0000     28 ;++
0000     29 ; Facility: rms32
0000     30 ;
0000     31 ; Abstract:
0000     32 ;                    This is the highest level routine to perform the $parse function
0000     33 ;
0000     34 ; Environment:
0000     35 ;                    VAX/VMS
0000     36 ;
0000     37 ; Author:
0000     38 ;                    Tim Halvorsen   AUG-1979
0000     39 ;
0000     40 ; Modified By:
0000     41 ;
0000     42 ;           V03-019 RAS0287         Ron Schaefer            3-Apr-1984
0000     43 ;                   Minor changes to searchlist and wildcard processing:
0000     44 ;                   1.  Prevent searchlist continuation if the error
0000     45 ;                       is not a continuable one;
0000     46 ;                   2.  Don't force context to be saved for ANY wildcard,
0000     47 ;                       only for searchlists, network or wildcard directories.
0000     48 ;
0000     49 ;           V03-018 RAS0251         Ron Schaefer            9-Feb-1984
0000     50 ;                   Add support for special parsing flag NAM$V_SLPARSE
0000     51 ;                   for BACKUP.   This flag causes multiple $PARSEs of
0000     52 ;                   a searchlist filespec to return successive searchlist
0000     53 ;                   elements.  Reorganize the cleanup of old saved context.
0000     54 ;
0000     55 ;           V03-017 RAS0241,RAS0242 Ron Schaefer           23-Jan-1984
0000     56 ;                   Fix bugcheck in saved-context searches caused by
0000     57 ;                   a bogus null directory spec.
0000     58 ;                   Fix bugchecks caused by lack of a fwa (valid R10)
0000     59 ;                   on calls to RM$PARSE_FILE.
0000     60 ;                   Return DNF error if no directory is found by RM$NEXTDIR.
0000     61 ;
0000     62 ;           V03-016 RAS0231         Ron Schaefer            9-Jan-1984
0000     63 ;                   Support NAM$V_SYNCHK by not doing the $ASSIGN nor
0000     64 ;                   the directory lookup.  Use FWA$V_SYNTAX_CHK flag.
0000     65 ;                   Don't save context in this case either so subsequent
0000     66 ;                   $SEARCHs will not work.
0000     67 ;
0000     68 ;           V03-015 RAS0219         Ron Schaefer            8-Dec-1983
0000     69 ;                   Process errors from RM$INIT_SWB.
0000     70 ;
0000     71 ;           V03-014 RAS0218         Ron Schaefer            5-Dec-1983
0000     72 ;                   Make node names work as search list elements.
0000     73 ;
0000     74 ;           V03-013 RAS0209         Ron Schaefer            4-Nov-1983
0000     75 ;                   Clean-up returned device characteristics by calling
0000     76 ;                   a central routine  RM$RET_DEV_CHAR.
0000     77 ;
0000     78 ;           V03-012 RAS0201         Ron Schaefer           17-Oct-1983
0000     79 ;                   Correct calls to RM$PARSE_FILE to account for the fact
0000     80 ;                   that it does NOT necessarily preserve R7.
0000     81 ;
0000     82 ;           V03-011 KBT0565         Keith B. Thompson       26-Jul-1983
0000     83 ;                   Save context if any wild field present
0000     84 ;
```

```
0000     85 ;        V03-010 KBT0530         Keith B. Thompson       31-May-1983
0000     86 ;                Add search list support
0000     87 ;
0000     88 ;        V03-009 KBT0519         Keith B. Thompson       23-May-1983
0000     89 ;                RM$XPFN moved so change ref to JSB
0000     90 ;
0000     91 ;        V03-008 LJA0062         Laurie J. Anderson      23-Feb-1983
0000     92 ;                Move RM$WRITE_DVI to RMONAMSTR.MAR which is where it belongs.
0000     93 ;
0000     94 ;        V03-007 KBT0430         Keith B. Thompson       3-Dec-1982
0000     95 ;                Change the way the device name is returned by write_dvi
0000     96 ;
0000     97 ;        V03-006 KBT0427         Keith B. Thompson       2-Dec-1982
0000     98 ;                Fix rm$write_dvi to use new type of name in shrfilbuf
0000     99 ;
0000    100 ;        V03-005 KBTJ405         Keith B. Thompson       30-Nov-1982
0000    101 ;                Change fwa$t_shrfildev to fwa$t_shrfilbuf
0000    102 ;
0000    103 ;        V03-004 RAS0103         Ron Schaefer            19-Nov-1982
0000    104 ;                Correct saving of the caller's access mode so that
0000    105 ;                exits via RM$EX_NOSTR have the caller's mode in R7.
0000    106 ;
0000    107 ;        V03-003 DMW4003         DMWalp                  2-Sep-1982
0000    108 ;                Added code so that RM$FABCHK was not called twice;
0000    109 ;                it was called once directly and a second time via RM$FSETI
0000    110 ;
0000    111 ;        V03-002 KBT0188         Keith B. Thompson       23-Aug-1982
0000    112 ;                Reorganize psects and rename entry point to single '$'
0000    113 ;
0000    114 ;        V03-001 KDM0002         Kathleen D. Morse       28-Jun-1982
0000    115 ;                Added $PSLDEF.
0000    116 ;
0000    117 ;--

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	35	00:00:00.09	00:00:00.87
Command processing	139	00:00:00.82	00:00:07.61
Pass 1	442	00:00:17.20	00:00:35.26
Symbol table sort	0	00:00:02.64	00:00:03.31
Pass 2	122	00:00:03.32	00:00:07.75
Symbol table output	13	00:00:00.14	00:00:00.44
Psect synopsis output	1	00:00:00.02	00:00:00.07
Cross-reference output	0	00:00:00.00	00:00:00.00
Assembler run totals	754	00:00:24.24	00:00:55.39

The working set limit was 1800 pages.
95512 bytes (187 pages) of virtual memory were used to buffer the intermediate code.
There were 100 pages of symbol table space allocated to hold 1842 non-local and 35 local symbols.
628 source lines were read in Pass 1, producing 15 object records in Pass 2.
30 pages of virtual memory were sed to define 29 macros.

Macro library stat stics

Macro library name	Macros defined
_255DUA28:[RMS.OBJ]RMS.MLB;1	14
_255DUA28:[SYS.OBJ]LIB.MLB;1	1
_255DUA28:[SYSLIB]STARLET.MLB;2	10
TOTALS (all libraries)	25

1982 GETS were required to define 25 macros.

There were no errors, warnings or information messages.
