermediate code.
 There were 10 pages of symbol table space allocated to hold 4 non-local and 0 local symbols.
 63 source lines were read in Pass 1, producing 13 object records in Pass 2.
 0 pages of virtual memory were used to define 0 macros.

This image displays a grid of 100 terminal window screenshots, arranged in 10 rows and 10 columns. Each window shows a different system utility or data display from the VAX/VMS V4.0 environment. The windows are densely packed and contain various types of information, including:

- System status and configuration screens (e.g., `SYSDATA`, `SYSDATA`, `SYSDATA`).
- File listings and directory structures (e.g., `DIR`, `DIR`, `DIR`).
- System logs and error messages (e.g., `LOG`, `LOG`, `LOG`).
- Performance monitoring and resource usage screens (e.g., `PERF`, `PERF`, `PERF`).
- System management and control screens (e.g., `SM`, `SM`, `SM`).
- Network and communication status screens (e.g., `NET`, `NET`, `NET`).
- System initialization and boot screens (e.g., `INIT`, `INIT`, `INIT`).
- System shutdown and power management screens (e.g., `SHUTDOWN`, `SHUTDOWN`, `SHUTDOWN`).
- System backup and recovery screens (e.g., `BACKUP`, `BACKUP`, `BACKUP`).
- System security and access control screens (e.g., `SECURITY`, `SECURITY`, `SECURITY`).
- System maintenance and diagnostic screens (e.g., `MAINT`, `MAINT`, `MAINT`).
- System configuration and parameter setting screens (e.g., `CONFIG`, `CONFIG`, `CONFIG`).
- System performance and resource usage screens (e.g., `PERF`, `PERF`, `PERF`).
