0000 29     : FACILITY: FORTRAN Support Library - user callable
0000 30     :
0000 31     : ABSTRACT:
0000 32     :
0000 33     :   This module contains the entry point for the FORTRAN
0000 34     :   READ DIRECT FORMATTED I/O statement. It is simply
0000 35     :   a call to FOR$$IO_BEG with bits in R0 which describe the
0000 36     :   parameter list. FOR$$IO_BEG interprets the parameters.
0000 37     :
0000 38     : MAINTENANCE NOTE:
0000 39     :   The transfer vector (RTLVECTOR+ALLGBL) must have the following:
0000 40     :
0000 41     :   .TRANSFER      FOR$READ_DF
0000 42     :   .MASK          FOR$$IO_BEG
0000 43     :   BRW           FOR$READ_DF+2
0000 44     :
0000 45     :   This puts the correct mask in entry vector, that is FOR$$IO_BEG entry mask.
0000 46     :   Furthermore this module must only use R0 and R1
0000 47     :   since any other register might not be in the entry mask for FOR$$IO_BEG.
0000 48     :
0000 49     : ENVIRONMENT: User access mode; mixture of AST level or not
0000 50     :

6690 bytes (14 pages) of virtual memory were used to buffer the intermediate code.  
There were 20 pages of symbol table space allocated to hold 187 non-local and 0 local symbols.  
179 source lines were read in Pass 1, producing 8 object records in Pass 2.  
9 pages of virtual memory were used to define 2 macros.
