## Printing History

New editions of this manual will incorporate all material updated since the previous edition. Update packages may be issued between editions and contain replacement and additional pages to be merged into the manual by the user. Each updated page will be indicated by a revision date at the bottom of the page. A vertical bar in the margin indicates the changes on each page. Note that pages which are rearranged due to changes on a previous page are not considered revised.

The manual printing date and part number indicate its current edition. The printing date changes when a new edition is printed. (Minor corrections and updates which are incorporated at reprint do not cause the date to change.) The manual part number changes when extensive technical changes are incorporated.

March 1985...Edition 1

## Chapter

## 9030/40 Product Information

## Features

- 32-bit CPU and full 32-bit internal and external data paths.
- Add-on performance with multiple CPUs.
- Up to 10 M bytes RAM.
- 36M byte/second memory processor bus.
- Seven internal HP-CIO slots expandable to 23.
- Virtual memory with 500 M byte address space.
- Single-user or multi-user system.
- HP-UX Operating System with C language, supports FORTRAN 77 and Pascal languages.
- Error correcting and self-healing memory.
- Diagnostic service panel with switches and LEDs.
- Broad range of peripherals.

## Central Processor Unit (CPU)

- 2 Types CPU board-Floating Point CPU has math chips.
- 32-bit single chip containing 450,000 transistors.
- Direct address range of 500 M bytes.
- Supports IEEE Floating-point Format.
- Instruction set of 230 operation codes.
- 18 M Hz clock rate with micro-instruction cycle time of 55 ns and memory cycle time of 110 ns .
- Typical execution times:
(CPU without math chips)
Load register from memory . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 550 nanoseconds
64 -bit floating-point multiply. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 10.34 microseconds
32-bit integer multiply ..................................................... . 2.92 microseconds
64-bit floating-point add . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 5.94 microseconds
(CPU with math chips)
1.4 times faster (overall)

2 times faster on B1D Program

## Memory

- 256K byte RAM boards.
- 512K byte RAM boards.
- 1M byte RAM boards-2M byte increments.
- RAM expandable to 10 M bytes.
- Single-bit error detection and correction.
- Double-bit error detection.

## I/O Processor (IOP)

- Supports 8 I/O channels with DMA capability on every channel.
- Two additional IOPs and their associated 97098A I/O Expanders are supported.
- Nominal IOP bandwidth of 900 K bytes/second.
- Maximum IOP bandwidth of 5.1 M bytes/second.

## Real-Time Clock

- Provides date and time of day.
- Accuracy within 30 seconds/month operating and 3 minutes/ month storage.
- Battery-maintained up to 30 days nominal and 10 days worst case.
- Located on System Control Module (SCM).

## System Components

|  | Base Systems |  |  | 9040AT $\quad$ Bundled Systems |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 9030 A | 9040A | 9050A |  |  |
| RAM (Std.) | 512 K byte |  |  | 1.5 M byte |  |
| RAM (Opt.) | Up to 10 M bytes in 2 M byte increments or up to 5 M bytes in 512 K byte increments |  |  |  |  |
| Service/ Diagnostic Panel | Standard |  |  |  |  |
| CPU Options | Single is standard; up to two additional CPUs are allowed. |  |  |  |  |
| LO Options | Models 9030/9040 - Up to two additional I/O Processors (IOP) allowed. Each IOP adds eight DMA-capable $1 / O$ slots. |  |  |  |  |
| System Software | Opt | onal (HP | - ${ }^{(1 X)}$ | HP-UX plus additional software options and compilers (single-user) | HP-LX plus additional software options and compilers (multi-user) |

| $0955-67004$ | Power supply discharge tool |
| $9300-0794$ | Antistatic kit |

## Safety Considerations

#### Abstract

WARNING SWITCH POWER OFF AND UNPLUG POWER CORD FROM AC OUTLET BEFORE REMOVING ANY ASSEMBLY. LETHAL VOLTAGES ARE PRESENT INSIDE THE COMPUTER. OBSERVE ALL WARNING LABELS.

PRIMARY WIRING CHANGE WARNING
AFTER MAKING A PRIMARY WIRING CHANGE, PERFORM CONTINUITY TEST BETWEEN POWER CORD GROUND AND METAL CHASSIS. RECORD RESULTS ON REPAIR ORDER.

## POWER SUPPLY WARNING

WHEN POWER SUPPLY IS REMOVED FROM COMPUTER, YOU ARE EXPOSED TO LETHAL VOLTAGE FROM POWER SUPPLY CAPACITORS. WAIT AT LEAST 15 MINUTES AFTER POWER IS SWITCHED OFF BEFORE REMOVING SUPPLY, OR USE THE POWER SUPPLY DISCHARGE TOOL TO DISCHARGE THE CAPACITORS PRIOR TO REMOVING THE SUPPLY

## Chapter 2

## 9030/40 Environmenta//Installation/PM

## Physical and Environmental Specifications

|  | System II Enclosure* | Stand-alone Mini-cabinet |
| :---: | :---: | :---: |
| Width | $17 \mathrm{in} .(432 \mathrm{~cm})$ | $14 \mathrm{in} .(35.6 \mathrm{~cm}$. |
| Depth | $23.0 \mathrm{in} .(58.4 \mathrm{~cm}$. | 28.0 in. ( 71.1 cm .) |
| Height | 8.75 in ( 22.2 cm.$)$ | 28.0 in ( 71.1 cm .) |
| Shipping weight (typical) | $65 \mathrm{lb} .(29.4 \mathrm{~kg}$.) | $114 \mathrm{lb} .(51.6 \mathrm{~kg}$.) |
| Temperature: Operating Storage | $\left\lvert\, \begin{aligned} & 0^{\circ} \text { to } 55^{\circ} \mathrm{C} \\ & -40^{\circ} \text { to } 75^{\circ} \mathrm{C} \end{aligned}\right.$ |  |
| Humidity | 95\% RH at $40{ }^{\circ} \mathrm{C}$, machine operating |  |
| Altitude | 15.000 ft . (570 mbars barometric pressure), machine operating |  |
| Voltage ranges | $90-125 \mathrm{Vac}$ or 198-250 Vac |  |
| Max. power dissipation | 650 Watts (2200 BTL hr.) |  |
| Frequency range | 48.66 Hz |  |
| Current requirements | 11 A at $90 \mathrm{Vac}, 5.5 \mathrm{~A}$ at 198 Vac |  |
| Vibration (peak to peak amplitude deflection) | 125 in . at 5 to 10 Hz 060 in . at 10 to 25 Hz 015 in . at 25 to 55 Hz |  |

Add 2 in focm tor nok mavit "tams

## Installation Procedure

1. Unpack the computer.
2. Position the computer. Leave about 6 inches of space at each side of computer (9030) or 6 inches at back (9040).
3. Connect power cord to power source.

| Country | P/N | Opt. | Voltage |
| :--- | :---: | :---: | :--- |
| Australia | $09855-61601$ | 901 | $250 \mathrm{~V}, 6 \mathrm{~A}$ |
| Denmark | $09855-61606$ | 912 | $250 \mathrm{~V}, 6 \mathrm{~A}$ |
| Europe | $09855-61602$ | 902 | $250 \mathrm{~V}, 6 \mathrm{~A}$ |
| Great Britain | $09855-61605$ | 900 | $250 \mathrm{~V}, 6 \mathrm{~A}$ |
| Switzerland | $09855-61604$ | 906 | $250 \mathrm{~V}, 6 \mathrm{~A}$ |
| United States | $09855-61600$ | 903 | $110 \mathrm{~V}, 10 \mathrm{~A}$ |
| United States | $09855-61603$ | 904 | $220 \mathrm{~V}, 10 \mathrm{~A}$ |

NOTE: Plugs are viewed from connector end. Shape of molded plug may vary within country.
Power cords supplied by HP have polarities matched to the power-input socket on the computer:

- $L=$ Line or Active Conductor (also called "live" or "hot")
- $\mathrm{N}=$ Neutral or Identified Conductor
- $E=$ Earth or Safety Ground

4. Check switch settings of interface cards (Chapter 7).
5. Install interface cards and connect the cables.
a. System Terminal (console) Interface Card in slot 0 .
b. System Disc HP-IB in slot 5 .
6. Check the switches on the peripheral devices.
a. Terminals

| LocalEcho: | OFF | Xmit Pace: | XON/XOFF |

b. Disc Drives

Set HP-IB address switch for system disc drive to " 0 ".
7. Install and connect the peripheral devices.
8. Connect the HP 97098A I/O Expander(s)

HP 97098A I/O Expanders

## Preventive Maintenance

There are no scheduled preventive maintenance procedures.

## Finstrate Installation Instructions for HP-Qualified Personnel:

Start on page 2-6 (RAM/CPU), or 2-7 (IOP) and follow the instructions that apply to the installation you are performing. For example, if you are installing a 2nd IOP in a 520 computer you would start on page 2-7, and perform all steps that begin with: (ALL), (ALL 2nd IOP), (ALL EXCEPT 520-3rd IOP), (520), (520 ONLY), and (520-2nd IOP).

ALL RAM and CPU Instuctions start on 2-6.
ALL IOP Instructions start on 2-7.

When completed with the installation of the finstrate, Insert the following pages in your CE Handbook (after page 2-4 of either the 9020 or 9030/9040 section).

## RAM/CPU Finstrate Installation

1. (ALL)

TURN THE POWER OFF AND DISCONNECT THE POWER CORD.
2. (520)

Open the left door.
(530)

Remove the front panel.
(540)

Remove the front bottom panel.
3. (530/540 ONLY)

From the front of the computer, remove the Radio Frequency Interference (RFI) shield by loosening the six thumbscrews.
4. (ALL)

Open processor stack door.

## CAUTION

ELECTROSTATIC DISCHARGE DAMAGE CAN OCCUR IN THE FOLLOWING STEPS. FOLLOW THE PRECAUTIONS IN CHAPTER 4 OF THE SERVICE MANUAL.
DO NOT TOUCH EDGE CONNECTOR OR FINSTRATE PLANE. HOLD FINSTRATE BY EJECTORS OR SIDE EDGES ONLY. HANDLING FINSTRATE INCORRECTLY COULD CAUSE ELECTROSTATIC DISCHARGE DAMAGE. WHEN INSTALLING FINSTRATE, HOLD BY EJECTORS AND MOVE AIR CONTROLLER OUT OF THE WAY WITH THE SIDE EDGE OF THE FINSTRATE.
5. (ALL)

Install the finstrate in the first unoccupied slot from the bottom. DO NOT LEAVE EMPTY SLOTS BETWEEN FINSTRATES.
6. (ALL)

Close the processor stack door. Firmly tighten thumbscrews to prevent RFI radiation.
Replace the label that is used as a seal for the processor stack door (Part Number 5180-5201).
7. (530/540 ONLY)

Replace RFI shield.
8. (520)

Close left door.
(530)

Replace front panel.
(540)

Replace the front bottom panel.
9. (ALL)

Connect power cord to ac outlet.

## IOP Finstrate Installation

WARNING
OBSERVE ALL WARNINGS AND SAFETY PROCEDURES IN THE
COMPUTER SERVICE MANUAL. LETHAL VOLTAGES ARE PRE-
SENT IN THE COMPUTER.

1. (ALL)

TURN THE POWER OFF AND DISCONNECT THE POWER CORD.

## 2. (520-2nd IOP)

Remove the left door.

## (520-3rd IOP)

Open the left door. Remove the I/O expander cable from the I/O EXPANDER 1 slot on the processor stack door (if connected).
(530)

Remove front panel.
(540)

Remove both front panels and flip-top cover.

## 3. (520-2nd IOP)

Remove the trim piece on the left side of the computer by loosening the two \#2 Pozidriv screws (Figure 1). The screws do not have to be completely removed to remove the trim piece.

## (520-3rd IOP)

Continue with next step.

## (530/540)

Remove top and bottom covers from System II enclosure. From the front of the computer remove the Radio Frequency Interference ( RFI ) shield by loosening 6 thumbscrews.

Figure 1. Model 520 Computer Stack.

## 4. (520 ONLY)

Remove the flat metal plate covering the appropriate IO EXPANDER connector slot by removing the two \#2 Pozidriv screws (Figure 2):
(2nd IOP) I/O EXPANDER 1. (3rd IOP) I/O EXPANDER 2.
(530/540)
Continue with next step.

*\#2 POZIDRIV CAPTIVE SCREW

Figure 2. Series 500 Computer Stack Door Removal.

## 5. (ALL EXCEPT 520-3rd IOP)

Loosen the two \#2 Pozidriv captive screws at the bottom of the processor stack door (Figure 2).

## (520-3rd IOP)

Continue with next step.

## 6. (ALL EXCEPT 520-3rd IOP)

Remove the processor stack door by loosening the two captive thumbscrews (Figure 2).

```
(520 - 3rd IOP)
Open processor stack door.
```

## CAUTION

DO NOT TOUCH EDGE CONNECTOR OR FINSTRATE PLANE. HOLD FINSTRATE BY EJECTORS OR SIDE EDGES ONLY. HANDLING FINSTRATE INCORRECTLY COULD CAUSE ELECTROSTATIC DISCHARGE DAMAGE. WHEN INSTALLING FINSTRATE. HOLD BY EJECTORS AND MOVE AIR CONTROLLER OUT OF THE WAY WITH THE SIDE EDGE OF THE FINSTRATE.

## 7. (ALL - 2nd IOP)

Move all finstrates above slot 2 up one slot.

## (ALL - 3rd IOP)

Move all finstrates above slot 3 up one slot (Slot 3 is first accessible finstrate without removing door).

## 8. (520-ONLY)

Remove cable clamp from processor stack door by removing two \#1 Pozidriv screws.
9. (ALL)

Slide the IOP finstrate into the appropriate slot without seating finstrate into the motherboard. Open the connector gate (Figure 3):
(2nd IOP) Slot 3.
(3rd IOP) Slot 4.

Figure 3. Series 500 Computer IOP Installation.
10. (520)

Place IOP cable door connector over studs on ends of appropriate I/O EXPANDER connector slot, and tighten connector to door with two nuts (Figure 3):
(2nd IOP) I/O EXPANDER 1 slot.
(3rd IOP) I/O EXPANDER 2 slot.
(530/540)
Continue with step 12 .
11. (520 ONLY)

Install cable clamp on door so that it holds cable(s) in position (Figure 4).

Figure 4. 520 Computer Stack Door.
12. (520)

Connect the IOP cable finstrate connector to the IOP finstrate with cable pointing down. Close the connector gate and seat the finstrate into the motherboard connector (Figure 4).
(530/540)
Route IOP cable through base plate. Connect IOP cable finstrate connector to finstrate. Close connector gate and seat board into motherboard connector.

## 13. (ALL EXCEPT 520-3rd IOP)

Install processor stack door with two captive \#2 Pozidriv screws at bottom.

## (520-3rd IOP)

Continue with next step.

## 14. (ALL)

Close processor stack door. Tighten thumbscrews to prevent Radio Frequency Interference (RFI) radiation. Replace the label that is used as a seal for the processor stack door (Part Number 5180-5201).

## CAUTION

ENSURE THE I/O EXPANDER CONNECTOR ON THE PROCESSOR STACK DOOR IS COVERED. AS EXPLAINED IN THE NEXT STEP. TO PREVENT RFI RADIATION.
15. (520)

Attach I/O expander cable(s) to the appropriate I/O EXPANDER connector (Figure 5), or cover connector with plastic connector cover (Figure 6).
(530/540-2nd IOP)
Route IOP cable along outside of base plate and attach IOP cable strain relief clamp to base with four \#2 Pozidriv screws. Ensure cable is centered in clamp and is not pinched.

## (530/540-3rd IOP)

Remove I/O cable strain relief clamp which holds 2nd IOP cable in place on outside of base plate. Route IOP cable along outside of base plate and attach IOP cable strain relief clamp to base with four \#2 Pozidriv screws. Ensure cable is centered in clamp and is not pinched.

Figure 5. IOP Connector Attached to Door.

Figure 6. Plastic IOP Connector Cover.

## 16. (530/540 ONLY)

Route cable between terminal block and base plate into enclosure.

## 17. (530/540 ONLY)

Remove cover plate from appropriate IOP expander slot in the computer rear panel. Insert IOP cable connector into the appropriate slot and secure in place with two nuts on the posts: (slots viewed from rear.)
(530-2nd IOP) Upper slot.
(530-3rd IOP) Lower slot.
(540-2nd IOP) Right slot.
(540-3rd IOP) Left slot.

## CAUTION

ENSURE THE I/ O EXPANDER CONNECTOR ON THE PROCESSOR STACK DOOR IS COVERED TO PREVENT RFI RADIATION.
18. (530 540 ONLY)

Attach I/O expander cable to connector on rear panel, or cover connector with plastic connector cover.
19. (520-2nd IOP)

Replace the trim piece and the left door.

## (520-3rd IOP)

Close the left door.
(530)

Replace RFI shield. top and bottom covers of System II enclosure. and front panel.
(540)

Replace RFI shield. top and bottom covers of System II enclosure, front panels and flip top cover.
20. (ALL)

Plug the power cord into the ac outlet and switch on the power.

## 512K RAM Board Installation Information

## Instructions For HP-Qualified Personnel:

Follow the instructions that apply to the installation you are performing. For example, if you are installing the RAM card in a 520 computer you would perform the steps that begin with: (ALL), and (520).

## Load Board

Systems that are shipped from the Fort Collins Sustems Division with 1 CPU, 1 IOP . and one 512K Byte RAM Board, will also have a Load Board in the slot that is adjacent to the RAM board (top occupied slot). If any other Finstrates, or RAM, is added to this configuration, the Load Board must be removed from the computer.

Any time the Processor Stack configuration is reduced to $1 \mathrm{CPU}, 1 \mathrm{IOP}$, and one 512K Byte RAM Board, A Load Board (09855-66525) is required. Load Board (09855-66525) is a replaceable part.

## CE Handbook

When completed with the installation, insert this page and the following page in your CE Handbook (after page 2-12 of either the 9020 or $9030 / 9040$ section).

## Part Numbers

| 512K Byte RAM (exchange) | $97047-69805$ |
| :--- | :---: |
|  | (new) |
| Load Board |  |
|  |  |
|  | $09855-6805$ |
|  |  |

## 512K Byte RAM Board Installation

1. (ALL)

TURN THE POWER OFF AND DISCONNECT THE POWER CORD.
2. (520)

Open the left door.
(530)

Remove the front panel.
(540)

Remove the front bottom panel.
3. (530/540 ONLY)

From the front of the computer, remove the Radio Frequency Interference (RFI) shield by loosening the six thumbscrews.
4. (ALL)

Open processor stack door.

## CAUTION

ELECTROSTATIC DISCHARGE DAMAGE CAN OCCUR IN THE FOLLOWING STEPS. FOLLOW THE PRECAUTIONS IN CHAPTER 4 OF THE SERVICE MANUAL.

DO NOT TOUCH EDGE CONNECTOR OR BOARD PLANE HOLD BOARD BY EJECTORS OR SIDE EDGES ONLY. HANDLING THE RAM BOARD INCORRECTLY COULD CAUSE ELECTROSTATIC DISCHARGE DAMAGE. WHEN INSTALLING THE RAM BOARD, HOLD BY EJECTORS AND MOVE AIR CONTROLLER OUT OF THE WAY WITH THE SIDE EDGE OF THE BOARD.

## 5. (ALL)

Remove the Load Board (09855-66525) from the Processor Stack. if it is present and at least one RAM board is installed. The load board will no longer be required. It is the property of the customer.
6. (ALL)

Install the new RAM board in the first unoccupied slot from the bottom. DO NOT LEAVE EMPTY SLOTS BETWEEN BOARDS.
7. (ALL)

Close the processor stack door. Firmly tighten thumbscrews to prevent RFI radiation. Replace the label that is used as a seal for the processor stack door (Part Number 5180-5201).
8. ( $530 / 540$ ONLY)

Replace RFI shield.
9. (520)

Close left door.
(530)

Replace front panel.

## (540)

Replace the front bottom panel.
10. (ALL)

Connect power cord to ac outlet.

## 1 Megabyte RAM Board Installation

## Instructions

Read the following information then follow the instructions that apply to the installation you are performing. For example, if you are installing the RAM Boards in a 520 computer you would perform all steps that begin with: (ALL), and (520).

## RAM Boards

1 Megabyte RAM Boards can only be installed in pairs. Any combination of $256 \mathrm{~K}, 512 \mathrm{~K}$, and pairs of 1 Megabyte boards can be used.

## Load Board

If a system is shipped with $1 \mathrm{CPU}, 1 \mathrm{IOP}$, and one 512 K RAM Board, it will also have a Load Board (09855-66525) in the top occupied slot. When the 1 Megabyte RAM Boards are added to the stack, the Load Board is no longer required and must be removed (assuming the 512K RAM board remains in the system).

When the only RAM boards in the stack are 1 Megabyte RAM boards, a load board is required if there are six or less. The load board should be removed when there are more than six 1 Megabyte RAM boards in the stack, or if there is a mixture of $256 \mathrm{~K}, 512 \mathrm{~K}$, and 1 Megabyte RAM boards in the stack.

Any time the Processor Stack configuration is changed so that it contains one of the above configurations, a Load Board is required. The load Board (09855-66525) is a replaceable part in spares. If the load board is used it must be in the top OCCUPIED slot of the Processor Stack. Do not leave any empty slots between finstates or boards.

## Boot Loader ROM

When the Processor Stack contains 1 Megabyte RAM Boards, Boot Loader ROM Rev. B (0902080001) must be used, and UNIX 4.0 or Basic 2.0 software must be used.

Boot Loader ROM 09020-80000 can be used with UNIX 4.0 or Basic 2.0 (or any previous software versions) as long as the stack DOES NOT contain a 1 Megabyte RAM Board.

Boot Loader ROM Rev. B (09020-80001) can be used with any RAM configuration but MUST use UNIX 4.0 or BASIC 2.0 software (any earlier versions of software cannot be used with this boot loader).

## Access Times

When the 1 Megabyte RAM Boards are installed in a computer, the access times will be slower. The customer may notice this slower process time during operation.

## System Integrity Test

The previous SFT tests (Part Number 09020-10010 Rev. 2.0) are not compatible with the Basic 2.0 Operating System. The updated version of the SFT must be used with this operating system.

The 4.0 HP-UX Operating System contains the same System Functional Tests (SFT) as the previous HP-UX. They are located in the CE. utilities dictionary.

## Part Numbers

|  | Megabyte RAM Board (exchange) | $97046-69704$ |
| :--- | :--- | :--- |
|  | (new) | $5061-7704$ |
| Boot Loader ROM * |  | $09020-80000$ (Rev.A) |
|  | $09020-80001$ (Rev.B) |  |
| Load Board | $09855-66525$ |  |

* See BOOT LOADER ROM on the previous page for part number applicability. When ordenng the ROM, the serial number and model number of the computer must be given to the individual taking the order.

## CE Handbook

When completed with the installation, insert these pages in your CE Handbook (after page 2-14 of either the 9020 or $9030 / 9040$ section).

## RAM Board Installation

1. (ALL)

TURN THE POWER OFF AND DISCONNECT THE POWER CORD.
2. (520)

Open the left door.
(530)

Remove the front panel.
(540)

Remove both front panels and the fliptop cover.
3. (530/540 ONLY)

From the front of the computer, remove the Radio Frequency Interference (RFI) shield by loosening the six thumbscrews.
4. (ALL)

Open processor stack door.

## CAUTION

ELECTROSTATIC DISCHARGE DAMAGE CAN OCCUR IN THE FOLLOWING STEPS. FOLLOW THE PRECAUTIONS IN CHAPTER 4 OF THE SERVICE MANUAL.

DO NOT TOUCH EDGE CONNECTOR OR BOARD PLANE. HOLD BOARD BY EJECTORS OR SIDE EDGES ONLY. HANDLING THE RAM BOARD INCORRECTLY COULD CAUSE ELECTROSTATIC DISCHARGE DAMAGE. WHEN INSTALLING THE RAM BOARD. HOLD BY EJECTORS AND MOVE AIR CONTROLLER OUT OF THE WAY WITH THE SIDE EDGE OF THE BOARD.
5. (ALL)

Remove the Load Board (09855-66525) from the Processor Stack, if it is present.
6. (ALL)

Install the RAM boards starting with the first unoccupied slot from the bottom. DO NOT LEAVE EMPTY SLOTS BETWEEN BOARDS. If a Load Board is required, install it in the next slot above the RAM. (See "Load Board" in the information at the front of the procedure.)
7. (ALL)

Close the processor stack door. Firmly tighten thumbscrews to prevent RFI radiation. Replace the label that is used as a seal for the processor stack door (Part Number 5180-5201).
8. (520)

Close the left side door.
(530/540)
Replace the RFI shield.
9. $(520)$

Remove right side door.
(530/540)
Remove the top cover of the System II enclosure. The cover has one captive screw at the back of the box. Loosen the screw and slide the cover back and away from the box.
10. (530/540 ONLY)

Disconnect the ac module cable and the service module cable.
11. (520)

Remove three \#2 Pozidriv screws from the mass storage cover (Figure 1). (530/540)
Remove the four \#2 Pozidriv screws that attach the I/O lid. Remove the lid.

* \#2 POZIDRIV MASS STORAGE COVER SCREW
* I/O DOOR CAPTIVE THUMB SCREW

Figure 1. Removing Mass Storage Cover

## 12. (520 ONLY)

Loosen two captive thumbscrews on I/O door (Figure 1) and swing door open, allowing door to rest in open position.
13. (520 ONLY)

Slide mass storage cover towards front cover of computer, disengaging cover from slot in front card guide.
14. (520 ONLY)

Lift mass storage cover with attached I/O door up and away from computer.
15. (520 With Bootstrap Loader Card)

Remove Bootstrap Loader card and replace the Bootstrap Loader ROM with the new ROM. Use tool 8710-0585. Reinstall the card in the I/O card cage.

## (520 With Fixed Disc Drive Controller Assembly)

Remove both cable connectors from controller assembly. Remove controller assembly and replace the Bootstrap Loader ROM with the new one (Figure 2). Reinstall the card in the I/O card cage.
(530/540)
Remove the SCM and replace the Bootstrap Loader ROM with the new ROM (Figure 3). Use tool 8710-0585. Reinstall the card in the box.

Figure 2. Fixed Disc Controller Assembly

Figure 3. 530/540 SCM Board
16. (520)

Reinstall mass storage cover and right side door.
(530/540)
Reinstall I/O lid and connect the ac module cable and service module cable.
17. (530/540 ONLY)Reinstall the top cover on the System II enclosure.
18. (520)

Close the right side door.
(530)

Replace front panel.
(540)

Replace the flip top cover and both front panels.
19. (ALL)

Connect power cord to ac outlet.

Fault Indicators (Sheet 3 of 3)

# Chapter 5 <br> 9030/40 Diagnostics 

## System Loader Messages

Trailer NNNNN indicates Rev. A loader select codes.
Example:
Where: NnNeN is 21

Trailer select code nn indicates Rev. B loader select codes; 0 through $7=1 \mathrm{st}$ IOP, 8 through $15=2$ nd IOP, and 16 through $24=3$ rd IOP.

## Messages

Loader $X X X$ - Informational message identifying the revision of the system loader. This message is usually followed by a single line message identifying the operating system the computer is attempting to load.
Error Code Testing Memory... - Informational message that follows the "Loader XXX" mes\#24 sage indicating that the loader is performing memory tests and configuring memory. This can take up to 15 seconds. (NOT AN ERROR)
Error Code Looking for System... - Informational message that follows the "Testing Mem\#25 ory..." message indicating that the loader is searching for an operating system.

Please mount next volume. - Informational message. The loader is ready to load another portion of the operating system. Mount the volume containing an unloaded portion of the operating system. Volumes may be mounted in any order without affecting the loading process.
$\begin{array}{ll}\text { Error Code } & \text { SYSTEM NOT FOUND; WILL RETRY: XXX } \\ \# 2 & \text { SYSTEM NOT FOUND; WILL RETRY IN } X X X\end{array}$

- Unable to find an operating system on any mass storage device. The loader will attempt to find an operating system again in XXX seconds. Possible causes: mass storage device not powered up, no media in mass storage device, wrong disc in disc drive, computer or mass storage device hardware failure, media failure, incompatible loader/system revision numbers, etc.
Error Code bad system file: nnnnn
\#4 bad system file: select code nn
- Operating system loaded. However, an error has been detected in the operating system code during loading. Possible causes: corrupt system, media failure, mass storage hardware failure, or computer hardware failure.
Error Code insufficient usable memory: xxxx
\#5 not enough usable memory; total is $x \times x y$
- The amount of usable memory is too small to load the operating system. The total amount of good memory is "XXXX" bytes. However, the amount of memory available for the Rev. A operating system is "XXXX" minus 32 K bytes. The amount of memory available for the Rev. B operating system is "XXXX" minus 98304 bytes. Possible causes: corrupt system or hardware (memory) failure.

| Error Code \#6 | BAD CARD OR DEUICE: NNNNN <br> bAD CARD OR DEUICE: SELECT CODE NN <br> - Informational message. A hardware failure has been detected (interface card or mass storage device did not pass the Module Self-Test). The loader continues searching for an operating system. Possible causes: bad interface card or mass storage device. |
| :---: | :---: |
| Error Code \#9 | DEUICE NOT READY: NNNNN <br> UOLUME NOT MOUNTED: NNNNN <br> MEDIA/DEVICE NOT READY: SELECT CODE NN <br> - While loading, the media (Volume) was removed from the device (e.g. a floppy disc was pulled out of a disc drive), the device went offline, or a hardware problem caused the device to become "not ready". <br> DMA FAILED: NNNNN - Data did not transfer properly from the mass storage device to the computer. Possible cause: Mass storage device hardware failure or computer hardware failure. |
| Error Code \#11 | UNRECOUERABLE DATA: NNNNN <br> unrecoverable data: select code nn <br> - Part of the operating system is not readable. Possible causes: media failure or mass storage device hardware failure. |
| Error Cod \#12 | END OF volume: NNNNN <br> END OF volume: SELECT CODE NN <br> - Attempt to address or read past the end of a volume. Possible causes: corrupt system, media failure or mass storage device hardware failure. |
| Error Code \#13 | CTRLR/UNIT FAULT: NNNNN <br> CTRLR/UNit FAULT: sELECT CODE NN <br> - Hardware passed initial self-test. However, it failed while being used to load the operating system. Possible causes: computer (interface card) hardware failure or mass storage device hardware failure. |
| Error Code \#14 | IO TIMEOUT: NNNNN <br> Io TIMEDUT: SELECT CODE NN <br> - Mass storage device failed to respond fast enough while attempting to load from <br> it. Possible cause: computer hardware failure or mass storage device hardware | failure.

Error Code csso device: nnnn
\#15 CS8ó DEUICE: SELECT CODE NN

- Indicates a mass storage device hardware failure.

Error Code tape device: select code nn -Usually indicates a tape device (HP 7970, HP \#16 7974, HP 7978) hardware failure. Can also indicate a failure on the HP 27110A HP-IB Interface (or the Internal HP-IB interface). Tape errors covered are: "Command Rejected", "Interface Busy", "Rewinding", "Tape Runaway", "Data Timing Error", and "Command Parity Error".
Error Code hpib card: nnnnn
\#17 hpib card: select code nn

- Transaction to the indicated HPIB interface card was terminated due to a probable interface card failure.

Error Code bad io bus: nnnnn
\#18 bad io bus: select code nn

- Indicates a computer hardware failure on the computers first IOP.

Error Code bad num: nnnnn
\#19 bad num: select code nn

- Indicates that Non-Volatile Memory failed its self-test. Possible cause: computer hardware failure.

```
Error Code bAD RTC: NNNNN
#20 BAD RTC: SELECT CODE NN
    - Indicates that the built in Real Time Clock is not operating correctly.
Error Code EAD SP: SELECT CODE NN - Indicates that the HP 9030 and HP 9040 computer's
#21
Error Code Test card found - (Not an error.)
#22
Error Code Test module did not find SCM
#23
```

## HP-UX 4.0 Operating System Error Messages

## Warning and Error Messages

Clock and date not set. - This message indicates that either the contents of the NVM are not valid at powerup or the clock has not been set since this condition was detected. Possible causes: a bad battery on the SCM board, or computer powered down for more than 2 weeks. The condition does not stop the system operation.

Self test error 1: I/0 address AA, SS STATUS: XXXXXXXX
Where: $\quad$ AA $=$ Select code

SS = Subaddress
XXXXXXXX = Device or card dependent error information (in hexadecimal).

This error message is displayed as a result of the self-test failure of an I/O device. The select code subaddress denote the device, and the device dependent error information indicates the nature of the failure. System operation can continue provided that use of the failed device is not required.

Self test error 2: CHECKSUM for segment NN - When the system is powered up, or a system reset is executed, the checksum for every code segment of the operating system is computed and compared to a checksum in the operating system code. When the checksums do not agree for a segment, the segment number is stored. As a result, the segment reported is the last segment for which a checksum error was detected. The operation of the system is not halted, however, further operation is at your own risk.

Self test error 3: $X X X X$ NN
Where: $\quad \mathrm{XXXX}=$ "CPU\#", "IOP\#", or "MC\#_".
$\mathrm{NN}=$ The Nth of that type of component (counting from the bottom of the stack).
This error occurs when the system is able to get completely through the board self-test and the loader self-test, but a failed stack component is detected by the operating system. The message indicates the type of component which has failed and its relative position in the stack. Operation of the system can continue, if the failed board is not required,

```
Self test error 4: Memory reduced to: NNNNNNNN Bytes, MCs:<list>
```

Where: $\quad$ NNNNNNNN = number of bytes (in decimal) that are available.
<list> = A list of Memory Controller numbers which had failures. Up to 10 MC numbers are printed in 10 two character fields, with no intervening spaces. For example: "MCs: 1210 " indicates that Memory Controllers 1, 2, and 10 have failed the memory test. Memory boards (and memory controllers) are numbered from 1, starting at the bottom of the RAM.

This number represents all usable RAM in the system including memory used to hold code segments.

Self test error 5: Fewer finstrates were found than expected, - This message is displayed when the number of boards recorded in the Non-Volatile Memory (NVM) is greater than the actual number of boards in the stack. If the number of boards in the stack is greater than the number stored in the NVM, the number in the NVM is updated to reflect the larger stack size.

## Fatal Error Messages

System halted due to double bit memory error on MC \# NN CCCCCCCC
Where: $\quad \mathrm{NN}=\mathrm{MC} \#$
$\operatorname{CCCCCCCC}=$ Last healer content for that MC (in hexadecimal).
This message is displayed when a double bit error has been detected by the memory controller hardware. The MC\# is in terms of memory controller boards (counting up from the bottom of the stack). This information is also recorded in the NVM.

If more than one MC with a double bit error is found, only the last error is displayed. If no double bit errors are found, "No DBE found" replaces NN XXXXXXXXX. DBE information is stored in the NVM.

SYstem_halted: Insufficient memory to start system - This message is displayed when there is insufficient memory for the operating system and user subsystem. Check the stack self-test lights to see if any stack components have failed self-test. Also, check the memory configuration of the computer to see if it is large enough to accomodate the system and options which are being loaded.

SYSTEM HALTED: Incompatitle IOPs - This message indicates that an illegal combination of IOP boards were found at power up. IOPs of Revision 2.1 or earlier are not compatible with IOPs of Revision 2.2 or later.

## System Error Message

System halted->SYSTEM ERROR:.... - This message is displayed when the operating system software encounters either:

- an unanticipated trap,
- an unrecoverable system software error.

The "trap" is distinguished from the software error by the word "trap:" which is added to the first line of the message.

Before displaying any messages, the currently executing CPU disables its interrupts and causes all other CPUs to stop operating. The message text is multiple lines information dumped from memory and internal registers. The message starts on the top line on the Display and overwrites any other messages on the CRT. If a printer is the output device and the message is more than 25 lines in length, the message continues to print (up to 500 lines).

## Service Panel Switches

| Switch | Function |
| :--- | :--- |
| SELF TEST | Pressing this latching switch initiates a continuous system self-test. As long as the <br> switch is latched, continous self testing occurs. Pressing the switch again, unlatching it, <br> terminates the self-test. |
| RESET | Pressing this switch resets the system, stopping all running programs and resetting all <br> I/O select codes. After reset, the system waits for further instructions. |
| START | Pressing this switch initiates system run from an idle state. If the system does not <br> restart, the computer must be turned off and then powered up. |
| MEM DUMP | Pressing this switch dumps the contents of main memory onto the system disc. This <br> switch should be used only when a load fault occurs and no system message is <br> displayed. |

## Service Panel LEDs

| LED | Indication When Lit | Cure |
| :--- | :--- | :--- |
| POWER ON | Power supply is working, and power is <br> being provided to the computer. | Normal operation. |
| RUN | Operating system is running. | Normal operation. |
| SELF TEST | Self-test is running. This LED turns on <br> when the self-test begins and tums off <br> when the self-test completes. It normally <br> remains on when a failure occurs; <br> another LED lights to indicate the na- <br> ture of the failure. | Determined by other LEDs. |
| PROCESSOR 1-12 | Finstrate in the specified processor stack <br> slot failed to pass self-test. | Check finstrate. |
| IO 0-6 | Interface card in the specified I/O slot <br> failed to pass self-test. | Check I/O card, peripheral device, inter- <br> face cable. |
| LOAD | Operating system is being loaded during <br> the power-up sequence. The light goes <br> off after the load is completed. | If light remains on, see Fault Indicators <br> (Sheet 2) in Chapter 4. |
| DOOR | Interface card cage door or processor <br> stack door is open. | Close door(s), tighten thumbscrews. |
| TEMP | Processor stack temperature has ex- <br> ceeded 100 ${ }^{\circ} \mathrm{C}$. | Check ambient air temperature, airflow, <br> fans, power supply assembly. |
| PS | Main power has been shut down. | Check power supply assembly, I/O <br> cards, finstrates, system control module, <br> motherboard, I/O backplane. |
| SCM | System control module is faulty. | Check SCM. |

## Power Supply LEDs

| LED | Indication When Lit | Cure |
| :--- | :--- | :--- |
| DOORS OPEN | Interface card cage door or processor <br> stack door is open. OV also lights. | Close door(s), tighten thumbscrews. |
| STACK TEMP | Processor stack temperature has ex- <br> ceeded $100^{\circ} \mathrm{C}$. | Check ambient air temperature, airflow, <br> fans, power supply assembly. |
| SEC BOARD | +12 MM mass storage power supply <br> has failed or temperature in power <br> supply assembly has exceeded $100^{\circ} \mathrm{C}$. | Check + 12MM mass storage power <br> supply and bus, ambient air tempera- <br> ture, airflow, fans, power supply <br> assembly. |
| PWR | Peak primary current exceeded 9A. | Check power supply assembly, short <br> circuits. |
| OV | Used in conjunction with voltage LEDs; <br> "on" indicates an overvoltage condition <br> on one or more of the supplies or door <br> open. "off' indicates an undervoltage <br> condition. | Close door(s), tighten thumbscrews. <br> Check power supply assembly, short or <br> open circuits. |
| $\mathbf{- 1 9}$ | Fault condition exists on the indicated <br> supply. If the OV LED is also lit, an <br> overvoltage condition is indicated; if <br> is nov lit. an undervoltage condition is <br> indicated. | Check power supply assembly, IOP <br> bus, modules using the indicated vol- <br> tage, short or open circuits. |
| $\mathbf{3}$ <br> $\mathbf{5}$ <br> $\mathbf{6}$ | 12 <br> $\mathbf{1 9}$ |  |

## System Functional Tests (SFT)

1. If not previously done, install and verify the HP-UX operating system.
2. In response to the losin: prompt, type: root and press RETURN. You are now the super-user.
3. Type: ct /usp/ptests.
4. Type: start and press RETURN
5. From the menu that appears on the system console, select the test you would like to run, enter its number, and press RETURN

## Chapter 6 9030/40 Adjustments

The 9030/40 has no adjustments.

## Chapter 7 <br> 9030/40 Peripherals

## Select Codes

| Select <br> Code | Usage |
| :---: | :--- |
| 0 | I/O Slot 0 |
| 1 | I/O Slot 1 |
| 2 | I/O Slot 2 |
| 3 | I/O Slot 3 |
| 4 | I/O Slot 4 |
| 5 | I/O Slot 5 |
| 6 | I/O Slot 6 |
| 7 | System Control Module |

## HP-CIO Interface Cards

## HP 27110A Standard HP-IB

## Features

- IEEE-488-1978 compatible.
- Supports DMA with two modes of performance: High Speed Mode for operation with fixed discs or other high-speed peripherals, and Standard Mode for instruments and slower peripherals.
- Supports up to 14 device loads.
- Selectable HP-IB controller or slave capabilities and parallel poll capabilities (BASIC Language System only).
- Built-in hardware self-test.

## Configuration

The normal switch settings are shown in the next figure.
The switch functions are:
S1-S5: Address 30 (decimal); S 1 is Least Significant Bit
S6: System Controller On
S7: Normal Speed
S8: Test Mode 1
High-speed devices can run on a normal-speed bus, but run slower than their capacity. Normalspeed devices cannot run on a high-speed bus. The following are high-speed devices:

- disc drives
- 7971A tape drive
- 2608 S and $2631 \mathrm{~B} / \mathrm{G}$ printers

HP 27110A HP-IB Interface Card

HP 27110 A HP-IB Interface Cabling

Available HP-IB Cables

| Product <br> Number | Length <br> (in meters) |
| :---: | :---: |
| 92220 R | 0.3 |
| 10833D | 0.5 |
| 45529A | 1.0 |
| 45229B | 2.0 |
| 45529 C | 4.0 |
| $5060-9459$ | 6.0 |
| $5060-9460$ | 8.0 |

## HP 27112A General Purpose I/O (GPIO) 16-Bit Parallel

## Features

- Choice of programmable operating modes (clocked or transparent) for ease of use with instrumentation.
- Supports +5 V level on all input and output signals, plus an optional +12 V level on output signals.
- Programmed data detection for either positive true or ground true levels.
- Independent 16 -bit input and output buses and storage registers.
- Two control and two status lines.

## Configuration

The normal switch settings depend on which peripheral device is connected to the GPIO. The 97060A Graphics Processor requires the GPIO switch settings shown in the next figure.

The switches correspond to:

| SW1 | S1: DIN; | Up-Positive True. Down - Negative True. |
| :---: | :---: | :---: |
|  | S2: CTS and STS; | Up - Positive True. Down - Negative True. |
|  | S3: PSET; | Up - Positive True. Down - Negative True. |
|  | S4: PDIR; | Up - Positive True. Down - Negative True. |
|  | S5: DOUT; | Up - Positive True. Down - Negative True. |
|  | S6: PEND; | Up - Positive True. Down - Negative True. |
|  | S7: PFLAG; | Up - Positive True. <br> Busy - High. <br> Ready - Low. <br> Down - Negative True. (HP 97060A) <br> Busy - Low <br> Ready - High. |
|  | S8: PCNTL; | Up - Positive True. Active - High. Idle - Low. <br> Down - Negative True. Active - Low. Idle - High. |

SW2
S1: Bidirectional Bus Enable;
Up - Disabled.
Down - Enabled.
S2: Internal Handshake Enable;
Up - Disabled. Down - Enabled.
S3: Full/Pulse Handshake Enable;
Up - Disabled.
Down - Enabled (HP 97060A).
S4 and S5: Data Input Clock Select;
Both Down - backplane sync cycle completion.
Both Up - Backplane sync cycle completion.
S4 Up and S5 Down - Busy to ready edge of PFLAG (trail edge).
S4 Down and S5 Up - Ready to busy edge of the PFLAG (lead edge).

HP 27112A General Purpose I/O (GPIO) Interface Card

## To configure the GPIO card:

1. Install jumpers in W1,W2, and W3, according to whether 5-volt or 12 -volt logic levels are to be used.
2. Set the card's switches for proper operation.
3. If necessary, increase the delays on the card as follows:

Two one-shots (E15) on the GPIO card generate the write delay and the internal handshake delay. The write delay one-shot provides approximately 100 nsec for the output data to settle. When extra-long cables are used, or when the peripheral device requires additional settling time for the data, the delay can be increased by adding a capacitor between pins 1 and 4 of the socket at E16.
The formula for selecting the capacitor value is:

$$
\mathrm{C}=(\mathrm{T}-100) / 1.5
$$

where
$\mathrm{C}=$ additional capacitance (in pf)
$\mathrm{T}=$ total time delay required in nsec
The internal delay one-shot provides a delay of approximately 3 usec between the assertion of PCNTL and the assertion of FLAG. The delay can be increased by adding a capacitor between pins 5 and 8 of the socket at E16.
The formula for the value of the capacitor is:

$$
\mathrm{C}=(\mathrm{T}-3000) / 3
$$

where
$\mathrm{C}=$ additional capacitance (in pf)
$\mathrm{T}=$ total time delay required (in nsec)

HP 27112A GPIO Interface Cabling

## HP 27122A Remote Job Entry (RJE)

## Features

- 1,200 to 19,200 baud rates.
- Compatible with EIA RS-232C and CCITT V. 24 specifications.
- Supports Bell type 208B, 2096, and 212 data sets or equivalent.
- Supports Siemens MSV2 protocol.
- Works with full or half duplex modems. and supports AUTO ANSWER and ORIGINATE.
- Provides link control functions: line bid. normal and transparent data modes, all responses, and link termination.
- Assures data integrity with CRC error checking.
- EBCDIC character recognition.
- Space compression/truncation.

HP 27122A Remote Job Entry (RJE) Cabling

## Shared Resource Management Interface (SRM) - HP 27123A

## Features

- Data transmission rate is 700 Kbits per second.
- Access to the network through rotary polling on an HP 98028A Multiplexer (part of the SRM product).
- All transmissions are broadcast to all connections on the HP 98028A Multiplexer.
- Packets can contain up to 512 data bytes.
- Reception of packets is acknowledged.
- Remote file access to create/open/purge a file or directory, read or write bytes, set protection, and catalog.

## Configuration

Ensure that the eight switches are set to the binary equivalent of the assigned decimal node address. S 1 is the MSB, and S8 is the LSB.

## Cable Information

## HP 27128A Asynchronous Serial Interface (ASI)

## Features

- Switch selectable and software programmable baud rate; up to 19,200 bits per second.
- EIA RS-232C, CCITT V.24, and CCITT V. 28 compatibility.
- Asynchronous transmission in simplex, full duplex, and echoplex mode.
- Programmable format control and built-in framing error, overrun error, and parity checking.
- Break detection, support for X-ON/X-OFF and terminal emulation mode.

## Configuration

The normal switch settings are:

| S1: Single Text Termination; | UP - Single Text Termination. (Typical) <br> Down - Not Single Text Termination. |
| :--- | :--- |
| S2: Hard wired; | Up - Device Directly Connected. <br> Down - Device Not Directly Connected. (Modem use) <br> S3: No Parity; |
| S4 - No Parity. (Typical) |  |

ASI Baud Rate Switches

## Terminal Cabling

are compatible with any of these.

13232U Modem

Laserjot Laserjot
$2686 A$

## HP 27130A/B Asynchronous 8-Channel Multiplex

## Features

- CCITT V. 28 and EIA RS-232C compatible.
- Supports simplex, echoplex, or full-duplex mode (asynchronous transmission only).
- Selection of data transmission attributes can be performed independently on each channel.
- Local intelligence reduces time consumed by the CPU during I/O transactions by offering edit functions, special character recognition, and handshake protocol control.
- Parity, overrun, and framing errors are sensed locally to detect transmission errors.
- X-ON/X-OFF (both directions) and ENQ/ACK (one direction, host sending ENQ) handshaking

RS-232C Connection Panel (28658-60005 or 21828-60001)

HP 27130A/B Asynchronous 8-Channel Multiplex Cabling

## HP 97060A Graphics Processor

## Features

- GPIO interface to the host computer. (See GPIO for cabling information.)
- High performance graphics processor; 8 planes of $1024 \times 1024$ pixels.
- RGB output to color graphics monitor.
- Built in self-test capabilities. Results displayed by the Ready light.
- Compatible with the HP 9111A Data Tablet.

HP-IB Cable. Not Included
Interconnecting the HP 97060A Graphics Processor

## HP 97062A Color Video

## Features

- Medium-resolution interface to 19 -inch color monitor.
- Produces RS-343-compatible signals across three coaxial cables.
- Uses four memory planes to display 16 colors from 4096 available.
- Supports all Graphics/9000 plotter commands including area shading.

HP 97062A Color Video Interface Cabling

## HP 2885A LAN 9000 Local Area Network

## Features

- HP-IB interface to host CPU.
- Coax cable with baseboard signaling.
- 10 Mbps data signaling rate.
- Minimum separation between nodes is 2.5 metres.
- Nodes can be up to 40 metres from the coax cable.
- Masterless protocol, Carrier-Sense Multiple Access with Collision Detection (CSMA/CD).
- Up to 500-metre segment coax length and up to 100 nodes per segment.
- Supports broadcast and multicast addressing.
- User-executable diagnostics which can be run simultaneously with other network services.

## Configuration

Before you install the HP-IB card, ensure that the resistor pack is installed in socket U74 (normal speed) and that the switches are set in these positions:

HP-IB Switch Setting

## 7-12 903040 Peripherals

Set the bus address of the LAN unit to 0 by setting the switches on the back of the unit to these positions:

Motherboard Signal Definitions

| Signal | Definition |
| :---: | :---: |
| -KEY - | Keyed hole in connector. |
| -12 | - 12 volt supply. |
| -19 | -19 volt supply. |
| -2 | -2 volt supply. |
| 12 | 12 volt supply. |
| 12MM | 12 volt supply to mass storage devices only. |
| 16 | 16 volt bias supply voltage. |
| 19 | 19 volt supply. |
| 3.85 | 3.85 volt supply. |
| 5 | 5 volt supply. |
| 5BB | 5 volt battery backup. |
| 6.7 | 6.7 volt supply. |
| AC+ | 25 KHz ac sine wave from power supply. |
| AC - | 25 KHz ac sine wave from power supply. |
| CCLK | Baud rate generator on SCM board for I/O backplane. |
| CS - 12 | Control sense for -12 volt supply. |
| CS - 2 | Control sense for -2 volt supply. |
| CS-2G | Control sense for -2 volt supply ground. |
| CS12 | Control sense for 12 volt supply. |
| CS3.85 | Control sense for 3.85 volt supply. |
| CS5 | Control sense for 5 volt supply. |
| CS6.7 | Control sense for 6.7 volt supply. |
| CSGND | Control sense for 5 volt supply ground. |
| DGND | Dirty ground return. |
| FANCTL | Fan control. Connected to PST. |
| FANF | Power to processor stack fan (negative voltage). |
| FANGND | Fan ground return. |
| FANI | Power to I/O card cage fan (negative voltage). |
| FANP | Power to power supply fan (negative voltage). |
| GND | Ground plane of motherboard. |
| LOLINE | Low line indication. |
| MS - 12 | Monitor sense for - 12 volt under/over voltage. |
| MS - 19 | Monitor sense for -19 volt under/over voltage. |
| MS - 2 | Monitor sense for -2 volt under/over voltage. |
| MS12 | Monitor sense for 12 volt under/over voltage. |
| MS19 | Monitor sense for 19 volt under/over voltage. |
| MS3.85 | Monitor sense for 3.85 volt under/over voltage. |
| MS5 | Monitor sense for 5 volt under/over voltage. |
| MS6.7 | Monitor sense for 6.7 volt under/over voltage. |
| NARQ | $\mathrm{HP}-\mathrm{ClO}$ card requests attention (negative true). |
| NBR | I/O bus burst mode DMA request (negative true). |
| NDEND | I/O bus device end (negative true). |
| NDO | Door open (negative true). Wired OR of NPDO and NIDO. |
| NDOORLED | Doop open (negative true). |
| NFANHI | Power supply fan at highest speed (negative true). |
| NFLG | I/O bus ready for data (negative true). |
| NIC1 | I/O bus interface control bit 1 (negative true). |
| NIC2 | I/O bus interface control bit 2 (negative true). |
| NIC3 | I/O bus interface control bit 3 (negative true). |
| NIC4 | I/O bus interface control bit 4 (negative true). |

## Motherboard Signal Definitions (Continued)

| Signal | Definition |
| :---: | :---: |
| NIDO | I/O cage door open (negative true). OR'd with NPDO. |
| NIDOO | I/O bus input/output data bit 0 (negative true). |
| NIDO1 | I/O bus input/output data bit 1 (negative true). |
| NIDO2 | I/O bus input/output data bit 2 (negative true). |
| NIDO3 | I/O bus input/output data bit 3 (negative true). |
| NIDO4 | I/O bus inputoutput data bit 4 (negative true). |
| NIDO5 | I/O bus input/output data bit 5 (negative true). |
| NIDO6 | I/O bus input/output data bit 6 (negative true). |
| NIDO7 | I/O bus inputioutput data bit 7 (negative true). |
| NIDO8 | I/O bus input/output data bit 8 (negative true). |
| NIDO9 | I/O bus input/output data bit 9 (negative true). |
| NIDO10 | I/O bus input/output data bit 10 (negative true) |
| NIDO11 | I/O bus input/output data bit 11 (negative true). |
| NIDO12 | I/O bus input/output data bit 12 (negative true). |
| NIDO13 | I/O bus input/output data bit 13 (negative true). |
| NIDO14 | I/O bus input/output data bit 14 (negative true). |
| NIDO15 | I/O bus inputoutput data bit 15 (negative true). |
| NIDOP | I/O cage door open (negative true. |
| NIFC | I/O bus interface clear (negative true). |
| NIOSB | I/O bus data transfer strobe (negative true). |
| NMI | Non-maskable interrupt. |
| NMID | Non-maskable interrupt. |
| NMYPA | HP-CIO card recognized its address has been asserted (negative true). |
| NPA0 | I/O bus peripheral address bit 0 (negative true). |
| NPA1 | I/O bus peripheral address bit 1 (negative true). |
| NPA2 | I/O bus peripheral address bit 2 (negative true). |
| NPDO | Panel door open (negative true). OR'd with NIDO. |
| NPDOP | Panel door open (negative true). Signals SCM board. |
| NPFW | Power fail warning (negative true). |
| NPI | Not pop in (negative true). Resets the stack. |
| NPKPWR | Shut down command indicator due to peak power (negative true). |
| NPOLL | I/O bus interface poll (negative true). |
| NPSTLED | Power supply overtemperature (negative true). |
| NPV | Not power valid; all outputs in spec (negative true). |
| NSELFT | Leading edge causes power supply to send stack into self-test via NSYSPU and NPI (negative true). Originates on SCM board. |
| NSTLED | Stack overtemperature (negative true). |
| NSTS | I/O bus status (negative true). |
| NSYSPU | Not system pop unsynchronized (negative true). Used with NPI to cause stack to perform a self-test. |
| NWAIT | I/O bus lengthen IOSB (negative true). |
| POLL | I/O bus interface poll. |
| PPON | Primary power on; all outputs in spec. |
| PST | Power supply temperature indicator, connected to FANCTL. |
| PWMEN | Pulse width modulator enable. |
| READ | I/O bus data direction (positive true; high indicates data to IOP). |

Motherboard Signal Definitions (Continued)

| Signal |  |
| :--- | :--- |
| ST1 | Stack self-test from slot 1. |
| ST2 | Stack self-test from slot 2. |
| ST3 | Stack self-test from slot 3. |
| ST4 | Stack self-test from slot 4. |
| ST5 | Stack self-test from slot 5. |
| ST6 | Stack self-test from slot 6. |
| ST7 | Stack self-test from slot 7. |
| ST8 | Stack self-test from slot 8. |
| ST9 | Stack self-test from slot 9. |
| ST10 | Stack self-test from slot 10. |
| ST11 | Stack self-test from slot 11. |
| ST12 | Stack self-test from slot 12. |
| STACKTEMP | Stack temperature indicator. |
| TON | (Not used) |
| US1 | Open trace. |
| US2 | Open trace. |
| US4 | POLL ANDed with NSELFT. |
| UPS1 | Uninterruptible power supply. |
| UPS2 | Uninterruptible power supply. |

I/O Backplane Connectors

| Designator | Connecting Assembly |
| :---: | :--- |
| P0 | I/O Card (Slot/Select Code 0) |
| P1 | I/O Card (Slot/Select Code 1) |
| P2 | I/O Card (Slot/Select Code 2) |
| P3 | I/O Card (Slot/Select Code 3) |
| P4 | I/O Card (Slot/Select Code 4) |
| P5 | I/O Card (Slot/Select Code 5) |
| P6 | I/O Card (Slot/Select Code 6) |
| J7 | Motherboard (Connector P11) |
| P8 | I/O Door Interlock Switch |

I/O Backplane
(and

I/O Backplane Connectors

## I/O Backplane Signal Definitions

| Signal | Definition |
| :---: | :---: |
| -12 | -12 volt supply. |
| 12 | 12 volt supply. |
| 5 | 5 volt supply. |
| 5BB | 5 volt supply, battery backup. |
| 5P | Primary 5 volt supply. |
| 5 S | Secondary 5 volt supply. |
| AC- | 25 KHz ac sine wave from power supply. |
| AC+ | 25 KHz ac sine wave from power supply. |
| CCLK | Common clock. |
| GND | Ground plane of //O backplane. |
| IDO | I/O door open. |
| IDOP | I/O door open (not used). |
| NARQ | HP-CIO card requests attention (negative true). |
| NBR | I/O bus burst mode DMA request (negative true). |
| NDEND | I/O bus device end (negative true). |
| NDPA | Internal select code availabie (negative true). |
| NFLG | I/O bus ready for data (negative true). |
| NIC1 | I/O bus interface control bit 1 (negative true). |
| NIC2 | I/O bus interface control bit 2 (negative true). |
| NIC3 | I/O bus interface control bit 3 (negative true). |
| NIC4 | I/O bus interface control bit 4 (negative true). |
| NIDO | I/O door open (negative true). |
| NIFC | I/O bus interface clear (negative true). |
| NIOD0 | I/O bus input/output data bit 0 (negative true). |
| NIOD1 | //O bus input/output data bit 1 (negative true). |
| NOD2 | I/O bus input/output data bit 2 (negative true). |
| NIOD3 | I/O bus input/output data bit 3 (negative true). |
| NIOD4 | 1/O bus input/output data bit 4 (negative true). |
| NIOD5 | I/O bus input/output data bit 5 (negative true). |
| NIOD6 | I/O bus input/output data bit 6 (negative true). |
| NIOD7 | I/O bus input/output data bit 7 (negative true). |
| NIOD8 | IO bus input/output data bit 8 (negative true). |
| NIOD9 | I/O bus input/output data bit 9 (negative true). |
| NIOD10 | I/O bus input/output data bit 10 (negative true). |
| NIOD11 | I/O bus input/output data bit 11 (negative true). |
| NIOD12 | I/O bus input/output data bit 12 (negative true). |
| NIOD13 | I/O bus input/output data bit 13 (negative true). |
| NIOD14 | I/O bus input/output data bit 14 (negative true). |
| NIOD15 | LO bus input output data bit 15 (negative true). |
| NIOSB | I/O bus data transfer strobe (negative true). |
| NMYPA | HP-CIO card recognized its address has been asserted (negative true). |
| NNMI | Non-maskable interrupt (negative true). |
| NPA0 | I/O bus peripheral address bit 0 (negative true). |
| NPA1 | 1 O bus peripheral address bit 1 (negative true). |
| NPA2 | 1/O bus peripheral address bit 2 (negative true). |
| NPA3 | I/O bus peripheral address bit 3 (negative true). |
| NPFW | Power fail warning (negative true). |
| NPOLL | I/O bus interface poll (negative true). |

I/O Backplane Signal Definitions (Continued)

| Signal |  |
| :--- | :--- |
| NSTS | I/O bus status (negative true). |
| NSW0 | Select code switch 0 (negative true). |
| NSW1 | Select code switch 1 (negative true). |
| NSW2 | Select code switch 2 (negative true). |
| NSYNC | Synchronize (negative true). |
| NUAD | Your address; slot/select code select (negative true). |
| NWAIT | (Not used) |
| PPON | Primary power on; all outputs in spec. |
| READ | l/O bus data direction (positive true; high indicates data to IOP). |
| SGND | Safety ground. |
| SPON | Same as PPON. |

## SCM Connectors

| Designator | Connecting Assembly |
| :---: | :--- |
| L | Motherboard (Connector P10) <br> S |
| Motherboard (Connector P9) |  |

## SCM

SCM Connectors

## SCM Signal Definitions

| Signal | Definition |
| :---: | :---: |
| -12 | - 12 volt supply. |
| -19 | - 19 volt supply. |
| 5 | 5 volt supply |
| 5F | 5 volt fused supply. |
| 12 | 12 volt supply. |
| 16 | 16 volt bias supply. |
| 19 | 19 volt supply. |
| CCLK | Baud rate generator for I/ O backplane. |
| GND | Ground plane of SCM. |
| NDOORLED | Door open (negative true). |
| NFANHI | Power supply fan at highest speed (negative true). |
| NFLG | I/O bus ready for data (negative true). |
| NIC1 | //O bus interface control bit 1 (negative true). |
| NIC2 | I/O bus interface control bit 2 (negative true). |
| NIC3 | I/O bus interface control bit 3 (negative true). |
| NIC4 | I/O bus interface control bit 4 (negative true). |
| NIDO0 | I/O bus input/output data bit 0 (negative true). |
| NIDO1 | I/O bus input/output data bit 1 (negative true). |
| NIDO2 | l/O bus inputoutput data bit 2 (negative true). |
| NIDO3 | 1/O bus input/output data bit 3 (negative true). |
| NIDO4 | I/O bus input/output data bit 4 (negative true). |
| NIDO5 | I/O bus input/output data bit 5 (negative true). |
| NIDO6 | I/O bus input/output data bit 6 (negative true). |
| NIDO7 | I/O bus input/output data bit 7 (negative true). |
| NIDO8 | //O bus input/output data bit 8 (negative true). |
| NIDO9 | I/O bus input/output data bit 9 (negative true). |
| NIDO10 | I/O bus input/output data bit 10 (negative true). |
| NIDO11 | //O bus input/output data bit 11 (negative true). |
| NIDO12 | l/O bus input/output data bit 12 (negative true). |
| NIDO13 | I/O bus input/output data bit 13 (negative true). |
| NIDO14 | I/O bus input/output data bit 14 (negative true). |
| NIDO15 | I/O bus input/output data bit 15 (negative true). |
| NIFC | I/O bus interface clear (negative true). |
| NIOOLED | I/O slot 0 LED on service panel (negative true). |
| NIO1LED | I/O slot 1 LED on service panel (negative true). |
| NIO2LED | I/O slot 2 LED on service panel (negative true). |
| NIO3LED | I/O slot 3 LED on service panel (negative true). |
| NIO4LED | I/O slot 4 LED on service panel (negative true). |
| NIO5LED | I/O slot 5 LED on service panel (negative true). |
| NIO6LED | 1/O slot 6 LED on service panel (negative true). |
| NIOSB | I/O bus data transfer strobe (negative true). |
| NLOADLED | LOAD LED on service panel (negative true). |
| NMEMDUMP | MEM DUMP switch on service panel (negative true). |
| NMI | Non-maskable interrupt. |
| NMYPA | HP-CIO card recognized its address has been asserted (negative true). |
| NPA0 | I/O bus peripheral address bit 0 (negative true). |
| NPA1 | I/O bus peripheral address bit 1 (negative true). |
| NPA2 | I/O bus peripheral address bit 2 (negative true). |
| NPDOP | Panel door open (negative true). |

## SCM Signal Definitions (Continued)

| Signal | Definition |
| :---: | :---: |
| NPFW | Power fail warning (negative true). |
| NPOLL | I/O bus interface poll (negative true). |
| NPSLED | PS LED on service panel (negative true). |
| NPSTLED | Power supply overtemperature (negative true). |
| NRESET | RESET switch on service panel (negative true). |
| NRUNLED | RUN LED on service panel (negative true). |
| NSCMLED | SCM LED on service panel (negative true). |
| NSELFT | Leading edge causes power supply to send stack into self-test (negative true) |
| NSELFTEST | SELF TEST switch on service panel (negative true). |
| NSELFTESTLED | SELF TEST LED on service panel (negative true). |
| NST1LED | Stack 1 LED on service panel (negative true). |
| NST2LED | Stack 2 LED on service panel (negative true). |
| NST3LED | Stack 3 LED on service panel (negative true). |
| NST4LED | Stack 4 LED on service panel (negative true). |
| NST5LED | Stack 5 LED on service panel (negative true). |
| NST6LED | Stack 6 LED on service panel (negative true). |
| NST7LED | Stack 7 LED on service panel (negative true). |
| NST8LED | Stack 8 LED on service panel (negative true). |
| NST9LED | Stack 9 LED on service panel (negative true). |
| NST10LED | Stack 10 LED on service panel (negative true). |
| NST11LED | Stack 11 LED on service panel (negative true). |
| NST12LED | Stack 12 LED on service panel (negative true). |
| NSTART | START switch on service panel (negative true). |
| NSTLED | Stack overtemperature (negative true). |
| NSTS | I/O bus status (negative true). |
| NSYNC | I/O bus interface poll (negative true). |
| NTEMPLED | TEMP LED on service panel (negative true). |
| NWAIT | $1 / \mathrm{O}$ bus lengthen IOSB (negative true). |
| PPON | Primary power on; all outputs in spec. |
| READ | I/O bus data direction (high indicates data to IOP). |
| ST1 | Stack self-test from slot 1. |
| ST2 | Stack self-test from slot 2. |
| ST3 | Stack self-test from slot 3. |
| ST4 | Stack self-test from slot 4. |
| ST5 | Stack self-test from slot 5. |
| ST6 | Stack self-test from slot 6. |
| ST7 | Stack self-test from slot 7. |
| ST8 | Stack self-test from slot 8. |
| ST9 | Stack self-test from slot 9. |
| ST10 | Stack self-test from slot 10. |
| ST11 | Stack self-test from slot 11. |
| ST12 | Stack self-test from slot 12. |
| US4 | POLL ANDed with NSELFT. |
| UPS1 | Uninterruptible power supply. |
| UPS2 | Uninterruptible power supply. |

# Chapter 10 <br> 9030/40 Reference 

## Real-Time Clock/Non-Volatile Memory Contents

Bute 0 - Second
Byte 1 - Clock Check Byte
Byte 2 - Minute
Byte 3 - Stack Size (two times number of finstrates)
Byte 4 - Hour
Byte 5 - Century
Byte 6 - Day of Week
Byte 7 - Day of Month
Byte 8 - Month
Byte 9 - Year
Bytes 10-13 - Control Registers
Byte 14 - Timer Resolution
Byte 15 - Timeout Scan Resolution
Byte 16 - Keyboard Initialization Data
Bytes 17-24 - Default System Startup Subsystem
Bytes 25-44 - Default Mass Storage Unit Specifier
Byte 45 - Size of System I/O Buffer
Bytes 46-47 - NVM Checksum
Bytes 48-53 - Healer CAM Overflow Counter
Bytes 54-57 - Last Double Bit Memory Failure Data
Bytes 58-60 - Number of 10-Minute Periods Computer is On
Byte 61 - Number of Overheat Cycles
Bytes 62-63 - Number of Power-On Cycles

## Chapter 11 9030/40 Service Notes

[^0]:    * These codes are not used.

[^1]:    * Typical modem
    ${ }^{* *}$ Typical direct connection application

[^2]:    * These parts have been changed from "inch" to "metric". You may need to obtain metric hardware when replacing these parts
