35 0035 1 FACILITY: DECnet-VAX Network Management Maintenance Operations Module (MOM)
36 0036 1
37 0037 1 ABSTRACT:
38 0038 1     This module contains general purpose file access routines
39 0039 1     necessary for manipulating the Load and Dump files for NML.
40 0040 1
41 0041 1 ENVIRONMENT: VAX/VMS Operating System
42 0042 1
43 0043 1 AUTHOR: Kathy Perko
44 0044 1
45 0045 1 CREATION DATE: 11-Jan-1983
46 0046 1
47 0047 1 MODIFIED BY:
48 0048 1     V03-001 MKP0001          Kathy Perko          12-April-1984
49 0049 1     Open load files for shared read so more than one MOM can
50 0050 1     load the file at a time.

232 0228 1 %SBTTL 'MOM$SRVREAD Read a record from the opened file'
233 0229 1 GLOBAL ROUTINE MOM$SRVREAD (BUFFERDSC, BYTES_IN_BUF, LOAD_FILE) =
234 0230 1
235 0231 1  +-+
236 0232 1  FUNCTIONAL DESCRIPTION:
237 0233 1
238 0234 1  This routine is called while doing down line load to get the
239 0235 1  contents of the load file (from disk or another node) to send
240 0236 1  to the node being loaded. It reads records from the currently
241 0237 1  opened load file into the specified buffer and return in the
242 0238 1  BYTES_IN_BUF parameter the number of bytes actually read.
243 0239 1
244 0240 1  FORMAL PARAMETERS:
245 0241 1
246 0242 1  BUFFERDSC      Descriptor of the receive buffer.
247 0243 1  BYTES_IN_BUF   Word to receive the actual number of bytes read.
248 0244 1  LOAD_FILE      Identification of which load file is being loaded
249 0245 1  (secondary, tertiary, or operating system). Used
250 0246 1  for signalling errors.
251 0247 1
252 0248 1  ROUTINE VALUE:
253 0249 1  COMPLETION CODES:
254 0250 1
255 0251 1  Returns the status of the operation.
256 0252 1
257 0253 1  SIDE EFFECTS:
258 0254 1
259 0255 1  Fills in the formal parameter BYTES_IN_BUF with the size of data
260 0256 1  actually received.
261 0257 1
262 0258 1  --
263 0259 1
264 0260 2 BEGIN
265 0261 2
