

**Systems**

**OS/VS2 Release 1 Guide**

**VS2 Release 1**

**IBM**

# Preface

This publication describes special considerations, status, and ordering procedures for the current release of OS/VS2.

The Release Guide provides installation managers, system programmers, and IBM Field Engineering personnel with information useful in planning for implementation of the current release.

This publication has three parts:

1. Programming considerations for generating and running this release of OS/VS2.
2. Module information consisting of a list of modules in the system and a list showing their status.
3. Ordering and distribution procedures for the current release, including program material lists and documentation support.

For a functional description of OS/VS2 Release 1 and the differences between OS/VS2 and OS/MVT, see the OS/VS2 Planning and Use Guide, GC28-0600.

## First Edition (September, 1972)

This edition applies to release 1 of OS/VS2 and to all subsequent releases until otherwise indicated in new editions or Technical Newsletters. Changes are continually made to the information herein; before using this publication in connection with the operation of IBM systems, consult the latest IBM System/360 and System/370 Bibliography, Order No. GA22-6822, and the current SRL Newsletter, Order No. GN20-0360, for the editions that are applicable and current.

Requests for copies of IBM publications should be made to your IBM representative or to the IBM branch office serving your locality.

A form for readers' comments is provided at the back of this publication. If the form has been removed, comments may be addressed to IBM Corporation, Publications Development, Department D58, Building 706-2, PO Box 390, Poughkeepsie, N.Y. 12602. Comments become the property of IBM.

Memorandum to: Users of OS/VS2  
Subject: Release 1.0

This memorandum announces the availability of Release 1.0 of the OS/VS2 System Control Program. Orders may now be submitted.

As an extension to OS/MVT, VS2 provides support of a 16 million byte virtual storage. CPU support will be coincident with first shipment of these CPUs as follows:

<u>Processor</u>	<u>Support Date</u>
145	now
158	4/73
155 II	4/73
168	8/73
165 II	12/73

Listed below are highlights of the enhanced support now available. For a detailed description of function, advantages, and compatibility considerations, see the OS/VS2 Planning and Use Guide, GC28-0600.

- A single 16 million byte virtual storage for application and system code.
- TSO foreground regions utilizing virtual storage.
- Fetch protection between user regions.
- Up to 63 protected batch user regions or 42 TSO user regions.
- Authorized Program Facility to selectively control the use of SCP services as well as customers own selected processing programs.
- Automatic Priority Group .
- I/O load balancing.
- SMF extensions.
- Paged Link Pack Area.
- Compatible teleprocessing support.

OS/VS2 is designed to operate efficiently with concurrent operations for TSO, batch, and HASP at 768K bytes of real storage; batch and TSO in 512K bytes. \*

Certain Current System Programs, SORT and Language Processors which may be used with VS2 can be taken from Release 21.6 of OS. For details, reference the OS/VS2 Release Guide.

VS2 Release 1 will be current through the availability of VS2 Release 3 or the Release 3 update, if any, plus six months. At that time, central and FE programming service for Release 1 will be withdrawn.

Users who plan to install Release 1.0 should meet with their IBM representatives to review known restrictions, PTFs and EC requirements.

\* A minimum batch system with a concurrent reader and writer operates in 384K bytes of real storage.

# Part 1: Programming Considerations

Part 1 contains special programming considerations for generating and running OS/VS2.

For further information see OS/VS2 Planning and Use Guide, GC28-0600, and OS/VS2 System Generation Reference, GC26-3792.

# System Generation

The purpose of this section is to point out system generation parameters with special performance considerations. For a complete discussion of the system generation process and the system generation parameters, see OS/VS2 System Generation Reference, GC26-3792.

## CTRLPROG

PGCLEAR - The default value for this parameter is "NO." The default value should be used unless you want pages cleared when they are first referenced. This parameter cannot be changed without regenerating the system.

## DATASET

In general, the DATASET macro instruction should not be used to allocate critical system data sets. If this macro is used, data set placement on the designated volume is not optional. Therefore, whenever possible, critical system data sets should be allocated when the system is generated. The guidelines for data set placement will vary according to your system configuration.

Allocate the required SYS1.SAMPLIB data set before you generate your system. Use the DCB parameters RECFM=F, BLKSIZE=80, and LRECL=80. If SYS1.SAMPLIB is not on the system residence volume use the DATASET macro instruction with the UNIT and VOLSER parameters to identify the data set location. Do not use the SPACE parameters to allocate space for the data set.

## SCHEDULR

WTOBFRS - At least 40 buffers should be specified for this parameter.

INITQBF - The track stacking facility will be ignored.

## TSO

TSOAUX - Unless the amount of secondary storage available for paging is critical, the default of "0" should be used.

# System Parameters

The purpose of this section is to point out system parameters with special considerations. For a complete description of the system parameters, see OS/VS Message Library: VS2 System Messages, GC38-1002.

CLPA - After you run the SPZAP service aid program against a module in SYS1.LPALIB you must specify this option the next time you IPL the system. If this option is not specified, the old version of the module will be used.

# PARMLIB Members

The purpose of this section is to point out PARMLIB members with special performance considerations. For a complete description of the PARMLIB members, see OS/VS2 Planning and Use Guide, GC28-0600.

IEALPAXx and IEAFIXxx - Alias names should not be used with these PARMLIB members. The use of alias names will cause the loss of either fixed or pageable storage.

# Protecting System and User Libraries

The use of the scratch facility is not restricted through the use of APF. To prevent a critical data set (all IBM system data sets and user data sets considered critical) from being inadvertently scratched, use the password protect facility.

# Operator Commands and Procedures

## Setting the Time of Day Clock

The time of day clock should be initialized when you restart the system. Once the clock is set, it need not be set again.

## SET Command

Do not use the SET command while time sharing is running.

# PROCLIB Members

## Time Sharing

Use the program name IKJVAT00 on the EXEC statement in the procedure used to start time sharing. Use of the OS/MVT program name IKJEAT00 will cause the job to abnormally terminate with a completion code of 047.

# Part 2: Module Summary

Part 2 is divided into two sections:

- o Module Directory
- o Module Status

# Module Directory

This directory lists the modules in the operating system, identifies the component to which each module belongs, and the library in which it resides.

## SYS1.AUADS

IBMUSERO

# Module Status

This section indicates the modules that have been added to, altered, or deleted from the system for this release.

The listing is arranged by library. Each field contains:

MODULE NAME	The module or alias name for each member that has been changed.
NEW	An asterisk indicates a new module for this release.
MOD SIZE	This is the storage size in hexadecimal required for the module.
MOD SIZE CHG.	The amount of change (in hexadecimal) from the prior release - - + for an increase, - for decrease.
ALS	An 'A' indicates an alias name.
OLD SSI	This is the SSI for the prior release.
NEW SSI	This is the SSI for this release.
ALIAS TRUE NAME	This is the true module name for this alias. (This field will appear only if the module is reentrant and reuseable.)

# Part 3: Ordering and Distribution

Part 3 contains ordering and distributing information about this release. It is divided into four sections:

- Ordering Procedures
- Distribution Procedures
- Documentation Support
- Hardware Engineering Change Levels

# Ordering Procedures

To order this release of OS/VS2, contact your IBM salesman or DP Branch Office. It is no longer necessary to fill out a Program Order Form; your IBM representative places the order for you.

All new users of VS2 should order the Starter System as well as the Distribution Libraries. The initial system generation of VS2 cannot be performed without the Starter System.

If additional features (such as the Starter System) are desired after your order has been received, you may order them through the DP Branch Office.

System control programs that are not shipped in the distribution libraries are available to VS2 users at no additional cost. They must be ordered separately. Examples are the Emulator programs. To order these or for additional information, contact your IBM marketing representative.

## Basic Material

Documentation: One copy of each of the following publications is provided:

<u>Title</u>	<u>Order Nos.</u>
OS/VS2 Planning and Use Guide	GC28-0600
OS/VS2 Release 1 Guide	GC28-0601
OS/VS2 System Generation Reference	GC26-3792
OS/VS JCL Reference	GC28-0618
Operator's Library: OS/VS2 Reference	GC38-0210
OS/VS Message Library: VS2 System Messages	GC38-1002
OS/VS Message Library: VS2 System Codes	GC38-1008
OS/VS2 Storage Estimates	GC28-0604
OS/VS Utilities	GC35-0005
OS/VS Linkage Editor and Loader	GC26-3813
OS/VS Service Aids	GC28-0633
OS/VS Message Library: Utilities Messages	GC38-1005
OS/VS Message Library: Linkage Editor and Loader Messages	GC38-1007
OS/VS Message Library: Service Aids and OLTEP Messages	GC38-1006
OS/VS and DOS/VS Assembler Language	GC38-4010
OS/VS Assembler Programmer's Guide	GC33-4021

Machine Readable Material: One copy of the machine readable materials consisting of OS/VS2 Distribution Libraries:

Order the basic material, selecting one of the following Specify numbers:

<u>Specify Number</u>	<u>Track/Density</u>	<u>User Volume Reqmt.</u>
9027	9 track/800 BPI tape	2
9029	9 track/1600 PBI tape	1

Note: To initially generate the system, a Starter Operating System is required.

## Material for Starter Operating System

Machine Readable Material: One copy of machine readable material containing a Starter Operating System for restoring to a 2314/2319 or a 3330.

Order the basic feature material selecting one of the following feature numbers:

<u>Feature Number</u>	<u>Residence</u>	<u>Track/Density</u>	<u>User Volume Requirement</u>
6000	2314/2319	9 track/800 BPI tape	1
6001	2314/2319	9 track/1600 BPI tape	none (DTR)
6002	3330	9 track/800 BPI tape	1
6003	3330	9 track/1600 BPI tape	none (DTR)
6999*		Starter system not ordered	

\* Enter this number if you have retained an applicable starter system from a previous order.

## Optional Material

Machine Readable Material: The machine readable material contains the system control program source code for SYSIN format, divided into eight component groups.

Order the optional material, selecting one or more of the following feature numbers:

<u>Feature Number</u>	<u>Group</u>	<u>Track/Density</u>	<u>User Volume Requirement</u>
7801	Installation Processors	9/800	1
7802	Installation Processors	9/1600	1
7805	Utilities	9/800	1
7806	Utilities	9/1600	1
7809	Data Management	9/800	2
7810	Data Management	9/1600	2
7813	BTAM/ISAM	9/800	1
7814	BTAM/ISAM	9/1600	1
7817	Prob. Deter/Diagnostics	9/800	2
7818	Prob. Deter/Diagnostics	9/1600	2
7821	Control Program	9/800	3
7822	Control Program	9/1600	3
7825	TSO	9/800	2
7826	TSO	9/1600	2
7829	TCAM/Graphics	9/800	2
7830	TCAM/Graphics	9/1600	2

Note: For an indication of which system control program components are included in the above groups refer to the documentation list.

## Related Documentation

Related documentation is available from the System Library Subscription Service (SLSS), Mechanicsburg. Contact your IBM representative for additional information.

## Current System Programs

The following Current System Programs can be used with OS/VS2. The programs can be extracted from Release 21.6 of OS.

COBOL F	Note 1
COBOL F Library	Note 1
Full ANS COBOL V2	
Full ANS COBOL V2 Library	
FORTTRAN G	
FORTTRAN H	
FORTTRAN G & H Library	
FORTTRAN Syntax Checker	
PL/1 F	Note 2
PL/1 F Library	
PL/1 Syntax Checker	
Sort/Merge	

Note 1: Program withdrawn, but will operate with VS2.

Note 2: Teleprocessing support is not available in this environment since QTAM is not supported by VS, and PL/1 F does not support TCAM.

Please contact your FE representative to determine what PTFs might be required for these CSPs to operate correctly with VS2.

# Distribution Procedures

OS/VS2 is distributed only on magnetic tape. The number of user volumes required for the available track density combinations is specified in the preceding ordering instructions.

The Distribution Libraries are distributed as unloaded partitioned data sets. Those can be loaded to various direct access devices using the IEBCOPY utility in the Starter System. The distribution tape is not device dependent. For details on installation procedures, see the OS/VS2 System Generation Reference, GC26-3792.

## Basic Program Material Lists

The Basic Program Material List identifies the available starter systems and the data sets contained on the unloaded distribution library tapes.

BASIC PROGRAM MATERIAL LIST FOR OS/V52

9027 9 TRACK 800 BPI TAPE - UNLOADED DLIB01  
9029 9 TRACK 1600 BPI TAPE - UNLOADED DLIB01

## Optional Program Material Lists

The Optional Program Material (Source Libraries) is available from DP-PID on 9 track 800 or 1600 BPI tapes.

The requestor may forward or order magnetic tapes, following the current ordering procedures in the 'Branch Office Manual DP Sales Activity'.

Any assemblies done utilizing OS/V52 SYMBOLICS must have SYS1.AMODGEN concatenated to SYS1.AMACLIB and SYS1.APVTMACS. SYS1.AMODGEN contains Stage II SYSGEN macros, some of which are called by other modules in the system. If you do not specify TSO in your system, you must concatenate SYS1.ATSOMAC to SYS1.AMACLIB, SYS1.AMODGEN and SYS1.APVTMACS. SYS1.ATSOMAC contains macros which may be required during the assembly of non-TSO modules.

An assembly of the source code may result in object code which is not the same byte for byte, as the object code in the distribution libraries. This is due to differences in macro expansion which do not affect execution of the modules.

# Hardware Engineering Change Levels

This section defines, by hardware component, the minimum engineering change levels known to be required for implementation of the current release.

Except for the following, the EC levels for hardware supported under OS/VS2 - Rel. 1 are identical to the levels identified in the Release 21 'Release Guide', GC28-6730

- . 3145, 135348, 1, Hardware, Field Bill 140776
- . 3145, 128615, 1, Microcode
- . 3830, Control Unit-EC level 427556
