29         Symbiont.
30
31     ABSTRACT:
32         Symbiont messages.
33
34         These are the messages common to VAX/VMS symbionts. Message types for
35         messages sent from the symbionts to the job controller are defined by
36         the $MSGDEF macro.
37
38     ENVIRONMENT:
39         VAX/VMS user and kernel mode.
40

49             Removed these definitions for SMB and placed in a separate
50             file SMBMSG.MSG. This accomplishes the renaming of messages
51             with a separate facility code. Now two types of messages
52             SMBS... AND PSMS... depending on the context of the
53             error. Audit trail begins at higher number since this is
54             a continuation of PSMMSG.MSG.

VAX/VMS V4.0

DIGITAL EQUIPMENT CORPORATION  
CONFIDENTIAL AND PROPRIETARY

The image displays a grid of 120 small terminal window screenshots, arranged in 10 rows and 12 columns. Each window contains text-based data, likely from a VAX/VMS system. The text is mostly illegible due to the low resolution and small size of the windows. However, some windows have prominent headers or titles, such as "SERVICES LIS" in the second row, seventh column; "SMBMSG LIS" in the eighth row, tenth column; and "TABLES LIS" in the tenth row, tenth column. The windows appear to be part of a larger application or a batch of similar operations, showing various data lists and tables.
