                     ;                Allow mapping of execute-access global sections.
                     ;
                     ;        V03-016 LJK0199         LAWRENCE J. KENAH       12-Apr-1983
                     ;                Restore FILCNT along with BYTCNT for files with shared windows.
                     ;
                     ;        V03-015 WMC0004         Wayne Cardoza           23-Mar-1983
                     ;                Fix a linker truncation error.
                     ;
                     ;        V03-014 WMC0003         Wayne Cardoza           18-Mar-1983
                     ;                Fix a return status in mapsecpag.
                     ;
                     ;        V03-013 WMC0002         Wayne Cardoza           02-Mar-1983
                     ;                MMG$CRECOM2 is gone
                     ;                MMG$RETADRINI, MMG$INADRINI return status
                     ;
                     ;        V03-012 WMC53991        Wayne Cardoza           21-Feb-1983
                     ;                Make protection checks on global sections not mapped to file.
                     ;
                     ;        V03-011 SRB0066         Steve Beckhardt         18-Feb-1983
```

```
                                                F 1
0000    115 ;                   Fixed two broken branch displacments.
0000    116 ;
0000    117 ;       V03-010 WMC0001         Wayne Cardoza           02-Feb-1983
0000    118 ;                   Ensure that section table entry is complete before service
0000    119 ;                   touches the return address.
0000    120 ;
0000    121 ;       V03-009 KDM0037         Kathleen D. Morse       16-Dec-1982
0000    122 ;                   Prevent shared memory and PFNMAP sections from being
0000    123 ;                   backed to page file via SEC$V_PAGFIL.  Optimize some code
0000    124 ;                   and add some comments.
0000    125 ;
0000    126 ;       V03-008 KDM0036         Kathleen D. Morse       15-Dec-1982
0000    127 ;                   Re-compute the section table entry address after every
0000    128 ;                   page creation as the process header may have been expanded
0000    129 ;                   causing the section table to slide up one page.
0000    130 ;
0000    131 ;       V03-007 KDM0038         Kathleen D. Morse       21-Dec-1982
0000    132 ;                   Change BSBW to JSB.
0000    133 ;
0000    134 ;       V03-006 KDM0029         Kathleen D. Morse       10-Nov-1982
0000    135 ;                   Correct check for backwards mapping of shared memory
0000    136 ;                   global section.  Only return SS$_IVSSRQ if the section
0000    137 ;                   is mapped in pieces, not if it is mapped in one contiguous
0000    138 ;                   piece of memory.
0000    139 ;
0000    140 ;       V03-005 LJK0189         Lawrence J. Kenah       10-Nov-1982
0000    141 ;                   Make RELPAG parameter work correctly for shared memory
0000    142 ;                   global sections.
0000    143 ;       V03-004 KDM0002         Kathleen D. Morse       28-Jun-1982
0000    144 ;                   Added $IODEF.
0000    145 ;
0000    146 ;       V03-003 PHL0101         Peter H. Lipman         21-Jun-1982
0000    147 ;                   $QIOW now synchronizes the EFN and IOSB parameters
0000    148 ;                   correctly.  Eliminate the synchronization code here.
0000    149 ;
0000    150 ;
0000    151 ;       V03-002 DWT0041         David Thiel             10-Jun-1982
0000    152 ;                   Correct sequence of clearing shared memory bitmap lock
0000    153 ;                   bit and releasing the shared memory GSD mutex so that the
0000    154 ;                   bitmap lock bit is cleared first.

OCE1  1901          .SBTTL  MAPSECPAG - MAP A SINGLE PROCESS/GLOBAL SECTION PAGE
OCE1  1902
OCE1  1903  ;++
OCE1  1904  ; FUNCTIONAL DESCRIPTION:
OCE1  1905  ;
OCE1  1906  ;       MAPSECPAG MAPS A SINGLE PAGE OF A GLOBAL OR PROCESS SECTION AT THE
OCE1  1907  ; SPECIFIED VITUAL ADDRESS.  AS IN CREPAG, THE PAGE TABLE IS EXTENDED
OCE1  1908  ; IF NECESSARY (WHICH COULD FAIL IF THE VIRTUAL ADDRESS SPACE IS FULL),
OCE1  1909  ; AND THE PAGE TABLE ENTRY IS DELETED IF NECESSARY AND THEN SET TO
OCE1  1910  ; SPECIFIED VALUE.
OCE1  1911  ;
OCE1  1912  ;       THE CREATE PAGE LOGIC WILL CAUSE THE SECTION TABLE TO BE RELOCATED
OCE1  1913  ; IF IT IS NECESSARY TO EXPAND THE PROCESS HEADER.  THIS HAPPENS WHEN THE
OCE1  1914  ; WORKING SET IS FULL AND IT IS BACK-TO-BACK WITH THE SECTION TABLE.  THAT
OCE1  1915  ; IS WHY THE SECTION TABLE ENTRY ADDRESS MUST BE RECOMPUTED AFTER EACH
OCE1  1916  ; CALL TO MMG$CREPAG.  THE SECTION TABLE INDEX NEVER CHANGES, BUT THE OFFSET
OCE1  1917  ; TO THE SECTION TABLE FROM THE TOP OF THE PROCESS HEADER DOES.
OCE1  1918  ;
OCE1  1919  ;       THIS ROUTINE IS ALSO USED TO UNMAP THE PAGES OF SHARED MEMORY GLOBAL
OCE1  1920  ; SECTION WHICH FOR SOME REASON COULD NOT BE INITIALIZED.  THE BIT,
OCE1  1921  ; GSD$V_INITFAIL, INDICATES THAT THE RANGE OF VIRTUAL ADDRESS SPACE IS TO
OCE1  1922  ; BE DELETED INSTEAD OF CREATED.  THIS SERVICE WILL ONLY BE NEEDED FOR SHARED
OCE1  1923  ; MEMORY GLOBAL SECTIONS SINCE ONLY THIS TYPE OF SECTION IS INITIALIZED BEFORE
OCE1  1924  ; THE $CRMPSC STATUS CODE CAN BE RETURNED TO THE USER.  THE NEW CONTENTS OF
OCE1  1925  ; THE PAGE TABLE ENTRY (R8) IS NOT USED WHEN DELETING VIRTUAL ADDRESS SPACE.
OCE1  1926  ;
OCE1  1927  ; CALLING SEQUENCE:

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	35	00:00:00.05	00:00:01.29
Command processing	124	00:00:00.53	00:00:05.56
Pass 1	695	00:00:30.80	00:01:38.85
Symbol table sort	0	00:00:04.67	00:00:15.89
Pass 2	411	00:00:07.61	00:00:28.35
Symbol table output	1	00:00:00.26	00:00:00.91
Psect synopsis output	0	00:00:00.03	00:00:00.49
Cross-reference output	0	00:00:00.00	00:00:00.00
Assembler run totals	1268	00:00:43.96	00:02:31.35

The working set limit was 2400 pages.
181708 bytes (355 pages) of virtual memory were used to buffer the intermediate code.
There were 160 pages of symbol table space allocated to hold 2875 non-local and 203 local symbols.
2436 source lines were read in Pass 1, producing 36 object records in Pass 2.
47 pages of virtual memory were used to define 46 macros.

Macro library statistics

Macro library name	Macros defined
_255DUA28:[SYS.OBJ]LIB.MLB;1	25
_255DUA28:[SYSLIB]STARLET.MLB;2	18
TOTALS (all libraries)	43

2991 GETS were required to define 43 macros.

There were no errors, warnings or information messages.
