0000    29  ; FACILITY: EXECUTIVE, PROCESS CREATION SYSTEM SERVICE
0000    30  ;
0000    31  ; ABSTRACT:
0000    32  ;       PROCSTRT CONTAINS THE CODE NECESSARY TO CONCLUDE THE CREATION
0000    33  ;       OF A PROCESS WHICH MUST BE EXECUTED IN THE CONTEXT OF THAT PROCESS.
0000    34  ;
0000    35  ; ENVIRONMENT:
0000    36  ;       MODE=KERNEL, EXECUTING IN CONTEXT OF NEW PROCESS
0000    37  ;
0000    38  ; AUTHOR: R. I. HUSTVEDT        , CREATION DATE: 27-DEC-76
0000    39  ;
0000    40  ; MODIFIED BY:
0000    41  ;
0000    42  ;       V03-002 RAS0332         Ron Schaefer            14-Sep-1984
0000    43  ;               Check for RMS$_BUSY status in the RMS exit handler
0000    44  ;               so as to prevent an infinite loop if the handler
0000    45  ;               has interrupted RMS rundown badly.   In that case,
0000    46  ;               give up on trying to do rundown cleanly.
0000    47  ;               Also, change the rundown type to do a full PPF rundown.
0000    48  ;
0000    49  ;       V04-001 JWT0195         Jim Teague              11-Sep-1984
0000    50  ;               Replace RMS exec mode exit handler for proper rundown
0000    51  ;               of single-image processes.
0000    52  ;
0000    53  ;       V03-043 LJK0288         Lawrence J. Kenah       9-Aug-1984
0000    54  ;               The AUTHPRI cell now exists in both the PCB and the PHD.
0000    55  ;
0000    56  ;       V03-042 ACG0440         Andrew C. Goldstein,    24-Jul-1984  10:45
0000    57  ;               Add ref count field to ORB
```

```
0000     58 ;
0000     59 ;       V03-041 HH0040          Hai Huang                   19-Jul-1984
0000     60 ;               Add routine EXE$CRE_GTABLE.
0000     61 ;
0000     62 ;       V03-040 LMP0275         L. Mark Pilant,             12-Jul-1984  20:14
0000     63 ;               Initialize the ACL info in the ORB to be a null descriptor
0000     64 ;               list rather than an empty queue.  This avoids the overhead
0000     65 ;               of locking and unlocking the ACL mutex, only to find out
0000     66 ;               that the ACL was empty.
0000     67 ;
0000     68 ;       V03-039 RAS0319         Ron Schaefer                29-Jun-1984
0000     69 ;               Initialize the logical name table name translation
0000     70 ;               cache queue to empty.
0000     71 ;
0000     72 ;       V03-038 LJK0272         Lawrence J. Kenah           10-Apr-1984
0000     73 ;               Initialize VECSET array at the same time that the VECRESET
0000     74 ;               array is set up.
0000     75 ;
0000     76 ;       V03-037 MHB0121         Mark Bramhall               9-Apr-1984
0000     77 ;               Move new spawn CLI information to P1 space.
0000     78 ;
0000     79 ;       V03-036 TMK0010         Todd M. Katz                27-Mar-1984
0000     80 ;               Modify the logical name system services to make use of the
0000     81 ;               updated internal protection checking mechanisms. What this
0000     82 ;               involves is replacing the CHIP protection template in the
0000     83 ;               templates for the group and job-wide logical name table with
0000     84 ;               a template for a quad-word aligned Object Rights Block, and
0000     85 ;               making sure that the appropriate fields within the Object Rights
0000     86 ;               blocks are initialized when group and job-wide logical name
0000     87 ;               tables are created.
0000     88 ;
0000     89 ;       V03-035 WMC0007         Wayne Cardoza               21-Mar-1984
0000     90 ;               Create the default image I/O segment.
0000     91 ;
0000     92 ;       V03-034 TMK0009         Todd M. Katz                07-Mar-1984
0000     93 ;               Add a hash code field, LNMX$W_HASH, to every translation block
0000     94 ;               of every logical name and logical name table template defined.
0000     95 ;               This hash code field will be used in an optimization of logical
0000     96 ;               name table name processing.
0000     97 ;
0000     98 ;       V03-033 TMK0008         Todd M. Katz                17-Feb-1984
0000     99 ;               Fix alignment problems with LNM$GROUP and LNM$JOB introduced
0000    100 ;               by one of the two logical name table alignment bug fixes
0000    101 ;               below. This is done by defining the symbols GROUP_XEND_SIZE
0000    102 ;               and JOB_XEND_SIZE. These two symbols represent the actual
0000    103 ;               amount of storage utilized by LNM$GROUP and LNM$JOB
0000    104 ;               respectively while the two symbols GROUP_SIZE and JOB_SIZE
0000    105 ;               represent the amount of storage actually allocated for these
0000    106 ;               logical names. These two new symbols are needed by the PROCSTRT
0000    107 ;               code that constructs the equivalence strings for these logical
0000    108 ;               names. This code depends upon knowledge of the actual amount of
0000    109 ;               storage, allocated to the logical names, which is utilized by
0000    110 ;               the logical names.
0000    111 ;
0000    112 ;       V03-032 LY00b8          Larry Yetto                 17-FEB-1984 14:36
0000    113 ;               Fix alignment of logical name tables
0000    114 ;
```

```
0000   115 ;       V03-031 LY00b6          Larry Yetto             16-FEB-1984 14:21
0000   116 ;               Fix alignment of logical name tables
0000   117 ;
0000   118 ;       V03-030 WMC0006         Wayne Cardoza           12-Jan-1983
0000   119 ;               Create DZRO space for XQP, CRF no longer an option.
0000   120 ;
0000   121 ;       V03-029 TMK0007         Todd M. Katz            26-Jan-1984
0000   122 ;               Fix a bug introduced in TMK0006. In EXE$CRE_JGTABLE, if an
0000   123 ;               existing group table is found when an attempt is made to
0000   124 ;               create-if a new group table, then the paged pool for what would
0000   125 ;               have become a new group logical name table must be deleted. This
0000   126 ;               was not being done. This resulted in multiple group tables with
0000   127 ;               identical names, and had the further undesirable affect of
0000   128 ;               causing paged pool to disappear over time as more and more of
0000   129 ;               these duplicate group logical name tables were created as a
0000   130 ;               by-product of process creation.
0000   131 ;
0000   132 ;       V03-028 LJK0258         Lawrence J. Kenah       18-Jan-1984
0000   133 ;               Fix bug introduced in LJK0257. Save R4 and R5 before they
0000   134 ;               are destroyed by a MOVC3 instruction.
0000   135 ;
0000   136 ;       V03-027 LJK0257         Lawrence J. Kenah       28-Dec-1983
0000   137 ;               Add support for longer text strings in the PQB. Fix error
0000   138 ;               paths. Add initialization code for P1 lookaside list.
0000   139 ;
0000   140 ;       V03-026 SHZ0001         Stephen H. Zalewski     27-Dec-1983
0000   141 ;               Remove RMS executive mode exit handler.
0000   142 ;
0000   143 ;       V03-025 TMK0006         Todd M. Katz            10-Nov-1983
0000   144 ;               Optimize the logical name and logical name table creations that
0000   145 ;               are required to be done at process creation time. This is done
0000   146 ;               by replacing all $CRELNT and $CRELNM system service calls with
0000   147 ;               the corresponding code that hand constructs the logical name
0000   148 ;               blocks and oversees their insertion into the overall logical
0000   149 ;               name structure. In addition, group logical name tables will no
0000   150 ;               longer be created for sub-processes. As in the case of the
0000   151 ;               job-wide logical name table, it will be assumed that the group
0000   152 ;               logical name table for a sub-process already exists.
0000   153 ;
0000   154 ;       V03-024 TMK0005         Todd M. Katz            12-Oct-1983
0000   155 ;               If the process being created is not a sub-process, create the
0000   156 ;               job-wide logical name table.
0000   157 ;
0000   158 ;       V03-023 TMK0004         Todd M. Katz            26-Sep-1983
0000   159 ;               Change the protection on the group logical name table to
0000   160 ;               SYSTEM:RWED OWNER: GROUP:R WORLD: so that processes with system
0000   161 ;               access rights can access and modify any group table.
0000   162 ;
0000   163 ;       V03-022 RAS0181         Ron Schaefer            5-Sep-1983
0000   164 ;               Convert creation of SYS$INPUT, SYS$OUTPUT, SYS$ERROR,
0000   165 ;               SYS$DISK and TT logical names to use $CRELNM.
0000   166 ;

0000   205 ;               Add CHIP protection to logical name structures.
0000   206 ;               Currently only SOGW protection is supported.
0000   207 ;               Fix quota of LNM$PROCESS_DIRECTORY.
0000   208 ;
0000   209 ;       V03-103 WMC0003         Wayne Cardoza           10-May-1983
0000   210 ;               Change XQP merge to use global sections rather than IMGACT.
0000   211 ;
0000   212 ;       V03-012 TMK0002         Todd M. Katz            26-Apr-1983
0000   213 ;               Create the following logical name structures at process creation
0000   214 ;               time:
0000   215 ;
0000   216 ;                       1. LNM$PROCESS_TABLE.
0000   217 ;                       2. LNM$GROUP_xxxxxxxx (The Group Logical Name Table).
0000   218 ;                       3. LNM$GROUP.
0000   219 ;                       4. LNM$PROCESS.
0000   220 ;
0000   221 ;               Change the name of LNT$PROCESS_DIRECTORY to
0000   222 ;               LNM$PROCESS_DIRECTORY.
0000   223 ;
0000   224 ;       V03-011 CDS0003         Christian D. Saether    20-Apr-1983
0000   225 ;               Fix to V03-009.  Don't merge xqp if EXE$V_INIT is clear.
0000   226 ;
0000   227 ;       V03-010 TMK0001         Todd M. Katz            14-Apr-1983
0000   228 ;               Make the following changes to the setting up of the process
```

```
0000   229 ;                   directory logical name table:
0000   230 ;
0000   231 ;                   1. Make the table a kernel mode access table.
0000   232 ;                   2. The address of the process directory table's table header
0000   233 ;                      is placed in LNMB$L_TABLE.
0000   234 ;                   3. The bit LNMTH$V_DIRECTORY is set in LNMTH$B_FLAGS.
0000   235 ;                   4. The field LNMTH$L_LOGNAM is eliminated.
0000   236 ;
0000   237 ;       V03-009 CDS0002         Christian D. Saether    12-Apr-1983
0000   238 ;                   Always merge f11bxqp.  Check for xqpmerge errors.
0000   239 ;
0000   240 ;       V03-008 WMC0002         Wayne Cardoza           01-Apr-1983
0000   241 ;                   Add second half of IMGDMP.
0000   242 ;
0000   243 ;       V03-007 WMC0001         Wayne Cardoza           14-Mar-1983
0000   244 ;                   Add image dump interface.
0000   245 ;
0000   246 ;       V03-006 ACG0305         Andrew C. Goldstein,    16-Dec-1982  14:03
0000   247 ;                   Get hibernate flag correctly in EXE$PROCIMGACT entry
0000   248 ;
0000   249 ;       V03-005 CDS0001         Christian D. Saether    16-Dec-1982
0000   250 ;                   Add routine to merge F11BXQP into P1 space.
0000   251 ;
0000   252 ;       V03-004 DMW4017         DMWalp                  15-Dec-1982

OF4C  1442          .SBTTL XQPMERGE - Merge the XQP into P1 Space
OF4C  1443 ;++
OF4C  1444 ; FUNCTIONAL DESCRIPTION:
OF4C  1445 ;
OF4C  1446 ; This routine merges the XQP into P1 space.
OF4C  1447 ;
OF4C  1448 ; The number of global sections specified by XQP$GL_SECTIONS is mapped into
OF4C  1449 ; the end of P1 space.  The sections have names of the form SYSXQP_nnn where
OF4C  1450 ; nnn ranges from zero to XQP$W_SECTIONS-1.  The section is mapped writeable-CRF
OF4C  1451 ; if the corresponding bit in XQP$GL_SECPROT is set.
OF4C  1452 ;
OF4C  1453 ; CALLING SEQUENCE:
OF4C  1454 ;
OF4C  1455 ;       CALLS   #0,XQPMERGE
OF4C  1456 ;
OF4C  1457 ; INPUT PARAMETERS:
OF4C  1458 ;
OF4C  1459 ;       NONE
OF4C  1460 ;
OF4C  1461 ; IMPLICIT INPUT:
OF4C  1462 ;
OF4C  1463 ;       none
OF4C  1464 ;
OF4C  1465 ; OUTPUT PARAMETERS:
OF4C  1466 ;
OF4C  1467 ;       none
OF4C  1468 ;
OF4C  1469 ; IMPLICIT OUTPUT:
OF4C  1470 ;
OF4C  1471 ;       NONE
OF4C  1472 ;
OF4C  1473 ; COMPLETION CODES:
OF4C  1474 ;
OF4C  1475 ;       R0 low bit set => XQP successfully merged
OF4C  1476 ;
OF4C  1477 ;               SS$_NORMAL
OF4C  1478 ;
OF4C  1479 ;       R0 low bit clear => Error occurred while merging XQP
OF4C  1480 ;
OF4C  1481 ;               Various errors returned by $IMGACT and $MGBLSC
OF4C  1482 ;
OF4C  1483 ; SIDE EFFECTS:
OF4C  1484 ;
OF4C  1485 ;       The permanent portion of P1 space is
OF4C  1486 ;       expanded to accommodate the merged image.
OF4C  1487 ;

Command processing	112	00:00:00.50	00:00:03.78
Pass 1	601	00:00:27.11	00:01:35.27
Symbol table sort	0	00:00:03.87	00:00:10.29
Pass 2	363	00:00:06.72	00:00:23.84
Symbol table output	42	00:00:00.31	00:00:01.35
Psect synopsis output	2	00:00:00.03	00:00:00.18
Cross-reference output	0	00:00:00.00	00:00:00.00
Assembler run totals	1152	00:00:38.61	00:02:15.41

The working set limit was 2250 pages.
154901 bytes (303 pages) of virtual memory were used to buffer the intermediate code.
There were 130 pages of symbol table space allocated to hold 2571 non-local and 54 local symbols.
1894 source lines were read in Pass 1, producing 37 object records in Pass 2.
54 pages of virtual memory were used to define 52 macros.

```
                              +----------------------------+
                              ! Macro library statistics !
                              +----------------------------+

Macro library name                          Macros defined
------------------                          --------------
_$255$DUA28:[SYS.OBJ]LIB.MLB;1                      12
_$255$DUA28:[SYSLIB]STARLET.MLB;2                   36
TOTALS (all libraries)                              48

2738 GETS were required to define 48 macros.

There were no errors, warnings or information messages.

MACRO/LIS=LIS$:PROCSTRT/OBJ=OBJ$:PROCSTRT MSRC$:PROCSTRT/UPDATE=(ENH$:PROCSTRT)+EXECML$/LIB
