MACRO

COMPARE QUADWORD VALUES--

Macro to compare two quadword values using the user supplied operator. This macro is somewhat inefficient if the supplied operator is EQL or NEQL since the expansion becomes (in part):

```
IF Q1 EQL Q2 THEN IF Q1 EQL Q2 THEN TRUE ELSE FALSE
```

However the compiler may remove this inefficiency through optimization. This macro works better for values that are close to one another as it does the equality check of the high order words first. This macro could be improved by inspecting the supplied operator and generating a tailored macro.

```
COMPARE_QUAD (Q1, OPER, Q2) =
```

```
BEGIN
```

```
  BIND A = Q1: VECTOR [2, LONG];
```

```
  BIND B = Q2: VECTOR [2, LONG];
```

```
  IF .A[1] EQL .B[1] THEN .A[0] OPER .B[0] ELSE .A[1] OPER .B[1]
```

```
END% ;
```
