IBM 3274 Control Unit Model 1C

Feature Numbers 5650 and 5651

IBM

First Edition (June 1978)

Information contained in this manual is subject to change, which will be reported in subsequent Technical Newsletters or, when this publication becomes obsolete, in the base publications listed in the Preface. Before using this publication in connection with the operation of IBM systems or equipment, refer to the latest *IBM System/360 Bibliography*, GC20-0360, and *IBM System/370 Bibliography*, GC20-0001 for the editions that are applicable and current.

The devices, options, and features described in this publication may not be available in every locale. Consult your IBM Marketing Representative for detailed information about product availability.

Copies of this and other IBM publications can be obtained through your IBM representative or the IBM Branch Office serving your locality. A form for readers' comments is provided at the back of this publication. If the form has been removed, address comments to: IBM Corporation, System Communications Division, Department 63T, Neighborhood Road, Kingston, New York 12401, U.S.A.

Preface

This interim publication provides descriptive, configuration, and physical planning information about the IBM 3274 Control Unit Model 1C Dataphone* Digital Service Adapter (DDSA) Features (# 5650 and # 5651). The publication is intended for data processing personnel, including managers and system analysts, for operations and administration managers, and for physical planning personnel.

Additional information about the characteristics of the IBM 3270 Information Display System is contained in the following publications:

- *An Introduction to the IBM 3270 Information Display System*, GA27-2739-8
- *IBM 3270 Information Display System: Configurator*, GA27-2849-2
- *IBM 3270 Information Display System: Planning and Setup Guide*, GA27-2827-3
- *IBM 3270 Information Display System: Component Description*, GA27-2749-7
- *IBM 3270 Information Display System: Installation Manual – Physical Planning*, GA27-2787-2**

This publication becomes obsolete when information concerning this feature is included in the appropriate publications listed above.

*Trademark of American Telephone & Telegraph Co.

**To properly plan an installation of the IBM 3274 Control Unit Model 1C a copy of this manual must be obtained early in the planning cycle, and its recommendations for system installation must be followed.

Chapter 1. Description

The Dataphone Digital Service Adapter (DDSA) Features are now available in the U.S. for installation in the IBM 3274 Control Unit Model 1C. Both features (#5650 for point-to-point and #5651 for multipoint operation) permit four-wire half-duplex communication with the host system via American Telephone & Telegraph's nonswitched Dataphone Digital Service. The DDSA features interface with the Dataphone Digital Service through AT&T's Channel Service Unit, or equivalent, thus enabling the user to take advantage of the data transmission techniques offered by this service. In addition, this service eliminates the need for modems.

Characteristics

The DDSA derives its power from the 3274 Control Unit. Data passes through the DDSA in both directions serial by bit and serial by character. No error checking is performed by the feature.

Speeds

The DDSA can operate at synchronous speeds of 2400, 4800, and 9600 bits per second (bps). The speed specified for the DDSA must correspond to the speed of the communication facility. Clocking of the DDSA is derived from the data and control signals on the Dataphone Digital Service communication lines.

3274 Control Unit Maintenance

Wrap facilities are provided in the DDSA for serviceability purposes. A switch is provided at the cable connector for serviceability and also for problem determination.

Figure 1 shows the connection of the 3274 Control Unit to the AT&T Dataphone Digital Service via a Channel Service Unit.

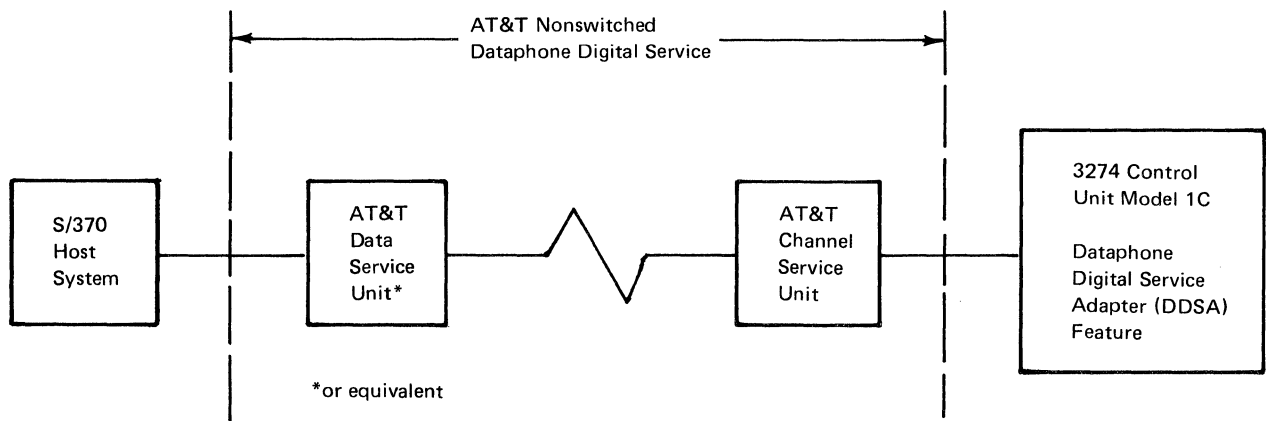

Figure 1. Connection of 3274 Control Unit Model 1C with DDSA Feature

Chapter 2. Configurations

This chapter updates the IBM 3274 Control Unit Model 1C configuration diagram (Figure 2) and feature list (Figure 3) from the *IBM 3270 Information Display System Configurator*, GA27-2849, to reflect the Dataphone Digital Service Adapter Feature.

**Not available on Model 1B.

1 AC voltage, 1 phase, 3-wire, 60 Hz.

2 4.3 metres (14 ft) normally supplied. Optionally specify other lengths.

3 6.1 metres (20 ft) normally supplied. Optionally specify other lengths.

4 Models 1A and 1C only.

5 Prerequisite only when SNA/SDLC protocol is required *and* #7802 is installed.

6 Not available in E/ME/A countries.

7 Not available with Special Features 5650 and 5651.

Chapter 3. Physical Planning

This chapter contains physical planning information that updates the *IBM Installation Manual – Physical Planning, GA27-2787*.

A 6.1 meter (20 ft) communication cable equipped with a 15-pin connector is supplied when Feature Number 5650 or 5651 is ordered (Figure 4). The 15-pin connector connects the 3274 Control Unit Model 1C with the DDSA Feature to the Channel Service Unit. Optional cable lengths of 3.0 meters (10 ft) (#9061), 9.1 meters (30 ft) (#9062), and 12.2 meters (40 ft) (#9063) are available and must be specified at the time of order. See Figure 3.
