{ FACILITY:  VAX/VMS DECnet Maintenance Operations Module (MOM)
{
{ ABSTRACT:
{
{       This file contains varions service SDL definitions for MOM.
{
{ ENVIRONMENT:
{
{       n/a
{
{ AUTHOR:  Kathy Perko          17-Dec-1982
{
{ MODIFICATION HISTORY:
{       V03-007 MKP0007         Kathy Perko     21-July-1984
{               Increase size of maximum MOP message buffers so they
{               can hold a fairly large loop message.  Other logic will
{               be added to recover gracefully if the loop message is
{               larger than this buffer.
{
{       V03-006 MKP0006         Kathy Perko     30-May-1984
{               Remove echo parameter from CIB P2 buffer so QNAs will do
{               service functions.
{
{       V03-005 MKP0005         Kathy Perko     12-April-1984
{               Add dump complete MOP function code.
{
{       V03-004 MKP0004         Kathy Perko     11-April-1984
```

```
{               Convert file to SDL.
{
{       V03-003 MKP0003         Kathy Perko     26-Mar-1984
{               Fix area 1 problem.
{
{       V03-002 MKP0002         Kathy Perko     11-Feb-1984
{               Use Remote Console protocol type for Boot message on NI
{               (instead of Load Dump protocol - the DEUNA doesn't care,
{               but the QNA does).
{
{       V03-001 MKP0001         Kathy Perko     10-May-1983
{               Allow load file names of up to 128 characters.
{
