

Systems

IBM System/370 and 4300 Processors Bibliography

For use by those who plan for, install, program, or operate an IBM System/370 or 4300 Processor, this bibliography describes technical publications which document:

- Machine components,
- System Control Programming (SCP),
- DB/DC and system support licensed programs,
- Other supplementary information (e.g., forms, PTF listings).

Features, and kinds of information included, are:

- Titles and *abstracts*, with page counts,
- Clustering* and sequencing of items by title,
- Second list in *order-number sequence*, with *subject codes* explained and indexed,
- Specific page lookup by *program acronym*,
- Latest edition of the publications listed, with TNLs,
- SLSS publication profiles* used in distribution, with an explanation of these profiles,
- Details on order numbers, including *pseudonumbers*.

For System/370 and 4300 Processors publications on industry systems and licensed *application* programs, refer to GC20-0370.

Fourth Edition (October 1979)

This is a major revision of, and supersedes, GC20-0001-2 and its Technical Newsletter.

It is possible that this material may contain reference to, or information about, IBM products (machines and programs), programming, or services that are not announced in your country. Such references or information must not be construed to mean that IBM intends to announce such IBM products, programming, or services in your country.

Publications are not stocked at the address given below; requests for IBM publications should be made to your IBM representative or to the IBM branch office serving your locality.

A form for readers' comments is provided at the back of this bibliography. If the form has been removed, comments may be addressed to IBM Corporation, Publications Support Services, Dept. 812, 1133 Westchester Avenue, White Plains, New York 10604. IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation whatever. You may, of course, continue to use the information you supply.

Preface

The IBM publications listed and described in this bibliography are those necessary in

- *Planning for*
- *Programming*
- *Installing*
- and *Operating*

a System/370 or the IBM 4300 Processors.

Organization

In Part 1, the publications are clustered by subject and sorted by title keywords.

Part 2 chiefly contains abstracts describing the items listed in Part 1.

Part 3 lists, in order-number sequence, all items sorted by subject and keyword in Part 1.

Note: *Order numbers sequence by second character. The first character (G, S, or L) is the use key. (See "Availability.")*

The three parts are described in more detail further on.

Subject Identification and Filing

The file number (e.g., S370-36) appearing on many publications listed in this bibliography identifies the system in the prefix (S370) and the subject code in the suffix (36, i.e., control program). An intermediate category, such as VSE or MVS, may also appear.

Subject Code

The *subject code* is simply a two-digit number standing for a subject, e.g. 29 for PL/I or 15 for physical planning manuals and templates. (Part 1 starts with a generalized index of subject codes and their definitions. Codes 60 – 83 apply mainly to the associated bibliography, GC20-0370.)

File numbers are printed on publications as an aid in filing manuals in your office library by system and category. Codes 00 through 40 are also used in subscribing to SLSS (System Library Subscription Service).

Part 1

In Part 1, the subject-code listing, each publication has only one code. Items within the cluster for each code are put in sequence. Sequencing for manuals is alphameric, by the most apparent single *keyword* in each title—such as *3890* for the IBM 3890 Document Processor physical planning template, or *I/O* for the OS/VS2 I/O supervisor logic manual. Sequencing for microfiche program listings is by order number.

Part 1 gives the eight-position order number of each publication. Listings such as those for VS1 and MVS show manuals supporting back releases

(identified by T or Q order numbers) under the *current* edition which supports the latest release. The title of each back edition identifies the earlier release(s) it supports, and includes the order number actually printed on that back edition. For details on T and Q numbers, see "Pseudonumbers."

The alphameric sorting of titles is done with single keywords. In a list of manuals all concerning virtual storage, words such as virtual, or variations such as V or VS (and other non-specific terms), are not considered useful in sorting; thus, VSAM items appear at the beginning of subject code 30 under *Access Methods* (A's), whereas BTAM, QTAM, TCAM and VTAM appear (in that order) under the specific keyword *Telecommunications* (T's).

When one publication applies to more than one type of SCP (system control programming), it is repeated in each applicable listing.

Acronym Index

Publications whose titles contain commonly used program acronyms such as COBOL, CICS, or JCL can be most easily retrieved. "An Index for Some Common Program Acronyms" (beneath the table of contents on page v) refers you directly to the starting page for such titles.

Part 2

An abstract in Part 2 provides you with a description which ordinarily adds much to the indications of the title. Abstracts are listed in order-number sequence. (See note at left.)

SLSS Profiles

Part 2 also gives you, beneath the abstract, the number of pages and the publication profile used for distributing key items under SLSS. The profile is shown in the format of six fields separated by slashes: Major system or processor No./C/SC/Prog. support/Machine components/Prog. No. or SUID

These fields correspond to the six sections B/C/D/E1/F/E2 on the SLSS subscription form. (See *Entering an SLSS Subscription*, G320-1561.)

The "C" field is used to restrict the distribution of communications items, but only when this would not be redundant or a hindrance to proper distribution: that is, not when the publication matches a licensed program number specified by the subscriber, and not when the machine components indicated are for operation *only* in the communications mode. In cases where there's no other profile indication that a manual is purely of communications interest, the C field is used to so indicate.

Contents

IBM 5990 SYSTEM: SYSTEM SUMMARY MANUAL: RPQ 8T0146
5996-T01 DATA ACQUISITION CONTROLLER; 5799-WJF EXCHANGE
DATA COLLECTION PROGRAM SUPPORT
This manual describes the IBM 5990 System and its function in common carrier switching centers or exchanges. The two major components of the system are the IBM 5996-T01 Data Acquisition Controller and the IBM 5799-WJF Exchange Data Collection Program Support. It is intended for use by telephone company management personnel.

IBM 5934 T02 TICKET TERMINAL (RPQ 8T0130), IBM 5983-T02
CONTROL UNIT (RPQ 8T0131) COMPONENT DESCRIPTION
The manual gives information about the ticket terminal subsystem, what it is, has and does. It covers the operation of the ticket terminal in processing hand-marked cards and describes ticket terminal switches and indicators, as well as programming considerations, card layouts, configuration possibilities, physical planning, and operator procedures.
The manual is written for managers, systems analysts, operators, and programmers in user organizations and for IBM marketing representatives and systems analysts.
Manual, 48 pages

5935-LO3 BANKING TERMINAL REFERENCE MANUAL RPQ Y96695
This publication describes the IBM 5935-LO3 Banking Terminal. It also gives installation planning information. The 5935 is a full-function workstation in one unit specially designed for the bank personnel.
The 5935 can operate directly with either a local or remote data processing system (online operation) or it can operate separately (offline operation), the transactions being recorded on magnetic tapes for transmission to the processing system later (batch procedure).
This manual is intended for managers or specialists evaluating telecommunication equipment, and planners or programmers preparing the installation of the 5935 in a data communication system. It can also be used by the supervisor in the bank branch office. The supervisor is the person in the bank branch office who manages the tellers' work on the 5935.
Detailed instructions for operating and servicing the 5935 are given in the IBM 5935-LO3 Banking Terminal, Operating Guide, GA11-8636.
Maintenance information is given in the IBM 5935-LO3 Banking Terminal, Maintenance Information Manual, SY12-8769.
Manual, 8 1/2 x 11 inches, 188 pages, 4/79

IBM 3767 COMMUNICATION TERMINAL OPERATOR'S GUIDE
This manual contains operating procedures for the IBM 3767 Communication Terminal. A brief introduction presents general information that is of interest to the operator. Following chapters describe how to prepare the machine for operation (power-on, select mode, and so forth), how to handle the printer (replace ribbon, insert paper, adjust printing, and so forth), how to operate online (to host system), how to correct or edit data (stored in the buffer), and how to operate offline (as a keyboard-printer). A separate chapter is devoted to Problem Determination Procedures (PDP); this chapter contains error recovery procedures and instructions for those cases where the error recurs or is not recoverable. Appendixes contain operating instructions for the Calculate-Scientific feature, and descriptions of 3767 lights, switches, and keys.
Manual, 104 pages
//09//3767/
- GA18-2012
PROBLEM DETERMINATION GUIDE FOR THE IBM 3767
COMMUNICATION TERMINAL
Guides operators from a symptom being experienced in starting or during operation to a procedure for analyzing the symptom and finding its possible cause.
Prerequisite Publication: IBM 3767 Communication Terminal Operator's Guide, GA18-2000.
- GA18-2014
IBM 3270 INFORMATION DISPLAY SYSTEM 3276 CONTROL UNIT
DISPLAY STATION PROBLEM DETERMINATION GUIDE
This item is intended for use by customer operators to recover from an error or a problem with 3276 Control Unit Display Station, the keyboard, the host, or the communication line. It should help operators pinpoint possible failure causes and avoid unnecessary calls for assistance.
Major topics include:
 Readying, keyboard check test procedures for display station and control unit, and symptom indexes.
Manual, 10 x 1 3/4 inches, 58 pages, 4/78
//09//3276/
- GA18-2017
IBM 3276 CONTROL UNIT DISPLAY STATION SETUP INSTRUCTIONS
Instructions to customer personnel for setup of a 3276 Control Unit Display Station without the help of an IBM customer engineer. The customer personnel is not required to have knowledge of display stations or communication facilities.
Manual, 8 1/2 x 11 inches, 10/77

IBM 3767 COMMUNICATION TERMINAL MODEL 2 DUAL DRIVE PINFEED
PLATEN (RPQ MF6321) USER INFORMATION ALLENCUM
This manual gives the IBM 3767 Communication Terminal user the additional information required for using the Dual Drive Pinfeed Platen (DDPFF) device (RPQ MF6321). Basic terminal setup instructions and operating procedures for the terminal should be followed, to supplement the operation of this device.
Information in this manual is written for all users of this device. They must thoroughly understand the IBM 3767 Communication Terminal and the following publications:
 • IBM 3767 Models 1, 2, and 3 Communication Terminal Component Description, GA27-3096
 • IBM Communication Terminal Setup Instructions, GC30-3026
 • IBM 3767 Communication Terminal Operator's Guide, GA18-2000

GA19-0034

IBM 1275 OPTICAL READER SORTER FOR SYSTEM/360 AND SYSTEM/370

This publication describes the functional characteristics of the IBM 1275 Optical Reader Sorter and contains recommended programming techniques and complete operating instructions. The manual is intended primarily for systems analysts, programmers, and operators who are working in an OCR environment.

The 1275 Optical Reader Sorter reads either of two common types of optical character recognition (OCR) printing and sorts intermixed paper documents. Models 1 and 3 operate off-line; Models 2 and 4 can operate either on-line with an IBM System/360 Model 25, 30, 40, or 50, or with an IBM System/370 Model 135, 145, 155, or 165, or off-line.

For understanding the on-line operation of the 1275, the reader should be familiar with the Systems Reference Library, IBM System/360 Principles of Operation (GA22-6821). Systems Library, 116 pages

GA19-0036

PAPER AND PRINT QUALITY REQUIREMENTS FOR IBM 1270 AND 1275 OPTICAL READER SORTERS

This publication describes the quality of paper and print required for documents that are to be read by the IBM 1270 and 1275 Optical Reader Sorters. The manual is intended for those responsible for providing the documents and for those who plan and maintain the optical character recognition system.

The following topics are dealt with:

1. The mechanical and optical characteristics desired of the paper.
2. The sizes and conditions of documents.
3. The quality of the printing, and the printing devices that can be used to obtain this quality.
4. The procedures for manual, as well as machine, handling of the documents.

For information on the 1270 and 1275 Optical Reader Sorters, refer to Systems Reference Library (SRL) IBM SYSTEM/360 COMPONENT DESCRIPTION - IBM 1270 OPTICAL READER Sorter, order no. GA19-0035 and component description - IBM 1275 OPTICAL READER SORTER, Order No. GA19-0034. For information on the design of documents, refer to SRL FORM-DESIGN CONSIDERATIONS - SYSTEM PRINTERS, Order No. GA24-3488. For information on the IBM printing devices dealt with in the manual, refer to SRL IBM 1403 PRINTER COMPONENT DESCRIPTION, Order No. GA24-3073 and to the booklet IBM TYPING INSTRUCTIONS FOR OPTICAL CHARACTER RECOGNITION. GA19-0049

IBM SYSTEM/360 AND SYSTEM/370 COMPONENT DESCRIPTION AND OPERATING PROCEDURES: IBM 1288 OPTICAL PAGE READER, MODEL 1
IBM prepared this publication as an aid for IBM System/360 and System/370 programmers, systems analysts, supervisors, and operators. Sections of the manual also include information of interest to forms designers, manufacturers and input document printers.

Programmers, systems analysts, and supervisors should be familiar with the system to which the 1288 is attached. For order numbers and names of other publications describing the IBM System/360 and System/370, see the IBM System/360 and System/370 Bibliography, GA22-6822.

See Handwriting Numbers and symbols for the IBM Optical Reader, SR29-1280, and the Handwriting Practice Sheet, SR29-1281, for proper handwriting for 1288 input.

For information about document design and input quality control, see the OCR Input Preparation Guide for the IBM 1287/1288 Character Readers, GC20-1686. Ready reference information for 1288 operators is provided by the Operator Guide, G229-4078 Document Gage for Machine Setup, GX21-9106. Manual, 104 pages

GA19-0050

IBM SYSTEM/360 AND SYSTEM/370 COMPONENT DESCRIPTION AND OPERATING PROCEDURES FOR IBM 1287 OPTICAL READER MODEL 5
This reference publication for the IBM 1287 Optical Reader Model 5 explains machine and system functions, specifications for input documents and data, programming considerations, and operating procedures. It is intended for machine operators, programmers, and people who prepare input documents. Machine operators need not have previous experience in operating the model 5, but programmers should be familiar with the various operating systems available with System/360 and System/370.

GA19-5024

IBM 3270 INFORMATION DISPLAY SYSTEM: 5926-E03 OPTICAL SCANNER REFERENCE MANUAL RPOS 7E0215 AND U42416

This publication provides information for customer and IBM personnel concerned in operating, programming and physical planning for 5926-E03 Optical Scanners. Readers should be familiar with the basic principles of the 3270 Information Display System.

The publication has six main sections.

Introduction: This section briefly describes the optical scanner, its operation, and the production of printed bar-codes suitable for scanning.

Operating Procedure: This section describes how an operator uses the optical scanner to read bar-coded data, and how the data is transmitted to a data processing system. **Program Considerations and Code Information:** This section describes the programming support, data codes, and error checking involved in scanning and transmitting bar-coded data.

Preparation of Bar Codes: This section lists the allowed dimensions of bar-codes, describes the ways that data can be arranged on a document, and describes UCS character assignment for bar-code printing.

Paper and Print Quality Requirements: This section gives requirements and recommendations for setting up a printer, selecting the correct paper, and so on, for producing printed bar codes suitable for optical scanning.

5926-E03 Characteristics and Installation Planning Information: This section lists the physical and (required) environmental characteristics of the optical scanner.

Appendix A describes the use of test documents.
Manual, 30 pages (4/75)

GA19-5029

3740 DATA ENTRY SYSTEM: (5926-BC3) BAR CODE READER PRINTER DATA STATION, CUSTOM UNIT DESCRIPTION RPOS 7E0215, X64601, 7B0194, X96684, AND X72888

The IBM 5926-E03 Optical Scanner is a hand-held scanner for reading printed bar-coded data. It can be attached to the IBM 3740 Data Entry System, the IBM 3270 Information Display System, IBM System/32 and to IBM System/7.

This publication provides information on operating, programming and planning for 5926-E03 Optical Scanners attached to data stations of the 3740 Data Entry System: either the IBM 3741 Data Station, Models 1 and 2, or the IBM 3741 Programmable Work Station, Models 3 and 4. Readers should be familiar with the operation of 3741 Data Stations and Programmable Work Stations as described in the following publications.

IBM 3740 Data Entry System; System Summary and Installation Planning, GA21-9152.

IBM 3741 Data Station Reference Manual, GA21-9183.

IBM 3740 Data Entry System Special Self-Check Number Device Custom Unit Description; RPOS (U.S.A.) WE0408, Z07465, (KT) X10260, GA33-3016.

IBM 3741 Data Station function control Feature Reference Manual Supporting RPO WE2360, GA21-9206.

IBM 3741 Data Station Operator's Guide, GA21-9131.

Manual, 8 1/2 x 11 inches, 44 pgs, 11/76

IBM 3270 INFORMATION DISPLAY SYSTEM: 5914 DOCUMENT INSCRIBE USER'S GUIDE, RPQ U74485 MODEL D01 - 7U0007 MODEL D02
This book tells you how to use the IBM 5914 Document Inscribe. The book tells you
• how to use the Document Inscribe to inscribe (that is, print on) a document,
• how to recognize that a document is printed correctly,
• and how to perform simple jobs to keep the Document Inscribe working correctly.
The book does not tell you how to operate the IBM 3277 Display Station. For this information, refer to Operator's Guide for IBM 3270 Information Display Systems, GA27-2742.
You should not need any previous knowledge of, or experience of using, a Document Inscribe to understand this book.

IBM 3843 LOOP CONTROL UNIT OPERATOR'S GUIDE
This manual tells how to operate the IBM 3843 Loop Control Unit. Included in this manual are directions for normal operation as well as procedures to help determine whether the 3843 is working correctly.
The information in this manual is intended primarily for the 3843 operator. However, it is also intended for persons who will write user operating procedures and train operator personnel, and for IBM customer engineers.
Although knowledge of data processing or data communications is not necessary, it is assumed that the reader is familiar with the user's remote loop and normal operation of equipment on the loop. The reader may also find it helpful to read the component description manuals for the modem and the subsystem controller to which the IBM 3843 is connected.

IBM SYSTEM/360 COMPONENT DESCRIPTION IBM 1288 OPTICAL PAGE READER MODEL 1
This publication is a reference manual for the IBM 1288 Optical Page Reader, which serves as an input device for the IBM System/360 Models 25, 30, 40, and 50. This manual, which is organized by function, discusses:
Interconnection between the 1288 and the processing unit.
Characters read by the 1288 and their data codes.
Data transfer between the 1288 and the system.
Programming information about 1288 control, status signals, and sense indications.
Optical Mark data recording and reading.
Operator controls for the 1288.
Operating procedures for the 1288 that are not application dependent.
Input document design and printing.
Special features for the 1288.
Input data printing.
The principle audience for this publication will be IBM System/360 programmers, system analysts, supervisors, and operators. Others who will use the manual are forms designers, forms manufacturers, and input document printers.
Programmers, systems analysts, and supervisors using this manual will need to be familiar with the system to which the 1288 is attached.
Systems Reference Library Manual, 54 pages
//04//1288/

GA21-9124

3504 AND 3505 CARD READER, 3525 CARD PUNCH SUBSYSTEM
This is an assembler-level programmer's Reference manual and an operator's guide. It describes the IBM 3504 Card Reader (an 80-column device that natively attaches to the IBM System/370), the IBM 3505 Card Reader (an 80-column device that attaches to a System/370 channel) and the IBM 3525 Card Punch (an 80-column device that attaches natively to either an IBM 3505 Card Reader or a System/370). These card devices and their interfaces with the system comprise subsystems that do much of the error logging and error recovery support usually provided by the system. The subsystem is buffered, channel overrun cannot occur, and data can be transferred to and from the subsystem in burst mode.
The manual contains information about instructions and commands error indications, conditions, and recovery procedures, a description of the devices, data about operator procedures and controls, and application hints.
Manual, 136 pages

IBM 1287 OPTICAL READER MODEL 5: GENERAL INFORMATION
This manual contains introductory information about the 1287 Optical Reader Model 5 for programmers, system analysts, supervisors, and machine operators. To fully understand the content of this manual, readers should be familiar with other 1287 models. References to the 1287 SRL GA21-9064 are made throughout the manual where basic 1287 operations information is necessary to understand Model 5 functions.
General Information Manual, 16 pages

GA21-9143

IBM 3881 OPTICAL MARK READER MODELS 1 AND 2 REFERENCE MANUAL AND OPERATOR'S GUIDE
This manual describes the use of the 3881 Model 1 as an on-line reader, and the use of the 3881 as a reader that reads marks onto magnetic tape via an IBM Model 2 3410.
The manual provides customer management, analysts, and programmers with detailed information about the functions and capabilities of the 3881. It describes the format of 3881 forms, explains forms layout, and printing and ink specifications. It contains sections on marking the forms with pencil, preprinted marks, and IBM line printers. The manual describes how to control 3881 by means of the IBM 3881 Format Control Sheets and how to control on-line 3881s by System/370 commands (assembler level programming). An operator's guide section provides detailed information about lights, keys, error stops, and operating procedures.
Manual, 100 pages

GA21-9144

IBM 2596 CARD READ PUNCH PROGRAMMER'S REFERENCE MANUAL AND OPERATOR'S GUIDE - SYSTEMS REFERENCE LIBRARY
This manual describes the IBM 2596 Card Read Punch. The manual is intended for IBM System/360 or IBM System/370 systems analysts, programmers experienced in assembler language, and operators.
This manual describes the following:
o General hardware characteristics of the 2596.
o Commands, status bytes, sense bytes and timing considerations.
o Keys, lights, and operating procedures.
Manual, 41 pages
//02//2596/

GA21-9147

IBM 3886 OPTICAL CHARACTER READER MODEL I REFERENCE MANUAL
The IBM 3886 Optical Character Reader Reference Manual (MODEL I) contains operational capabilities and programming requirements for the 3886 Model I. The manual is written for customer management, systems analysts, and data processing equipment operators, familiar with data processing operations, but not necessarily with CCR devices or techniques.
Manual, 70 pages

GA21-9150

IBM SYSTEM/360 AND SYSTEM/370 COMPONENT DESCRIPTION AND OPERATING PROCEDURES: IBM 1287 OPTICAL READER, MODEL 5
This publication is a reference manual for the IBM 1287 Optical Reader, Model 5, which serves as an input device for the IBM System/360 Models 22, 25, 30, 40, 50, 65, 65MP, 75, and when in 65 mode, 67; and IBM System/370 Models 135, 145, 155, 158, 165 and 168. This manual which is organized by function, discusses:
o Interconnection between the 1287 and the processing unit.
o Characters read by the 1287 and their data codes.
o Special features for the 1287.
o Data transfer between the 1287 and the system.
o Programming information about 1287 control, status signals, and sense indications.
o Operator controls for the 1287.
o Operating procedures for the 1287 that are not application dependent.
o Input document design and printing.

o Input data printing.

The principal audience for this publication will be IBM System/360 and IBM System/370 programmers, system analysts, supervisors, and operators. Others who will use the manual are forms designers, forms manufacturers, and input document printers. Programmers, systems analysts, and supervisors using this manual will need to be familiar with the system to which the 1287 is attached.
Manual, 92 pages

GA21-9152

IBM 3740 DATA ENTRY SYSTEM - SYSTEM SUMMARY AND INSTALLATION PLANNING

This manual is intended for customer executives, customer DP managers, key entry supervisors and installation planning consultants. It should be used where general information about the system is required.

The manual contains descriptive information about the system and each unit. Discussions of available functions and features, information on the media, probable programming changes, and suggested operating procedures are included. Installation planning information is also part of this publication. In addition, a bibliography of applicable teleprocessing publications is included in the teleprocessing section.

GA21-9167

5424 AND 5425 MULTIFUNCTION CARD UNITS OPERATOR'S GUIDE AND PROGRAMMER'S REFERENCE MANUAL

This manual describes the IBM 5424 Models A1, A2, K1, K2, and K3 and the IBM 5425 Models A1 and A2. It includes operating instructions for this 96 column card reader when it is natively attached to IBM System/370 or IBM 4331 Processing Unit or used with the 5424 Stand Alone Feature.

The manual will be of interest to System/370 and IBM 4331 Processing Unit system analysts, programmers experienced in assembler, and operators.

Besides describing the devices, the manual describes the commands, status bytes, sense bytes, and timing considerations for the 5424 and 5425, and describes the keys, lights, and operating procedures.

GA21-9182

THE IBM DISKETTE: GENERAL INFORMATION MANUAL

This manual provides information about handling, shipping, and storing all IBM diskettes, and detailed information about cylinder formats for IBM diskettes used for data exchange. Because it contains information of general nature regarding terminology, formats, handling, and shipping, of the diskette, the manual will be of interest to most people being introduced to the diskette medium for the first time.

Much of the information presented in this manual is not available in other publications. Therefore, the manual is a co-requisite to IBM 3540, 3741, 3742, 3747, 3600, 3890, and 3891 manuals.

Manual, 24 pages, 6/76

IBM 3741 MODELS 3 AND 4 PROGRAMMABLE WORK STATION PROGRAMMING REFERENCE MANUAL

This manual contains detailed reference material about Application Control Language (ACL) programming for the IBM 3741 Models 3-4. Information in the manual is intended to satisfy the requirements of ACL programmers and 3741 Model 3-4 operators.

Manual, 136 pages
//08//3741/

GA21-9195

A PROGRAMMER'S INTRODUCTION TO THE APPLICATION CONTROL LANGUAGE (FOR 3741 MODELS 3 & 4 PROGRAMMING WORKSTATION)

This publication is intended for persons who want to learn how to write programs using ACL (Application Control Language). ACL is the programming language used on the IBM 3741 Models 3 and 4 Programmable Work Station. The publication is an educational tool for programmers who either already know a computer language, or have just learned programming by attending the IBM class in ACL. The reader should be familiar with the data processing concepts and the operation of the IBM 3741 Models 1 and 2 Data Station.

This publication is divided into two chapters. The first chapter is an introduction to ACL. It briefly describes ACL control statements and instructions and gives a procedure to code an ACL program. The second chapter describes the ACL control statements and instructions that a programmer must use. The information in this chapter is arranged so that you learn the functions and structure of the language first and then the operations. After reading this publication, you should have enough knowledge about ACL to write a program. The Order Entry program is used as an example throughout the chapter.

GA21-9196

IBM 3741 MODELS 3 AND 4 PROGRAMMABLE WORK STATION GENERAL INFORMATION

This publication provides general information about the IBM 3741 Programmable Work Station. It describes the new functions of the work station and the Application Control Language which is used to control the work station. Examples of applications that can be used on the work station are also provided.

This publication is for company executives, system analysts, data processing managers, programmers, and installation managers who wish general information about the IBM 3741 Programmable Work Station.

Manual, 25 pages

GA21-9197

IBM 3540 DISKETTE INPUT/OUTPUT UNIT OPERATOR'S GUIDE AND PROGRAMMER'S REFERENCE MANUAL

This manual provides experienced assembler language and machine level programmers, systems analysts, and machine operators with reference information about the IBM 3540. The manual contains descriptions of IBM S/370 instructions and commands used to control the 3540. It provides them with error indications, conditions, and recovery procedures. It provides systems analysts and machine operators with a description of the 3540, its operator controls, and operator procedures.

Programmers using this manual should be familiar with the system to which the 3540 will be attached, and should understand the system interface characteristics.

Manual, 56 pages

GA21-9221

IBM 3742 DUAL DATA STATION FUNCTION CONTROL FEATURE REFERENCE MANUAL SUFFICIENT RFP 843866

This manual describes the operation and use of the FCF (Function Control Feature) of the IBM Dual Data Station. The FCF is made available by RFP 843866.

This manual is written with the assumption that you can operate the IBM 3742 Dual Data Station and are familiar with the IBM 3742 Dual Data Station Operator's Guide, GA21-9136, and the IBM 3742 Dual Data Station Reference Manual, GA21-9184. This manual does not contain any information covered in these publications. You should have an understanding of general programming concepts to make full use of this

manual. You should also read the general description of the FCF and its operation with the 3742 programs before going on to the following sections.

Several examples illustrate functions for which the RPQ was intended. There is considerable flexibility in the FCF functions that can be performed. You can also implement functions not addressed in this manual. However, no programming support or assistance is provided beyond that contained in the manual.

GA21-9224

IBM 3740 DATA ENTRY SYSTEM ASCII RPQ REFERENCE MANUAL SUPPORTING RPQS S40069, S40075, and S40081

This publication is intended for customer programmers, system analysts, operators, and IBM system engineers who need specific information about the 3740 Data Entry System RPQS. This publication describes only the differences between the ASCII RPQ and the standard EBCDIC machine operations. This publication assumes the reader understands the contents of the following manuals:

- o IBM 3740 Data Entry System, System Summary and Installation Manual -- Physical Planning, GA21-9152.
- o IBM 3741 Data Station Operator's Guide, GA21-9131.
- o IBM 3742 Dual Data Station Operator's Guide, GA21-9136.
- o IBM 3741 Data Station Reference Manual, GA21-9183.
- o IBM 3742 Dual Data Station Reference Manual, GA21-9184.
- o The IBM Diskette for Standard Data Interchange, GA21-9182.
- o IBM 3747 Data Converter Reference Manual and Operator's Guide, GA21-9170.
- o IBM 3740 Data Entry System Programmer's Guide, GA21-5071.

3741 READER/PUNCH ATTACHMENT FEATURE RPQ GF2495 REFERENCE MANUAL AND OPERATOR'S GUIDE

This manual describes the operation and use of the IBM 3741 Reader/Punch Attachment feature. This feature is made available by RPQ GF2495. Included is programming reference information, operating instructions, and error recovery procedures.

This manual is written with the assumption that the user has an understanding of the IBM 3741 and is also familiar with the IBM 3741 Data Station Operator's Guide, GA21-9131 and the IBM 3741 Data Station Reference Manual, GA21-9183. This manual does not contain information covered in these publications.

Information about the input/output devices that can be attached to the 3741 when using the Reader/Punch Attachment feature can be found in the following reference manuals listed:

- o IBM 1017 Paper Tape Reader:
IBM System/360 Component Descriptions 2826 Paper Tape Control Unit, 1017 Paper Tape Reader, 1018 Paper Tape Punch, GA33-4500
IBM System/3 1017 Paper Tape Reader Program Reference Manual, GC21-5035
- o IBM 2956 Optical Mark/Hole Reader:
IBM 2956 Optical Mark/Hole Reader Models 2 and 3 Component Description and Operating Procedures, GA21-9050
System/3 Model 10 Disk System Attachment for IBM 2956 Optical Mark/Hole Reader Models 2 and 3, GA21-9198
- o IBM 1054 Paper Tape Reader and the IBM 1055 Paper Tape Punch:
IBM 1050 Operator's Guide, GA24-3125

GA22-6864

IBM 2701 DATA ADAPTER UNIT COMPONENT DESCRIPTION

The IBM 2701 Data Adapter Unit Component Description is a reference manual describing the functions of the IBM 2701. The IBM 2701 permits an IBM System/360 or System/370 to communicate with a variety of remote terminals, devices, and stations.

This publication is designed to help the 2701 user, operator, and programmer to achieve efficient use of the 2701. Detailed descriptions are presented for:

- o The 2701 in the IBM System/360 and System/370 environment
- o Characteristics of the 2701 (including features)
- o Terminal adapter types: IEM Start/Stop Terminal Adapters, Telegraph Terminal Adapters, Parallel Data Adapter, Synchronous Transmit Receive (STR) Adapter, and Binary Synchronous Communications (BSC) Adapter
- o Programming considerations for the 2701
- o Line control sequences to and from the 2701 and attached terminals
- o ending status and sense bit descriptions

The reader should have a knowledge of teleprocessing and be familiar with the principles of operation for the IBM System/360 or System/370. For detailed information about Binary Synchronous Communication, refer to General Information - Binary Synchronous Communications (GA27-3004). For detailed information about a specific terminal, refer to the appropriate publication for that terminal.

GA22-6866

SYSTEM/360 COMPONENT DESCRIPTIONS: 2400-SERIES MAGNETIC TAPE UNITS, 2803/2804 TAPE CONTROLS, AND 2816 SWITCHING UNIT MODEL 1

This manual contains a comprehensive presentation of the characteristics, functions, and features of the IBM 2400 Series Magnetic Tape Units, 2803/2804 Tape Controls, and a general description of the IBM 2816 Model 1 Switching Unit. The 2400 series consists of the 2401, 2402, and 2420 Magnetic Tape Units, and 2403, 2404, and 2415 Magnetic Tape Units and Controls.

In most instances, operational descriptions are limited to the channel and command level. Operating functions and procedures common and fundamental to all I/O operations are described in IBM SYSTEM/360 PRINCIPLES OF OPERATION, Order Number GA22-6821.

Subjects covered include magnetic tape unit principles; keys and lights; tape load, unload, and cleaning procedures; status and sense information; magnetic tape handling; tape block and reel organization; and error recovery procedures.

IBM SYSTEM/370 MODEL 165 FUNCTIONAL CHARACTERISTICS

This publication describes the organization and the functional characteristics of the IBM System/370 Model 165, an information-processing system designed for very high-speed, large-scale scientific and business applications.

The system components are described, and a detailed consideration is given to the functions of processor storage, the central processing unit, the input/output channels, and the operator-control and operator-intervention portions of the system control panel. In addition, certain coding and timing considerations are described.

The reader is assumed to have a knowledge of information-processing systems and to have an understanding

of the System/360, as that system is described in the IBM SYSTEM/360 PRINCIPLES OF OPERATION, Order No. GA22-6821. The IBM SYSTEM/370 PRINCIPLES OF OPERATION, GA22-7000, should be used in conjunction with the IBM SYSTEM/360 PRINCIPLES OF OPERATION. Functional Characteristics Manual, 48 pages 3165//01///

IBM SYSTEM/370 MODEL 155 CONFIGURATOR

This sheet shows standard and optional features, main storage sizes by model, channel and sub-channel availability by model, and adapters required for console I/O units on the System/370 Model 155.

GA22-6958

7070/7074 COMPATIBILITY FEATURE FOR IBM SYSTEM/370 MODELS 165, 165 II, and 168

This publication contains information about the IBM 7070/7074 compatibility feature, which adds interpretive facilities to System/370 Model 165 for use by the IBM 7074 emulator program. The combination of the feature and the program (referred to as the 7074 emulator) allows execution on IBM System/370 Model 165 of programs written for the IBM 7070 and 7074 Data Processing Systems. Systems Reference Library Manual, 36 pages 3165,3168//13//7070,7072,7074/

GA22-6962

IBM SYSTEM/370 MODEL 155 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 155 data handling capabilities that are dependent upon I/C-channel configurations and operations. Considerations of methods are also presented for priority attachment of I/C devices for maximum throughput.

Information related to specific I/O devices is contained in separate Systems Reference Library publications. These publications are listed by order number and briefly described in IBM System/360 Bibliography, GA22-6822.

This manual is intended for users at the system programmer level; it assumes a thorough background in I/O programming techniques. Systems Reference Library Manual, 52 pages 3155//01///

GA22-6963

7080 COMPATIBILITY FEATURE FOR IBM SYSTEM/370 MODELS 165, 165 II, and 168

This publication contains information about the IBM 7080 compatibility feature, which adds interpretive facilities to System/370 Model A65 for use by the IBM 7080 emulator program. The combination of the feature and the program (referred to as the 7080 emulator) allows execution on IBM System/370 Model 165 of programs written for the IBM 7080 Data Processing System.

Systems Library Manual, 48 pages 3165,3168//13//7080/

GA22-6966

IBM SYSTEM/370 MODEL 155 OPERATING PROCEDURES

This manual describes operator procedures for an IBM System/370 Model 155. Machine coverage includes console indicators, switches, and keys; printer-keyboard; and operating procedures. The manual is intended for the Model 155 system operator. The reader is assumed to have a knowledge of information-processing systems and to have read the IBM SYSTEM/360 OPERATING SYSTEM: OPERATOR'S PROCEDURES, GC28-6692.

Systems Library Manual, 40 pages 3155//01///

GA22-6968

IBM 129 CARD DATA RECORDER OPERATOR'S REFERENCE MANUAL

This manual describes the functional and operating characteristics and the operator procedures for the IBM 129 Card Data Recorder. The 129, operating with or without a prepunched card program, is manually keyed (and corrected, in memory storage), then automatically punches, providing conventional 80-column punched cards. Models are provided with these functions:

- Model 1 Funch, verify
- Model 2 Print, punch
- Model 3 Print, punch, verify

Keyed input errors may be erased and corrected before being punched into the card. Verification compares keyed data with data read into storage; correction is made in storage. After reverification in storage, the corrected card is punched.

This manual is addressed to the card data recorder operator.

Manual, 72 pages NOT AVAILAABLE UNDER SLSS

GA22-6969

IBM SYSTEM/370 MODEL 165 OPERATING PROCEDURES

This manual describes the manual operator procedures for an IBM System/370 Model 165. This material provides a guide to performing the procedures which cover the bulk of the operator's job in operating the Model 165. This publication is written for the working operator who has already received training in general computer operation. This book is prepared specifically for the Model 165 system operator; other models have their own manuals. Covering the overall daily manual operation, this information includes System Procedures, Operator Intervention Procedures, Bow the System Works (control panels), and supplementary appendixes useful for operating this model. The reader is assumed to have read the IBM SYSTEM/360 OPERATING SYSTEM: OPERATOR'S PROCEDURES, GC28-6692.

System Library Manual, 80 pages 3165//01///

GA22-6983

SYSTEM/370 SPECIAL FEATURE: CHANNEL-TO-CHANNEL ADAPTER
This publication provides a functional description of the SYSTEM/370 Channel-to-Channel Adapter. The System/370 and System/360 channel-to-channel adapters are alike in function and similar in operation. This manual describes all the functions of the System/360 adapter as provided in IBM System/360 Special Feature Channel-to-Channel Adapter, plus unique System/370 extensions. Reference information is included which pertains to the adapter's use, operation, and commands, and status data required for the assembly language programming.

The reader should possess a basic knowledge of data processing systems and, specifically, the IBM System/370. Such information can be found, for example, in the Introduction to IBM Data Processing Systems, GC20-1684, and in the IBM System/370 System Summary, GA22-7001.

This manual is directed to the user who needs a description of the adapter's function and operation, as well as to the systems programmer, systems engineer, or maintenance personnel who need reference information in the writing and maintenance of assembly language programs for the channel-to-channel adapter.
Manual, 20 pages
370//13///

GA22-7000

IBM SYSTEM/370 PRINCIPLES OF OPERATION

This publication provides, for reference purposes, a detailed definition of the machine functions performed by System/370. System/370, like System/360, consists of many models of general purpose computers, each of which can process both commercial and scientific data.

The manual describes each function to the level of detail that must be understood in order to prepare an assembly language program that relies on that function. It does not, however, describe the notation and conventions that must be employed in preparing such a program, for which the user must instead refer to the appropriate assembly language manual.

The information in this manual is provided principally for use by assembly language programmers, although anyone concerned with the functional details of System/370 will find it useful.

Because this manual is written as a reference document, it should not be considered to be an introduction or a textbook for System/370. It assumes the user has a basic knowledge of data processing systems, and specifically, the System/370, such as can be derived from the Introduction to IBM Data Processing Systems, GC20-1684, and the IBM System/370 System Summary, GA22-7001.

The information presented in this manual is grouped into 14 chapters and several appendixes. The major topics presented include: Control, Dynamic Address Translation, Interruptions, Multiprocessing, System Control Instructions, General Instructions, Decimal Instructions, Floating Point Instructions, Machine-Check Handling, Input/Output Operations, and System Console.
Manual, 316 pages
370//01///

GA22-7001

SYSTEM/370 SYSTEM SUMMARY: PROCESSORS

This manual provides basic information about IBM System/370, the data processing system based on IBM System/360 but extending beyond its capabilities. Briefly discussed are the system concepts, features, individual models, and programming systems.

A basic knowledge of data processing systems, such as that given in the Introduction to IBM Data Processing Systems, GC20-1684, is assumed.

More detailed information about System/370 is available in IBM System/370 Principles of Operation, GA22-7000. For more information about any individual System/370 model, see the functional characteristics manual for the model.

This manual can be ordered separately by using Order Number GA22-7001, or together with two companion manuals: the IBM Input/Output Device Summary GA32-0039, and the IBM Data Communication Device Summary GA27-3185, by using Order Number GBOP-4550.
Manual, 8 1/2 x 11 inches, 90 pages, 9/78

GA22-7002

SYSTEM/370 INPUT/OUTPUT CONFIGURATOR

This publication, intended as a guide and reference for system planners, provides information about the local and remote attachment of current IBM devices and systems that can operate as input/output equipment with the System/370 models and processor complexes.

For each method of attachment a listing, arranged by equipment category, is followed by a chart, arranged by device or system number. The chart provides comparative information for the attachment of IBM input/output devices to the System/370 processors.

Manual, 8 1/2 x 11 inches, 36 pages, 9/77

GA22-7010

SYSTEM/370 MODEL 168 FUNCTIONAL CHARACTERISTICS MANUAL

This publication provides management, programming, and operations personnel with information on the organization and functional characteristics of the IBM System/370 Model

168.

The manual first describes the highlights of the system, configurations, facilities, and features. It then presents a more in-depth description of the central processing unit, storage control unit, storage, channels, functions, controls, indicators, and multiprocessing.

Details concerning programming and peripheral equipment are not given in this manual.

The reader is assumed to have an understanding of data processing systems including fundamental knowledge of IBM System/370 as defined in IBM System/370 Principles of Operation, GA22-7000.

Manual, 46 pages

GA22-7011

IBM SYSTEM/370 MODEL 158 FUNCTIONAL CHARACTERISTICS

This manual describes the characteristics and features of the Model 158. It provides experienced management, programming, and operations personnel with a fundamental understanding of this model. Knowledge of System/370 as provided in IBM System/370 Principles of Operation, GA22-7000, is required. Only information of particular concern to Model 158 users is covered in this manual which summarizes the processing unit, storage functions, system console, programmed operations, multiple-processor systems including the attached processor and facilities and features. A glossary and the index completes the manual.
Manual, 8 1/2 x 11 inches, 60 pages, 8/78

GA22-7012

IBM SYSTEM/370 MODEL 158 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 158 Data Handling Capabilities that are dependent on I/O channel configurations and operations. In addition, consideration is given to priority attachment of I/O devices for maximum throughput, and to calculating CPU interference caused by channel operations. This manual is intended for users having system programmer experience, and a thorough background in I/O programming techniques.
Manual, 70 pages

GA24-3018

IBM 1030 DATA COLLECTION SYSTEM

This reference publication discussed in detail the operating features, controls, and special features for the:

- IBM 1031 Input Station
 - Card Reader
 - Manual Entry Unit
 - Data Cartridge Reader
 - Badge Reader
- IBM 1032 Digital Time Unit
- IBM 1033 Printer
- IBM 1034 Card Punch
- IBM 1035 Badge Reader

These components provide on-line and off-line capabilities for this Tele-processing system. System timing calculations for the transmission line, for the IBM 1034 Card Punch, and for packed-card operation with the IBM 1034 are all fully discussed. Also included is a summary of system checking, and instructions for making wiring charts to be used at installation time.

Manual, 72 pages

IBM 1050 OPERATOR'S GUIDE

This publication is designed specifically for operating personnel using the IBM 1050 Data Communication System. It consists of five individual sections, with each section prepared as a complete stand-alone unit. The sections of this manual are:

Section 1. Introduction: description of all system

components including standard and special features.

Section 2. System and Component Controls--Detailed description of all controls and indicators for each component of the system.

Section 3. Operator Procedures: Step by step instructions covering all setup and operating procedures for the system.

Section 4. Basic Applications: Step by step instructions covering the various input/output operations possible with the 1050 System for both home-loop and line-loop operations.

Section 5. Tips and Techniques: Methods for improving operating efficiency for specific situations.
Manual, 144 pages

GA24-3388

IBM 2671 PAPER TAPE READERIBM 2822 PAPER TAPE READER CONTROL - COMPONENT DESCRIPTION

This publication gives sufficient information to understand the IBM 2671 Paper Tape Reader and IBM 2822 Paper Tape Reader Control and the associated special features. The main purpose of the publication, however, is to assist programmers and operators to operate the machine when it is used as an I/C unit to the IBM System/360 Model 25, 30, 40, 44, 50, or 67, or to System/370. The relevance of the controls and indicators for such a configuration are given, together with points of specific interest to the following:

- o Programmers: Operational characteristics, including stop conditions, addressing, recovery procedures, and System/360 commands.
- o Operators: Tape loading, unloading, rewinding, and repair procedures.
- o System Analysts: Tape specifications.

The sections for programmers presuppose a knowledge of System/360 and System/370 operation and of paper tape readers, but no such knowledge is required in understanding the sections for operators.

ASSOCIATED PUBLICATIONS

Physical Characteristics of the 2671 Paper Tape Reader and 2822 Paper Tape Reader Control and of System/360 operation are given in the following publications:

PLANNING AND INSTALLATION OF A DATA COMMUNICATION SYSTEM USING IBM LINE ADAPTERS

This reference publication contains information, for systems engineers and installation planning engineers, on the planning and installation of data communications systems that use IBM Line Adapters (modems). A brief introduction to data communication and to the general purposes and functions of line adapters is presented. Included is technical information applicable to an in-plant user-installed data communications system, and to the local facilities of common carriers. Specifications and requirements are provided for each IBM Line Adapter type, including those intended for limited-distance use only, and for those designed to operate over unlimited-distance common-carrier lines. A Glossary is included as an appendix.

Prior knowledge of data communications systems is helpful, but not essential.

For a description of the switched network, automatic answering, and automatic call origination features of the IBM 1200 Bit-per-Second Line Adapter, this manual refers to SYSTEMS manual, IBM 3872 Modem User's Guide, GA27-3058. General Information, 74 pages

IBM 3211 PRINTER 3216 INTERCHANGEABLE TRAIN CARTRIDGE AND 3811 PRINTER CONTROL UNIT COMPONENT DESCRIPTION AND OPERATOR'S GUIDE

The 3211 Printer, 3216 Interchangeable Train Cartridge and 3811 Printer Control Unit constitute a high-speed printer subsystem for attachment to System/360 and System/370 data processing systems via the System/360/370 Standard I/C Interface. This reference publication is intended for:

- o System planners who require information about features, character sets, subsystem performance, forms and ribbons.
- o System programmers who use printer commands, status and sense information, and error-recovery procedures.
- o Operators who perform basic setup, operating, and error-recovery procedures.

A basic knowledge of System/360/370 is assumed. The manual is organized into three sections:

- o Subsystem Components describes the subsystem features, available character sets, and performance characteristics.
- o Programming Information describes valid subsystem commands and available status and sense bytes, and provides buffer loading and suggested error recovery procedures.
- o Operating Information describes the subsystem keys, indicators, and controls, and provides procedures for initial setup, running, and error recovery.

Appendices contain reference information, such as an EBCDIC chart, for all users. The following publications are referenced for additional forms requirements and ribbon recommendation information:

Form Design Reference Guide for Printers, GA24-3488

GA24-3474

IBM 1050 DATA COMMUNICATION SYSTEM PRINCIPLES OF OPERATION

This reference publication provides a complete description of the operating principles of this IBM Tele-processing system. The functional characteristics of the system and of each component is discussed in detail. Additional information, pertaining to the overall system and World Trade considerations, are provided in the appendix.

FORM DESIGN REFERENCE GUIDE FOR PRINTERS

This publication contains information to be considered by personnel designing, ordering, or using forms for the system printers listed below.

This manual has two sections: general forms-design information applicable to system printers, and specific information (Appendix) for particular printers. The general information relates to items such as form length, width, weight, fastenings, and other forms-related items that must be considered and/or met when forms are designed for system printers. The specifications are not intended to be restrictive, but to permit the customer to purchase continuous forms from the manufacturers of his choice.

For detailed information on forms feeding and operating procedures, see the appropriate component description and operating procedures manuals for the particular printer or system.

- o Companion publications useful in designing forms are:
- o OCR Input Preparation Guide, Order No. GC20-1686

IBM 3215 CONSOLE PRINTER-KEYBOARD COMPONENT DESCRIPTION

This reference publication describes the functions and operation of the IBM 3215 Console Printer-Keyboard. This information is intended for those planning for and operating an IBM System/370 Models 135, 145, and 155. Presented are the printing method, control keys and lights, functional timing, forms controls and specifications, and make-ready procedures.

For system operation (including programming and operating procedures), refer to the IBM System/370 Bibliography (GC20-0001), for the functional Characteristics and Operating Procedures manuals for the particular system and model.
Manual, 8-1/2 x 11 inches, 18 pages
//01//3215/

GA24-3552

IBM 3210 CONSOLE PRINTER-KEYBOARDS COMPONENT DESCRIPTION

This manual is intended as an introduction to the IBM 3210 (Models 1 and 2) Console Printer-Keyboards. The 3210's are described according to the way in which they operate with IBM System/370's.

A description of the physical and functional characteristics of the IBM 3210's is contained in this manual. The purpose of all control keys and indicator lights, supplementing the keyboard, is included.

Because the 3210 Model 2 is a standalone I/O unit, the assigned functions of the control keys and indicator lights described here may vary according to the particular requirements of another system.

A section describing "Operator's Procedures" contains the following:

1. Forms insertion procedure
2. Platen removal and replacement

For additional information on forms specifications refer to "Form Design Reference Guide for Printers", GA24-3488.

For additional information on 3210 operating procedures, refer to the IBM System/370 Model 145 Operating Procedures, GC38-0015.

IBM SYSTEM/370 MODEL 145 FUNCTIONAL CHARACTERISTICS

This publication describes the relationship of the Model 145 to other System/370 models and to System/360. Included is information concerning the system features and capabilities, console file, input/output channels, integrated file adapter, OS/DOS compatibility, IBM 1401, 1440, 1460, 1410, and 7010 emulation features, console printer-keyboard, additional instructions, and instruction timings.

The following IBM manuals offer information to assist the reader:

IBM 1972 MODEL 3 PRODUCTION TERMINAL
IBM 1972 MODEL 4 INSTRUCTION CONSOLE INSTALLATION MANUAL
PHYSICAL PLANNING COMPONENT DESCRIPTION

This manual contains physical planning information and component descriptions for the IBM 1972 Model 3 Production Terminal and the IBM 1972 Model 4 Instruction Console. The specific topics covered include:

- o Power Requirements
- o Environmental Considerations
- o Interface Considerations
- o Floor Area and Loading Considerations
- o Servicing and Access Requirements
- o Safety Considerations
- o Transportation Requirements
- o Physical Characteristics

The manual is intended to assist users in their work station production planning and in preparation of installation areas prior to delivery of the units.

IBM SYSTEM/370 MODEL 145 CHANNEL CHARACTERISTICS

This publication describes methods used to calculate System/370 Model 145 data-handling capabilities that are dependent upon I/C-channel configurations and operations. Considerations of methods are also presented for priority attachment of I/O devices for maximum throughput.

Information related to specific I/O devices is in separate Systems Reference Library publications. These publications are listed by order number and briefly described in IBM SYSTEM/360 AND SYSTEM/370 BIBLIOGRAPHY (GA22-6822).

This manual is intended for users at the system programmer level; it assumes a thorough background in I/O programming techniques.
Manual, 72 pages

IBM 1972 MODEL 3 PRODUCTION TERMINAL 1972 MODEL 4
INSTRUCTION CONSOLE OPERATOR'S GUIDE

This manual contains information for operating the IBM 1972 Model 3 Production Terminal and the IBM 1972 Model 4 Instruction Console. The specific operating information includes:

- o Functional description of operating controls
- o Information on preparing, programming, punching, and splicing perforated tapes
- o Instructions for loading perforated tape in production terminal and for operating the production terminal.

This information is presented to aid the user in the operation of the production terminal and the instruction console and in the preparation of perforated tapes for use on the production terminal.

GA24-3594

IBM EMULATOR FOR RCA 301 ON SYSTEM/370 USING DCS AND ECS/VS
PLANNING GUIDE - PROGRAM NUMBER 5799-ACR

This publication describes the IBM Emulator for RCA 301, an integrated emulator program, for the IBM System/370 Models 135 and 145. Also provided are introductory and planning information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS) or the IBM Disk Operating System/Virtual Storage (DCS/VS). The emulator uses the System/370 standard instruction set, the RCA 301 Compatibility feature, and the data management facilities of ECS and ECS/VS to emulate the RCA 301

processor unit, input/output, and console operations.

Publications useful as reference material are:

IBM EMULATOR FOR HONEYWELL SERIES 200 ON SYSTEM/370 USING

DOS AND DOS/VS (PRPQ): PLANNING GUIDE, PROG. NO. 5799-ADT

This publication describes the IBM Emulator for Honeywell Series 200, an integrated emulator program, for the IBM System/370 Models 135 and 145. This publication also provides introductory and planning information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS), or the IBM Disk Operating System/Virtual Storage (DOS/VS). The emulator uses the system/370 standard instruction set, a Honeywell Series 200 Compatibility feature, and the data management facilities of DOS or DOS/VS to emulate the Honeywell Series 200 processor unit, input/output, and console operations.

Publications useful as reference material are:

IBM System/360 Principles of Operation, Order No.

GA22-6821.

IBM System/370 Principles of Operation, Order No.

GA22-7000.

For information about the Disk Operating System, refer to:

GA24-3604

EMULATOR FOR HONEYWELL SERIES 200 ON SYSTEM/370 USING DOS

AND DOS/VS (PRPQ), PROG. NO. 5799-ADT

This publication describes the IBM Emulator for Honeywell Series 200, an integrated emulator program, for IBM System/370 Models 135 and 145. It provides planning, implementation, and operating information for managers, programmers, and operators.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM Disk Operating System (DOS). The emulator uses the System/370 standard instruction set, the Honeywell Series 200 Compatibility Feature, and the data management facilities of DOS to emulate the Honeywell Series 200 processor unit, input/output, and console operations.

GA24-3605

IBM EMULATOR MANUAL FOR RCA 301 ON SYSTEM/370

USING DOS & DOS/VS, PROG. NO. 5799-ADR

This manual describes the IBM Emulator for RCA 301, an integrated emulator program, for the IBM System/370 Models 135 and 145. Also provided are planning, implementation, and operating information for management and planning personnel.

The emulator is a problem program that operates in either a batched-job foreground or the background partition under control of the IBM System/370 Disk Operating System (DOS) or the IBM Disk Operating System/Virtual Storage (DOS/VS). In this manual the term "DOS" is used unless it is necessary to distinguish between DOS and DOS/VS. The emulator uses the System/370 standard instruction set, the RCA 301 Compatibility Feature, and the Data Management facilities of the Disk Operating System to emulate the RCA 301 processor unit, input/output, and console operations.

Manual, 108 pages

IBM 3890 DOCUMENT PROCESSOR MACHINE AND PROGRAMMING

DESCRIPTION

Provides a comprehensive description of the IBM 3890 Document Processor for those persons doing systems analysis and planning, programmers, systems engineers, and customer engineers. The reader is assumed to have an understanding of bank data processing.

This publication provides in-depth descriptions of operating principles and procedures, basic and special features, programming support including detailed explanations of both data management and SCI macros with examples, sorting techniques with examples, diagnostic aids, the IBM Diskette drive, and all operating controls.

Manual, 160 pages

//04//3890/

GA24-3619

3890 DOCUMENT PROCESSOR OPERATOR'S GUIDE

This operator's manual contains information primarily for personnel operating the 3890 Document Processor Models A and B. No prior operating experience is necessary.

The operating information includes:

- A description of the 3890 by functional units (modules)
- A description of the special features
- The operator panel: keys, lights, and switches
- Machine operation: start, run, and stop conditions, and error recovery procedures
- Operator maintenance for optimum machine performance.

Operating information for related programming is not included.

For more detailed information, refer to IBM 3890 Document Processor, Machine and Programming Description, GA24-3612. Manual, 84 pages, (9/75)

GA24-3632

SYSTEM/370 MODEL 138 FUNCTIONAL CHARACTERISTICS

This publication describes the capabilities, features, input/output channels, integrated adapters and attachments, system console, and operations of the IBM System/370 Model 138. Also provided is information on program operating systems and compatibility features that are available with other systems and programs. The publication is intended for users and potential users, such as system analysts and programmers of the System/370 Model 138. The reader is assumed to have a working knowledge of IBM System/370 Principles of Operation, GA22-7000 and IBM System/370 System Summary, GA22-7001.

Manual, 105 pages, 5/76

3138//01//

GA24-3633

IBM SYSTEM/370 MODEL 138 CHANNEL CHARACTERISTICS

This manual provides information needed for checking that a proposed configuration of I/O devices on the channels of IBM System/370 Model 138 will work satisfactorily. The book is intended for use in systems assurance work at the planning stages.

Procedures with examples are given for testing the effects of imposing heavy loads on the Model 138 channels. The effects covered are: data overrun, loss of device performance, channel interference with the CPU, program overrun, and excessive channel utilization.

Additional but related topics covered in the book are: (1) priority sequence of devices on the byte-multiplexer channel (with examples that include the 1419 Magnetic Character Reader with expanded capability); (2) the effects of block-multiplexing on channel busy time and percentage channel utilization; and (3) channel programming conventions, upon which the validity of test procedures in the book is based.

Prerequisite Publications

The reader must be familiar with System/370 input/output operations as presented in:

IBM System/360 Principles of Operations, GA22-6821

IBM System/370 Principles of Operation, GA22-7000

IBM System/370 Model 138 Functional Characteristics, GA24-3632

IBM System/360 and System/370 Interface Channel Unit

Original Equipment Manufacturers Information, GA22-6974

For testing data overrun on the byte-multiplexer channel, the following special worksheet is required: IBM System/370 Models 135 and 138 Byte-Multiplexer Channel: Load Sum Worksheet, GX33-6004.

Manual, 8 1/2 x 11 inches, 116 pgs, 9/77

IBM 3896 TAPE-DOCUMENT CONVERTER MACHINE DESCRIPTION AND OPERATOR'S GUIDE

This manual contains information describing the use, operation, and operator maintenance of the IBM 3896 Tape-Documents Converter. It is intended for the use of operations management and machine operators.

The introduction describes the machine functions, performance criteria, document criteria, and copy quality. This publication also contains operating procedures for conversion of tape listings, jam recovery, and operator maintenance. Machine operators normally require no prior converter (copier) experience when using this manual.

A section on legal information describes the legal aspects of copying certain documents. For additional information, refer to the IBM 3896 Tape-Documents Converter, Physical Planning, GA24-3643 and to the Systems Library manual, IBM 3895 Document Reader/Inscriber General Information, GA24-3645.
Manual, 36 pgs, 1/77

IBM 3890 DOCUMENT PROCESSOR MODELS C AND D OPERATOR'S GUIDE

This reference manual contains information necessary to operate the IBM 3890 Document Processor Models C and D including the following optional features:
Item Numbering/Endorsing and Microfilming. The specific operating information includes: A brief description of the standard machine and available optional features, operating controls (keys, lights, and switches), machine operation (document loading and unloading, film loading and unloading), error conditions and recovery procedures, and operator maintenance.

This publication is intended for machine operators and those persons required to operate and control the IBM 3890. No prior operating experience is necessary, but is helpful. A feature of the manual is removable pages containing information to be used with the operator run book.

Operating information for related programming is not included. For more detailed information, refer to IBM 3890 Document Processor Machine and Programming Description, Order No. GA24-3612.
Manual, 100 pgs, 2/77
//04//3890/

GA24-3663

MAGNETIC HAND SCANNER - MAGNETIC SLOT READER REPLACEMENT PROCEDURES

Both the IBM Magnetic Band Scanner (MBS) and the IBM Magnetic Slot Reader (MSR) read encoded magnetic-striped documents. These two accessories differ in general appearance and method of operation, but their internal design and construction are sufficiently similar to allow a common set of procedures for problem determination and repair.

The MBS and MSR attach to several types of IBM terminals. Each of these terminals has problem

determination procedures (FDP) that should be used with this publication when isolating and repairing scanning failures.

A plastic magnetic test stripe for isolating a failure is supplied with each terminal to which the MBS/MSR can be attached. The test stripe should be kept in the clear plastic envelope in which it is supplied, near the MBS/MSR. The FDPs for each terminal describe the use of the test stripe.

COMPONENT SUMMARY-2835 STORAGE CONTROL
2305 FIXED HEAD STORAGE

The 2835 Storage Control and 2305 Fixed Head Storage Module form a large capacity, high speed direct access storage facility for general purpose data storage and system residence. It attaches to the central processing unit through a block multiplexor channel, and operates under direct program control of the CPU.

For experienced programmers, this manual provides readily accessible reference material related to channel command words, sense bytes, track format, track capacities, and error recovery.

Less experienced programmers will find sufficient information to create channel programs to best utilize the standard and special features of the facility.

A complete description of the switches and indicators is provided for systems installation operators.

Programmers should be familiar with the information contained in IBM System/360 Principles of Operation, Order Number GA22-6821 and IBM System/370 Principles of Operation Order Number GA22-7000. Operators should be familiar with the material presented in the system summary for the parent system.

IBM 2730 MODEL 1 TRANSACTION VALIDATION TERMINAL, IBM 2968 MODEL 9 AND MODEL 12 RECEIVER-TERMINAL CONTROL UNIT

The IBM 2730 Model 1 Transaction Validation Terminal, IBM 2968 Model 9 and IBM 2968 Model 12 Receiver-Terminal Control Unit are part of an on-line credit authorization system. This manual describes the function of these devices in the system configuration, and provides typical operating procedures for the 2730 Model 1 and its acoustic coupler. The Appendix contains specifications for magnetic stripe credit cards.

A basic knowledge of data processing, including teleprocessing, is required to understand the material presented in this manual.

IBM 2319 DISK STORAGE - A-SERIES, COMPONENT DESCRIPTION

This manual contains basic information about the IBM 2319 Disk Storage Models A1 and A2. Model A1 is designed for attachment to IBM System/370 via the Integrated File Adapter (IFA) feature.

The IBM 2319 Models B1 and B2 are described in the publication IBM SYSTEM/360 COMPONENT DESCRIPTIONS--2314 DIRECT ACCESS STORAGE FACILITY AND 2844 AUXILIARY STORAGE CONTROL, Order No. GA26-3599, with which the reader should be familiar.

INTRODUCTION IBM 3330 A-SERIES DISK STORAGE - SYSTEM LIBRARY

This manual is intended for readers having prior knowledge of direct access storage devices and concepts. Major topics are: standard and special features, I/O operations, and operators panel.

Manual, 14 pages
//07//3330,3333/

GA26-1617

REFERENCE MANUAL FOR IBM 3830 STORAGE CONTROL MODEL 2

This manual is intended for readers having prior knowledge of direct access storage devices and concepts. Major topics are: standard and special features, I/C operations, and the operator panel.

Manual, 12 pages
//07//3830/

GA26-1619

IBM 3340 COMPONENT SUMMARY

This manual is intended to familiarize experienced data processing personnel with the characteristics of the IBM 3340 Disk Storage. (The reader should have prior knowledge of direct-access storage devices and concepts.)

It lists functional characteristics and discusses record format, capacity, and timing characteristics. It also lists all commands executed by the 3340 and suggested operating instructions.

Manual, 14 pages
370//07//3340,3344/

GA26-1620

REFERENCE MANUAL FOR IBM INTEGRATED STORAGE CONTROL

This manual is intended primarily for programmers and operators. It provides reference material on channel command words, sense bytes, error recovery procedures, special features, operator controls, and the usage meter.

Manual, 90 pages

GA26-1621

INSTALLATION MANUAL PHYSICAL PLANNING IBM 2984 MODEL 1 CASH ISSUING TERMINAL REC 834660

This manual contains technical information, recommendations, and suggestions to be used in installing the IBM 2984-1 Cash Issuing Terminal. Included are physical specifications, cable, electrical, and environmental requirements. The customer should arrange for professional assistance in planning his installation, if necessary, to ensure that local and national codes are met.

It is assumed that the customer has both a system (CFU) and a transmission control unit (2701, 2703, or equivalent) either installed or to be installed.

The following publications provide necessary additional information:

- o IBM System/360 Installation Manual Physical Planning, GC22-6820
- o IBM System/370 Installation Manual Physical Planning, GA22-7004

GA26-1625

IBM 3348 DATA MODULE HANDLING PROCEDURES

This manual is a guide for handling the IBM 3348 Data Module. It is intended for personnel who operate the 3340 Disk Storage. Except for being familiar with the 3340 Disk Storage, operating personnel need no other prerequisites. The following topics are covered: Introduction, General Handling Procedure, Storage, Receiving and Shipping, Labeling, and Operating Instructions.

Manual, 16 pages

GA26-1630

IBM 3330 SERIES DISK STORAGE MODEL 1 TO MODEL 11 (ELEVEN) CUSTOMER CONVERSION GUIDE

This manual is intended to guide the IBM customer in planning a field conversion of the 3330 Series Disk Storage Model 1 to a 3330 Series Disk Storage Model 11. This manual is organized into two distinct categories: hardware and programming considerations. The hardware considerations cover topics concerning bills of material; power and cabling requirements; configuration requisites; and conversion times.

The program considerations define programming support and lists available programs. Also included are procedures for making programming updates to provide for the 3330 Model 11 (ELEVEN).

Manual, 20 pages

GA26-1632

IBM 3340 DISK STORAGE - FIXED HEAD FEATURE USERS GUIDE

The manual describes the IBM 3340 Disk Storage Fixed Head Feature. It is intended to provide system and application information to guide systems analysts and experienced programmers in installing and using the fixed-head feature.

Note: The manual serves as the central information

document for current supporting releases and thus fully describes the fixed-head feature and all anticipated restrictions for those systems.

The material presented requires that users be familiar with data management concepts as they apply in OS and DOS virtual storage programming systems and to have a working knowledge of Job Control Language (JCL) coding.

FORMS DESIGN REFERENCE GUIDE FOR THE IBM 3800 PRINTING SUBSYSTEM.

This publication contains instructions for preparation of forms overlays for the IBM 3800 Printing Subsystem. Included are paper considerations, printer capability, preprinted forms, paper storage requirements, and photo negative specifications. Print charts and overlay master illustrations are included together with tables showing the print character capacities of all common use and ISO paper sizes.

A companion publication with additional information useful for the forms designer is: Introducing the IBM Printing Subsystem and its Programming, Order No. GC26-3829.
Manual, 50 pages
//03//3800/

GA26-1634

IBM 3800 PRINTING SUBSYSTEM OPERATORS GUIDE

This publication provides operating instructions for the IBM 3800 Printing Subsystem. These instructions include descriptions of the controls, switches, and indicators used for initial setup, running, and error recovery. This publication is written as a reference for the working operator who has received training in the 3800 printer operation. It is assumed that the user of this manual has a basic knowledge of printer I/O operation. It is not intended to be a self-study text. The publication is intended for the operators who will perform the basic setup, operation, error recovery, and cleaning tasks associated with the 3800.

Manual, 114 pages, 7/76
//03//3800/

GA26-1635

REFERENCE MANUAL FOR THE IBM 3800 PRINTING SUBSYSTEM

This manual provides information on the functions and features of the IBM 3800 Printing Subsystem relating to channel commands, sense bytes, and error detection, recovery, and recording. In addition, specific information and examples are given of copy modification and control, and graphic character modification.

The manual is intended for use by systems analysts, installation managers, systems programmers, and other personnel requiring 3800 reference information.
Manual, 105 pages 7/76
//03//3800/

GA26-1638

IBM 3350 DIRECT ACCESS STORAGE REFERENCE MANUAL

Intended for experienced data processing personnel, this publication describes the characteristics, formats, features, commands, and compatibility modes of the IBM 3350 Direct Access Storage Subsystem.

GA26-1646

3800 PRINTING SUBSYSTEM REFERENCE: OCR DOCUMENT PREPARATION

This manual provides supplemental Optical Character Recognition (OCR) information for systems analysts, forms designers, programmers, and operators. The manual is intended for use in OCR document preparation with the IBM 3800 Printing Subsystem and the IBM 1287/1288, and 3886 Optical Character Readers. Most of the existing OCR manuals contain information that is generally applicable except for some differences which are listed in this manual. Prerequisite knowledge of optical readers and forms design is assumed for users of this manual.

GA26-1653

INTRODUCING THE IBM 3800 TAPE-TO-PRINTING SUBSYSTEM FEATURE AND ITS UTILITY, PROG PROD 5748-UT2

This publication provides introductory information for prospective users of the Tape-to-Printing Subsystem Feature and the Offline IBM 3800 Utility for the IBM 3800 Printing

Subsystem. The intended audience is data processing managers and system analysts planning for these 3800 features, and others seeking initial information about the features. The information is presented in general terms and assumes that the reader understands the basic functions of the 3800 printer and either the 3410/3411 or the 3803/3425 magnetic tape subsystem. This publication has three main sections: (1) Introduction, briefly describes the features; (2) Tape-to-Printing Subsystem Feature, contains a brief description of the printer, tape units, configuration, and tape formats; (3) Offline IBM 3800 Utility, briefly describes the program product which includes storage requirements and operating considerations. A glossary is also included.

Manual, 8 1/2 x 11 inches, 16 pgs, 6/77
//13//3800/

GA26-1654

OPERATOR/REFERENCE MANUAL FOR THE IBM 3800 TAPE-TO-PRINTER SUBSYSTEM FEATURE

This publication provides information about the IBM 3800 Tape-to-Printer subsystem feature for operators and programmers. The operator instructions include descriptions of the controls, switches, indicators, and selection of the printing options for initial setup, running, and error recovery. Examples are provided for the typical tape-to-printer operating modes. Programming related information consists of channel commands, sense bytes and status, error detection, recovery, and recording, which are associated with tape-to-printer operation.

Also provided is a section that describes tape formats, which includes information concerning labels, control and data fields, and record lengths. Performance considerations for maintaining maximum throughput are defined and illustrated by an example calculation.

This publication is intended as a reference for operators who have received training in tape-to-printer operation and for system analysts, and system programmers. It assumes that users understand the basic functions of the 3800 printer and either the 3410/3411 or the 3803/3420 Magnetic tape subsystem and the steps involved in preparing magnetic tape files.

IBM 2560 MULTI-FUNCTION CARD MACHINE: COMPONENT DESCRIPTION AND OPERATING PROCEDURES
This publication describes the operating principles and features of the IBM 2560 Multi-Function Card Machine (MFCM). Descriptions of the programmed operations, indicators, and operator's console are included. Since this device is natively attached, you should have a thorough understanding of the using system before using this manual. The book is intended for system engineers, programmers, and operators.
The 2560 is compared with conventional card equipment in file-updating operations. In addition to descriptions and flowcharts of these operations, tables are provided for a ready comparison of the operational steps, card volumes, and running times of the two systems.
Restart procedures for a particular type of program (RPG, IOCS, etc.) are covered in the operating procedures manual associated with the particular program and using system.

AN INTRODUCTION TO THE IBM 3270 INFORMATION DISPLAY SYSTEM

This publication provides customer executives, installation managers and planners, and IBM marketing representatives with planning information about the IBM 3270 Information Display System, which includes local and remote display stations and printers. The publication:

- o Describes the 3270 hardware units, features, functional capabilities and its programming support.
- o Outlines applications for alphanumeric displays and guidelines for conversion.
- o Gives data on human factors, installation planning, reliability, and performance.

This publication is primarily a planning aid and will be supplemented with reference documentation.

The current major revision incorporates descriptions of the following special features: Dial, IBM 600/1200 bps Line Adapter, IBM 600/1200 bps Line Adapter with auto answer, Switched Network Back capability, and 4800/7200 bps Transmission Speed.

IBM 7412 MODEL 1 CONSOLE, CUSTOM SYSTEMS RPG AA2846,CUSTOM FEATURE DESCRIPTION

This reference manual describes the functional characteristics and features of the IBM 7412-1 Console with the IBM 3215-1 Console Printer-Keyboard. This publication is intended for System Analysts, Programmers, and Operators. Assumed is a background knowledge of the IBM System/360 and System/370, and of the I/O Interface.

Manual, 26 pages

GA27-2771

A GUIDE TO 50 HERTZ UPS SELECTION

The Power Warning Feature provides for an automatic interruption and permits implementation of orderly shutdown and recovery procedures following power-line disturbances on System/370 Models 158 and 168 supported by an Uninterruptible Power Supply (UPS). This manual provides information to guide the customer in the selection of a 50-Hertz UPS. It (1) discusses input and output power characteristics, operating environmental conditions, and other performance requirements and it (2) describes the UPS required.

Manual, 15 pages

GA27-2772

A UPS INSTALLATION PLANNING GUIDE

This document is intended to assist the IBM System/370 user in determining UPS requirements for his EDP operations and to guide him in planning and implementing the installation of a UPS that will satisfy the requirements. This document is basically a check list that is amplified by descriptive narrative to identify the significant UPS installation planning factors. It is chronologically arranged to cover the period ranging from the earliest planning stage to the final testing and acceptance of the UPS installation at his EDP location.

Manual, 20 pages

IBM 3284/3286 PRINTER CUSTOM FEATURE DESCRIPTION: FORMS TRACTOR (RPQ WD 4031)

This reference manual provides information about IBM 3284 and 3286 Printers which have the Forms Tractor (RPQ WD 4031) attached. It is intended for use by customers, operators, and service personnel. Information contained herein supplements the printer information found in the 3270 System Component Description, Order No. GA27-2749 and the 3270 System Operator's Guide, Order No. GA27-2742. This manual also supports forms tractor printers which have the Vertical Forms Index Control (RPQ EB 4324) installed.

GA27-3015

IBM 2790 DATA COMMUNICATION SYSTEM COMPONENT DESCRIPTION

The IBM 2790 Data Communication System is a two-way, in-plant communication and production reporting system. This publication describes the units of the 2790 system, along with its capabilities, features, and applications. This publication presumes a telecommunications background and IBM System/360 experience. The purpose of this publication is to assist programmers and systems analysts in designing and operating the 2790 system.

This publication describes the 2790 system using the 2715 Transmission Control Unit as the system controller.

IBM 2793 Area Station
IBM 2795 Data Entry Unit
IBM 2796 Data Entry Unit
IBM 2797 Data Entry Unit
IBM 2798 Guidance Display Unit

IBM 2790 DATA COMMUNICATION SYSTEM INSTALLATION MANUAL PHYSICAL PLANNING

This manual provides technical information necessary for planning the physical installation of the IBM 2790 Data Communications System. Included are physical specifications and electrical requirements for each unit of the system. Typical system configurations with interunit cabling requirements are presented.

The intended customer audience includes facilities planners such as architects and consultants, contractors, operating management of the system, building superintendents, and communications technical representatives.

The intended IBM audience includes Sales Representatives, Systems Engineers, Installation Planning Representatives, and Customer Engineers.
System Reference Library Manual, 66 pages
//15//2790,2791,2793/

GA27-3019

IBM 2770 DATA COMMUNICATION SYSTEM INSTALLATION MANUAL--PHYSICAL PLANNING

This publication presents detailed information concerning the physical characteristics of the IBM 2770 Data Communication System. Dimensions, weights, service clearances, physical information for each unit, and environmental and electrical requirements are included. Particular attention is devoted to information necessary for the customer to prepare his premises for actual installation of equipment. Planning assistance is available from IBM sales and installation planning representatives.

Systems Reference Library Manual, 42 pages
//15//2770,2772/

GA27-3021

IBM 2790 CONFIGURATOR

The IBM 2790 Configurator is written for IBM Salesmen, IEM Systems Engineers, and customer system evaluation management. This manual illustrates configurations for IBM 2790 Data Communications Systems attached to System/7, System/360, System/370, or to an IBM 1800 Data Acquisition and Control System. Diagrams show the relationship of all units in the system. Domestic and World Trade systems are shown in table and chart form to provide standard, special, and specify feature information.

GA27-3029

2721 PORTABLE AUDIO TERMINAL COMPONENT DESCRIPTION

This manual is designed to acquaint the reader with the basic concepts and use of the IBM 2721 Portable Audio Terminal. The publication should be used as a general guideline for useful application of the terminal. Functional and operational characteristics are discussed in detail, and no previous reading is required for an understanding of how the terminal operates as a remote input/output device. The operation of the 2721 terminal in a systems environment depends largely on how the user's program is written; therefore, the operating procedures outlined in this manual are of a general nature. The ultimate operation of the terminal depends upon the programmer's ingenuity and the applications involved.

For detailed information regarding the handling of data by the IBM 2770 Audio Response Unit, refer to the SRL manual, Component Description - IBM 2770 Audio Response Unit Model 3, GA27-2712. Related manuals are shown in the following Publications Availability Guide.

GA27-3043

IBM 3735 PROGRAMMABLE BUFFERED TERMINAL CONCEPT AND APPLICATION

The purpose of this manual is two-fold: first, it introduces the IBM 3735 Programmable Buffered Terminal; and, second it provides planning information for those who may be involved in installing a 3735. Because of this dual purpose, not all sections of the manual may be of interest to each reader. Those interested in an overview and in the highlights of the 3735 will find the Introduction of most value; those who need more detailed information on the terminal's operation and functional capabilities will find the sections on Operating Characteristics and Implementation Considerations of most interest; systems and application programmers will find information on Programming Considerations for the 3735 in Appendix E.

Generally, the prerequisites for this manual are an understanding of the concept and application of the IEM System/360 and the IEM System/370 in a teleprocessing environment. The section on Programming Considerations requires more extensive knowledge of the applicable operating system (CS or DOS).

Although not intended as a terminal operator's guide or as a programmer's guide, the manual presents general information concerning these subjects.

System Reference Library, 50 pages

GA27-3044

IBM 2976 MOBILE TERMINAL SYSTEM CUSTOM SYSTEM DESCRIPTION OPERATOR'S GUIDE - PHYSICAL PLANNING

This manual is the primary source of information on the IBM 2976 Mobile Terminal System. The Mobile Terminal System provides high-speed, two-way data communications between a central IEM System/360 or System/370 and mobile terminals. It is comprised of an IEM 2976 Model 3 Transmission Control Unit, an IEM 2976 Model 5 Signal Converter, and a number of IBM 2976 Model 4 Mobile Terminals.

The manual contains both introductory and in-depth information about the system components, a discussion of programming requirements for the system, the operator information needed to use the components of the system, diagnostic procedures for rapid problem determination, and the physical planning and installation information required for planning and installing the Mobile Terminal System.

Organization of the manual into separate parts allows the expected users to go directly to the information they require. These users include: management, programming, system analyst, and central site operating personnel; mobile terminal operators; and site planning and installation personnel.

Users who require the detailed information provided in this publication should have a basic understanding of telecommunications and radio operations and should have IEM System/360 or System/370 programming and operating experience.

Manual, 50 pages

GA27-3051

INTRODUCTION TO THE 3704 & 3705 COMMUNICATIONS CONTROLLERS
The IBM 3704 and 3705 Communications Controllers are compatible, programmed transmission control units designed to assume many teleprocessing control functions formerly assigned to a teleprocessing access method. The 3704 and 3705 are controlled by programs resident in the controller. This publication contains introductory information on the hardware components of the controllers and on the programs provided to support them. Any user or potential user of a 3704 or 3705, including management, programmers, operators, and maintenance personnel, should be familiar with the contents of this manual. The only prerequisite for this manual is an understanding of basic teleprocessing operations.
System Library Manual, 56 pages
//09//3705,3704/

GA27-3058

IBM 3872 MODEM USER'S GUIDE
The IBM 3872 Modem can transfer data at rates of 2400 or 1200 bits per second. It operates on dedicated (leased or privately owned), voice-grade communications facilities. In the USA and Canada, the 3872 also operates on the public switched network.
In this publication, the 3872 is described as an item of equipment in the medium-speed modem field. The manual is in four main parts: Part 1 describes (in general terms) the IBM 3872 Modem, planning considerations, and equipment and facility considerations; Part 2 presents 3872 operating procedures and offline problem determination procedures; Part 3 describes (in detail) the IBM 3872 Modem: interface specifications, installation specifications, channel specifications, and special features. Considerations in using the 3872 in World Trade countries are included in appropriate places in the manual and are summarized in Part 4, which also contains the glossary.
This publication is intended for system planners, systems engineers, installation planners, operators, and supervisory personnel. A knowledge of teleprocessing systems is a prerequisite for Part 3 only. Operator information (Part 3) is separated from general and specific descriptive information, for easier accessibility.
System Library User's Guide, 70 pages
//09//3872/

GA27-3061

IBM 3735 PROGRAMMABLE BUFFERED TERMINAL OPERATOR'S GUIDE
The IBM 3735 Programmable Buffered Terminal consists of two cable-connected units: a keyboard/printer and a control unit. In its typical application, the 3735 is used to prepare source documents (preprinted forms on which the terminal operator adds variable information). Programs, stored within the 3735 control unit, guide the operator during preparation of the forms, and cause selected input data to be stored for later batch transmission to a central data processing system.
This operator's guide introduces the 3735 and describes its operating procedures. Both normal operating procedures and error recovery techniques are described.
The manual assumes that the user has been previously trained in the operation of an office typewriter such as the IBM Selectric.
Manual, 100 pages

GA27-3063

COMPONENT INFORMATION FOR THE IBM 3780 DATA COMMUNICATION TERMINAL
This manual introduces the IBM 3780 Communication Terminal, designed to transmit and receive data accurately, quickly, and economically in a teleprocessing environment. The terminal's applications, capabilities, and design highlights are discussed, as well as use of the binary synchronous communication, a description of the associated data-link control characters, code structures, and timeouts. The manual also discusses communication facilities, IBM modems, and special features available for this teleprocessing terminal.
In-depth information for those who implement customer applications is also included. Readers concerned with the 3780's capabilities and design highlights will find the Introduction, Card Reader, and Printer sections useful, while those needing more detailed information on the terminal's operation and its binary synchronous method of communication should read the Operating Characteristics and Programming Considerations sections.
Prerequisites for this manual include an understanding of the IBM System/360 and the IBM System/370 in a teleprocessing environment, together with knowledge of the binary synchronous method of data-link control as outlined in the IBM Systems Reference Library publication, General Information, Binary Synchronous Communications, GA27-3004.

GUIDE TO USING THE IBM 3704 COMMUNICATIONS CONTROLLER CONTROL PANEL
This publication is a 3704 control panel guide for the systems programmers, the systems engineers, the customer engineers, and the programming service representative with a knowledge of the internal operation of the 3704 and a need to use the control panel for normal operation, testing, or diagnostics. It primarily describes the functions and uses of the 3704 control panel.
For the operator, an IBM 3704 Operator Reference Summary is provided with this manual to be used as an easy reference for preparing the 3704 for operation and for handling basic error conditions.
This manual is divided into five sections and five appendices.
Section 1 describes the general capabilities of the 3704 control panel and how to use the panel.
Section 2 describes the basic and advanced program independent control panel procedures for the 3704.
Section 3 describes the 3704 control panel procedures used with the Emulation Program.
Section 4 describes the 3704 control panel procedures used with the Network Control Program.
Section 5 is an alphabetical list of the 3704 panel controls that summarizes their functions and provides a cross-reference to the applicable procedures.
The appendixes provide supplementary information needed to execute and interpret certain of the control panel procedures.
A special feature of the manual is a foldout diagram of the 3704 control panel (Appendix D). The diagram is divided into areas, each of which has a number. Throughout the book, references to a specific panel control are keyed to the section of the diagram where that control is located. For ease of reference, the diagram can be folded out to be seen with any other page of the manual.
The information in this manual was previously in the IBM 3704 and 3705 Communications Controllers Operator's Guide (GA27-3055). The 3705 information, previously a part of the Operator's Guide, is now in the Guide to Using the IBM 3705 Communications Controller Control Panel.
Manual, 138 pages
//09//3704/

GA27-3087

GUIDE TO USING THE IBM 3705 CONTROL PANEL
This publication is a 3705 control panel guide for the systems programmer, the systems engineer, the customer engineer, and the programming service representative with a knowledge of the internal operation of the 3705 and a need to use the control panel for normal operation, testing, or diagnostics. It primarily describes the functions and uses of the 3705 control panel.
For the operator, an IBM 3705 Operator Reference Summary is provided with this manual to be used as an easy reference for preparing the 3705 for operation and for handling basic error conditions.
A special feature of the manual is a foldout diagram of the 3705 control panel. The diagram is divided into areas, each of which has a number. Throughout the manual, references to a specific panel control are keyed to the section of the

diagram where that control is located. For ease of reference, the diagram can be folded out to be seen with any other page of the manual.

The information in this manual was previously in the IBM 3704 and 3705 Communications Controllers Operator's Guide GA27-3055. The 3705 information previously a part of the Operator's Guide is now in the Guide to Using the IBM 3705 Control Panel. Manual, 76 pages //09//3705/

GA27-3091

IBM 3704 OPERATOR REFERENCE SUMMARY

IBM 3704 Operator Reference Summary This reference card accompanies the Guide to Using the IBM 3704 Control Panel (or may be ordered separately) and provides the operator with an easy reference for basic 3704 operating procedures.

It lists the procedures to be followed in preparing the 3704 for operating (up to IPL) and the basic error recovery procedures. Reference Summary, 6 panels //09//3704/

GA27-3092

IBM 3705 OPERATOR REFERENCE SUMMARY

This reference card accompanies the Guide to Using the IBM 3705 Control Panel (or may be ordered separately) and provides the operator with an easy reference for basic 3705 operating procedures.

It lists the procedures to be followed in preparing the 3705 for operation (up to IPL) and the basic error recovery procedures. Reference Summary, 6 panels //09//3705/

GA27-3093

SYNCHRONOUS DATA LINK CONTROL GENERAL INFORMATION

This manual describes the procedures that comprise Synchronous Data Link Control (SDLC). It includes a brief background and a basic description to familiarize the reader with the terminology and concepts of SDLC. This is followed by a catalog of the components of SDLC and some representative examples of their uses.

Readers who have no prior knowledge of data communications line control should refer to: IBM Introduction to Teleprocessing, GC20-8095-02 before attempting to understand the material presented in this publication.

The IBM Data Processing Glossary, GC21-1699, is a useful reference for the definitions of terms used in this manual. A reader who is familiar with other systems of line control should not assume that familiar terms have the same definitions in SDLC procedures.

This manual does not provide instructions for the implementation of SDLC, nor does it describe any specific information about an IBM SDLC implementation, refer to the appropriate IBM publication for that machine or system. Manual, 60 pages 370,8130,8140,4331,4341//09//

GA27-3094

OPERATING PROCEDURES GUIDE: IBM 3774 AND 3775 COMMUNICATION TERMINALS

This Operating Procedures Guide is designed specifically for personnel writing detailed operator procedures for IBM 3774 or IBM 3775 Communication Terminal job applications, and for operators of the terminals. Included are:

- o Operating procedures for the basic configuration (the console printer, the keyboard, the operator's console, and the controller).
- o Operating procedures for the input and output devices.
- o Job definition and job start procedures for the terminal.
- o Error recovery and problem identification procedures for the terminal.

This guide describes the purpose and use of the terminal controls as they apply to all jobs. This manual can be used in preparing a detailed operator procedure for a specific job in an application. Manual, 200 pages //09//3774,3775/

GA27-3095

REFERENCE CARD: IBM 3774 AND 3775 COMMUNICATION TERMINALS

This Reference Card summarizes information that is already included in the Operating Procedures Guide: IBM 3774 and 3775 Communication Terminals (GA27-3094), and gives a quick reference to the information needed for the routine operation of the IBM 3774 or IBM 3775 Communication Terminals.

Reference Summary, 4 pages //09//3774,3775/

GA27-3096

IBM 3767 MODELS 1 & 2 COMMUNICATION TERMINAL COMPONENT DESCRIPTION

This manual describes the IBM 3767 Communication Terminal, a multipurpose terminal that communicates with an IBM System/370. The information it contains is directed to customer executives, systems analysts, and systems engineers already

aware of the operating procedures for the applications in which they plan to use the terminal.

The first chapter gives an overview of the 3767. It describes the applications and features of the 3767 and the communication facilities required.

The chapter on operating controls follows the chapters on operating characteristics and special features so that the reader can better appreciate the functions of these controls.

Information on installation and physical planning is given in IBM Remote Multiplexers and Communication Terminals Installation Manual -- Physical Planning, GA27-3006. Manual, 80 pages //09//3767/

GA27-3099

ADVANCED FUNCTION FOR COMMUNICATIONS: SYSTEM SUMMARY

This manual provides summary information about IBM System Network Architecture elements, a selection of equipment and programs comprising compatible components as a basis for a data communications network. It briefly describes the concepts of the System Network Architecture and the interrelationships of its components. Short descriptions of equipment components are also included. Manual, 28 pages 370//09//

GA27-3100

OPERATING PROCEDURES GUIDE: IBM 3771 AND 3773 COMMUNICATION TERMINAL

This Operating Procedures Guide is directed specifically to personnel writing detailed operator procedures for IBM 3771 or IBM 3773 Communication Terminal job applications, and for operators of the terminals. Included are:

- o Operating procedures for the basic configuration (the console printer, the keyboard, the operator's console, and the controller).
- o Operating procedures for the input and output devices.
- o Job start procedures for the terminals.
- o Error recovery and problem identification procedures for the terminals.

This guide describes the purpose and use of the terminal's controls as they apply to all jobs. You can use this manual in preparing a detailed operator procedure for a specific job in your application. Manual, 120 pages //09//3771,3773/

GA27-3101

IBM 3771 AND 3773 COMMUNICATION TERMINALS REFERENCE SUMMARY

This Reference Summary contains information that is already included in the Operating Procedures Guide: IBM 3771 and 3773 Communication Terminals (GA27-3100), and gives a quick reference to the information needed for the routine operation of the IBM 3771 or IBM 3773 Communication Terminals.

Reference Card, 1 page //09//3771,3773/

GA27-3102

SYSTEMS NETWORK ARCHITECTURE GENERAL INFORMATION MANUAL

This manual provides general information on Systems Network Architecture (SNA). It is a basic description to equip the reader with knowledge of the terminology, concepts, and scope of SNA.

This manual does not provide instructions for implementing SNA, nor does it describe any specific equipment or programs that may be needed to implement SNA. For specific details about an IBM SNA implementation, refer to the appropriate publication for that product. Manual, 56 pages 370//09//

GA27-3103

3770 DATA COMMUNICATION SYSTEM CUSTOMER SITE PREPARATION GUIDE

This reference manual will be given to the customer by the IBM Marketing Representative at the time the customer orders a 3770 Data Communication System. The manual provides the customer with the information necessary to prepare his site for the installation of the 3770 which he will perform. Handbook, 50 pages //15//3770,3771,3773,3774,3775,3776,3777/

GA27-3104

3767 COMMUNICATION TERMINAL CUSTOMER SITE PREPARATION GUIDE

This manual will be given to the customer by the IBM Marketing Representative at the time the customer orders a 3767 Communication Terminal. The manual provides the customer with the information necessary to prepare his site for the installation of the 3767 which he will perform. Reference Summary, 15 pages //15//3767/

GA27-3106

OPERATOR'S INTRODUCTION TO THE 3767 COMMUNICATION TERMINAL
This brochure is intended to serve as the preferred means of first exposure to the equipment (i.e., before delivery) by

presenting to the prospective user or operator some of the characteristics and features of the 3767 Communication Terminal. Locations and functions of keys and controls are presented in a facts-folder format.
Reference Summary, 18 pages
//09//3767/

GA27-3107

OPERATING PROCEDURES GUIDE: IBM 3776 COMMUNICATION TERMINAL
This Operating Procedures Guide is directed to personnel writing detailed operator procedures for IBM 3776 Communication Terminal job applications, and for operators of the terminals. Included are: (1) operating procedures for the basic configuration (the printer, the keyboard, the operator's console, and the controller), (2) Operating procedures for the input and output devices; (3) job definition and job start procedures for the terminal, and (4) error recovery and problem identification procedures for the terminal.
Manual, 148 pages
//09//3776/

GA27-3108

IBM 3776 COMMUNICATION TERMINAL REFERENCE SUMMARY
This reference summary contains information that is already included in the Operating Procedures Guide: IBM 3776 Communication Terminal, GA27-3107, and provides a quick reference to information needed for routine operation of the 3776. Use the Operating Procedures Guide if you need more detailed information about terminal operation than is provided in this summary.
Reference card, 4 panels
//09//3776/

GA27-3113

IBM 3773, 3774, AND 3775 PROGRAMMABLE COMMUNICATION TERMINALS REFERENCE SUMMARY
This reference summary contains information that is already included in the publication IBM 3773, 3774, and 3775 Programmable Communication Terminal Operator's Guide, GA27-3114, and provides a quick reference to information needed for routine operation of these terminals. For more detailed information about terminal operation, the Operator's Guide must be used.
Reference card, 5 panels

GA27-3114

3773 PROGRAMMABLE COMMUNICATION TERMINAL OPERATOR'S GUIDE
This manual contains operating instructions for the IBM 3773 Programmable Communication Terminal, Models P1, P2, and P3. This guide describes the purpose and use of the terminal's controls and functions. You can use this manual in preparing detailed operator procedures for a specific job in your application. This manual is written for personnel having the following responsibilities:
• Operating the terminals
• Programming the terminals
• Creating the specific job run books
Manual, 200 pages
//09//3773/

GA27-3116

IBM SYSTEMS NETWORK ARCHITECTURE INTRODUCTION
Systems Network Architecture (SNA) is a design for a total data communications system that offers many advantages over systems of the past. This publication introduces the major concepts of SNA and relates them to the advantages an SNA network offers the data communications user.
The IBM Systems Network Architecture Introduction manual is intended only for the data communication manager considering installing or converting to a data communication system designed to SNA specifications.
The SNA Introduction manual answers four questions a potential SNA user might ask:
(1) What is SNA? - A brief introduction to SNA concepts.
(2) What does SNA offer that is not available in pre-SNA data communication networks? - The advantages of SNA as a means of reducing many of the limitations inherent in pre-SNA systems.
(3) What equipment and programs are used to put SNA into operation? - A summary of the components of a data communications system and the IBM products that fulfill SNA requirements for each component.
(4) What is the conversion path from existing networks to an SNA network? - A look at the conversion aids available to ease the transition from current networks to SNA.
Manual, 24 pages, 2/76

GA27-3120

IBM 2790 INSTALLER'S GUIDE
This publication gives simple installation techniques and precautions that, when followed, will insure proper cable installation. It should be used as an on-the-job reference for terminating cable ends, making splices, connecting grounds and testing the cable installation.
Manual, 3 5/8" x 8 1/2", 44 pages, 1/76
//15//2790,2791,2793/

GA27-3123

3767 COMMUNICATION TERMINAL FRONT DOCUMENT INSERT DEVICE USER'S INFORMATION ADDENDUM (RPO MF5272)
This manual is a supplement to user information for the 3767 Communication Terminal equipped with the Front Document Insertion Device (RPO MF5272). This device enables the operator to easily insert documents for printing in front of the terminal platen without having to use the platen knobs. This manual furnishes the information needed by management, programming, and operator personnel to successfully use this device.

Major subjects include: operating procedures, paper specifications, and print specifications.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics and operating procedures, and the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.
Manual, 12 pages, 7/76
//14//3767/

GA27-3124

OPERATING PROCEDURES GUIDE: IBM 3777 COMMUNICATION TERMINAL

This operating procedures guide is directed to personnel writing detailed operator procedures for the IBM 3777 Communication Terminal, and for operators of the terminal. This manual also includes operating procedures for the IBM 3203 Printer, and for other devices that can be attached to the 3777. Users of this manual should already be familiar with the information contained in the publication IBM 3770 Data Communication System, System Components, GA27-3697.
Manual, 140 pages 8/76
//09//3777/

GA27-3125

3777 COMMUNICATION TERMINAL REFERENCE SUMMARY

This reference summary contains information that is already included in the Operating Procedures Guide: IBM 3777 Communication Terminal, GA27-3124, and provides a quick reference to information needed for routine operation of the 3777. Use the Operating Procedures Guide if you need more detailed information about terminal operation than is included in this summary.
Reference Card, 2 pages, 8/76
//09//3777/

GA27-3126

3767 COMMUNICATION TERMINAL PINFEED PLATEN USER INFORMATION (RPO EG0314 AND 851142)

This manual is a supplemental source of user information for the 3767 Communication Terminal equipped with the Pinfeed Platen Device (RPOs EG0314 and 851142). These devices allow accurate feeding of marginally pre-punched forms.

Major subjects include descriptions of components which are part of the pinfeed platen devices, platen removal and installation procedures, and forms insertion procedures.

This manual furnishes the information needed by management and operator personnel to successfully use this device.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics, operating procedures, and the contents of the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.
Manual, 10 pages, 3/76
//14//3767/

GA27-3127

3767 COMMUNICATION TERMINAL INTEGRATED MODEM WITH AUTO-ANSWER AND DIAL DISCONNECT (RPO 853134) USER INFORMATION ADDENDUM

This manual is a supplemental source of user information for the 3767 Communication Terminal equipped with Integrated Modem with Auto-Answer and dial Disconnect (RPO 853134).

This modem makes possible manual dial-up auto answer over a point-to-point switched communications network.

Major subjects include: Description of Functions, and Installation of Modem Data Cable. This manual furnishes the user with all information necessary to use a terminal equipped with this modem.

It is essential that users of this manual be familiar with the 3767 Communication Terminal characteristics and operating procedures, and the following manuals: IBM 3767 Model 1, 2, and 3 Communication Terminal Component Description, GA27-3096, and IBM 3767 Communication Terminal Operator's Guide, GA18-2000.
Manual, 10 pages, 5/76

GA27-3129

IBM 3777 MODEL 2 COMMUNICATION TERMINAL OPERATOR'S GUIDE

This manual is directed to operators of the IBM 3777 Model 2 Communication Terminal. This manual describes the operation of the IBM 3777 Model 2 Communication Terminal Operating with a System/360 Model 20 submodel 5 BSC MULTI-LEAVING workstation program, and communicating with a System/370 using one of the following BSC MULTI-LEAVING programming

systems:

- o OS/VS1 RES
- o OS/VS2 HASP
- o OS/VS2 JES2
- o OS/VS2 ASP
- o OS/VS2 JES3
- o VM/370 RECS

It is assumed that the user of this manual is already familiar with the programming system used. In conjunction with this Operator's Guide, the user will also require a copy of the programming systems publication that describes the system commands for controlling the system (refer to the publication IBM System/370 Bibliography, GC20-0001). Additional information about the IBM 3777 Model 2 can be found in the publication IBM 3770 Data Communication System, System Components, GA27-3097.
Manual, 8 1/2 x 11 inches, 140 pgs, 11/76

IBM 3289 LINE PRINTER (MODELS 1 AND 2) SETUP INSTRUCTIONS

These instructions are used by the customer to set up (attach accessories and connect cables) and check out the operation of the IBM 3289 Line Printer (Models 1 and 2).
Manual, 8 1/2 x 11 inches, 8 pages, 8/78
//03//3289/

GA27-3141

3289 MOD 1, 2 ERROR RECOVERY AND PROBLEM DETERMINATION GUIDE

Directed to the printer operator and describes the procedures to use if an error or breakdown occurs. These procedures will help the operator identify and eliminate the problem and possibly avoid the need to call for assistance.

Subjects in this guide include recognizing errors, responding to status indicators, restarting a job after an error, and requesting maintenance.

When an error occurs, the operator goes to page 1 and follows the flowchart until the problem is found. The operator then corrects the problem or calls for assistance.

Other publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Operator's Guide, GA27-3147
- IBM 3289 Line Printer Models 1 and 2 Operator's Reference Summary, GA27-3148
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922

GA27-3142

IBM 3773, 3774, AND 3775 PROGRAMMABLE COMMUNICATION TERMINALS PROGRAMMER'S HANDBOOK

This handbook summarizes selected reference information about the 3773, 3774, and 3775 Programmable Communication

Terminals. The information was extracted from the 3770 Programmer's Guide GC30-3028), which is the authoritative source. Some of the contents are:

- o 3770 Programming Statements
- o Supervisor Instructions
- o ESC Message Headers
- o SNA FM Headers
- o PVS Control Statements
- o Error and Abend Codes
- o Record Formats
- o I/O Status Information
- o Condition Codes and System Indicators

For comprehensive information, refer to the 3770 Programmer's Guide.

Handbook, 3 3/4 x 6 3/4 inches, 72 pgs, 8/77

GA27-3143

IBM 3773 AND 3774 PROGRAMMABLE COMMUNICATION TERMINALS OPERATOR'S GUIDE FOR PINFEED PLATEN RFG MJO436

Describes how to install and remove the pinfeed platen (RFG MJO436) for the IBM 3773 and 3774 Programmable Communication Terminals. It also describes how to load and align margin-punched forms on the terminals.

The publication supplements operating procedures contained in the IBM 3773, 3774, and 3775 Programmable Communication Terminals Operator's Guide, GA27-3114. Users should be thoroughly familiar with the above publication and with the operation of either the 3773 or 3774. Users who need more technical information on the functions and features of the terminals should refer to the IBM 3770 System Components manual, GA27-3097.

Manual, 8 1/2 x 11 inches, 12 pgs, 10/77
//14//3774/

GA27-3144

INTRODUCTION TO THE IBM 3770 DATA COMMUNICATION SYSTEM

Introduces the terminals and components of the IBM 3770 Data Communication System. Describes the capabilities, functions, features, and performance of the 3770 system for readers responsible for planning a data communication network or for integrating 3770 terminals into an existing network.

This publication describes the capabilities, functions, speeds, options, specify features, special features, accessories, and attachable input/output devices for the following 3770 terminal types: the general purpose nonprogrammable terminals, the general purpose programmable terminals, the general remote job entry (RJE) terminals, the BSC Multi-Leaving RJE workstation terminal, and the SNA Multiple Logical Unit RJE workstation terminals.

Information in this manual was previously in the IBM 3770 Data Communication System: System Components, GA27-3097, except for the information on the following new terminals: the IBM 3776 Communication Terminal Models 3 and 4 and the IBM 3777 Communication Terminal Model 3, SNA Multiple Logical Unit Workstation.
Manual, 8 1/2 x 11 inches, 100 pgs, 10/77

GA27-3145

COMPONENT DESCRIPTION FOR THE IBM 3776 AND 3777 COMMUNICATION TERMINALS

This publication presents introductory and reference information about the 3776 and 3777 terminals used in the following applications: 1) medium and high speed remote job entry terminals (BSC or SNA single logical unit), 2) high speed BSC MULTI-LEAVING workstation, and 3) medium and high speed SNA multiple logical-unit workstations. It describes the capabilities and functions of these terminals for those concerned with planning for a data communication network or for integrating the terminals into an existing network. It is also a reference source for system and application programmers, and for personnel planning job setups for the 3776 and 3777 terminals. Application personnel planning job setups will also require a copy of the appropriate Operating Procedures Guide or Operator's Guide.

It is assumed that the reader of this manual understands the concept and application of the IBM System/370 in a data communication environment, and is familiar with data link control procedures - Synchronous Data Link Control (SDLC) or Binary Synchronous Communications, whichever is used.
Manual, 8 1/2 x 11 inches, 336 pages, 3/78

GA27-3146

IBM 3771, 3773, 3774, AND 3775 COMMUNICATION TERMINALS COMPONENT DESCRIPTION

This publication describes the capabilities and functions of the general purpose terminals of the IBM 3770 Data Communication System: the IBM 3771, 3773, 3774, and 3775 Communication Terminals. The publication is directed to readers planning for a data communication network or for integrating the general purpose terminals into an existing network. It also contains reference information for system and application programmers, and for personnel planning job setups for the terminals.

Although this publication describes the operating controls of the terminals, it is not intended to provide detailed operating procedures. The controls are described only to illustrate the capabilities, functions, and features of the general purpose terminals. Operating procedures are described fully in the appropriate Operating Procedures

Guide for the terminals.
Manual, 8 1/2 x 11 inches, 246 pages, 1/78

GA27-3147

IBM 3289 LINE PRINTER MODELS 1 AND 2 OPERATOR'S GUIDE
Describes the basic operating procedures for the IBM 3289 Line Printer Models 1 and 2. It is intended for those who either operate the printer or write its detailed operating procedures.

It is assumed that the reader of this publication has previous operating experience, with a working knowledge of the 3289 printer or related data processing equipment. Detailed procedures for a particular application are not presented. Rather, this publication describes the use and capabilities of the printer as they apply to all applications. Chapter 1 describes models, printing speeds, character sets, and the operator panel. Chapter 2 describes basic operating procedures such as turning power on and off, setting format, reprinting a job, etc. Chapter 3 provides information for installing forms, ribbons, and print belts.

Publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Error Recovery and Problem Determination Guide, GA27-3141
- IBM 3289 Line Printer Models 1 and 2 Operator's Reference Summary, GA27-3148
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922.

GA27-3148

3289 LINE PRINTER MOD 1, 2 OPERATOR'S REFERENCE SUMMARY
Directed to the operator of the printer and contains reference information needed for routine operation of the IBM 3289 Line Printer Models 1 and 2. A complete listing of status codes is found here, plus other information that is also included in either the 3289 Operator's Guide or the 3289 Error Recovery and Problem Determination Guide.

Other publications that should be available for the operator's use are:

- IBM 3289 Line Printer Models 1 and 2 Operator's Guide, GA27-3147
- IBM 3289 Line Printer Models 1 and 2 Error Recovery and Problem Determination Guide, GA27-3141
- IBM 3289 Line Printer Models 1 and 2 Operator's Trouble Report Form, GX27-2922

GA27-3150

3287 PRINTER OPERATOR GUIDE
This manual describes, for the operator, the basic operating procedures of the IBM 3287 Printer. It contains an introduction, a discussion of the operating controls (lights and switches), and a description of basic functions of the printer.

Manual, 8 1/2 x 11 inches, 72 pages, 1/78
//03//3287/

GA27-3151

3287 PRINTER MODELS 1 AND 2 PROBLEM DETERMINATION GUIDE
This guide has been prepared to help you (the operator) determine the type of problem and how to correct it, when the 3287 Printer, Models 1 and 2, is not operating properly. It is designed to save you time by pointing out possible causes for troubles that you can easily and quickly correct yourself.

The following documents contain related information that may help diagnose problems and recover from error conditions:

- IBM 3287 Printer Operator's Guide, GA27-3150
- IBM 3287 Printer Operator's Trouble Report, GX27-2923
- IBM 3287 Printer Component Description, GA27-3153

GA27-3160

3289 LINE PRINTER MODEL 4 ERROR RECOVERY AND PROBLEM DETERMINATION GUIDE

Directed to the printer operator and describes the procedures to use if an error or breakdown occurs. These procedures will help the operator identify and eliminate the problem and possibly avoid the need to call for assistance.

Subjects in this guide include recognizing errors, responding to status indicators, restarting a job after an error, and requesting maintenance.

When an error occurs, the operator goes to page 1 and follows the flowchart until the problem is found. The operator then corrects the problem or calls for assistance.

IBM 3776 MODELS 3 AND 4 AND IBM 3777 MODEL 3 COMMUNICATION TERMINALS OPERATOR'S GUIDE

This manual is designed specifically for personnel writing detailed operator procedures for remote job entry (RJE) applications that use the IBM 3776 Models 3 and 4 and the IBM 3777 Model 3 Communication Terminals, and for operators of the terminals. Included are:

- Operating procedures for:
 - Starting up and initializing the terminal for communication with the host processor.
 - Logging on to and logging off from the System Services Control Point (SSCP) in the host processor
 - Sending messages to the host application program
 - Defining, storing, retrieving, and executing cataloged procedures for sending job input to the host processor and for receiving job output at the terminal executing immediate commands for sending and receiving jobs
 - Setting up the input and output devices and recovering from media problems such as card jams
 - Performing data transfers between local input and output devices
- Error Recovery and Problem Identification procedures for the terminal
- Operational comparisons to aid in converting from IBM 3777 Model 2 to IBM 3777 Model 3 terminal operation and converting from IBM 3776 Models 1 and 2/3777

This guide describes the purpose and use of the terminals' controls and operator commands as they apply to all jobs. You can use this manual in preparing a detailed operator procedure (runbook) for a specific remote job entry application.

This manual also contains information describing changes for Multiple Logical Unit (MLU) enhancement.

GA27-3176

3289 LINE PRINTER MODELS 1 AND 2 COMPONENT DESCRIPTION
Presents introductory and reference information about the IBM 3289 Line Printer Models 1 and 2. The 3289 connects to an IBM 3270 Information Display System through an IBM 3274 Control Unit or an IBM 3276 Control Unit/Display Station. Model 1 has a maximum print speed of 155 lines per minute and Model 2 has a maximum print speed of 400 lines per minute.
Describes the capabilities and functions of the 3289 Printer for those concerned with planning a new system or integrating a Model 1 or Model 2 into an existing system. It also provides information needed by those who write detailed operating procedures for the printer.
It is assumed that the reader of this manual understands the concepts and applications of the IBM 3270 Information Display System. Information about 3270 publications can be found in the publication IBM System/370 Bibliography, GC20-0001.
Chapter 1 contains general information about configurations and basic characteristics of the Model 1 and Model 2 printer. Chapter 2 explains operating controls and characteristics including modes of operation and how to handle abnormal conditions. Chapter 3 contains programming information including the control codes for each mode of printing. The appendixes describe code charts, character sets, throughput controlling factors, and the printer control information area (PCIA).
Manual, 8 1/2 x 11 inches, 75 pages, 12/78
//03//3289/

GA27-3177

3289 LINE PRINTER MODEL 4 COMPONENT DESCRIPTION
Presents introductory and reference information about the IBM 3289 Line Printer Model 4. The 3289 connects to a 4331 Processor through a coaxial cable and has a maximum print speed of 400 lines per minute.
This publication describes the capabilities and functions of the 3289 for those concerned with planning a new system or integrating a Model 4 into an existing system. It also provides information needed by those who write detailed operating procedures for the 3289.
It is assumed that the reader of this manual understands the concepts and applications of the IBM 4331 Processor.
Chapter 1 contains general information about configurations and basic characteristics of the Model 4 printer. Chapter 2 explains operating controls and status codes. Chapter 3 contains programming information, including printer commands, forms control buffer, status and sense information, and error recovery information.
Appendixes A through D describe code charts, character sets, a summary of sense bytes, and throughput controlling factors.
Related Publications: The 3289 Line Printer Model 4 Operator's Guide, GA27-3159 is available for those who operate the 3289 or who write its detailed operating procedures.

This bulletin describes the characteristics, functions, and features of the IBM 2420 Model 5 Magnetic Tape Unit. Systems Reference Library Manual, 12 pages
//05//2420/

GA32-0020

3803/3420 MAGNETIC TAPE SUBSYSTEMS
This manual describes the IEM 3803 Model 1 Tape Control and the IEM 3420 Models 3, 5, and 7 Magnetic Tape Units. The 3803 Model 1 tape control provides communication between the tape units and the system input/output interface. The 3420 Models 3, 5, and 7 tape units read and write one-half inch magnetic tape at 75, 125, and 200 inches per second respectively. All three basic tape units read and write nine-track, 1,600 bytes per inch (bpi), phase-encoded format. Nine-track, 800 bpi NRZI recording mode is available as a feature on all models. Seven-track, 556/800 bpi NRZI recording mode is an optional feature on all models.
Readers should be familiar with the contents of IEM SYSTEM/360 PRINCIPLES OF OPERATION, Form GA22-6821 (sections on input/output operations). System/370 users should also refer to IEM SYSTEM/370 PRINCIPLES OF OPERATION, Form GA22-7000.
Systems Reference Library Manual, 32 pages

GA32-0021

IEM 3803-2/3420 MAGNETIC TAPE SUBSYSTEMS SUBSYSTEM DESCRIPTION
This manual describes the IEM 3803 Model 2 Tape Control and the IEM 3420 Models 3 through 8 Magnetic Tape Units. The 3803 Model 2 Tape Control provides communication between the tape units and the system input/output interface.
The 3420 Models 3/4, 5/6, and 7/8 read and write one-half inch magnetic tape at 75, 125, and 200 inches per second respectively. The 3420 Models 4, 6, and 8 read and write 9-track 6,250 bytes per inch (bpi) group coded recording (GCR) format.
The basic 3420 Models 3, 5, and 7 read and write nine track, 1,600 bpi, phase-encoded format. Nine track, 800 bpi NRZI recording mode and seven-track 800/556/200 bpi NRZI recording mode are available as features on the 3420 Models 3, 5, and 7 and on the 3803 Model 2.
A reader should be familiar with IEM System/360 Principles of Operation, GA22-6821 (section on I/O operations) and IEM System/370 Principles of Operation, GA22-7000 (section on I/O Operations).
Manual, 60 pages

GA32-0022

IBM 3410/3411 MAGNETIC TAPE SUBSYSTEM COMPONENT DESCRIPTION MANUAL
This manual describes the IEM 3410/3411 Magnetic Tape Subsystem, Models 1, 2, and 3. In most instances, operational descriptions are limited to the channel and command level. Operations common to all I/C devices are described in IEM System/360 Principles of Operation, Form GA22-6821, and IEM System/370 Principles of Operation, Form GA22-7000.
Subjects covered include keys and lights, tape handling procedures, status and sense information, and error recovery procedures.
Systems Programmers who are writing programs for magnetic tape
Systems engineers who are planning installation using magnetic tape
Sales personnel
Manual, 44 pages
//05//3410,3411/

GA32-0023

IBM 3803/3420 CUSTOMER CONVERSION GUIDE

This document guides the IBM marketing representative and the IBM customer in planning a field conversion of 3803-1 and 3420-3, 5, 7 tape subsystems to 3803-2 and 3420-4, 6, 8 (6250 bpi) tape subsystems.

Notify the IBM Field Engineering representative early in the planning stages of the conversion. An early conference with him should be helpful to both of you.

IBM 3875 MODEM USER'S GUIDE

In this publication the 3875 Modem is described, and interface details, installation planning, and operating and operator maintenance procedures are given. Differences between operation in the USA and other countries are described in the appropriate parts of the publication, and a summary is given in an appendix.

The content is intended for:

- o Systems Engineers
- o Installation Planning Engineers
- o Operators

The information for systems engineers presupposes a knowledge of teleprocessing, but the information for installation planning engineers and operators requires no such understanding.

Manual, 78 pages, 6/76
//09//3875/

GA33-0002

IBM 3874 MODEM USER'S GUIDE

This publication is primarily intended for system planners, operators, systems engineers, installation planners and supervisory personnel. It is also required for its operating procedures by IBM customer engineers who must maintain the IBM 3874 Modem.

The publication describes the 3874 Modem, which can operate on non-switched and switched lines at a speed of 4800 or 2400 EPS and is in four main parts:

- Part 1 describes (in general terms) the 3874, with planning and equipment considerations
- Part 2 shows the operator controls and gives the operating and operator maintenance procedures
- Part 3 describes (in detail) the 3874 giving functional description, interface specifications, strapping options, physical installation specifications, and communication channel specifications.
- Part 4 summarizes counting differences, gives abstracts from the communication channel specifications, and describes switched network back-up operation with ETAM.

The information for Part 3 for systems engineers presupposes a knowledge of teleprocessing, but the information for installation planning engineers and operators requires no such understanding.

Manual, 8 1/2 x 11 inches, 102 pages, 4/77

GA33-1506

IBM SYSTEM/370 MODEL 125 FUNCTIONAL CHARACTERISTICS

This manual contains information on the operations that can be performed on the System/370 Model 125, including channel and I/O operations.

The Model 125 is a general purpose data processing system, controlled from a central processing unit, with a direct attachment for disk drives as a standard feature. It can be equipped with a multiplexer channel and with integrated attachments and adapters for magnetic tape units, card I/O devices, a printer, and teleprocessing devices.

The manual describes the basic architecture and features of the central processing unit, and the channel characteristics.

The intended readership consists mainly of systems analysts evaluating the capabilities of the Model 125 in terms of its manual and program operations, and of system programmers writing channel programs or operating systems for the Model 125. The manual is only of limited use to application programmers because it contains little information related to programming languages.

The first main section of the publications, "System Control," describes the architectural features such as the program status word control registers, and fixed areas in main storage, and gives details of mode selection and other manual operations. The second main section describes the channel characteristics, and specifies the commands, status and sense information of the natively-attached I/O devices. A separate chapter describes the teleprocessing attachment. Instruction timings are listed in an appendix.

GA33-1509

OPERATOR'S LIBRARY: SYSTEM/370 MODEL 125 PROCEDURES
This manual is intended for operating personnel using the System/370 Model 125.

The manual is divided into four sections: The Introduction, The Operation Console, Operation Actions and the Appendix. The section on the operator console describes the hardware and the facilities available for the manual control of the system. The section on the operator actions describes how the facilities are used, how to handle unexpected situations, and how to recover from a fault. The appendix provides reference information for the handling of I/O devices that can be directly attached (no control unit or channel is needed) to the Model 125. Restart procedures for the 2560 multifunction Card Machine, attached directly to the Model 125, are also given.
Manual, 120 pages
3125//01///

GA33-1510

IBM SYSTEM/370 MODEL 115 FUNCTIONAL CHARACTERISTICS
This publication describes the characteristics of the IBM System/370 Model 115, including the central processing unit, multiplexer channel, direct disk attachment, and the integrated attachments and adapters for other input/output devices.
Its main purpose is to give systems analysts an understanding of the structure, features, and operations of the system. The manual also provides system programmers with information which is essential when writing and maintaining channel programs and operating systems for the System/370 Model 115.

In the six chapters of the manual, the characteristics of the Model 115 are described in terms of:

1. The basic system structure
2. Main storage addressing
3. The operations which can be performed and the means of manual and program control.
4. Compatibility features
5. The commands, status and sense information for input/output devices attached other than through the multiplexer channel.
6. The characteristics of the integrated communications adapter.

Appendixes A, B, and C provide (respectively) code tables for the integrated communications adapter, instruction timings, and an example procedure for conversion from 2311 Model 15 to a 3340 disk subsystem. Appendix D gives some information on magnetic tape unit compatibility. Appendix E gives definitions of the abbreviations and special terms used in this manual.

The reader is assumed to be conversant with the IBM System/370 installation sets, data formats, channel operations, and basic programming concepts such as status switching and interruption.

Prerequisite Reading

IBM System/370 System Summary, GA22-7001

GA33-1511

IBM SYSTEM/370 MODEL 115 CONFIGURATOR
This configurator is intended for sales personnel, systems engineers and customer systems evaluation management. This configurator provides a concise graphic description of the Model 115 with standard and optical features, as well as all possible configurations of I/O devices which can be directly attached to the Model 115.
Manual
3115//00///

GA33-1512

IBM SYSTEM/370 MODEL 125 CHANNEL CHARACTERISTICS
This manual describes how the effects of imposing loads on the channels of the IBM System/370 Model 125 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output devices will work satisfactorily in the System/370 Model 125.

The manual is divided into four sections. Section one describes the channels in terms of type, theoretical data rates, and the effects of loading. Section two describes how to test for data overrun, and how to assign priorities to devices on the byte multiplexer channel. Section three describes how the interference of the activities of the channels with the IPU can be assessed. Section four describes the concept of channel utilization.

Before using this manual the reader should understand input/output operations for the Model 125 as described in:

IBM System/370 Model 125 Functional Characteristics, GA33-1506
IBM System/370 Principles of Operation, GA22-6821
IBM System/370 Principles of Operation, GA22-7000

GA33-1514

OPERATOR'S LIBRARY SYSTEM/370 MODEL 115 PROCEDURES
This manual provides operating and reference information for operators of the IBM System/370 Model 115. The reader is assumed to have a working knowledge of Introduction to IBM Data Processing Systems, GC20-1684, and some previous operating experience on either a similar system or on related data processing equipment.

This manual describes how to operate the system hardware of the IBM 3115 Processing Unit.

The manual is divided into:

1. Preliminary information, including action to be taken in an emergency.
2. "Introduction", which briefly describes the system.
3. "Facilities," which describes the operator console, keyboard and video display screen.
4. "Actions," which describes the preparation of the system for operation, and the handling of unexpected situations which may occur during preparation and operation.
5. "Appendix," which provides:
 - a. Reference information on the:
 - o Direct disk attachment
 - o Magnetic tape adapter
 - o Integrated communications adapter
 - o Integrated console printer attachment
 - o Integrated printer attachment
 - o Integrated card I/C attachment.
 - b. Restart Procedures for the IBM 2560 Multi-Function Card Machine (MFCM) and the IBM 5425 Multi-Function Card Unit (MFCU).
 - c. A description of the choices on the "Line Modes for ICA" displays.
 - d. Conversion tables.
6. A glossary, bibliography, and index.

GA33-1515

IBM 3203 PRINTER COMPONENT DESCRIPTION AND OPERATOR'S GUIDE
This publication provides reference information for the users of the IBM 3203 Printer. It is written mainly for the benefit of system planners, programmers and operators, but is also of interest to system supervisors and engineers. The publication provides a general introduction to the 3203, its components, method of operation, and requirements; and explains the various operating procedures. The chapter "Programming Information" is provided for users of the 3203 Models 1 and 2, which are attachable to System/370 Models 115 and 125. For information on the programming of 3203 Model 3, attachable to the IBM 3777 Data System, see IBM 3770 Communication System Programmer's Guide, GC30-3028.

A section on printer throughput is included for system analysts who wish to calculate the performance of the machine. A separate chapter covers the requirements and procedures for producing printed output that can be processed by optical character readers.

The publication contains three appendixes:

- Appendix A: Extended Binary Coded Decimal Interchange Code
- Appendix B: 3203 Sense Byte Summary
- Appendix C: Abbreviations

The reader should be familiar with the system to which the printer is attached. For system and programming information refer to publications listed in the bibliography for the system.

Prerequisite Publications:

For programmers: IBM System/370 Principles of Operation, Order No. GA22-7000.
Manual, 76 pages, 7/76
//03//3203/

GA33-1516

IBM SYSTEM/370 MODEL 115 CHANNEL CHARACTERISTICS
This manual describes how the effects of imposing loads on the channels of the IBM System/370 Model 115 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily in the System/370 Model 115.

The first section of the book describes the types of channels to which I/O devices can be connected, the theoretical data rates of the channels, and the possible effects of imposing heavy I/O loads on those channels. The effects considered are: data overrun, loss of device performance, channel interference with the machine instruction processor (MIP), program overrun, and excessive channel utilization.

The second section gives the procedures for testing data overrun on the byte-multiplexer channel. This section also

includes a description of how to assign priorities to devices on the byte-multiplexer channel.

The third section deals with interference with the MIP that is caused by activities on the channels, and describes how the interference can be assessed. The same section also shows how to check for the possibility of program overrun.

The fourth section describes the concept of channel utilization.

Before using this manual, the reader should have a thorough understanding of input/output operations for the Model 115 as described in: IBM System/370 Model 115 Functional Characteristics, GA33-1510. IBM System/370 Principles of Operation, GA22-7000.

When calculating for data overrun on the byte multiplexer channel, a special worksheet is required: IBM System/370 Model 115 Byte-Multiplexer Channel: Load Sum Worksheet GX33-6007, available in pads of 50. System library manual, 44 pages 3115//01///

GA33-1519

IBM 3203 PRINTER REFERENCE SUMMARY FOR OPERATORS

Provides quick reference information for operators on 3203 Printer, which can be attached to the System/370 Models 115 and 125.

Consists of extract from GA33-1515 and describes forms loading procedure, operator controls, stacker settings, keys, lights and switches, and correction of forms jam. In handy pocket format for use at the machine. Reference Card, 2 sides 18-1/8 x 8-1/2 inch, 10 panels //03//3203/

GA33-1520

SYSTEM/370 MODEL 115 CHANNEL CHARACTERISTICS FOR SYSTEMS WITH IBM 3115-2 PROCESSING UNIT

This manual describes how to check the effects of imposing loads on the channels of an IBM 3115-2 Processing Unit in an IBM System/370 Model 115. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily in the System/370 Model 115.

The first section of the book describes the types of channels to which I/O devices can be connected, the theoretical data rates of the channels, and the possible effects of imposing heavy I/O loads on those channels. The effects considered are: data overrun, loss of device performance, channel interference with the instruction processing unit (IPU), program overrun, and excessive channel utilization.

The second section gives the procedures for testing data overrun on the byte-multiplexer channel. This section also includes a description of how to assign priorities to devices on the byte-multiplexer channel.

The third section deals with interference with the IPU that is caused by activities on the channels, and describes how the interference can be assessed. The same section also shows how to check for the possibility of program overrun.

The fourth section describes the concept of channel utilization.

Before using this manual, the reader should have a thorough understanding of input/output operations for the 3115-2 as described in:

IBM System/370 Model 115 Functional Characteristics, GA33-1510,

IBM System/370 Principles of Operation, GA22-7000.

Detailed information on the standard I/O interface is given in IBM System/360 and System/370 I/O Interface Channel to Control Unit, Original Equipment Manufacturer's Information, GA22-6974.

When calculating for data overrun on the byte-multiplexer channel, a special worksheet is required: IBM System/370 Model 115 Byte-Multiplexer Channel: Load Sum Worksheet, GX33-6007, available in pads of 50, or an equivalent worksheet from a System/360 machine may be used. Manual, 44 pages, 8/76 3115//01///

GA33-1521

IBM 3203 MODEL 3 PRINTER REFERENCE SUMMARY FOR OPERATIONS

Provides quick reference information for operators on 3203 Printer Model 3, which can be attached to the IBM 3777 Communication Terminal. Consists of extract from GA33-1515 and describes forms loading procedure, operator controls, stacker settings, keys, lights and switches, and correction of forms jam.

In handy pocket format for use at the machine. Reference summary, 2 sides, 18-1/8"x8-1/2", 10 panels //03//3777/

GA33-1523

4300 PROCESSORS SUMMARY AND INPUT/OUTPUT AND DATA COMMUNICATIONS CONFIGURATOR

This publication is intended to give a general understanding of the IBM 4300 Processors. It is divided into five sections:

. Sections 1 to 3 explain the concepts of the processors and give an overview of their structure and most important features.

. Section 4 describes the individual 4300 Processors.

. Section 5 presents the input/output and data communications configurator for the 4300 Processors. Because each section is built on information presented in preceding sections, it is preferable to read the sections in

the order of presentation. A basic knowledge of data processing systems, such as given in the Introduction to IBM Processing Systems, GC20-1684, is assumed. Manual, 78 pages, 1/79 4331,4341//00///

GA33-1525

IBM 4331 OPERATING PROCEDURES AND PROBLEM DETERMINATION GUIDE

This manual describes how to operate the IBM 4331 Processor. You are assumed to have a knowledge of Introduction to IBM Data Processing Systems, GC20-1684, and some experience in operating a similar computer system.

- The section "Communicating with the System" describes the parts of the IBM 4331 Processor that you need to know about in order to be able to communicate with, and control the system. It describes the operator console and related facilities.
- The section "Procedures" explains how to operate the IBM 4331 Processor.

Manual, 8 1/2 x 11 inches, 114 pgs, 4/79 4331//01///

GA33-1526

4331 FUNCTIONAL CHARACTERISTICS

The characteristics of the IBM 4331 Processor with its I/O adapters and standard channels are described in this publication for the use of system analysts and programmers.

The reader is assumed to have a working knowledge of the IBM 4300 Processors Principles of Operation for ECFB:VSE Mode, Order No. GA22-7070, and the IBM System/370 Principles of Operation, GA22-7000, and to have had programming experience with System/360, System/370, or other 4300 Processors.

The main chapters of the manual cover:

- Introduction and structure of the 4331 Processor
- I/C and data communication characteristics
- Model-dependent information
- Compatibility features

Manual, 8 1/2 x 11 inches, 194 pages, 3/79 4331//01///

GA33-1527

4331 PROCESSOR, CHANNEL CHARACTERISTICS

This manual describes how the effects of imposing loads on the channels of the IBM 4331 processor can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily in the IBM 4331 processor.

Manual, 8 1/2 x 11 inches, 138 pages, 2/79 4331//01///

GA33-1528

4331 PROCESSOR, COMPATIBILITY FEATURES

This publication is provided mainly for users of the System/360 and System/370 with attached IBM 2311 or IBM 2314 disk devices, who wish to transfer their current DCS release to the IBM 4331 processor for operation by disk devices with fixed block architecture. The publication also contains information for 1401/1440/1460-Series users who are transferring programs to the 4331 Processor.

The two chapters of the manual are:

- 1) 2311/2314 emulated on the IBM 3310 Direct Access Storage.
- 2) 1401/1440/1460 emulated on the IBM 4331 Processor.

Manual, 8 1/2 x 11 inches 4331//13//2311,2314,1401,1440,1460/

GA33-1529

3203 PRINTER MODEL 5 COMPONENT DESCRIPTION AND OPERATOR'S GUIDE

This publication provides reference and operating information for users of the IBM 3203 Model 5 Printer. It is written mainly for system planners, programmers, and operators, but may also be of interest to system supervisors and engineers. The publication provides a general introduction to the 3203 Model 5 and explains the operating procedures. The Programming Information section describes the commands used to control the printer, the status and sense information returned to the system, and the error recovery procedures.

Manual, 8 1/2 x 11 inches, 102 pages, 1/79 370,4331,4341//03//3203/

GA33-1531

3203 PRINTER MODEL 5 REFERENCE SUMMARY FOR OPERATORS

This publication contains operating information for operators of the 3203-5 printer. Information herein is extended from the 3203 Component Description and Operator's Guide, GA33-1529.

Reference card 3-5/8 x 8-1/2 inches, 12 panels, 4/79 370,4331,4341//03//3203/

GA33-1532

IBM 4331 PROCESSOR CHANNEL LOAD SUMMARY WORKSHEET

This form is provided for use when calculating the channel load on the IBM 4331 Processor. Use of this form is explained in detail in the IBM 4331 Processor Channel Characteristics; Form GA33-1527.

Form, 2/79

GA33-3005

IBM SYSTEM/370 MODEL 135 FUNCTIONAL CHARACTERISTICS
This publication describes the capabilities, input/output channels, integrated adapters (printer, file, and communications), features (including the 2314/3340 Compatibility feature), and operations of the IBM System/370 Model 135. This information includes the relationship of the IBM System/370 Model 135 to the IBM System/360. This publication is intended for users and potential users such as system analysts and programmers of the System/370 Model 135. The reader is assumed to have a working knowledge of IBM System/370 Principles of Operation (GA22-7000) and IBM System/370 System Summary (GA22-7001).
Manual, 99 pages
3135//01///

GA33-3007

SYSTEM/370 MODEL 135 TERMINAL ADAPTER TYPE I MODEL II (FOR ICA): SPECIAL FEATURE DESCRIPTION SYSTEM LIBRARY MANUAL
This manual provides information for writing channel programs for the Terminal Adapter Type I Model II subfeature in the Integrated Communications Adapter (ICA) base feature of the IBM System/370 Model 135.

The manual is intended for applications programmers who use the assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000).

The Terminal Adapter Type I Model II subfeature covered by this manual allows the Model 135 to communicate with remote start/stop terminals such as the IBM 1050 Data Communications Terminals, and IBM System/7.

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link. Subsequent sections give details of transmission codes, methods of error detection, special characters, status and sense information, and communication procedures. Appendixes give information about the particular requirements of the remote devices.
Manual, 56 pages
3135//13///

GA33-3008

IBM SYSTEM/370 MODEL 135 TERMINAL ADAPTER TYPE III FOR ICA: SPECIAL FEATURE DESCRIPTION
This manual provides information for writing channel programs for the Terminal Adapter Type III subfeature in the integrated communications adapter (ICA) base feature of the IBM System/370 Model 135.

The manual is intended for applications programmers who use assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000).

The Terminal Adapter Type III subfeature allows the Model 135 to communicate with remotely sited IBM 2260 or 2265 Display Stations, via IBM 2848 or 2845 Display Controls, respectively.

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link. Subsequent sections give details of transmission codes, methods of error detection, special characters, commands, status and sense information, and communication procedures.
System Library Manual, 36 pages
3135//13///

GA33-3009

SYSTEM/370 MODEL 135 SYNCHRONOUS DATA ADAPTER TYPE II (FOR ICA): SPECIAL FEATURE DESCRIPTION
This manual provides reference information for programmers writing channel programs for the Synchronous Data Adapter Type II subfeature in the Integrated Communication Adapter (ICA) feature of the IBM System/370 Model 135.

The Synchronous Data Adapter Type II subfeature allows the Model 135 to communicate with other processing systems and terminals that operate under binary synchronous communications procedures.

The manual is intended for applications programmers who use assembler language and who are familiar with input/output programming as described in IBM System/360 Principles of Operation (GA22-6821) and IBM System/370 Principles of Operation (GA22-7000). The reader should also be familiar with the basic principles of binary synchronous communications, such as is given in General Information - Binary Synchronous Communications (GA27-3004).

The first section of the manual outlines the relationship of the ICA to the CPU main storage and to the external communication link; the second section summarizes the principles of binary synchronous communications. Subsequent sections give details of the transmission codes used in the Synchronous Data Adapter Type II, the error detection methods used, control characters, commands, status and sense information, and operations of the adapter.
Manual, 64 pages
3135//13///

GA33-3010

IBM SYSTEM/370 MODEL 135 CHANNEL CHARACTERISTICS
This manual provides information needed for checking that a proposed configuration of I/O devices on the channels of IBM System/370 will work satisfactorily. The book is intended

for use in systems assurance work at the planning stage.

Procedures with examples are given for testing the effects of imposing heavy loads on the Model 135 channels. The effects covered are: data overrun, loss of device performance, channel interference with the CPU, program overrun, and excessive channel utilization.

Additional but related topics covered in the book are: (1) priority sequence of devices on the byte-multiplexer channel (with examples that include the 1419 Magnetic Character Reader with expanded capability); (2) the effects of block-multiplexing on channel busy time and percentage channel utilization; and (3) channel programming conventions, upon which the validity of test procedures in the book is based.

Prerequisite Publications

The reader must be familiar with System/370 input/output operations as presented in:

IBM System/360 Principles of Operation GA22-6821
IBM System/370 Principles of Operation GA22-7000
IBM System/370 Model 135 Functional Characteristics GA33-3005

IBM System/360 and System/370 Interface Channel Unit Original Equipment Manufacturers Information GA22-6974.
For testing data overrun on the byte-multiplexer channel, the following special worksheet is required: IBM System/370 Model 135 and Model 138 Byte-Multiplexer Channel: Load Sur Worksheet, GX33-6004.
Manual, 8 1/2 x 11 inches, 110 pgs
3135//01///

GA33-3011

IBM SYSTEM/370 MODEL 135 - TELEGRAPH ADAPTER TYPE II (FOR ICA): SPECIAL FEATURE DESCRIPTION MANUAL

This manual is primarily for communication programmers who wish to write their own channel programs for the Telegraph Adapter Type II feature. The manual will also be of interest to programmers who intend to use programs that are available from IBM. The Telegraph Adapter Type II feature (available in USA only) is one of the optional subfeatures in the integrated communications adapter (ICA) feature of the IBM 3135 Processing Unit. The subfeature allows the IBM System/370 Model 135 to communicate with remote teletypewriter-exchange-service (TWX) terminals, Models 33 & 35.

The first section of the manual outlines the relationship of the ICA to the main storage of the 3135 Processing Unit and to the external communication link; the section also gives input/output programming information. The remaining sections of the manual apply solely to the Telegraph Adapter Type II feature and give the programmer details of: Transmission codes, Methods of error detection, Control characters, commands, status and sense information, communication procedures and line monitoring.

An appendix give the TWX code structure for the remote devices.
Manual, 30 pages
3135//13///

GA33-3014

IBM SYSTEM/370 MODEL 135 CONFIGURATOR

This publication lists the standard, optional, and selective features of the IBM System/370 Model 135, and describes how these features attach to the System/370 Model 135. Details of feature numbers, prerequisite features, programming support, and control storage requirements are also given.

This configurator is intended for IBM marketing personnel, and for customer systems planners; that is, it is intended for readers who are involved with planning Model 135 system configurators and who need to know how the features and combinations of features can be attached to the Model 135. To make the best use of this configurator, the reader should be familiar with the information in IBM System/370 Model 135 Functional Characteristics.

This configurator lists the Model 135 features under the following general headings:

- o standard, optional, and selective features
- o instruction sets
- o channels
- o integrated adapters

Manual, 44 pages

GA33-3015

REFERENCE MANUAL FOR IBM 5985 COLOR DISPLAY CONTROL UNIT MODEL H02 AND IBM 5941 DISPLAY CONSOLE, MODEL H02 (SEE ABSTRACT FOR REFS)

U.S.A. Canada: RFGS Y94176 and 7H0014. Other countries: RFGS 7H0020 and 7H0023. Provides reference information for operating and programming the color display subsystem, which attaches to IBM System/370. The subsystem displays text and graphic data on color television monitors that are provided by the user.

The manual has two sections. The first section describes the operation of the keys, pushbuttons and lights of the 5941-H02 Display Console, and gives corrective actions to be taken in unexpected situations. It is intended for operators who have a working knowledge of Introduction to IBM IIA Processing Systems, GL20-1684.

The second section, which is for programmers, describes how to generate a character set, manipulate the information on the screen, control some of the lights on the display console for operator guidance and simulate messages from the display console to check its operation. The commands and the status and sense information

are described for both local (channel-attached) and remote (BSC) control units.
For a local control unit, the programmers is assumed to be familiar with channel programming for System/370.
For a remote control unit, the programmer is assumed to be familiar with General Information Binary Synchronous Communications, GA27-3004.

Transmission codes for a remote control unit are described briefly.

Appendix A contains physical planning information, Dimensions, service areas, and user supplied cables are specified for the display console and control unit.

Appendix B lists the RPQ numbers that must be quoted in an order for the color display subsystem and its optional features; and shows possible configurations of the subsystem components.

3277 DISPLAY STATION, GRAPHICS ATTACHMENT RPQ 7H0284,
CUSTOM FEATURE DESCRIPTION

This publication provides information about the Graphics Attachment, RPQ 7H0284, for the IBM 3277 Display Station Model 2. It is intended to be read by data processing managers, systems analysts, system programmers, and programmers of graphics applications.

Chapter 1 provides an overview of the Graphics Attachment RPQ, its features and functions, and some applications for which it might be used. The remaining chapters provide a more detailed description of the product and its programming support.

This information is provided to enable customers:
• To plan for the installation of the product itself and of the graphics workstation that the product would

enable the customer to install.

- To understand the architecture so as to undertake any programming that is not provided by the IBM-supplied software.

IBM 8775 DISPLAY TERMINAL CHARACTER SET REFERENCE

This manual provides general reference material about the character sets, alphanumeric keyboards, and input/output (I/O) interface codes (bit patterns) for languages that are available with the IBM 8775 Display Terminal. The manual is intended for management personnel, programmers, and system analysts.

The manual has three chapters:

- Chapter 1 describes the various language character sets for the 8775 Display Terminal
- Chapter 2 describes and illustrates the keyboards that are available for the terminal:
 - Typewriter keyboards
 - Extended typewriter keyboards
 - Data entry keyboards
 - Data entry (high volume) keyboards
 - Japanese (Katakana) keyboards
- Chapter 3 contains:

Matrix drawings of the I/O interface codes that support the various keyboards;

A table that shows the differences in I/O interface codes for the various national languages;
An I/O interface code matrix for the magnetic slot reader.

The reader is assumed to have a general knowledge of display terminals. For further information on the 8775, see An Introduction to the IBM 8775 Display Terminal, GA33-3040.

For information about the system to which the 8775 is attached, see An Introduction to the IBM 8100 Information System, GA27-2875.

IBM 5275 DIRECT NUMERICAL CONTROL STATION INTRODUCTION AND COMPONENT DESCRIPTION

Provides a description of the 5275 and its function in a numerical control environment. It is intended for customer executives, installation managers, application programmers, and those involved with the physical installation and maintenance of the terminal.

This publication provides: a comparison of conventional numerical control systems to the improved system using the 5275; a brief functional description of the terminal and its major components; human factor considerations; a detailed description of the functional capabilities; highlights of the programming support; and information concerning installation planning, reliability, availability, and performance considerations.

Only a general knowledge of data processing, numerical control systems, and the steps involved in making a part (part programming) is required to use this manual.

Manual, 100 pages

IBM 5275 MACHINE TOOL CONTROL UNIT (MCU) ACCESSORY RPO D08286: GENERAL INFORMATION MANUAL

This publication is intended to be instructional and will introduce the reader to the Machine Tool Control Accessory Unit (D08286) and how it relates to the IBM 5275 and the Machine Tool Control Unit. This publication was written for service personnel and individuals concerned with machine tool control. It is assumed that the reader of this publication is familiar with the IBM 5275 and how it interfaces with the Machine Tool Control Unit. This publication covers the following topics:

- o General description of accessory and associated hardware
- o Functions of accessory D08286
- o Signal considerations
- o Interface specifications
- o MCU Identification
- o Maintenance requirements
- o Installation-physical planning information

4872 MODEM MODEL 1

This publication introduces the IBM 4872 Modem Model 1 and describes its role in a point-to-point network. Details concerning installation planning, operation, and special features are also included.

Manual, 8 1/2 x 11 inches, 22 pages, 5/70
//13//4872/

GA36-0002

4481 FILM READER/RECORDER

This publication provides basic information about the IBM 4481 Film Reader/Recorder, with the objective of helping readers to achieve a general understanding of the machine's operation, its interface with the IBM System/360 and System/370 through the IBM 1827 Data Control Unit, and its functional characteristics. Programming considerations, timing information, operator controls, and installation planning are discussed in detail.

Manual, 8 1/2 x 11 inches, 36 pages, 4/72
//14//4481/

GA36-0003

4481 FILM READER/RECORDER PROGRAMMER'S GUIDE

This publication provides information that will enable the user to write programs for the IBM 4481 Film Reader/Recorder. Programming considerations are discussed prior to acquainting the user with the software support designed for his use. The user-oriented support programs comprise a set of macro-instructions which control data flow between the System/360 and System/370 CPU's and the Film Reader/Recorder, and a selection of FORTRAN callable subroutines and image handling programs which perform transmission of data to and from the Film Reader/Recorder.

Systems Reference Library Programmer's Guide, 38 pages

SYSTEM/370 VSPC LIBRARY PRINT PROGRAM REPORTS ALL VSPC USERS THEIR FILES AND PROCFILES, IFF 5785-EAA, NOTICE
 This Availability Notice for The International Field Program VSPC Library Print Program, explains the System, Installation and other Requirements of this Program.
 The VSPC Library Print Program provides the VSPC chief administrator with an easy aid to list all enrolled users and their profiles, and to list all file profiles currently in the VSPC library.
 Plyer, 8 1/2 x 11 inches, 6 pages, 07/77
 ////5785-EAA/WT-CNLY

SB11-5012
IBM SYSTEM/370 VIRTUAL STORAGE PERSONAL COMPUTING LIBRARY PRINT (VSPCPR), DESCRIPTION/OPERATIONS, FRCG PRCD 5785-EAA
 The purpose of this manual is to provide the user with all the necessary information to understand, install, and use the VSPC Library Print Program (VSPCPR). It describes the environment in which the program runs, gives the JCL required to install, compile and execute it, and explains the headings and messages on the output reports. Finally a word of warning is given regarding who should be allowed to use VSPCPR.
 Manual, 8 1/2 x 11 inches, 16 pgs, 6/77

SYSTEM/370: IBM 3800 PLOTTING PROGRAM, IFF 5785-AAA, NOTICE
 This Availability Notice for the IBM 3800 Plotting Program explains the system, installation and other requirements.
 This International Field Program permits the creation of precise graphs on the 3800 printer via simple commands similar to those used for drawings on plotters or graphic devices.
 Plyer, 8 1/2 x 11 inches, 4 pages, 09/77
 ////5785-AAA/WT-CNLY

SB11-5014
3800 PLOTTING, IFF 5798-AAA DESCRIPTION/OPERATIONS
 This program description and operations manual describes the general characteristics of the International Field Program, number 5785-AAA. This program makes it possible to process and print drawings on an IBM 3800 Printing Subsystem in a more precise way than on a printer that uses points or asterisks.
 This manual also provides the user with the necessary information allowing him to modify the IFF, in order to adapt it either to specific installation conditions or to special graphic usage. To implement these modifications, however, the user should have a good knowledge of the IBM 3800 Printing Subsystem and the IEBIMAGE Utility Program, see the Reference Manual for the IBM 3800 Printing Subsystem, GA26-1635.
 Manual, 8 1/2 x 11 inches, 50 pgs, 09/77

GB11-5020
IBM SYSTEM/370 IMS/VS HIGH-SPEED SEQUENTIAL RETRIEVAL, IFF 5787-LAA FOR IMS/VS DATA BASES, NOTICE
 This IFF Availability Notice for the high-speed sequential

retrieval of IMS Data Bases explains the system, programming and installation of this program.

This IFP was designed as a high performance option to improve throughput for sequential processing of large IMS/VS Data Bases.

This program was developed by, and is running at the Swiss Bank Corporation Basel.

Flyer, 8 1/2 x 11 inches, 4 pgs, 10/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SB11-5021

IBM SYSTEM/370 HIGH-SPEED SEQUENTIAL RETRIEVAL OF IMS DATA BASES DESCRIPTION AND OPERATIONS, INTERNATIONAL FIELD PROGRAM 5787-LAA

The International Field Program High Speed Sequential Retrieval (HSSR) was designed as high performance option to improve throughput for sequential retrieval of large physical IMS/VS Data Bases.

The Program Description and Operations Manual of HSSR contains:

- An Introduction
- A Functional Description of HSSR
- A list of supported functions and restrictions
- A description of how to use HSSR: how to code an application program, how to code a PSB and how to code JCL for the execution of an application program
- A chapter about performance figures
- A chapter about installation, maintenance and problem determination
- Messages and codes.

It is necessary to have a knowledge of IMS/VS in order to understand this manual.

Manual, 8 1/2 x 11 inches, 94 pgs, 11/77
/////5787-LAA/WT-ONLY

LB11-5022

IBM SYSTEM/370 HIGH-SPEED SEQUENTIAL RETRIEVAL OF IMS DATA BASES LOGIC, INTERNATIONAL FIELD PROGRAM 5787-LAA

The International Field Program High-Speed Sequential Retrieval (HSSR) was designed as a high performance option to improve throughput for sequential retrieval of large physical IMS/VS Data Bases.

The Program Logic Manual of HSSR describes the functions and logic flow of HSSR. You should have IMS/VS knowledge and you should have read the HSSR Program Description and Operations Manual SB11-5021 in order to understand this manual.

GB11-5025

SYSTEM/370 OS/VS INTERACTIVE PL/I FOR VSPC PL/I PROCESSOR FOR VS PERSONAL COMPUTING (VSPC), IFP 5785-EAB, NOTICE

This Availability Notice for the International Field Program Interactive PL/I Virtual Storage Personal Computing (VSPC), for the International Field Program, explains the System, Installation and other requirements of this Program.

VSPC PL/I is a single-pass batch compiler which operates under OS/VS1 and OS/VS2 (MVS) VSPC. It provides a subset of the OS PL/I Optimizing Compiler Release 3.0 language level and is compatible at the source statement level with the OS PL/I Optimizing Compiler. VSPC PL/I provides a powerful, easy-to-use, programming language. Its facilities are appropriate to the VSPC interactive environment.

VSPC PL/I is known to VSPC as a Foreground Processor with the name PLI. Thus it is accessible to any users of VSPC.

A primary objective of VSPC PL/I is to provide a straightforward language implementation which is easily invoked and understood.

GB11-5070

IBM SYSTEM/370 DOS/VS CICS-IMS ONLINE INTERFACE, INTERACTIVE AND QUEUED EXTENDED 3270 SCREEN SUPPORT, INTERNATIONAL FIELD PROGRAM 5785-DAW, NOTICE

The CICS-IMS Online Interface (CIMONI) Availability Notice explains the System Features, Installation and other requirements of this International Field Program, CIMONI. It also gives reference material compatibility.

CIMONI is used to create a link between an IMS/VS DB/DC System and a CICS/DOS/VS System. Each CICS/DOS/VS user benefits from facilities offered by IRSS and has the possibility to communicate with IMS/VS in conversational mode, as well as in batch mode. It is then possible to implement a computer hierarchy, based on the distribution of data and functions.

Flyer, 8 1/2 x 11 inches, 6 pages, 2/78
/////5785-DAW/WT-ONLY

SB11-5071

SYSTEM/370 CICS-IMS ONLINE INTERFACE PROGRAM DESCRIPTION AND OPERATIONS, INTERNATIONAL FIELD PROGRAM 5785-DAW

The IBM System/370 CICS-IMS Online Interface Program Description and Operations Manual is designed to be used in conjunction with existing CICS/DOS/VS documentation.

It describes the functions, the installation and the operating procedures of the CICS-IMS Online Interface.

The international Field program contains the information to run a sample problem using the CIMONI features. The reader of this publication should have a basic knowledge of

CICS/DOS/VS and be familiar with the CICS/DOS/VS and IMS/VS terminology.

The first part describes the basic structure and operating system requirements of CIMONI and gives functional specifications.

The next part indicates how to write application programs and describes installation procedures with instructions on how to use CIMONI.

Instructions on installing and executing the CIMONI sample programs and a list of usable messages andabend codes are given in the last chapters.

IBM SYSTEM/370 CICS-IMS ONLINE INTERFACE SYSTEMS GUIDE, INTERNATIONAL FIELD PROGRAM 5785-EAW

The IBM System/370 CICS-IMS Online Interface Systems Guide provides a description of the internal logic of each CIMONI International Field Program.

It is intended for system programmers in charge of the maintenance of CIMONI systems. To understand this manual, the reader should have a good knowledge of CICS/DOS/VS, be familiar with the usual BTAM line procedures, and have a basic knowledge of IMS/VS.

The manual describes the functional structure of CIMONI and the relationship between CICS/DOS/VS, IMS/VS the user's application programs and the CIMONI system programs.

The second part of the manual describes how the CIMONI system programs are written and the assembling and cataloging of single CIMONI programs.

Part 3 describes the functions and contents of the tables exclusively used by the CIMONI programs, as well as the contents of the CICS/VS areas accessed by the CIMONI task.

Part 4 describes how the CIMONI system can be modified, if necessary.

IBM CONVERSION AID S/3 TO DOS/VS, IFP 5785-KAC, NOTICE

This conversion aid simplifies conversion from an IBM System/3 to an IBM System/370 DCS/VS. It converts complete S/3 RFG Patch Job streams, including source statements, job control, file definitions, data, and utilities. The advantage of this conversion aid lies in the completeness of the conversion. It reduces the conversion effort drastically and lowers the total migration costs.

CONVERSION AID SYSTEM/3 TO SYSTEM/370 IFP 5785-KAC PROGRAM DESCRIPTION AND OPERATIONS MANUAL

This publication provides the information required by a user who wants to migrate from a System/3 to a System/370 under DCS/VS. It contains the information needed to convert programs and files and to prepare the corresponding control cards. The assistance concerning file distribution is more meaningful when the user is familiar with the physical location of his files.

APL COMPLEMENTARY FUNCTIONS, IFP 5785-DBX, -DEY DESCRIPTION/OPERATIONS

This manual describes the set of APL Complementary Functions available as an International Field Program for VS APL running under VM/370-CMS, VSPC, or ISO and for APLSV. It is intended for APL users who want to use Complementary Functions in their own problem solving or application programming. Therefore, elementary knowledge of APL is a prerequisite for using the manual.

In this introduction, the concept of API Complementary Functions as language extension is explained and related to the structured programming method of other programming languages. Syntax, a description of arguments and result, and an example of its use are given for each Complementary Function.

Manual, 8 1/2 x 11 inches, 96 pages, 12/78

3850 MASS STORAGE SYSTEM TRACE INTERPRETATION PACKAGE , IFF
5785-DBW, NOTICE

The IBM 3850 Mass Storage System Trace Interpretation Package (MSTIP) is a set of programs for processing Mass Storage System Trace data to produce reports on Mass Storage System activity for status and performance analysis.

The raw Mass Storage System Trace data is the source of information for the evaluation of subsystem performance. A reformatted data set, created from the raw Mass Storage System Trace data, can be used as input to high level language programs. The package contains programs written in Assembler language and PL/I to create various reports and statistical information about Mass Storage System activity. These reports assist the system programmer in determining the reasons for subsystem problems. The reformatted data set can serve the user as a base for writing additional Mass Storage System Trace report programs of his own.

Flyer, 8 1/2 x 11 inches, 4 pages, 2/79

5811-5259

3850 MASS STORAGE SYSTEM TRACE INTERPRETATION PACKAGE,
IFF 5785-DBW, DESCRIPTION/OPERATIONS

Runs under any OS/VS Operating System supporting IBM 3850 (Mass Storage System). Because part of the program is written in PL/I, installation of the IBM PL/I Optimizing Compiler is required.

This publication contains "how to install," "how to use," and reference information concerning the Mass Storage System Trace Interpretation Package. For information about the internals of the package see the Systems Guide, LB11-5260. Basic knowledge of the Mass Storage System functions and the IDCAMS TRACE-command is required.

SIEMENS - IBM ASSEMBLER CONVERSION AID, IFF 5785-DCA,
NOTICE

This program assists in the conversion of Assembler programs written for the BS 1000 of Siemens into IBM Assembler language, for assembly and execution on an IBM/370 or 4300 Processor.

It is designed so that conversions from Siemens BS 1000 to IBM may be accomplished with reduced effort and in reduced time.

The user must still verify the proper execution of converted programs on any configuration he plans to use.

SIEMENS-IBM ASSEMBLER CONVERSION AID, IFF 5785-DCA,
DESCRIPTION/OPERATIONS

With the Siemens-IBM Assembler Conversion Aid, one is able to convert Siemens BS 1000 assembler programs in such a way that they can be assembled and executed on an IBM System/370 running under the control of DOS/VS or on an IBM 4300 processor under control of DOS/USE.

The main part of this manual provides a description of the functions of the Siemens-IBM Assembler Conversion Aid as well as detailed instructions for the installation and execution of the program. The appendixes contain a summary of all error and warning messages that can occur during a program conversion, and an overview of how the access macros for ISAM files are converted.

SYSTEM/370 IMS/VS BLM GENERALIZED SYNONYMS ANALYZER
PROGRAM OPERATIONS, 5785-GAH

IMS/VS BDM Generalized Synonyms Analyzer Program helps in evaluating keys distribution performed by a randomizing algorithm, for an IMS/VS BDM data base.

It allows the user to analyze and pick the way a particular randomizing module works without really loading the data base. The program nevertheless, handles real not simulated data. The user can thus select the most effective randomizing module and set off parameters (such as space allocation for Root Addressable Area (RAA), number of Root Anchor Points (RAP per Block), thus resulting in improved performances, more efficient space utilization and, last but not least, reducing the need for data base reorganization.

Used against existing data bases, this tool provides the Data Base Administrator with an inexpensive and easy-to-use way of evaluating the need for data base reorganization and the most effective set of parameters to use for reorganized data base.

ICL 1900 SERIES TO IBM DCS/USE FILE CONVERSION, FRCG
5785-FAR, NOTICE

This program assists in the conversion of files contained on magnetic tapes, formerly used on ICL 1900 Series Computing Systems, into IBM DCS/USE formats on either magnetic tape or on sequential DASE files.

It is designed so that users need to have little or no knowledge of the detailed data manipulation involved in the conversion.

Highlights:

- Handles 7 or 9 track single or composite files
- Produces sequential disk or tape output files in DCS/USE format
- Extra facilities may easily be added to convert nonstandard data formats
- A data selection feature allows a user to convert a subset of the input file.

Flyer, 8 1/2 x 11 inches, 4 pages, 3/79

SE11-5319

SYSTEM/370 OR AN IBM 4300 PROCESSOR ICL 1900 SERIES TO
IBM DCS/USE FILE CONVERSION AID, FRCG 5785-FAR

The ICL 1900 Series to IBM DCS/USE File Conversion Aid assists Programmers and Analysts with the task of converting serial files from the ICL 1900 Series to IEP DCS/USE.

File conversion is a complex task which needs assembler programming skills together with a detailed knowledge of

both ICL and IBM data formats.

This Conversion Aid provides the user with a comprehensive set of conversion facilities and enables a relatively inexperienced user to generate 'tailored' file conversion programs.

All sections of this manual assume a knowledge of ICL and IBM data formats, ICL 1900 Series Magnetic Tape Housekeeping Standards, the record formats available under DOS/VSE and the DOS/VSE job control statements necessary to assemble, link edit and execute a program which processes sequential disk or tape files.

This document describes the capabilities and the

programs of the DOS 3330 Data Set Conversion Aid. This FDP, written in ALC, provides the S/360/370 DOS user with a facility to copy data sets from one DASD to a 3330. Based upon parameters submitted by the user, the program will produce DOS Assembler programs which can be compiled and executed to perform the actual conversion of each data set. The 3330 Data Set Conversion Aid provides support for users converting from 2311, 14, 19 to the 3330 DASF.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

STREAM - A 3270 INFORMATION DISPLAY SYSTEM PROGRAMMING AID FOR SYSTEM/360, 370: FDP 5798-ANE, NOTICE

This document describes the purpose and highlights of STREAM - A3270 Information Display System Programming Aid for the System/360, 370. Written in BAL, this program, which is comprised of a macro and a support module, is designed to facilitate the use of the wide variety of advance facilities available on the 3270 IDS. This DSP will assist the programmer in the detailed structuring and analysis of data and control characters. The FDP consists of two basic parts. The first is a support module that is assembled once and catalogued by the user. The second is the programmer interface. When the user wishes to activate the STREAM system, he will issue a series of STREAM macros (BAL) of high-level language STREAM calls.

This Availability Notice contains complete ordering instruction for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

SYSTEM/360/370 CPU CCNSCLE AS CICS MASTER TERMINAL: FDP 5798-ANK DESCRIPTION/OPERATIONS

This document describes the capabilities of the FDP and the programs of the CPU Console as System/360, 370 CICS Master Terminal. Written in Bal for the System/360, 370, this system running under CICS DOS Entry, DCS Standard and OS Standard, Version 2, allows the user to utilize the CPU console as a master terminal. CICS transactions can be requested from the console, and CICS error messages can be routed to the console. The program requires no modification to CICS and allows normal operating system use of the console.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

BURROUGHS 2500 SERIES COBOL TO IBM ANS COBOL CONVERSION AID AVAILABILITY NOTICE - FDP NUMBER 5798-APB

This document describes the purpose and highlights of the FDP. This FDP written in ALC is a series of programs, subroutines, and procedures designed to address many of the problems encountered when converting from Burroughs 2500 Series COBOL to IBM ANS COBOL. The translation system was designed to operate under either DOS or CE, and produce COBOL code to be compiled under OS, DOS, or S/3. A data conversion utility program is provided to convert Burroughs tape files to standard IBM files. It is designed to convert 7 track BCL or BCL, 9 track EECIC or ASCII or, via a user exit, a user-specified code. The data conversion utility offers the user great flexibility of data handling and formatting during the conversion process. The FDP will operate under OS on a S/360/370 with a 44K byte or larger region, and under DCS on a S/360/370 with a minimum of 48K bytes of storage.

This Availability Notice contains complete ordering instructions for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

OS/DITTO PROGRAM DESCRIPTION/OPERATIONS MANUAL - FDP NUMBER 5798-ARD

This document describes the capabilities of the FDP and the programs of the OS/DITTO. Written in Assembler, this program is a generalized utility program that provides most of the normal card, tape, and disk utility functions, thus eliminating the necessity of using several different OS utility programs. The functions provided are the equivalent of the functions provided by the DOS/DITTO FDP (5798-ARN).

DOS/DITTO, written in ALC, is a general purpose utility program containing thirty-seven utility functions for Unit Record, Tape and Disk Input/Output units. Functional utilities are: Tape and Disk Record Scan, Disk and Tape Record Alteration, Disk ID Volume Number Charge, Deblocking and Tape Records when printing, and User Tape Error Correction. DOS/DITTO is an enhanced version of the Type III program DITTO-360L.00.1.018. It requires a S/360, 370 with a minimum partition size of 16K and supports 3330 devices. This FDP was approved and announced in October 1972.

GB21-0999

DOS SOURCE STATEMENT LIBRARY MAINTENANCE FOR ANS COBOL ON SYSTEM/370 AVAILABILITY NOTICE - FDP NUMBER 5798-AWD

This document describes the purpose and highlights of DOS Source Statement Library Maintenance for ANS COBOL on System/370. This program is written in Assembler. DOS ANS COBOL users have been reluctant in the past to use the extended source program library facility. In order to update the library, the programmer must prepare a new set of control cards for the DOS MAINT program. He must also convert the COBOL statement numbers (the first six positions) to MAINT statement numbers (the last four positions). This program allows updating the library with the same control cards used in compiling the program. The time required to make new control cards and correct errors

can be eliminated.

The convenience of maintaining complete COBOL program libraries on disk may be realized. Programs may be compiled directly from the source statement library with changes submitted on cards. When a program has been fully tested, the change cards may be used to update the library, providing a final version for later use.

This Availability Notice contains complete ordering instructions for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

GB21-1002

DOS/VS DASE DEVICE INDEPENDENCE OPEN (DI OPEN) FDP 5798-AWH, NOTICE

This FDP is written in Assembler.

DI-OPEN is designed to dramatically reduce the time and effort which are generally required to convert to a new DASE Device in a DCS/VS or DOS/VSE environment.

This is accomplished by providing the user with a measure of DASE device independence for his current programs which does not exist in DOS, DCS/VS or DCS/VSE. Using this device independence, users can begin almost immediately upon installation to take advantage of the faster performance and increased capacity of a new device or operating environment with their existing programs. Thus, the need for a total program conversion compressed into the time frame prior to installation is eliminated.

The Enhancement Feature (9534, 9535) provides for execution of the DCS/VS DASE Device Independence Open (DI-OPEN), 5798-AWH operating under DOS/VSE.

The Availability Notice contains complete ordering instructions for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

CICS DYNAMIC MAP - FDP 5798-AXR
DESCRIPTION/OPERATIONS

This document describes the capabilities of the FDP and the programs of the CICS Dynamic Map. This FDP is written in Assembler.

Operating as a task in a variety of modes within a CICS/STANDARD partition, this program can selectively display a myriad of system tuning statistics. These include parameters describing the partition composition, fragmentation and its effects, storage utilization for task and system, dynamic task activity, and the effects of program residence on storage and system performance. Other features optionally available are time initiation, logging, core dumping, and an output writer facility.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

IMS LOW-LEVEL CODING & CONTINUITY CHECKING SUBPROGRAM:
FDP 5798-AYN NOTICE

This document describes the purpose and highlights of the Low Level Coding and Continuity Checking FDP, written in COBOL.

With the present emphasis on COPICS and Materials Requirements Planning, users who desire or require the flexible design capabilities of the Information Management System (IMS) have been faced with a problem: how to accomplish Low Coding and Continuity Checking of Bills of Materials, and still maintain the data base design flexibility of IMS?

The IMS Low Level Coding and Continuity Checking Subprogram provides an answer to this question:

- o Provides for the addition of Bills of Material to an IMS Data Base.
- o Creates and maintains low level codes.
- o Provides standard error-checking of previous packages (BOMP-CFMS).
- o Includes a transaction and error listing of product structure additions.
- o May be used as the basis for an expanded Bills of Material maintenance program.
- o Single level explosion program as part of the sample program.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

COBIMS - FDP 5798-AYK - DESCRIPTION/OPERATIONS
This document describes the capabilities of the FDP and the programs of COBIMS. This FDP is written in COBOL.

PLIMS/COBOL, macro language extension of COBOL, is a programming aid designed to reduce programming and testing time in producing IMS batch and/or TP application programs. PLIMS/COBOL statements are expanded by a precompile step into a complete COBOL Source Program ready for compilation. Those PLIMS/COBOL Statements which involve data base activity are expanded into COBOL source code which is customized to the user's data structure as defined by the IMS PSB and by Segment Definitions. COBOL Statements can be intermixed with PLIMS/COBOL statements, thus combining the ease and simplicity of PLIMS with the power of COBOL.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

CICS PERFORMANCE ANALYZER - FDP 5798-AZN
DESCRIPTION/OPERATIONS

This document describes the capabilities of the FDP and the programs of the CICS Performance Analyzer. The FDP is written in Assembler.

The program gathers statistics about user transactions run under control of CICS. The type of information gathered is CPU execution time, total transaction time, largest amount of core used, the total entries to a file control access method, and so on. The information is very useful for performance evaluation and system tuning.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

GB21-1210

ON-LINE PREPARATION OF VIDEO/370 FORMATS
FDP 5798-BAC, NOTICE

This 4 page documentation describes and highlights the purpose of the On-Line Preparation of VIDEO/370 Formats FDP. Written in RPG II, this FDP consists of three formats for VIDEO/370 and a set of Assembler language macros that expand into VIDEO/370 format definition statements. The FLF

eliminates the use of coding sheets for preparation of formats by allowing creation of formats from a picture of a proposed screen layout. The FDP provides a fill-in-the-blanks approach so that no keywords have to be coded.

Three basic screen formats are used during the definition of a new document. The first describes the document name and exit routines. The second is used for entering information about the fields. The third type is used to describe how the fields should be extracted. The input that is keyed on the 3270 is, in most cases, a single character as opposed to a keyword if a coding sheet is used.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

GIS/DDT TRANSLATION FROM IMS/DBD - FDP 5798-EBR,
DESCRIPTION/OPERATIONS

This document, written in Basic Assembler, describes the purpose and highlights of GIS/DDT from IMS/DBD.

The simple query and report functions provided by GIS can considerably reduce both programming effort and elapsed time required to answer low volume requests for IMS data base information. This further automates the procedures required for GIS access, by converting existing IMS DBDs to GIS data description tables (DDTs).

IMSDDT (an intermediate step in this program) would be

used initially as a quick method of creating error free DDTs for existing IMS data bases. The output thus generated can then be immediately inputted to the GIS monitor to create the necessary entries for GIS processing of the data base. As this method uses previously validated descriptions of the IMS data base, validity and compatibility errors that might be introduced through the keying of a separate description of the data base, may be avoided.

DOS/VS SORT FOR 1400 FILES FDP 5798-BDB, NOTICE

This document describes the

purpose and highlights of DOS/VS Sort for 1400 Files.

This Field Developed Program operates with the DOS/VS Sort programs (5746-SM1) intended to reduce sort (5743-SM1) times within most 1400 emulator installations currently using Sort 5 or 6 under 1400 emulation.

This program provides most of the functions contained in the 1400 Sort programs through an assembler macro which will generate a program interface to the DOS Sort programs. The user may continue to use his 1400/1311 sort control cards and his 1400 files.

The input and output file format is independently specified so that conversion from one format to another is also possible.

The supported file formats include CS or spanned tape, emulator format disk (2319, 3330, 3340) or sequential 370 disk and tape.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

DESCRIPTION/OPERATIONS

This document describes the capabilities of the FDP and the programs of the DOS/VS Sort for 1400 Files.

This Field Developed Program operates with the DOS/VS Sort programs (5746-SM1) intended to reduce sort (5743-SM1) times within most 1400 emulator installations currently using Sort 5 or 6 under 1400 emulation.

This program provides most of the functions contained in the 1400 Sort programs through an assembler macro which will generate a program interface to the DOS Sort programs. The user may continue to use his 1400/1311 sort control cards and his 1400 files.

The input and output file format is independently specified to that conversion from one format to another is also possible.

The supported file formats include CS or spanned tape, emulator format disk (2319, 330, 3340,) or sequential 370 disk and tape.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

Manual, 25 pages

CMS SORT FOR VM/370 FDP 5798-BDW, NOTICE

This document describes the purpose and highlights of CMS Sort for VM/370.

This FDP provides several sort programs and subroutines which run under the CMS component of VM/370. They may be invoked from a COBOL, PL/I, FORTRAN, or BAL program, or as a CMS command. Compared with the SORT component of CMS, these programs offer a compatible replacement for the CMS sort command with improved function and performance.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

DBOMP INTERFACE FOR RPG II - SYSTEM/370 DOS/VS - FDP 5798-BDZ, NOTICE

This document describes the purpose and highlights of DBOMP Interface for RPG II - System/370 DOS/VS.

The DBOMP Interface for RPG II is designed to permit retrieval and maintenance of DBOMP databases using DOS RPG II. The use of the interface programs does not require expertise in assembler language programming; the FDP programs handle the sophisticated file manipulations that are required, allowing the programmer to concentrate his RPG II expertise on his application program.

The design of the FDP, when combined with the full capabilities of RPG II, should assist users in reducing the time and effort involved with implementing new applications. DL/I (5746-XX1) and DL/I ENTRY (5746-XX7) should be considered as alternatives to this Field Developed Program.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

IMS LOG TAPE ANALYSIS - FDP 5798-CAQ, NOTICE

This document describes the purpose and highlights of IMS Log Tape Analysis.

This FDP is designed to read an IMS EB/DC System log tape and summarize the response times experienced and the number of transactions submitted by source terminals during a user specified time period. The program reads a completed log tape and collects response time data for user specified transaction codes. A report line is printed to summarize accumulated percentages of response times, spread from 1 to 23 seconds, for each user specified time increment. A summary report of the number of the user specified input transactions submitted by each physical terminal is produced at the end of the analysis. This FDP can be used to determine IMS system performance and work load in relation to the terminal user environment. Response time can be analyzed when tuning an IMS DE/DC System or relative to changes in system configuration, an application program, or system volumes. This FDP can be used in conjunction with the IMS DC Monitor FDP (5798-PCF) to analyze response time and transaction volumes during the time interval being monitored.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

VS/1 UTILIZATION MONITOR - FDP 5798-CAK, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

VS/1 Utilization Monitor is a software system monitor that provides users with the ability to measure, evaluate, and document application program characteristics while executing in a virtual (VS/1) environment. The VS/1 Utilization Monitor reports provide a broad range of information at both a summary and/or detail level with

minimal degradation, easy access, and flexibility in use.

This package consists of two programs: (1) VS/1 Utilization Monitor Trace Program which captures system and job related data and records the information to a log tape on a timed basis (normally every two seconds); (2) VS/1 Utilization Monitor Analysis/report Program processes the log tape and generates the requested reports.

VS/1 Utilization Monitor captures and reports the three basic dimensions of a computing system: CPU utilization, I/O activity, and storage usage - both real and virtual. Information on these dimensions and their sub-parts are available at various user-selected levels, from detailed lines for each observation to a summary sheet for an entire run. At the detail level, the dynamics of the virtual system graphically display the impact of the application program.

Thirteen different reports have been designed to provide insights from many different perspectives to programs operating in the virtual VS/1 system.

Charting and graphing techniques have been used to visually display the dynamics of the virtual system.

Users of the Monitor will vary, but would normally be the systems programmers and application programmers. A single individual would not normally require the use of all VS/1 Utilization Monitor reports for a single assignment. Flyer, 12 pages

CICS/M.T.C.S. 3270 SCREEN FORMAT UTILITY - FDP 5798-CBB,
NOTICE

This document describes the purpose and highlights of CICS/M.T.C.S. 3270 Screen Format Utility.

This FDP consists of programs and procedures which greatly simplify the creation of input and output maps for the 3270 under MTCs, CICS or CICS/VS. The TP control system may be running under DOS, DOS/VS, OS/MFT, OS/MVT, OS/VS1 or OS/VS2 on a System/370. The main program allows the user to specify his screen layout directly on an 80-column form and have the necessary control blocks generated directly from the screen layout. This makes coding new screens and changing existing screens extremely simple while reducing the chance for error. The existing Basic Mapping Support Facilities of CICS are used to provide the execution time map retrieval, interpretation services.

Optional features allow the user to explicitly name fields, to repeat fields (VS), insert EIT words in a DSECT (VS) and to preview an output screen on a 3270 prior to coding the application program.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it. Availability Notice, 6 pages

GB21-1492

CICS/ENTRY SYSTEM STATISTICS - FDP 5798-CB2, NOTICE

This document describes the purpose and highlights of CICS/Entry System Statistics.

This FDP operates as a standard task under CICS DOS Entry 5736X16. It will operate under either DCS or DGS/VS, with CICS Entry running either virtual or real. The function of this CICS task is to display on a 3270 Model 2 terminal all the critical statistics, sizes and counters in a CICS Entry system. It can be used as a task to validate the initial generation of a CICS system. It can be used to monitor the effect of changes to a generated CICS system. It eliminates difficult searching through memory dumps or lengthy calculations to determine the size of the various components of CICS. Once a system is successfully installed, this task can be used to dynamically monitor system activity and parameters. For example, it is possible from a terminal to determine the current settings of things such as max tasks or the storage cushion. Any significant parameters that are not at normal value such as "dump count" not are displayed in high intensity mode on the 3270. An existing FDP, 5798-AXR CICS Dynamic Map, does not support DGS/CICS Entry. This proposed FDP would compliment the existing CICS FDP/IUP programs.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This document describes the capabilities of the FDP and the programs of the CICS/Entry System Statistics System Statistics.

This FDP operates as a standard task under CICS DOS Entry 5736XX6. It will operate under either DOS or DOS/VS, with CICS Entry running either virtual or real. The function of this CICS task is to display on a 3270 Model 2 terminal all the critical statistics, sizes, and counters in a CICS entry system. It can be used as a task to validate the initial generation of a CICS system. It can be used to monitor the effect of changes to a generated CICS system. It eliminates difficult searching through memory dumps or lengthy calculations to determine the size of the various components of CICS. Once a system is successfully installed, this task can be used to dynamically monitor system activity and parameters. For example, it is possible from a terminal to determine the current settings of things such as max tasks or the storage cushion. Any significant parameters that are not at normal value such as "dump count" not 0 are displayed in high intensity mode on the 3270. An existing FDP, 5798-AMR CICS Dynamic Map, does not support DOS/CICS Entry. This proposed FDP would compliment the existing CICS FDP/IUP programs.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

CICS/VOLUME TEST FACILITY - FDP 5798-CDJ, NOTICE

This document describes the purpose and highlights of CICS/Volume Test Facility.

CICS Volume Test Facility provides the user with the capability to stress his total teleprocessing system in a production-like environment. The need for volume testing when undertaking changes in terminals, in network configuration, in central hardware systems, in control programs, or in applications is answered by this FDP.

When the Volume Test Facility is installed, the user will be able to use his own terminals and communications network and/or simulated facilities without the need for manning the physical terminals. He will be able to collect test data during normal production. He will use his own application and control programs during the test. He will be able to control the transaction rate, receive feedback on test progress during the test, and change testing parameters dynamically. Statistics in printed form are provided at the conclusion of the test. Each test can be controlled by a single analyst and can be repeated.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

CICS NETWORK ACTIVITY SIMULATOR - FDP 5798-CCH, NOTICE

This document describes the purpose and highlights of CICS Network Activity Simulator.

This Field Developed Program provides a means of using sequential input support of CICS while introducing delays between messages that would simulate the input messages through a terminal or line. Multiple streams could simulate a multi-line configuration allowing for a controlled rate of messages being processed. Thus by bending the system's resources, the user is able to measure impact on response time, paging, utilization, etc., by comparative analysis.

This Availability Notice contains complete ordering information for the Program and all its related documen-

tation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

POWER/VS COST & PERFORMANCE ANALYZER, FDP 5798-CDG NOTICE

This document describes the purpose and highlights of POWER/VS Cost and Performance Analyzer.

POWER/VS provides accounting records which contain important information concerning system utilization. The FDP reads these records and generates summary reports which should prove to be of significant benefit to data processing management. Reports include Execution (CPU), I/O Device activity, RJE, and a cost analysis report based on user-specified cost figures. The FDP provides the facility to accumulate daily information for monthly reports. A user modification and/or addition may be developed to use these summary records for monthly billing.

The POWER/VS Cost and Performance Analyzer will provide valuable operating information to Data Processing and Operation Managers. System tuning will be possible by using the Performance Report to change placements of high activity files and indicate where excessive time and resources are used. From the Monthly Cost Analysis (which may be run at any desired frequency), a more enlightened view of computer costs may be obtained. Billing is facilitated because the data needed is available in a tape or disk record and need only be processed against the users customer data as bills are printed.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

IMS ON-LINE PROGRAM AND JOB DEVELOPMENT SYSTEM FDP 5798-CDR, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

This document describes the capabilities of the FDP and the programs of the IMS On-line Program and Job Development System.

The IMS Online Program and Job Development System is an IMS DB/DC application system which provides the ability to develop, edit, modify, test, and execute OS/VS jobs from an IBM 3270 Display Station supported by the IMS Data Base and Data Communications system. As a productivity aid, the IMS Online Program and Job Development System assists authorized users in developing OS/VS jobs through the text input and editing facilities of the system. Programs developed on this system may be executed from the remote 3270 displays and the resulting output may be displayed at any 3270 Display terminal or associated IMS hard copy device.

Convenient options screens are provided where users may specify optional parameters to create, edit, and display job input or output data.

In addition, utility programs are provided so that the user may include any existing data to the IMS user data base. This function allows any potential user to load his data, at any point in development, and continue the development through the facilities provided by this system. Additional utility programs allow the user to remove his input sets and associated output data from the data base when it is desired to continue development work offline. When the IMS DB/DC system is not in use, this facility allows users to continue their work offline. During online sessions, the user may replace the now changed input set and resume development and testing online.

DOS/VS MICR READER/SORTER UTILITY
FDP 5798-CEB, NOTICE

This document, written in APL, describes the purpose and highlights of DOS/VS MICR Reader/Sorter Utility.

This program is designed to allow a user to generate a tailored MICR capture program without knowledge of reader/sorter hardware, DOS assembler language, or MICR programming conventions. Once generated, this program performs all basic capture functions including:

1. Read and examine the validity of all input data field
2. Select out desired user information for further processing.
3. Self-check account numbers according to user specifications.
4. Sort documents to user specifications by digit, cascade or R/T number.
5. Accumulate totals and item counts for each pocket used.
6. Accumulate hardware and software error statistics for each batch processed.
7. Print capture lists and optionally outgoing bundle lists for "killed" pockets.
8. Batch balance all input data.
9. Accept input data from MICR documents, cards, or both, within the same run.
10. Allow multi-tank processing.
11. Create a disk record for each document processed.
12. Full restart at batch level in case of hardware or software failure.

IMS TRAPDLI SYSTEM - PDP 5798-CEJ, DESCRIPTION/OPERATIONS
This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

This document describes the capabilities of the PDP and the programs of the IMS TRAPDLI System.

The IMS TRAPDLI System consists of load module to trap DL/I calls, WAIT information, and various other pertinent IMS batch related activities for either IMS/360 Versions 2.3 and 2.4 or IMS/VS Version 1.0 and 1.0.1 to output sequential file; and a set of report programs to process this sequential file to produce several reports which can be used to analyze and tune an IMS Batch (DB) system. The goal of TRAPDLI is to collect information similar to what IMS DC Monitor (PDP 5798-BOP) collects for an IMS DB/DC system and produce reports similar to IMSASAP (PDP 5798-CDT) reports. Manual, 94 pages

CICS/M.T.C.S. ON-LINE PANEL ENTRY LIBRARY SYSTEM - PDP 5798-CET, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This PDP is written in Assembler Language.

This PDP provides a system for creating, storing, updating and retrieving screen formats for the 3270 display system in an online, interactive mode. It operates as an application program under both CICS (DOS/VS and OS/VS) and MTCs.

Primary input to the PDP is from the 3277 via an interactive session. There are batch functions including several reports and the ability to input BMS macro statements for incorporation of existing into PANELS. Batch output also includes BMS macro statements corresponding to the screens in the library.

GENERALIZED TRACE FACILITY - DIRECT ACCESS CONTENTION ANALYZER, PDP 5798-CEZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This PDP will process a dataset produced by the

Generalized Trace Facility service aid of either VS1, V62 (SVS or MVS) extracting the Input/Output interrupt records and Start I/O records for a set of selected Direct Access Device addresses. If the system was generated with alternate path support, the program will accommodate the alternate addresses. From these records, the control unit busy time and device busy time are calculated. The total time for input/output operations and the number encountered in the trace output are also developed.

These statistics give visibility to the amount of control unit or device contention, and the number and duration of Input/Output operations in a large Direct Access installation.

MINIMUM TELEPROCESSING DATA ENTRY SUBROUTINES PDP 5798-CFG, NOTICE

This document, written in Assembler, describes the purpose and highlights of Minimum Teleprocessing Data Entry Subroutines. Developed for use with the M.T.C.S./370 FDP (5798-ALN), the Minimum Teleprocessing Data Entry Subroutines provide facilities which enhance M.T.C.S./370 performance and flexibility in data entry applications. The subroutines, invoked by user-written transaction programs, provide DAM file support, paging for re-reading and changing previously entered data, automatic signalling when file capacity has exceeded a pre-determined level, and online closing and re-opening of files for space enlargement or substitution of new files. Additional functions provided include a recovery transaction for data integrity, a data extraction subroutine, a self-relocating sort-exit subroutine for interfacing to DOS/VS Sort/Merge (5746-SM1), plus a sample data entry as well as serving as a model for more complex data entry transactions.

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

MTCS/VS, FDP 5798-CFK, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The minimum Tele-Communication System/Virtual Storage (MTCS/VS), written in Assembler, is a generalized data communication system designed for the smaller DOS/VS user. In addition to data communication facilities, it provides interface and control functions so that installation files and databases can be accessed to implement a small scale data base/data communication (DB/DC) system.

MTCS/VS is designed to be installed quickly with a minimum expenditure for man and machine resources. The advantages of a DB/DC system can be realized sooner because long lead times are not required for specialized training of application and system programmer, and the low main storage requirements permit installation with minimum expenditure for additional equipment.

MTCS/VS is the third in a series of "MTCS" Field Developed Programs (the first was Minimum Teleprocessing Communication System (MTCS), 5798-BAAY, the second was Minimum Tele-Communication System for System/370 (MTCS/370), 5798-ALN).

MTCS/VS provides the following improvements to, and features not available in, MTCS/370:

- o Access to VSAM Datasets
- o Access to DL/I Entry Databases
- o Enhanced CICS/DOS/VS Compatibility
- o Technological Improvements achieved through:
 - Utilization of DOS/VS capabilities which are not available in the non-VS Disk Operating System
 - Addition of New Features
 - Improved Installability, Usability and Operational Flexibility.

DOS/VS ENTRY TIME SHARING SYSTEM - FDP 5798-CFL, SYSTEMS GUIDE

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

This FDP, the DOS/VS Entry Time Sharing System provides customers an entry level interactive facility whereby

terminal users may enter and edit programs or data, compile source programs and execute the resulting object programs. It will run on a System/370 with a minimum of 128K bytes of real storage and supports local 3270, non-switched remote 3270, 3275, 2740, and 3767 in 2740 mode, as well as 3284, 3286, 3288 attached to supported 3270.

Normal "batch" compilers should function without modification in the Time Sharing System, provided they conform to standard DOS/VS coding conventions. Programs in Assembler, VS/BASIC DOS/VS COBCL, DOS FORTRAN IV, PL/I Optimizer and RPG II have been entered, compiled and executed from a terminal under the Time Sharing System.

The Time Sharing System executes in a single foreground partition.

Batch processing, spooling, and remote job entry can execute concurrently outside the Time Sharing partition and programs entered via terminal can be submitted for batch processing through a Submit-to-Batch facility.

Security features include user identification code, password, controlled access to public, private and common data via user profile, and user storage protection.

The DOS/VS Entry Time Sharing System uses the terminal control facility for the Minimum Tele-Communication System (M.T.C.S./370) FDP, 5798-ALN.

Users who do not have M.T.C.S./370 installed must also order the Terminal Control for DOS/VS Entry Time Sharing System, 5798-CGC, at an additional \$85/mcnth. (paid up license after 12 months).

CICS SOURCE PROGRAM MAINTENANCE ON-LINE II - FDP 5798-CFT, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This new Field Developed Program is an improved version of the Source Program Maintenance On-Line FDP (5798-BDT). It is being offered with extended support and continuing monthly payments. The product extends the power of a CICS online system to programmers and systems programmers via a 3270 display station. Specifically this program provides CICS users with a facility for storing source programs on disk, retrieving them, conversational modification via terminal, and the creation of job streams from the terminal for compilation and testing of the programs.

Enhancements to the original version include POWER/VS job submission, tab characters to ease statement entry, support of multiple data sets for capacity and integrity, statement location by relative reference, a facility to move or copy parts or all of a program, multiple line (or text) entries per transaction, and an improved arrangement of display and compressed directories.

DOS DASDI JCL CONVERSION AID - FDP 5798-CBA, NOTICE

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, the DOE DASDI JCL Conversion Aid, written in Assembler Language, is a program developed to significantly reduce the manual effort required to convert DCS Job Control Language decks when changing types of disk drives. Although changes for permanent assignments and standard labels can be manually accomplished without much difficulty, ASSIGN, LABEL, and EXTENT cards imbedded in JCL decks can require many hours of manual labor. This FDP allows the user to define conversion requirements with one master control card and a series of cards which describe the relationship between the old and new devices. There may be as few as two cards per disk drive. The DOS DASDI JCL Conversion Aid can provide substantial savings in personnel costs when large program libraries must be converted to reflect installation of new disk drives.

3741 SORT PROGRAM - FDP 5798-CBB, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is a sort program for the 3741 Models 3 and 4. There are two programs, one is a 4K program which sorts up to 1024 records, the second is an 8K program which sorts up to 1898 records using two diskettes. The sort field can start in any record position 1 through 128 with a field length of 1 to 15 bytes. The program does not require diskette work space. Sort control data is specified by a user "sort control label" on track zero record 26 of Drive 1 or 2. The user can specify:

- 1) Input data set name (Drives 1 or 2)
- 2) Sort Field Description
- 3) Output data set name (Drive 1 or 2)
- 4) Name of next program (Program chaining)
- 5) Request printout of records sorted

Since this program is to be installed on a 3741 Programmable Work Station, it is licensed to operate on a designated 3741 rather than a designated CPU. Therefore, on the Supplement to Amended License Agreement for IBM Program Products (For Specially Developed Programs), in the column entitled Designated CPU Type/Serial Number, the 3741 Programmable Work Station on which the 3741 Sort Program is or will be installed should be designated by type/serial number. An asterisk (*) should be placed beside the serial number and the following statement inserted on the Supplement: "*For the 3741 Sort Program License, the term CPU in the License Agreement and Amendment and Supplement thereto refers to the 3741 Programmable Work Station."

IMS MONITOR SUMMARY AND SYSTEM ANALYSIS PROGRAM II

(IMSASAP II), FDP 5798-CHJ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

IMSASAP II (FDP 5798-CHJ), a Productivity Aid written in ALC, extends the significant features of IMSASAP (FDP 5798-CDT) to IMS/VS 1.1 and provides key reporting and usability enhancements for both IMS/VS 1.0.1 and IMS 1.1 users.

IMSASAP II is comprised of a set of report processors which execute under the System for Generalized Performance Analysis Reporting (FDP 5798-CPR). It processes IMS/VS monitor output to provide management, analyst, and

programmer level reports which assist in the analysis of an IMS/VS system environment.

Significant features include:

- New Reports
 - System IWAIT Reports
 - Transactions by Time Period
 - Detail PSB Activity Reports
- Enhanced Reports
 - Summary Reports
 - Region Histogram
 - Program Trace
- Hierarchical reporting structure, from system
- summarizes to program trace reports.
- Elapsed time per event distributions provided on appropriate reports.
- Reporting of schedules in progress at trace start and trace end, including wait-for-input and EMP programs.
- Report and content selection by report type, time period, region, and PSBNAME or DDNAME groups.
- Selection of reports and reporting options through use of a command language.

TSO/3270 DISPLAY COPY SUPPORT, FDP 5798-CHL NOTICE

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler & TCAM Macros, allows a TSO 3277 terminal user to print a copy of his current terminal display on a 328X printer (3284, 3286, or 3288) of his choice. He may also print a selected number of preceding pages, in effect creating a hardcopy log of all or part of his session.

The program runs in a VS2 environment as part of a TCAM MCP (Message Control Program). It is compatible with a complementary offering, FDP 5798-AYP, "TSO Command Processor," which allows a TSO user to print data sets on the same 328X printers. It also may reside in the same system with PP 5740-XT2, "TSO 3270 Structured Programming Facility," though SPF has its own facilities for printing display images.

APL DATA LANGUAGE - FDP 5798-CBR, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program is written in APL. This FDP expands the capability of APL by providing the APL application programmer with a powerful data management facility. It complements APL's extensive data manipulation facilities with a dictionary driven, data independent, data storage and retrieval system. The user can retrieve data across a network of inter-related files.

APL data language can help eliminate the usually large amounts of user written data manipulation and housekeeping code.

Data handling can be standardized, improving code readability and documentation. It improves programmer productivity through more problem solving; less data handling activities. Applications previously abandoned or

delayed due to complex data requirements may now be feasible.

The data base management services of APL Data Language assist the user in:

- handling complex data access and maintenance problems
- description and definition of data bases
- creation of data bases
- auditing of data base activity.

GENERALIZED TRACE FACILITY - DATA ANALYSIS PROGRAM - FDP 5798-CHR, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP analyzes GTF records to produce various summary and detail report listings on traced events. Nineteen reports and a condensed detail listing are available. The primary use of the program is to assist in tuning the system for performance, balancing channel and device loads, pinpointing developing hardware problems thru I/O CSW analysis, and detection of jobs misusing the system. The reports total by type of event and by job. Some of the data reported include, I/O usage, SVC usage, SIOs, Page faults, and I/O Interrupt Analysis.

DOS/VIS DASD SPACE UTILIZATION ANALYSIS - FDP 5798-CHW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program is written in Assembler language. The DOS/VIS Disk Space Utilization Report FDP produces three reports to assist the installation manager in analyzing disk space utilization.

A physical sequence report displays for each disk volume, the data sets, their record size, block size, lower extent, upper extent, and amount of space allocated to the data set. An Alphabetic Sequence report displays the same information in data set alphabetic sequence. In addition, there is a graphical representation report which graphically shows the physical location of each data set on the disk volume.

MF/1 POST ANALYZER - FDP 5798-CHX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The MF/1 Post Analyzer FDP is intended to assist installation management in balancing system resources, tracking the effects of changes that affect CPU usage, channel/device use and paging activity, transaction rates, or response times.

The FDP provides summary reports using each of the five record types; CPU Activity, Paging Activity, Workload Activity, and Device Activity. It also produces histograms of the following activities: percent of real storage frames allocated, swap activity, percent page space slots allocated, SIOs per second, CPU utilization, channel utilization. The program is parameter driven so that the user can select only those reports that are of interest to him.

DOS/VIS STORAGE & CPU UTILIZATION, FDP 5798-CHY, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DOS/VIS Storage and CPU Utilization Display Field Developed Program, written in Assembler, will collect and graphically display, in real time or batch, information from the DOS/VIS Supervisor which affects overall system performance. The program will display CPU cycles utilization by partition, real storage utilization by partition, the paging rates and other pertinent information. With the easy to interpret displays and reports, the DOS/VIS user can better understand the internal operation of his DOS/VIS operating environment. He can identify job mixes and make better informed decisions regarding the use of his computer resources.

370X TRACE EDITOR - FDP 5798-CHZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler language, was developed to increase the usefulness of the 3704/3705 Dynamic Trace Output for users who are operating in emulation mode with either EP2.2 or EP2.3. The 370X Trace Editor allows the user to control the amount and type of output, in addition to reformatting the data into a more readable display. Output selections include:

- (a) Up to four specific operation commands (the default is to all Operation Commands)
- (b) A specific range of block numbers
- (c) Up to two types of final status and/or sense. (The default is to any status or sense.) The output is in a symbolic form, representing a CPU-to-370X-to-terminal-line connection.

VIDEO/370 REVERSE ABSTRACT OFFLINE DATA ENTRY - FDP DOS/VS (5798-CJG) AND OS/VS (5798-CJP), NOTICE

This Availability Notice contains complete ordering information for the Field Developed Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, the VIDEO Reverse Extract/Offline Data Entry Program provides the means for off line data entry onto VIDEO/370 data files for online correction and editing. The program accepts input data records from tape, disk, or card files in fixed or variable length record formats or optionally from user-written input exit. The fields within each data record are defined, edited, and reformatted according to the rules set up with the Format Definition Program of VIDEO/370.

- Applications for this Field Developed Program include:
- o Reverse Extraction - allows the re-entry of VIDEO batches which have been extracted
 - o Batch Data Entry - allows VIDEO editing and modification for data collected from other sources
 - o Data Field Update/ADD - allows users files to be placed onto video files for online addition or updating
 - o Improved File Flexibility - eases reorganization of VIDEO files and allows retention time for disk files to be decreased.

CICS/VS PERFORMANCE ANALYZER II - FDP 5798-CFP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This new Field Developed Program is an improved version of the CICS Performance Analyzer FDP (5798-AZN). It is being offered with extended support and continuing license payments.

The program gathers statistics about user transactions and runs under the control of CICS/VS to assist in system performance analysis and resource utilization. Information gathered includes CPU execution time, total transaction time, largest amount of storage used and the number of entries to file control access methods. Enhancements to the original version include terminal message-size monitoring, DL/I activity monitoring, summary information by terminal operator ID, increased number of user counters and accumulators, and usability enhancements to the problem determination analysis model. Enhanced data reduction and display capabilities include graphic display of CPU utilization, task rates, and EXCP rates.

CICS/VS DUMP READING PROGRAM, OS/VS, 5798-CJX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to create and display direct-access data sets containing an image of the partition or region at the time of an CICS/CS/VS ABEND. There are nine application modules which run under CICS/VS - OS/VS to provide an on-line capability for analyzing and debugging of dumps via an IBM 3270. The functions which can provide a productivity and problem solving tool consist of the following:

- o Display on the 3270 from the dump data set, any core location specified by the user.
- o Scan through the dump data set to find the combination of characters that the user requests, and display the location and data.
- o Display General Purpose Registers and Program Status

Word at time of ABEND.

- o Locate and display from the FDP dump data set the following CICS Tables: Terminal Control Table, File Control Table, Destination Control Table, Program Control Table, and Processing Program Table.
- o Format and display CICS Trace Table Entries for a given task within the dump data set.
- o Map any area of core against any DSECT available to the user.
- o Recap CICS status, number of active tasks, suspended tasks.

In addition, a program is supplied to print the dump data set in the event that a hard copy is required.

CMSSERVICE - FDP 5798-CJZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is a general utility program which runs under the Conversational Monitor System (CMS) of Virtual Machine/370. It makes computer services more readily available to new time sharing users of limited experience other than control functions or unit record. It performs typical utility functions such as tape-to-card, card-to-disk, etc., but with sufficient prompting to enable inexperienced operators to: 1) store and maintain control of intermediate unit record files; 2) invoke utilities such as sort and merge to eliminate intermediate punched card output; 3) generate jobstreams by imbedding data within appropriate JCL; and 4) reduces contention for initiators or partitions and devices of co-resident systems.

DIAL SUPPORT FOR DOS/VS ENTRY TIME-SHARING SYSTEM,
FDP 5798-CRD, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler, enhances the DOS/VS Entry Time Sharing System (5798-CFL, ETSS) by providing dial-up support.

Dial-up terminals supported by this FDP include the IBM 3767-1, 3767-2, 2741, and TWX (ASR 33/35). (IBM 3767 terminals require the 2741 compatibility feature.)

ETSS is now available to remote terminal users without requiring the installation of expensive leased line communication facilities. Functions currently available in ETSS, including IBM 3270 and 2740 support, remain unchanged. This support is limited to ETSS customers who use the companion FDP - Terminal control for DOS/VS Entry Time Sharing (5798-CGC).

This FDP is distributed in the form of MAINT updates to the Terminal Control FDP (5798-CGC), requires DOS/VS and the following Field Developed Programs:

- o Terminal Control for DOS/VS Entry Time Sharing System (5798-CGC)
- o DOS/VS Entry Time-Sharing System (5798-CFL)

DOS/VS SYSTEM/360 MODEL 20 EMULATED DISK BACKUP/RESTORE,
FDP 5798-CRE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to reduce the time and effort to backup and restore S/360 Model 20 emulated volumes in a DOS or DOS/VS environment. It provides a utility program which copies emulated volumes from disk to disk, disk to tape, or tape to disk. Based on parameters submitted by the user, the FDP generates a DCS or DOS/VS assembler utility to backup or restore a S/360 Model 20 volume emulated on 2314s, 2319s 3330s or 3340s. Tape may be used as intermediate storage or as permanent backup. The total programming and scheduling effort for DASD conversion and/or emulator pack maintenance may be drastically reduced considering system time and performance lost while running S/360 Model 20 emulation to do volume maintenance. This program is designed to support DCS and DCS/VS on System 360 or System 370.

DOS/VS INTERACTIVE DEBUG FACILITY, FDP 5798-CRF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DOS/VS Interactive Debug Facility FDP, written in Assembler, extends the productivity benefits of the DOS/VS Entry Time Sharing System (ETSS) to include on-line program testing and debugging. Previously, under ETSS, there was no facility for the programmer to interact with his program during the testing of that program. Now there is such a facility!

The DCS/VS Interactive Debug Facility is an interactive command processing program which allows a terminal user to monitor and control the execution of a program from a terminal for the purpose of testing and debugging that program. From his terminal, a programmer will be able to: start and stop at specified breakpoints, single cycle on instruction or branch basis, monitor changes to data areas or registers, display data areas or registers, change data or registers, locate strings of data or conditions, trace or alter the logical flow of execution, display source statements during the session, plus many other functions.

The program has its own command language, simple commands with few operands or delimiter requirements.

It is a read-only program which should reside in the DOS/VS Shared Virtual Area where it is possible for a single copy to be in use by several terminal users at one time.

This program may be used in debugging most programs which may be loaded from the DOS/VS Core Image Library or from object modules loaded by the DOS/VS Time Sharing System LOADER utility. However, it is most effective with single phase programs written in: Assembler, CCBL, or PL/I and to a lesser degree, FORTRAN IV.

The Interactive Debug Facility will run on a System/370 with DOS/VS and a minimum of 128K bytes of memory. It is primarily intended for use with the DOS/VS Entry Time Sharing FDP (5798-CFL), however an option is provided with allows the program to be used with a DOS/VS Latch partition using the system console.

DOS/VS LOADER, FDP 5798-CKG, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DOS/VS Loader Field Developed Program, written in Assembler, provides link edit type capabilities in a compile (or assemble), load and go environment. Due to its performance characteristics, it can have a significant effect on total throughput where the compile-load-go type jobs are frequently executed.

The Loader program combines the basic editing and loading functions of the linkage editor and program fetch in one job step. Therefore, the function performed by the loader program is equivalent to the link edit and execute function.

The Loader program will load the basic input from either SYLNK or SYSIPT. INCLUDE statements will be resolved from the relocatable library. Unresolved external references will also be resolved from the relocatable library unless NOAUTO has been specified.

The Loader program does not produce load modules for program libraries such as the core image library.

The program runs on any model System/370 under DOS/VS. Availability notice, 4 pages, 6/76

HASP-JES2 SPOOL TRANSFER PROGRAM, FDP 5798-CKJ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The HASP-JES11 Spool Transfer Program, written in Assembler, provides the ability to transfer all or selected jobs from one system's spool file to the spool file of another system. This function allows the user to shut down one system (e.g., MVT) and bring up a new or test system (e.g., MVT) without waiting for the queues to become quiescent. The transfer program will transfer spool files in either direction between systems.

The primary use of the program is to facilitate testing of new systems, but a secondary use is its ability to transfer all or portions of the spool file to tape for reloading and processing at a later time.

GENERALIZED DATA AREA MONITOR AND DISPLAY PROGRAM - FDP 5798-CKK, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, is written in Assembler, provides a generalized capability to monitor and report on system data areas in an OS/VS environment. The FDP makes no assumptions as to which data areas are to be monitored. Through control cards the user describes system data areas which can be accessed by a problem program. The FDP monitors and reports

on those data areas.

Data areas to be monitored are defined by specifying in a control card the data format of the data area and a series of displacements to pointers within the system. Ten data formats may be specified and up to 7 displacements can be provided to locate the system data area to be monitored. The data formats are, 1 byte binary number, 2 byte binary number, 3 byte binary number, 4 byte binary, signed halfword, first word of time of day clock, doubleword time of day clock, binary integer (bit) character format, hexadecimal format.

Detail and summary reports may be generated. The detail report shows the description supplied in control cards and the observations during the measurement interval. The detail report formats as many user specified observations as will fit on a user specified print line. Twenty observations may be printed on each 208 character line.

The summary report prints, arithmetic mean, high value, and number of zero observations for each arithmetic data area specified by the user. Default values for length of measurement interval, number of intervals in the summary, and the number of summary reports in a run can be overridden by the user.

PL/I D TO PL/I OPTIMIZER CONVERSION, FDP 5798-CKL, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The PL/I-D to PL/I Optimizer Conversion Program (D-Convert), written in Assembler, is designed to reduce the cost of converting PL/I-D programs to PL/I Optimizer (5736-PL3) programs. It achieves its objectives as listed below:

- o Automates bulk of source code conversion.
- o Issues warnings for statements not converted or incompletely converted.
- o Produces more complete conversion in less time than hand methods.

DCONVERT reads symbolic PL/I-D programs and checks each statement for Optimizer compatibility. Each statement is then punched to suit the Optimizer or is marked in error on the report. The output can, in most cases, be compiled with the Optimizer and executed.

INTRODUCTION TO TSO, FDP 5798-CKT, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in IIS, ITS, is a computer-based training course directed to new TSO users, to serve as an introduction to the concepts and facilities of TSO. The course guides a student interactively from an understanding of the concepts through LOGON and most of the TSO commands. This FDP is designed to shorten the training cycle of new TSO users by exposing them to the correct and productive uses of TSO. It is operational under Interactive Training System (ITS) and Interactive Instructional System (IIS).

USING TSO EFFECTIVELY - FDP 5798-CKW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ITS, is a course of instruction which operates under the Interactive Training System program product (5734-XXC). The effective and productive use of TSO goes beyond what one gets from the Command Language Reference Manual. This course addresses many of the aspects of TSO not fully understood by most users. The course is not oriented toward the new TSO user, but rather toward experienced users who want to get more out of their system. The course sessions contain review material and cover the following topics:

- Data Set Naming Conventions
- Program Testing Techniques
- Data Set Organization
- Structured Program Facility
- Control of Disk Space
- Selected Command Operands
- Advanced EDIT Techniques
- Expanded MVS CLIST Capabilities
- 3270 Techniques

IMS HISTORY REPORTING SYSTEM - FDP 5798-CLB, NOTICE

This FDP is written in Basic Assembler Language. The IMS History Reporting System FDP is designed to provide the IMS/VS DC user with the ability to obtain information about the utilization and performance of his online system on an ongoing basis. The FDP provides routines which, using the IMS/VS log tape, edits and stores information pertaining to system load and performance in an IMS database. A command language is then used to construct tailored reports from the database on a demand basis. Summary and/or detail reports can be obtained for any desired combination of date range, time span, and transaction codes. The reports can be produced as a normal OS/VS batch job, or can be invoked as terminal output to a TSO session. A method is provided to identify periods of deviation from the user-observed and/or statistically defined performance norms. The program can also be used to reconstruct transaction codes and conversational SPA contents for terminals active at the time of an IMS/VS system failure, which information can be used to assist in system reconstruction during exceptional IMS/VS Emergency Restart situations.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

STRUCTURED PROGRAMMING MACROS - FDP 5798-CLF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

Structured Programming macros, written in Assembler, is a Field Developed Program that is available for use with the OS/VS, DOS/VS and CMS Assemblers. It is a set of macros which is intended to facilitate the use of Structured

Programming.

Structured Programming is the key element of the Improved Programming Technologies. High productivity gains in all areas of the programming activity have secured a permanent place for Structured Programming methodologies as the discipline of the programming profession. Up to now structured programming has been restricted to higher level languages where existing functions are adaptable to the structure theorem's control figures. Now the Structured Programming Macros FDP has provided the full capabilities of the structure theorem to assembler language users. Assembly language programs are written in a top down fashion with the macros corresponding to the structure theorem's control figures.

- Macros provided are:
- o IF/ELSE/EIF
 - o DOWHILE/EDO
 - o DOUNTIL/EDO
 - o DOPROC
 - o PRO/EPROC
 - o DCL/EDCL
 - o CASE/ECASE

TSO INTERACTIVE DATA ENTRY SUPPORT FOR COBOL, FDP 5798-CLG, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, accepts free-form input from a TSO terminal, and passes edited, justified, fixed-form data to an application program. A series of fields is accepted as terminal input, rather than a single record. Each field is validity checked, and formatted for use by the application program. Typing time is reduced through support of duplicate fields, and re-entry only of error fields. The FDP is designed to help quickly implement on-line Data Entry, or to test the viability of a proposed on-line system. This FDP runs in an OS/VS2 Time Sharing environment, as a subroutine of a COBOL program, and provides terminal input/output support for entering data into an application program operating under TSO. By introducing and enforcing terminal dialogue standards, the FDP can help present a more consistent and reasonable dialogue to the terminal user.

SYSTEM/370 VS BASIC CONVERSION, FDP 5798-CLH, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler to run on a S/370 under DOS/VS or OS/VS. It is designed to assist users of G. E. Mark III, CDC call/370 Basic, and Tymeshare Superbasic in converting programs and data to VS Basic and the required data formats. Program conversion includes modifying the format of Basic statements; replacing Basic statements, functions and operators with equivalent VS Basic statements, functions and operators; changing BCD characters to EBCDIC characters (optional), and flagging statements which have no equivalent in VS Basic and can not be converted. Data conversion includes replacing commas (or another delimiter) with blanks, and enclosing character fields in quotes.

IMS SOURCE PROGRAM AND JOB DEVELOPMENT SYSTEM II, FDP 5798-CLP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

IMS Source Program and Job Development System (IMSJDS II), written in Assembler, is a new FDP and is an enhanced version of the FPD IMS Online Program and Job Development System (IMSJDS) (5798-COR), released June 27, 1975.

The IMS Source Program and Job Development System II provides the capability to develop, edit, modify, test and execute OS/VS jobs from IBM 3277-2 and 3275 Display Stations supported by the IMS DB/DC and IMS/VS DB/DC systems.

Release 1 of IMSJDS II has all the basic functions of the original product plus:

- o Extended 72 character mode editing
- o Extended 80 character mode editing
- o Extended execute function allowing for dynamic include of other input acts or copy members
- o Job status display
- o Enhanced installation procedure
- o Extended copy function
- o Online display of OS/VS data sets
- o Multiple generations of SYSOUT data
- o Additional user exit so users can use existing library management systems with IMSJDS
- o Support for MVS
- o Enhanced data display
- o Software tabbing
- o Improved user statistics
- o Performance improvements
 - Load balancing
 - No resident BMP requirement
 - Copy function 50% less calls
 - Delete performance improvements
 - More efficient data base organization
 - Elimination of previously required high overhead functions
 - Significant improvement in performance of execute function.

DOS/VS ENTRY TIME SHARING SYSTEM/II (ETSS/II), FDP 5798-CLR, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DOS/VS Entry Time Sharing System/II (ETSS/II) FDP, written in Assembler, is an intermediate level interactive facility designed to provide terminal users with problem solving capability, source program maintenance, and librarian functions. End user problem solving is accomplished via interactive use of languages such as PL/I, FORTRAN, and VS/BASIC. Source program maintenance is provided via features such as the ETSS/II context editor and the ability to test programs interactively. Librarian

functions include the ability to update, edit, or otherwise maintain up to 32,767 separate libraries. The libraries may contain data in compressed format for increased direct access space savings. In addition, an archiving function is available to allow the libraries to be maintained in off-line storage.

ETSS/II is an extension of the DOS/VS Entry Time Sharing System. ETSS/II has many new commands and functions not available in the original ETSS. These functions have been designed to provide the terminal user with a much more powerful interactive facility. Some of these extended features are as follows: dynamic disk space allocation, dynamic file label definition, terminal retrieval of output from POWER/VS, pseudo-partitions, availability of the pre-generated system, editing during pseudo-partition execution, data compression on the library, logic in procedures, multiple line input in a single terminal transmission, split screen use of 3270, buffered hard copy output, lower case input facilities, editor full screen verify, linecode editing, and indexed editing for large library members.

ETSS/II will run on a System/370 with a minimum of 160K bytes of real storage. It supports local and remote 3270 configurations with or without hardcopy 328X printers. If hardcopy printers are available, they may be used for buffered (via disk) off-line printing. Also supported are 2740, 2741, and 3767 terminals.

All terminal support will be handled by either the Customer Information Control System/Virtual Storage (CICS/VS) or the Minimum Telecommunication System/Virtual Storage (MTC/VS). If CICS/VS will be used, the minimum storage requirement should be 192K rather than 160K.

Normal batch compilers should function without modification in the ETSS/II pseudo-partition environment provided they conform to standard DOS/VS coding conventions. Programs in Assembler, VS/BASIC, DOS/VS COBOL, DOS FORTRAN/IV, PL/I Optimizer, and RPG II have been entered, compiled and executed from a terminal under ETSS/II.

ETSS/II executes in a single foreground partition. Batch processing, spooling, and remote job entry can execute concurrently outside the ETSS/II partition, and programs entered via terminal can be submitted for batch processing through a Submit-to-Batch facility.

Security features include user identification code, password, controlled access to public, private and common data via user profile, and user storage protection.

TSO PROGRAMMING CONTROL FACILITY - II, FDP 5798-CLW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

PCF II, written in Assembler, offers the features of the TSO/VS2 Programming Control Facility FDP, 5798-BBJ, to users of MVS Release 3.7 with TSO/VTAM, RACF, or the TSO Command Package installed. Those PCF features which have been compatibly extended into the new environment include:

- o TSO command subsetting and program execution control by user
 - o File access control by file category and PCF authorization level
 - o SMP accounting data optionally recorded for each command and major subcommand
 - o Use of a semicolon as command delimiter for multiple commands entered per line
 - o User direct access space control by volume.
- New and enhanced capabilities include:
- o Improved command authorization control
 - o Volume control enhancements to support multiple volumes per user
 - o Standardized system interfaces for ease of MVS

- o maintenance
- o Full SMP support for installation
- o Continuous support.

This package enhances the functional capabilities of MVS/TSO while providing basic security and integrity features, and complements other new functions such as RACF.

The software prerequisite for this FDP is TSO/VTAM Selectable Unit or TSO Command Package Program Product (5740-XT6).

IBM DIRECT ACCESS STORAGE DEVICE CONVERSION AID,
FDP 5798-CLQ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is intended to reduce the manual effort required to perform Direct Access conversions. IEM 3330 Model 1, Model 11, 3340, 3344, and 3350s are supported.

- The FDP provides for:
1. Generation of JCL and utility statements required to allocate space on the new device, move the data set to the new device, update the catalogue.
 2. Identification of affected data set JCL statements in the procedure library, and generates a jobstream to update the procedure library using user-supplied JCL parameter arguments.
 3. Space calculation routines to identify data sets whose current blocking factors do not effectively utilize space on the new device.
 4. Data set space requirements are calculated for the new devices.

Due to device independence, this FDP is not required for VSAM.

IMS/VS VIRTUAL STORAGE ANALYSIS - FDP 5798-CNC, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in PL/1 and Assembler, the IMS/VS Virtual Storage Analysis Program (IMSVSAP), is designed to assist the systems programmer in an IMS/VS DB/DC installation in the analysis and improvement of IMS/VS performance. The IMSVSAP product serves as a vehicle to study the effect of paging on overall IMS/VS performance, and in particular on response time. This program produces a detail page fault report of all paging activity associated with the IMS/VS Control Region and IMS/VS Message Regions. A summary report is also provided which indicates the percentage of system page faults and the page faults per second associated with the IMS/VS Control Region, Message Regions, and non-IMS related jobs. A summary report is also supplied which further breaks down the IMS/VS Control Region page faults into categories by pools, blocks, and code in order to enable the systems programmer to page-fix the portions of IMS/VS which are most affecting response time. Availability notice, 8 1/2 x 11 inches, 6 pgs, 12/76

IMS/VS LOCAL COPY-II - FDP 5798-CLZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides the local 3270 terminal user with hardcopy capability for locally attached components of the IBM 3270 Information Display System. When invoked, an image of the display screen is queued to a designated IBM 3284, 3286, or 3288. The program allows for user specification of either the PA3, or PFK12 keys to invoke the copy function. The program also provides for the printing of the terminal ID of the requesting terminal as well as for dynamic alteration of the destination printer by the system operator.

This support has been designed and implemented to be procedurally compatible with IMS 3270 Local Copy (5796-ABL).

IMS/VS Local Copy II was written in Assembler Language and has been tested with OS/VS1 Release 5.0, and IMS/VS Release 1.1.1 as well as OS/VS2 Release 3.7, and IMS/VS Release 1.1.3.

OS/VS ON-LINE PROBLEM TRACKING - FDP 5798-CNJ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to assist

management in coping with the problems that occur in the DP installation.

Installation hardware and software problems can be entered and maintained in an on-line environment. An inquiry capability is provided for researching the master problem file for previously encountered occurrences of the same or similar problems. Inquiry responses are provided for individual or multiple symptoms and/or specific dates. An audit trail is provided for view by management's designated problem coordinator.

There are two versions of the program; IMS/VS and CICS/OS/VS.

IBM 3270 support is provided for on-line input and update, and hard copy output of any inquiry response. Availability Notice, 8 1/2 x 11 inches, 6 pgs, 12/76

ACCAP/CMS CONVERSION AID - FDP 5798-CNH, NCICIE

This FDP, written in OS ANS COBOL, the Autccoder to COEOL Conversion Aid Program for CMS, ACCAP/CMS, is designed to aid in the conversion of 1400 series Autocoder and 1401 SS programs to S/370 COEOL (DOS/VS and OS/VS versions). The ACCAP/CMS Conversion Aid FDP executes in a CMS Virtual Machine under VM/370.

The program provides the user all of the functions of the IBM Type II program "1400 Autocoder to CCBOL Conversion Aid Program" (360A-SE-19X) plus the following new functions:

- o Actual addresses for 1401 unit record areas accepted in 1440 programs.
- o SELECT and FDP statements generated via file control cards to support sequential, indexed sequential, and VSAM files. Either DOS/VS or CS/VS sysnames are generated for the ASSIGN verb.
- o OPEN and CLOSE statements generated via file control cards. Files are opened for INPUT, CUTPUT, and I-C.
- o 1400 sense switches set via DOS/VS "UFSI" JCI statement and OS/VS "EXEC" JCL statement "PARM" operand.
- o COBOL statements scanned and reformatted when required to produce syntactically correct ANS COBOL source decks. A listing is provided to display all changes to the source deck.

IMS AVAILABILITY REPORTS - FDP 5798-CNN, NCICIE

This Availability Notice contains complete ordering information for the Program and all its related

documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The IMS/VS Availability Reports Field Developed Program, written in Assembler, produces management-oriented reports which detail the availability of the major components of on-line system including the IMS Control Program, the 3270 Lines, the On-Line Transactions, and the Databases. This package can either augment a user's existing Availability Reporting System or can provide statistical data required to implement one. Four Availability oriented reports are produced by this package: The Daily Summary, the Consolidated Summary, the Daily Detail, and the Pseudo-console listing.

Each report is concise, easy to interpret, and is designed to focus management attention on potential problem areas. In addition, the Consolidated Summary report allows the customer to measure overall availability over extended periods of time. A TSO Interface is provided for timely summarizations of availability of remote locations. Availability notice, 8 1/2 x 11 inches, 6 pgs, 12/76

DOS/VS TIME CONTROL - FDP 5798-CNQ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to enhance the capability of DOS/VS by adding the facility of limiting certain programs to specified time durations. The user is given the option of specifying which DOS/VS partitions will be time controlled, giving time durations for specified programs, and excluding certain programs from time control. In situations where there is a large amount of testing being done on a system, the use of DOS/VS Time Control can be a valuable asset to the user.

3770-P BATCH TRANSMISSION SERVICES, FDP 5798-CNX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides a host program that will maintain a library of 3770 function programs and transmit to and receive from the programmable models of the IBM 3774, and 3775. The library maintenance function builds and maintains a VSAM library from the data set created by the Program Validation Services program (BQBLIBI). The transmission function will process function programs, terminal commands, and data through either the Basic Telecommunications Access Method (BTAM) using Binary Synchronous Communications or the Virtual Telecommunications Access Method (VTAM) using Synchronous Data Link Control. This FDP contains all of the function provided by the IBM 3770 Communications Utility (5798-CKZ) plus SDLC support and other minor enhancements. The FDP is designed to operate under either DOS/VS or OS/VS.

DOS/VS INCIDENT REPORTING & TRACKING - FDP 5798-CNP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to formalize and automate the tracking and reporting of problems within a data processing installation.

It provides for on-line entry, update and display of current, detailed problem information. Reports are also provided in batch mode for detailed and summary data. The on-line display is based on selection criteria entered by the user. Some of the categories coded are: Department, Application, Problem types, Failing component, System ID, ABEND codes, plus others. Space is also provided for user comments.

The FDP is designed to run under the control of DOS/VS using CICS/VS and VSAM.

VIDEO CORRECTION OF OCR DATA - FDP 5798-CPE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel

who are prospective users of the program and others who require information concerning it.

The primary function of this FDP, written in Assembler, is to provide a simple method of correcting unrecognizable characters resulting from a 3886 Optical Character Reader run. The programs are designed to operate under CICS using the 3270 Information Display System with the VIDEO-COLLECT RPQ.

The subject of correcting errors (unrecognizable characters) resulting from optical scanning is sometimes not only a technical problem, but frequently a psychological problem to be overcome by the prospective user.

The FDP provides a sequential disk file where the output of a 3886 Optical Character Reader run is stored. This data file normally contains characters which were unrecognizable to the Reader. The CICS program scans this file until an unrecognized character is encountered. It then displays the data string in the vicinity of the unrecognized character along with the video image of that character using the VIDEO COLLECT feature of the 3270 and 3886. The operator then interprets the character and enters the correct character via the 3270 System. The program inserts the correct character in the data stream, and constructs a corrected data file.

Statistics on counts of records read, the frequency of unrecognized characters by type, etc., are maintained. A program is provided to display the statistics.

POWER/VS RJE CONTROLLED ACCESS MONITOR - FDP 5798-CPH,
NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler, is designed to allow a DOS/VS POWER/RJE Host system to restrict the Datasets and Programs which a remote terminal can access for processing through DOS/VS. The interface to POWER/VS is provided through the reader exit facility in the "POWER" macro. Anyone currently using a reader exit may continue to do so by linking this FDP to their current exit routines.

This FDP consists of a monitor program which scans job control statements for DLBL, EXEC, STDLABEL and PARSTD cards. Any attempt by remote station to (1) change the permanent area on the label cylinder, (2) access a data set not authorized by the user, or (3) execute a program not authorized by the user will result in that job being flushed from the POWER/VS input queue. In addition to the monitor program, three other Macros are provided to generate a remote station control table (RCT), a table (PCT). The RCT is used to determine which entries in PCT and FCT a remote station is allowed to execute or access. Changes to the monitor and/or tables can be made by recoding the macros and cataloging the new program. The new program becomes effective at POWER initialization.

MVS/TSO/VTAM DATA SET PRINT - FDP 5798-CPF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in PLS/Assembler, provides the ability for a TSO user to have a specified data set directed to any 3284/3286/3288 printer or 3790 print data set that is attached and defined to the VTAM network.

This program is intended for use only on those TSO/MVS systems that have a VTAM network. The system environment may be either VTAM only, or a mixed TCAM and VTAM, but it is necessary that the designated printer be under control of VTAM.

This program provides the same facility to the TSO/VTAM user that the TSO Command Processor FDP (5798-AYF) provides to the TCAM only TSO user.

IBM 3790/3770 PVS DATA SET TEST SUPPORT, FDP 5798-CPG NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This Field Developed Program, written in Assembler, is designed to increase the productivity of 3790/3770 application programmers. Use of this product can simplify the testing effort and reduce the time required for debugging application programs. The program creates, from user input data and control statements, a VSAM file to use as a simulated 3790/3770 dataset when testing application programs.

Previously, under the 3790/3770 Program Validation Services (PVS), the user would create simulated datasets for program testing by one of two methods: either by writing another 3790/3770 program to create the dataset or by writing a batch program to create a VSAM file properly structured for PVS.

All customers who are installing IBM 3790 Controllers or Programmable 3770 Terminals and using Program Validation Services (PVS) to develop and maintain their application programs are potential users of this FDP.

HIGHLIGHTS

- o Improve the productivity of application programmers by eliminating need for an "extra" program to load files for testing.
- o Eliminate the need to write VSAM load programs to test each application system by implementing a generalized utility program.
- o Allow the user to create a "baseline" set of 3790/3770 files for regression or recurrent testing during the life of an application program.
- o Document, by a printed listing, the contents of the 3790/3770 data set prior to the test.
- o Accept as input either tape or disk sequential files or a card "image" file. Such cards are blocked together to create a record of the proper length.
- o Using the card input capability, extend to the CMS, VSFC, TSO, AND ETSS user the capability to create test files as well as prepare and submit batch tests for 3790/3770 application programs from his terminal.

CONSOLE SPOOLING UNDER POWER/VS, FDP 5798-CPQ, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
 This Field Developed Program, written in Assembler, collects the console messages generated in a POWER/VS controlled partition and prints them out on a line printer, following the normal printed output for the job.
 Many DOS/VS users find that it is difficult and awkward to obtain information from the DOS/VS console. In many cases vital debugging information is printed only on the console (SYSLOG) and not on the user's printout (SYSLST).
 Providing the user with automatically generated console messages can improve programmer productivity, decrease the time required to determine why a job failed, and minimize the number of times the computer operator is interrupted with requests to locate previous console entries. Console messages can be automatically routed to the submitting RJE terminal.
 CICS Source Program Maintenance Online II (5798-CFT) users can display their console listings on a local or remote 3270 Display Station.
 DP Managers and Auditors may find the printed output provides valuable audit and control information showing which jobs were executed, when they were executed, and which devices were accessed.

SYSTEM FOR GENERALIZED PERFORMANCE ANALYSIS REPORTING (GPBAR) - FDP 5798-CPR, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a Productivity Aid provided as a base for IMSASAP II (Field Developed Program 5798-CBJ) and other IBM or user written tuning aid and performance report programs. GPBAR also provides independent facilities to print user tailored graphs from performance data logs or other non-VSAM sequential data sets. GPBAR is an Assembler Language batch program which executes under OS/VS1 and OS/VS2 or as an OS/VS2 TSO foreground program.

The GPBAR design objectives are to provide facilities to reduce the cost of complex report program development; increase the quality of dependent report programs; relieve tedious and costly, but necessary effort to code print editing, layout and control routines; provide a common user interface to the execution of various report programs, and to enable the user to obtain time/event graphs from any sequential non-VSAM performance data log records with little or no additional programming.

Highlights

- o Base (IMSASAP II tuning aid) and other report programs. GPBAR was developed in conjunction with IMSASAP II. GPBAR comprises the functions common to the development and execution of report programs. GPBAR provides both executable control logic common to report programs, and coding aids to support the development of report programs written in Assembly Language.
 - o Handles any sequential non-VSAM input file. GPBAR uses QSAM to read non-VSAM sequential input files. Multiple, stacked files can be handled. An internal queue management technique enables fast processing of input files in a single pass without using a sort utility.
 - o Prints user tailored graphs defined at execution time. GPBAR provides a graphing facility for SYS1, LOGREC, IMS/VS monitor logs, or user specified input files. Input file record occurrences, rates or accumulated values can be graphed versus time. The 'graph' command allows user definition of graphing parameters which tailor the resulting reports to his needs.
 - o Common user access to all report programs.
 - Flexible command language controls GPBAR execution
 - Copy feature allows prestored command input
 - Help facility lists information on IEM supplied commands
 - o SYNAD and STAE routines. GPBAR provides SYNAD and STAE exits so that partial reports are printed even if input or processing errors force abnormal termination.

VIRTUAL MACHINE FACILITY/370 PERFORMANCE/MONITOR ANALYSIS, RELEASE 3, FDP 5798-CPX, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This extended support FDP, written in PL/I, enables VM/370 systems analysts and administrators to obtain reports and graphs portraying the performance and utilization of a running VM/370 system. The FDP uses data collected by the VM/370 MONITOR command. It requires little previous knowledge of VM/370 and should be of value to new VM/370 installations as well as to experienced users.

The functions available with Release 2.0 are:

- An attached processor report that presents information on the rate of page reads, page writes, real external interrupts and virtual SVCs attributed to the attached processor, the main processor and the total system.
- An attached processor report that presents information on the locking activities associated with an attached processor environment. It provides data on both spin locks and on activity deferred due to the inability of acquiring a lock.
- Provides a count of the number of times a virtual machine waited on the global system lock.
- Provides the user with the ability to subtract I/O time from the calculation of expansion factors.
- Provides the user with the ability to calculate storage utilization based on either real main storage size or on the number of pageable pages available.
- Provides support for the "MONITOR-to-DISK" facility of VM/370 Release 5.

The use of the "MONITOR-to-DISK" facility of VM/370 Release 5 eliminates the need for a tape to be dedicated for

collection monitor data. Monitor tape input is still Release 3.0 contains support for VM/Systems Extensions (SEPP), 5748-XE1, and VM/Basic System Extension (BSEPP), 5748-XX8 monitor data, enhanced processing of spool files, ACUM files and reports, plus error correction to Release 2.0. The following functions are available with Release 3.0:

- Facilities to assist users in creating subsets of ACUM history files.
- A program to sequentially page number a set of VMAP reports
- A new PROFILE EXEC for automatic data reduction of Monitor Spool files
- Facilities to uniquely identify ACUM files based on the creation date and time of the original Monitor data
- A three-part report reflecting feedback information on the Resource Manager of the SEPP and BSEPP program products.
- Two additional SEPP reports: one summarizing migration activities, the other presenting shadow table maintenance activities.

CICS/VS MVS PEER ADDRESS SPACES - FDP 5798-CQE, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
 This FDP, written in Assembler, facilitates the running of multiple copies of CICS/VS in an MVS environment. It helps users to realize the performance potential of a multi-processing environment (AP and MP configurations). This is achieved by distributing the function over multiple copies of CICS/VS. One copy of CICS/VS (designated as the DC copy) is primarily concerned with controlling the terminal network. It passes transactions via the FDP to the other copy(s) of CICS/VS (designated as TX copies) for processing. Terminal I/O requests in the TX copies are intercepted and passed to the DC copy for execution. The FDP and this concept of operation offers greater CICS/VS system protection from errant application programs. New applications, for example, can be brought up in their own TX copy of CICS/VS but still use the same terminal network which supports the production system. All MVS CICS/VS users (including UP configuration) can benefit from this aspect of the FDP.
 All copies of CICS/VS may retain the capability to perform all CICS/VS functions. The DC copy can process transactions and the TX copies can control additional terminals at the users option.
 Accounts considering proposing this FDP should review their plans with the Palo Alto Systems Center.
 A feature (Specify 9550, 9551) is available that will extend the Central Service support for CICS/VS MVS Peer Address Spaces, 5798-CQE, until August 31, 1980.
 The original Central Service period for 5798-CQE ended 6/15/79.

GIS/VS 3270 FORMATTING AID FDP 5798-CQN, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. The GIS/VS 3270 Formatting Aid FDP is designed to assist the user of GIS/VS in an IMS/VS terminal environment. The user is provided with a series of 3270 IMS/VS screen formats which will guide him through a terminal session and enable him to easily enter GIS/VS queries. Screen formats are provided which will help him enter queries from a skeletal 3270 screen, edit queries and maintain the GIS/VS task data base, call a GIS/VS "HELP" function, and review user data base segment and field names as defined to GIS/VS.

It will enable the user to converse with the system in order to submit data base queries. A tailoring facility will let the user standardize queries in any form desired. Users will be able to concentrate on the logic of the query rather than syntax requirements.

IMS/VS PERFORMANCE ANALYSIS AND REPORTING SYSTEM (IMSPARS), FDP 5798-CQP, NOTICE

This Availability Notice contains complete ordering

information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a Performance Analysis and Tuning Aid for IMS/VS DB/DC systems and provides a variety of reports designed to help the user improve the productivity of the IMS/VS system. The reports, derived from the IMS/VS log tape, provide information in the areas of

Transaction response times
IMS system resource usage
IMS system resource availability

The IMSPARS reports are designed for different working levels within the data processing organization. A management summary report lets management know if IMS is functioning within expected limits. A series of summary reports are intended for administrators and analysts who want various types of operating information in easy to read summary form. Finally, detail reports assist analysts and programmers involved in problem solving.

IMSPARS executes under, and requires, the System for Generalized Performance Analysis Reporting (GPAR), (Program Number 5798-CFR). It supports log tapes produced by IMS/VS 1.1.4, and it is released with extended support. Flyer, 8 1/2 x 11 inches, 4/78

GENERALIZED TRACE FACILITY PERFORMANCE ANALYSIS (GTFPARS), FDP 5798-CQQ, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ASM, is a performance analysis and tuning aid for OS/VS Operating Systems. Data input is created by the Generalized Trace Facility (GTF), a standard feature of OS/VS systems.

GTFPARS provides the system programmer with a comprehensive collection of reports that help identify problems which impact overall OS/VS system performance or performance sensitive online applications such as IMS/VS, CICS/VS, or TSP. It produces Job and System Summary Reports, as well as Detail Trace Reports. Summary Reports include information on SVC, Page Fault, I/C, Seek Distribution and Arm Movement, System Resources Manager, External Interrupt, Contents Supervision, etc.

Detail Trace Reports provide the user with a chronological listing of events when the Summary type of information is inadequate to pinpoint a problem area. GTFPARS executes under the System for Generalized Performance Analysis Reporting (GPAR) FDP 5798-CFR. Flyer, 8 1/2 x 11 inches, 12 pages, 12/77

CALL/OS TC USEC ENVIRONMENT TRANSITION PROGRAM, FDP 5798-CGR, NOTICE

This FDP is written in Assembler, provides CALL/CS

installations with the ability to selectively, as well as totally, convert their users to the VSPC environment with little manual effort. The FDP is a utility program which uses the CALL/OS backup tape to create an archive tape compatible with the VSPC archive tape. The program provides the means for dynamically transferring and converting all user profiles and programs/data files from CALL/OS to VSPC.

Highlights

- Automatic definition of user profiles based on installation specifications.
- Automatic definition of project libraries to VSPC.
- Conversion of BASIC, PL/1, FORTRAN programs under CALL/OS to meet the specifications of these compilers under VSPC.
- User options to convert internal data files under CALL/OS to either internal or external data files under VSPC.

IBM 3800 PLOTTING FACILITY, FDP 5785-AAA, NOTICE
 This Availability Notice contains complete ordering information for the program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in FORTRAN IV, allows the creation of precise drawings and graphs on the IBM 3800 Plotting Subsystem. It uses simple commands, similar to those used for drawings on plotting devices.

The objective of the product is to produce on an IBM 3800 Printing Subsystem more precise drawings and graphs than have been possible using periods or asterisks on conventional printers.

Highlights

- Ease of use - the common interfaces to the plotting subroutines are identical, from a parameter standpoint, to those of available plotter packages.
- Higher quality graphs - the graphics output are of a quality acceptable for final copy in graphs not requiring a high degree of resolution, such as business trend analysis. In addition, it can be used to test programs which produce graphs requiring a high degree of resolution, such as engineering drawings.

CICS/VS FORMATTED TRANSACTION DUMP ONLINE, FDP 5798-CQY, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, makes CICS/VS transaction dumps available to online CICS/VS users in formatted mode for display and analysis on an IBM 3270 terminal with optional CICS transaction security.

The actual dump is written to a VSAM Key Sequential Data Set in unformatted mode when the dump is produced and formatted a screen at a time for analysis. The FDP has preserved the format of the previous batch utility program so the online dumps will be familiar to the user.

The FDP intercepts the task dump requests, and writes the records produced to a Key Sequential Data Set using date, time, and terminal ID as a key. If the FDP cannot continue, it reverts to the old method of storing dumps in the previous CICS/VS sequential dump data sets, so that

transaction dumps are not lost.

Once a dump is stored in the VSAM Key Sequential Data Set, a terminal operator can call up the dump on a 3270 terminal. The display is formatted very similar to the batch utility format and is pageable at the terminal. The operator can scan the dump looking for a 1-20 byte character string as well as get formatted trace table entries.

At the end of the analysis the terminal operator can request that the dump be deleted or kept for later referral or printed on a hard copy terminal or line printer.

An inquiry is available to display the number and IDs of all dumps currently active.

The FDP was tested under DOS/VS Release 34.0, CICS/VS Release 1.3, and OS/VS1 Release 6. It is written in Assembler Language.

IBM 3890 DCS/VS CYCLE SORT, FDP 5798-CQX, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides the software required to sort on-us items into the following general categories (based on input from the user's Demand Deposit Accounting system):

- Items requiring special handling.
 - Signature verification items.
 - High item-volume items.
 - Items sorted by statement cycle for bulk filing.
- Software for the 3890 Document Processor features:
- 3277 Display station for control of 3890 function.
 - Full restartability with restart display.
 - Jam display.
 - Status display of current status of 3890 including item and reject statistics.
 - Asynchronous tasks for 3890 and 3277 allows resumption of reading when 3890 is made ready, without operator action at 3277.

Reports are provided which show the distribution of low-speed items and the intended distribution of items rejected during the cycle sort.

IBM 3890 ON-LINE FINE SORT, FDP 5798-CRC, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, COBOL, is designed to improve fine sort productivity by eliminating one or more document passes per run and by processing multiple banks and related control documents in a single run, resulting in reduced setup and handling. Sorting is achieved by host program communication with 3890 SCI using pocket assignments calculated at the host.

Facilities of this FDP include radix sorting (number compression by assigning an alias and base number conversion of the alias); image matching; multiple sort specifications per run; high volume account kill; divider insertion; processing of on-us tracers and bank control documents; operator communication via CRTs; restart/recovery; High Volume Accounts report and Sort Statistics report.

GB21-2173

IMS/VS IBM 3790 OUTBOARD FORMATTER, FDP 5798-CRD/CWY, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides for migration of 3270 applications and screen formats from IMS/VS to an IBM 3790. These FDPs were designed to be used with IMS/VS and therefore a prospect for these programs should be a licensed user of IMS/VS (5740-XX2) with the Data Communication Feature.

These FDPs can significantly reduce the amount of data transmitted between IMS/VS and the 3790 in 3270 Data Stream Compatibility mode. This is accomplished by eliminating literals and other fixed data from the data stream transmitted from IMS/VS to the 3790. Panels containing the literals and other fixed data are retrieved from the panel data set at the 3790 and merged with the variable data contained in the condensed 3790 data stream. This composite screen is then displayed on the 3277 with the same appearance and operating characteristics as an unconverted SLU type 2 3270 data stream.

Migration options are provided so that users may gradually convert some of their existing 3270 formats to the SLU type 2 condensed formats while continuing to run with existing 3270 and unconverted SLU type 2 formats.

The Outboard Formatter consists of two programs - a conversion utility (5798-CRD), which is installed at the host System/370 and a Monitor (5798-CWY), (a 3790 function program) which the user installs on each 3791 controller. 5798-CRD is a prerequisite for 5798-CWY. A license is required for each 3791 that uses 5798-CWY. The major functions of the conversion utility (5798-CRD) are:

- Conversion of existing MFS source statements to new condensed MFS source statements that do not contain literals or constant data.
- Creation of a set of 3790 full-screen panels corresponding to the condensed format definitions. Each panel contains all of the literals and auto-skip sequences that were removed from the MFS format definitions.
- Optional creation of a set of 3790 Forms that describe the 3270 screen. These forms help aid users who want to include their own application logic in the monitor.
- Statistics are generated on the total amount of data transmitted and the savings resulting from the use of these programs.

The 3790 Monitor program (5798-CWY) performs the functions of:

- Receiving and transmitting the 3270 data stream between IMS/VS and the 3790.
- Retrieving the appropriate panel from the panel data set and merging it with the 3270 data stream received from IMS/VS.
- Providing documented exit points so that user application function may be performed in the 3790.

MVS SECONDARY OPERATOR FACILITY, FDP 5798-CRE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides facilities to simplify MVS console operation and reduce the possibility of operator delays and errors. This FDP runs as an MVS job and has two major functions: Command/Job Procedure Processing; and Time-of-Day Event Scheduling.

Command/Job Procedure Processing allows operators to request execution of complex procedures containing OS/MVS, JES, VTAM, and/or TCAM commands. Parameter substitution and control logic facilities are provided. Procedures may submit jobs to MVS for execution.

Time-of-Day Event Scheduling will automatically submit production and/or backup jobs for execution at dates and

times specified by the user. A checkpoint/catch-up facility covers the possibility that the system is down at the requested schedule time. Command procedures and write-to operator messages may also be executed at specified dates and times.

ATMS II FCMT CHANGE FOR THE IEM 3800, FDP 5798-CRH, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The ATMS II Font Change for IBM 3800 Field Developed Program, written in Assembler, provides new capabilities for in-house publishing utilizing the Advanced Text Management System (ATMS II) and the IEM 3800 Printing Subsystem.

High quality output with mixed fonts, which may be suitable as final composed copy, can now be generated using this FDP. Simple font change controls can be imbedded in the original text which will cause the text to be printed using the font specified when output to the IBM 3800. New character sets provided include eight 12-pitch and one 15-pitch which allow 20% or 50% greater page density respectively.

Additionally, the nine new character sets provided can be used by themselves without ATMS II for other existing or new IBM 3800 printer applications.

DOS/DITTO AND EXTENSIONS, FDP 5798-ARN AND 5798-CAF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

DOS/DITTC (5798-ARN), written in Assembler, is a general purpose utility program containing thirty-seven (37) utility functions for Unit Record, Tape and Disk Input/Output units. Functional utilities available in addition to normal card, disk, and tape utilities are: Tape and Disk Record Scan, Disk and Tape Record Alteration, Disk ID Volume Number Change, DeLocking of Tape Records when printing, and User Tape Error Correction. DCS/DITTO is an enhanced version of the Type III program DITTO (3600-00.1.018).

The Enhancement Feature (9500, 9501) to 5798-ARN supports the IEM 3300-11 and 3350 disk storage units and operation with Advanced Functions-DOS/VS (5746-XE2).

EXTENSIONS to DOS/DITTC for System/370 (5798-CAF) adds 24 additional user-oriented functions to DCS/DITTO (5798-ARN). The Enhancement Feature (9502, 9503) to 5798-CAF supports the IBM 3330-11 and 3350 disk storage units and operation with Advanced Functions-DOS/VS (5746-XE2).

IBM BRAILLE UTILITIES, FDP 5798-CRZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, converts machine-readable EBCDIC data sets into a correspondence braille code to be embossed on IBM impact printers with appropriate braille RPOs attached.

This FDP is designed to provide visually impaired braille readers employed in electronic data-processing activities with access to information normally available through computer printouts. These computer printouts might include many conceivable types of listings generated during the course of job-related activities: reports, program listings, machine-readable text, etc.

DASD SEEK SIMULATOR, FDP 5798-CTD, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DASD Seek Simulator FDP, written in ASM/PLI, assists in solving an OS/VS (MVS, SVS, VS/1) installation's performance problems associated with arm movement. It is a tool which can optimize the placement of datasets upon a DASD volume, and members within a PDS, to achieve minimal arm movement. The simulator allows evaluation of various dataset placement strategies without moving any datasets. In a simulator run the user may have the simulator optimize dataset placement and/or have the simulator evaluate user specified dataset placements. Simulation can be based upon data from a single GTF trace or merged data from a history of traces previously analyzed.

Highlights include:

- Reduction of Timestamp and Time adjustment
- Conversion of UNIT addresses
- Shared file support
- Fixed Head Facility support

PROGRAM FUNCTION KEY SIMULATOR FOR SPF-II, FDP 5798-CTF, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides the capability of using the TSO-3270 Display Support and Structured

Programming Facility Version 2 Program Product (SPF-2) on IBM 3277 Model 2 terminals that do not have 12 program function keys. Prior to the availability of this FDP, SPF-2 required that the IBM 3277 terminal have 12 program function keys. Now, SPF-2 can be used on any IBM 3277 Model 2 Terminal, regardless of keyboard arrangement.

This FDP may be of value to those customers who desire to use SPF (or to enlarge their SPF user-community) but are unable to do so because of the lack of IEM 3277 Model 2 Terminals with 12 program function keys.

IMS FAST SCAN UTILITY, FDP 5798-CTP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is a performance oriented program designed to retrieve segments from a DL/1 BD Database (BIDAM or BDAM) in hierarchic (GET NEXT) sequence and produce multiple output datasets for use by other IMS/VS Utilities or user programs. Each output dataset can contain a different complement of segments as indicated by a user specified PSB in conjunction with optional user exists. Three output formats are provided, or the users may elect to handle the output function themselves. The three provided formats and their function are:

1. BD REORG UNLOAD format which allows the FIP to run as a high speed unload step in the reorganization process.
 2. BSAM format which allows a set of segments to be rapidly extracted from a large database and then processed by a DL/I batch program.
 3. Variable Block format which allows a set of segments to be selected from a database and then processed by a batch program using QSAM instead of DL/I.

VTAM CONFIGURATION AND GENERATION AID, FDP 5798-CTL, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is an installation aid allowing for simplification of the initial generation process for a CICS/DOS/VS, VTAM or ACF/VTAM, and NCP/VS or ACF/NCP/VS system. Based on user input of macro statements defining a VTAM configuration, the aid produces sample DOS/VS input job streams and tables tailored to the generation of that particular system. Creation of generation job streams for all or a subset of supported products is selectable. The output of this FDP can eliminate much of the time consuming work associated with the generation process. Additionally, via review and modification of the output, it can be useful in the planning and generation of more complex configurations than those directly supported.

VTAM PERFORMANCE ANALYSIS REPORTING SYSTEM (VTAMPARS), FDP 5798-CTW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a performance analysis and tuning aid for OS/VS VTAM users. It is a tool for network management. It will assist an installation in determining an optimum buffer pool specification for its VTAM installation, and thus improve performance of the system. The VTAM Storage Management Services routines trace buffer utilization upon request by the user, and forward the information to Generalized Trace Facility (GTF) for writing out trace records. VTAMPARS uses the GTF SMS trace records as input. Upon analysis of the input data, VTAMPARS provides the user with reports, which offer a clear picture in identifying threshold exceeded conditions, excess buffer allocation, and buffer pool shortages.

Reports provided are:

1. Storage Pool Usage Summary report
2. Sequential Trace report
3. Max Used Mode report
4. Exception report

VTAMPARS executes under the System for Generalized Performance Analysis Reporting (GPARR), FDP 5798-CPR.

IMS/VS TIME INITIATED INPUT FACILITY, FDP 5798-CWF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, provides the IMS/VS customer with the capability of programmed entry of IMS transactions, message switches, or operator commands based upon time of day or initial startup of IMS.

With this product installed, the customer may automatically start extra message regions during peak

periods, start and stop lines that span time zones at specified times, generate system statistics displays on a periodic basis, automatically shut the IMS system down each night, perform startup sequences after a restart (the restart command itself must still be operator entered).

The capability to dynamically update both the time intervals and the code and messages to be generated is provided for the 24 hour operation customer. The changes can be incorporated either automatically at a specified time or by operator intervention.

This product can significantly improve overall IMS operation by eliminating situations where operators fail to perform a function on a timely basis or perform the wrong function.

IBM 3770 SUPERVISOR ASSEMBLER, FDP 5798-CWB, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides a symbolic language and associated assembler code for the 3770 Programmable terminal.

The FDP will decode and validate the input data, build a table of addresses, and generate text cards. Significant features of the assembler include:

- Symbolic addressing and definition of data areas.
- Assembly and symbolic linkage of multiple supervisor programs in a single pass.
- A cross-reference listing of source and object code.

For better control and error recovery, 3770 supervisor programming should be a major part of general application design on the 3770-P. This FDP provides a method, other than byte-by-byte machine level, for 3770-P supervisor programming.

OS/VS DATA SET EDITOR, FDP 5798-CXQ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a productivity aid designed to help reduce the time and effort required for modifying data sets, or members, that result from hardware and/or software changes.

The program provides the user with editing capability for sequential data sets and libraries. It can process the library as a single entity or by selecting members.

Highlights:

- The ability to globally change cylinder allocations for non-specific volumes or via a volume list for specific volumes
- The ability to process all or selected parts of a library via easy-to-use keyword selection.
- Updates done online or a job stream can be built to run later.
- Automatic expansion of data as required (continuation records may also be generated under user control).
- Maintains alias names for members.
- Test option allows the user to review the changes before updating the library.
- AND OR and NOT logic provided for both FIND and CHANGE processing.
- Automatic library compression as required under user control.
- User controlled report capability.

GB21-2341

IMS FAST REORGANIZATION RELOAD, FDP 5798-CXT

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is designed to rapidly reload an IMS/VS database. It uses as input the unloaded dataset produced by either the IMS Fast Scan Utility 5798-CTP or the IMS ED Reorganization Unload Utility (5740-XX2). It produces a database that is IMS/VS Version 1 compatible, but does not utilize IMS/VS facilities. The program operates as a non-DL/I batch job under OS/VS.

This product is designed to reduce the time required to reorganize HD-type databases. It also generates dataset, segment, and segment pointer statistics that may be valuable database tuning aid. While this FDP is particularly applicable to large database users, it offers performance improvements to most IMS/VS DL/I users. Faster reorganization should allow more frequent database reorganization thus enhancing the performance of jobs accessing the database. Faster reorganization also means the database is unavailable to the online IMS Control Region for a shorter period of time.

PRINT LOAD ANALYZER, PDP 5798-CXY, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This PDP, written in COBOL, is designed to allow users to create an accurate picture of their printing environment. It totals the print volumes by job name, system, job origin, printer or form. This PDP can be used as an audit tool to measure forms usage and is useful in the following circumstances:

- User is evaluating IBM 3800 Subsystem
- User is evaluating remote printing requirements
- Multiple local and/or remote printers in use
- Multiple System environment
- User needs to control and track forms use by CPU, Remote ID, and/or Job ID.

VM/CMS LIBRARY MAINTENANCE AND SPMOL-II SIMULATOR, PDP 5798-CYA, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This PDP, written in ALC and CMS Exec., is composed of two major functions, either of which may be implemented independently of the other. The LIBRARY MAINTENANCE FUNCTION controls a central library which is kept in compressed format and is protected against multiple updates. Programs are never directly updated unless a new Version or Mod is created. Original sequence numbers will be maintained and all changes are applied temporarily when a program is compiled. This gives the user a good audit trail and an easy method of backing out changes. The second function is a simulator of most of the SPMOL edit commands which allows the programmer to use program sequence numbers or relative line numbers within a screen to make changes. This PDP should ease the transition for users moving from SPMOL-II to VM/CMS.

This PDP runs under VM/CMS and requires the DISPLAY EDITING SYSTEM FOR CMS IUP (5796-PJP).

GB21-2370

RACF PRODUCTIVITY AID, PDP 5798-CYF, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This PDP, written in ALC (Macro), is a step-by-step guide to converting an organization to the full use of RACF with minimum disruption to the existing users of the system.

Most of the programs available with this aid are written in the form of macros to help in the generating of routines that will run as standard exits to RACF. The options provide the following function:

- Automating the user definition process based on existing job accounting data in batch job cards.

- Creating automatic by-pass capability in the case of RACF removal with system wide protection for key data sets.
- Allowing for a grace period for logging of violations without causing job execution failure.
- Allowing for the definition of special installation defined relationships between user names, group names and resource names.
- Performance improvements through installation defined 'fast path' authorization capability.
- Creation of a different mechanism for validating batch user IDs, which will keep the password private and exclusively used for online access. This new mechanism is more suitable for batch environments because the passkey that is used can be designed for one-time access.
- Creation of a testing environment for logging activity to GTF and bypassing all but user defined test jobs to validate that exit functions are operating correctly.
- Allowing for "alias" and "generic" naming of data sets to RACF to handle naming conventions not conforming to RACF requirements, and CDG data sets.
- Make options capable of on-line enabling and disabling where appropriate with the 'setopts' command.

S/370 APPLICATION-WIDE COBOL DATA-NAMES CROSS REFERENCE, PDP 5798-CYG, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The S/370 Application-Wide COBOL Data-Names Cross Reference PDP is a programmer aid for debugging, changing, maintaining, or converting a multi-program COBOL application. The report produced gives a single cross-reference report for multiple programs and displays the program and source statement for each occurrence of each data name. It helps the programmer identify names that are currently in use, identify the attributes of any name, and locate all occurrences of any name in the application.

This PDP will accept both IBM and non-IBM source COBOL. It optionally will cross-reference COBOL reserved words, making it a valuable tool in program conversion by identifying all uses of each non-standard word. PDP 5798-CYG operates under DOS/VSE. PDP 5798-CXW operates under OS/VSE.

ISAM -- DL/I BRIDGE, FDP 5798-CYT, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is an execution time interface between DL/I and an ISAM application program. Data in a DL/I data base may be accessed by DL/I or ISAM programs. No modification to source programs, recompilation or relink editing will be required. Application programs will run under the Bridge program and all languages which support ISAM or DL/I are supported, as the "bridging" is done at execution time. Hierarchical data bases are supported. Field sizes in both the ISAM file image and the DL/I data base must be identical.

CHARACTER EXTENSIONS FOR THE IBM 3800, FDP 5798-CZG, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, provides the scan patterns for new text printing characters for the IBM 3800 Printing Subsystem in the form of IEBIMAGE Utility data statements. Any group of characters can be installed in the user's system by processing the data statements from that group, using standard JCL, with IEBIMAGE. IEBIMAGE then stores them in SYS1.IMAGELIB as Graphic Character Modification modules. The user can build, modify, and name Character Arrangement Tables with IEBIMAGE to include the graphic character modification and thus make them accessible for printing.

COMPUTER BASED TRAINING AND INSTRUCTION COURSEWARE SUMMARY PROG PROD 5734-XXC, 5736-E11, 5734-E13, 5748-XX6

This document summarizes the courses of Computer Based Instruction, a technique that combines computer technology with self-study principles. Through the use of a terminal, the student and instructor have easy access to computer managed drill, simulation, and tutorial materials. This method can meet special and general needs: a wide range of curricula for the educational institutions, orientation training for new hires, sales courses for marketing training, new procedures for office personnel, instruction in administrative and personnel skills for supervisors and managers. It can also be used to help develop the skills of programmers, systems designers, and computer programmers.

GB21-9903

INTERACTIVE QUERY AND REPCRT PROCESSOR (IQRP) - IUP 5796-PDG, GENERAL INFORMATION

This Document contains general information on IQRP which consists of nine on-line programs, of which three contain

several modules, together with five additional modules which provide an efficient interface with CICS/VS. The entire system is highly modularized to permit ease of maintenance and provide for efficient operation in Virtual Storage. In addition to the on-line programs, IQRP includes a set of utility programs to prepare the system for operation, provide a journal, gather statistics on system use, etc.

In the operation of IQRP, the user at a terminal interacts with the system by entering his identification and the report name and, optionally, the selection criteria and report format and contents. This interaction is thereupon interpreted by IQRP, and passed to one of several IQRP query processors.

System files are used to determine whether a user has the proper security clearance to access the information he has requested, as well as to translate any special terms the user has included in his interaction. Data names supplied by the user are likewise translated into field names recognized by the access methods and any further information regarding structure required to permit access to the data is also provided from the system files. The system files also supply information on predefined report formats and any modifications to the standard format which this user may have predefined.

Using the information regarding the physical nature of the data, the IQRP processor proceeds to search the appropriate data file for the information required on the basis of the criteria provided by the terminal user. IQRP manipulates the data, performing any sorting, totalling, or arithmetic operations required. The information is then formatted into the appropriate two-dimensional report structure and output is sent to the terminal or system printer. Should the IQRP interpreter detect a user request that is incomplete or incorrect, IQRP will return a message to the terminal indicating the nature of the problem. The user should then reinsert the corrected request.

IBM SYSTEM/360 BIBLIOGRAPHY

For use by all who plan for, install, program or operate an IBM System/360 Model 22 and above, this bibliography describes technical publications in support of the following:

- System/360 machine components
- Type I programming support
- DB/DC and all other licensed programs operable under Type I support on System/360
- Type II and Type III programs
- Other supplementary information (forms, PTF listings, etc.)

Features and types of information included, are:

- Titles and abstracts, with page counts
- Current status of all publications listed, with TNIS; description of TNL system
- Editions and TNIS applying to each supported release of OS/MPT and OS/MVT
- Clustering of manuals by subject; fine-sorting by title
- Explanation of file numbers and subject-code system
- Subject-code indexes (both numeric and alphabetic)
- Graphic charts for machines and major operating systems
- Convenient list of all publications in order-number sequence, with subject codes
- Specific page lookup of titles by program acronyms
- Order numbers; and details on order-numbering system
- Publication profiles used for distribution items under SLSS

Explanation of SLSS profiles

This bibliography is regularly updated to provide the latest information pertaining to the System/360 library. For System/370 publications, refer to GC20-0001 and GC20-0370. System/360 Model 20 publications are in GA26-3565. Bibliography, 380 pages, 7/75

IBM SYSTEM/370 BIBLIOGRAPHY OF INDUSTRY SYSTEMS AND APPLICATION PROGRAMS

This bibliography describes technical publications needed by those who plan for, install, program, or operate System/370 industry systems and licensed application programs.

Industry (sub)systems covered are the IBM 3600 Finance Communication System, the IBM 3650 Retail Store System and all others, including the IBM 3790 Communication System. Licensed programs included are all completed applications running under System/370 programming (or under Type I programming if for System/370 only). Completed applications are those for specific industries such as finance, insurance, or manufacturing and those applicable to many industries.

Features, and the kinds of information included, are:
Titles and abstracts, with page counts;
Clustering and sequencing of items by title within subject;

Second listing of all publications in order-number sequence, with subject codes; codes explained and indexed;

Specific page lookup by program acronym;
Current status of the publications listed, with TNLS;
SLSS publication profiles used for distributing items; explanation of these profiles.

This bibliography is regularly updated to provide the latest information pertaining to industry systems and application programs. For System/370 machine components, support programming, selectable units, DB/DC and supplementary information, refer to the IBM System/370 Bibliography, GC20-0001.

NUMBER SYSTEMS - STUDENT TEXT

This IBM student text on number systems presents a brief review of the principles of positional notation, as applied to the binary and hexadecimal systems of notation. The publication covers the operations of binary and hexadecimal arithmetic, decimal-binary - hexadecimal base conversion, and the principles of base and base-minus-one complementation.

A GUIDE TO PL/I FOR FORTRAN USERS: STUDENT TEXT

This manual is an introductory guide to PL/I written especially for those who have a working knowledge of FORTRAN II or IV. No particular machine implementation of FORTRAN or PL/I has been assumed. Part 1 gives a broad survey of PL/I. A sample program illustrating some of the principle features of the language is explained step by step.

Part 2 gives sufficient detail for the user to be able to write a straightforward program for himself. It is not a rigorous exposition. Examples have been used to clarify the text. The terminology used is intended to be that which is familiar to a FORTRAN user.

Part 3 describes concepts not familiar to FORTRAN users, although some of them are familiar to those who know COBOL or ALGOL. Where references to COBOL or ALGOL will help readers who know these languages, the reference is made, but the explanation is also given in full for those who do not.

This guide does not attempt to cover all the features of the language. Many facilities have not been mentioned at all, and some of the statements and features have not been explained in full detail.

A PROGRAMMER'S INTRODUCTION TO IBM SYSTEM/360 ASSEMBLER LANGUAGE: STUDENT TEXT

This student text is an introduction to System/360 Assembler Language coding. It provides many examples of short programs shown in assembled form. Some elementary programming techniques and the specific instructions illustrated in the programs are discussed in simple, relatively nontechnical terms. Much of the text is based on information in IBM SYSTEM/360 PRINCIPLES OF OPERATION (GA22-6821). This includes a brief review of relevant System/360 concepts and descriptions of selected assembler language instructions for arithmetic, logical, and branching operations. Standard (fixed-point), decimal, and floating-point arithmetic are discussed. The book also includes an elementary introduction to assembler language and the assembler program, and chapter on base register addressing and on program linkages and relocation. The coding of many other common programming techniques, such as the use of branches, loops, and counters, is shown. The use of macro instructions is demonstrated, but not covered in detail. Program flowcharting and input/output operations are beyond the scope of the book.

The publication is a sampler rather than a comprehensive textbook. It is intended for supplementary reading for the student in a regular course of study on System/360 assembler language coding, and for the novice programmer. In general, the reader will find that the program examples are quite simple at the beginning of each chapter, or major subject division, and become progressively more complex. If the going seems difficult, it is suggested that he simply skip to the next subject and come back later.

The student should have access to two IBM System/360 System Reference Library (SRL) manuals for reference purposes: the PRINCIPLES OF OPERATION and the assembler specification manual for one of the System/360 operating systems. (All publications and their form numbers are

listed at the end of the Preface.) He should also be familiar with fundamental concepts of data processing and the basic operating principles of System/360. Two IBM programmed instruction (P.I.) courses, or their equivalent, are prerequisite to a full understanding of this student text: COMPUTING SYSTEM FUNDAMENTALS and INTRODUCTION TO SYSTEM/360. The student who is not enrolled in a comprehensive programming course will find the P.I. book FUNDAMENTALS OF PROGRAMMING a valuable guide to problem analysis and program flowcharting.

INTRODUCTION TO IBM DIRECT-ACCESS STORAGE DEVICES AND ORGANIZATION METHODS: STUDENT TEXT

This text discusses the physical characteristics and capacities of the following Direct Access Storage Devices available for System/360 Models 25, 30, 44, 50, 65, 67, 75, and 85:

2301 Drum Storage
2302 Disk Storage
2303 Drum Storage
2311 Disk Storage Drive
2314 Direct Access Storage Facility
2321 Data Cell Drive

The file organization methods and access methods provided for these devices by the IBM System/360 Operating System, the IBM System/360 Disk Operating System and the IBM System/360 Basic Operating System are also discussed. The uses of direct access storage, basic terminology, and the establishment of controls for a direct access system are other topics addressed by this text. Most of the chapters end with student exercises, answers to which may be found at the end of the manual.

No attempt at completeness is made. Refer to the publications listed in the Bibliography for additional details.

A GUIDE TO PL/I FOR COMMERCIAL PROGRAMMERS (STUDENT TEXT)

PL/I is a multipurpose, high-level programming language that enables the programmer not only of commercial and scientific applications but also of real-time and systems applications. It also permits a programmer to use the full power of his computer in an efficient manner and to program applications in a relatively machine-independent fashion.

This publication presents those features of PL/I that apply to commercial data processing. It does not restrict itself to a particular aspect of commercial data processing but attempts to discuss all features of PL/I that may be used in the full spectrum of commercial applications.

INTRODUCTION TO IBM DATA PROCESSING SYSTEMS: STUDENT TEXT

This manual presents concepts and principals essential to a basic knowledge of computers. It is designed for use in training programs that serve as prerequisites for a detailed study of an IBM system. Covered in general terms are topics such as Data Representation, Storage Devices, CPU Functions, I/O Devices, Stored Program Principles, Programming Systems, Operating Systems, Conversion, and Procedural Controls. Reference to specific Systems is made to illustrate general principles.

OS/VIRTUAL STORAGE 1 FEATURES SUPPLEMENT
This supplement discusses OS/Virtual Storage 1 (OS/VS1) features and organization as of Release 6. Only concepts and functions of OS/VS1 that are new to and significantly different from those of OS MPT are presented in detail. Transition from OS MPT to OS/VS1 is discussed also.
This supplement is an optional section designed to be inserted in its entirety in any one of the following base publications, each of which contains the conceptual and System/370 hardware information required to understand the OS/VS1 discussion presented:
A Guide to the IBM System/370 Model 135 (GC20-1738),
A Guide to the IBM System/370 Model 138 (GC20-1785),
A Guide to the IBM System/370 Model 145 (GC20-1734),
A Guide to the IBM System/370 Model 148 (GC20-1784),
A Guide to the IBM System/370 Model 158 for System/370 Model 155 Users (GC20-1754),
A Guide to the IBM System/370 Model 158 for System/360 Users (GC20-1781),
A Guide to the IBM System/370 Model 168 for System/370 Model 165 Users (GC20-1755),
A Guide to the IBM System/370 Model 168 for System/360 Users (GC20-1787).
Readers who possess more than one of the above base publications need add this supplement to only one of the documents, as the OS/VS1 information presented applies to System/370 Models 135, 138, 145, 148, 158, and 168 unless otherwise indicated in the text.
The contents of this supplement are designed to acquaint the OS MPT knowledgeable reader with the new facilities and the advantages of OS/VS1. Manual, 192 pages

VIRTUAL MACHINE FACILITY/370 FEATURES SUPPLEMENT

This supplement discusses Virtual Machine Facility/370 (VM/370) features and organization. It assumes knowledge of System/370 hardware and an understanding of virtual storage concepts and terminology, virtual machine concepts, and dynamic address translation hardware, as discussed in each of the base publications for which this supplement can be ordered. The reader is also assumed to be familiar with operating system concepts in general and any specific operating system that is to be executed under control of VM/370 except for the Conversational Monitor System of VM/370, which is discussed in this supplement. Knowledge of Control Program 67/Cambridge Monitor System (CP-67/CMS) is not assumed. This supplement is an optional section that is designed to be inserted in its entirety in any one of the guides for System/370 Models 135, 138, 145, 148, 158 and 168 and 3031, 3032 and 3033 Processors. Readers who possess more than one of those publications need add this supplement to only one of the guides, since the VM/370 information presented applies to all supported processors unless otherwise indicated in the text.

The contents of this supplement are designed to acquaint the reader with the facilities and operation of VM/370. Types of installations that can benefit from the use of VM/370 and performance considerations are indicated also.

OPTICAL MARK READ/CARD PRINT APPLICATION SOLUTIONS IBM 3504 and 3505 CARD READERS IBM 3525 CARD PUNCH

This manual contains brief descriptions of application solutions using the 3504/3525 Card Subsystem with System/370 Model 125 and the 3505/3525 Card Subsystem with all models of System/370. The application solutions highlights the Optical Mark Read feature on the card reader, and the Card Print feature on card punch.

The two-color card form samples accompanying the majority of application descriptions illustrate the variety of ways of using the card subsystem to solve data processing problems in many industries. Data printed in black within the sample cards simulates 3525 card printing.

It is assumed that punched hole data will be contained

in many of the application cards discussed, but the punched holes have not been represented in these illustrations.

All card documents illustrated in this publication are reduced in physical size from the standard specifications for an 80-column card.

PLANNING GUIDE FOR THE DOS/VIS "CARDLESS" SYSTEM

This manual is for systems programmers, application programmers, and operators who are planning to use the System/370 Model 115 or 125 in a "cardless" environment. It discusses the Disk Operating System/Virtual Storage (DOS/VIS) programming support provided for the IBM 3540 Diskette Input/Output Unit. Aspects of system operation, system generation, conversion, and application development are covered with regard to systems that do not use a conventional card reader or punch.

An operational knowledge of DOS/VIS and POWER/VIS is basic to understanding this publication. Planning for a cardless system should include understanding the operation of the 3540 and the use of the diskette in the data entry area.

SYSTEM/3 TO DOS/VIS CONVERSION GUIDE

This guide is intended to assist the System/3 user who is converting to a DOS/VIS system, to be used as the primary reference document for the conversion. It presents a comparison of System/3 and DOS/VIS features and gives procedures for converting to DOS/VIS, either manually or with programming tools. Through numerous examples, the user can see how to change his current programs, files, and operation control language to comparable DOS/VIS programs, files and job control language. Where comparable functions do not exist, an alternate approach is suggested. The guide also presents a suggested migration plan and a checklist of things to consider, and directs the user to available migration tools.

The guide will be of interest primarily to people within the data processing department. The DP manager will find introductory information, migration guidelines, and system comparisons. The system programmer will find information on the system control program, system generation, and library considerations. The application programmer will find specific information on program conversion, control card conversion, sorts and utilities. In addition management outside the data processing department may be interested in the overview, the advantages of DOS/VIS, and migration considerations.

GC20-1800

VIRTUAL MACHINE FACILITY/370: INTRODUCTION

This publication introduces VM/370, and defines the minimum equipment configuration necessary to execute it. It is intended for anyone who is interested in VM/370. However, the reader should have a basic understanding of IBM data processing.

VM/370 (Virtual Machine Facility/370) is an operating system that manages the resources of a single System/370 computer so that multiple computing systems (virtual machines) appear to exist. VM/370 consists of a Control Program (CP), which manages the real computer, a Conversational Monitor System (CMS), which is a general-purpose conversational time sharing system that executes in a virtual machine, a Remote Spooling Communications Subsystem (RSCS), which spools files to and from geographically remote locations, and an Interactive Problem Control System (ICPS), which provides problem analysis and management facilities.

The first section of the publication is an introduction; it describes what VM/370 can do. The second, third, and fourth sections describe the Control Program, Conversational Monitor System, and Remote Spooling Communications Subsystem, respectively. The appendixes include information about system requirements and related VM/370 publications for CMS users.

This publication is a prerequisite for the VM/370 system library.

VIRTUAL MACHINE FACILITY/370: SYSTEM PROGRAMMER'S GUIDE

This publication is intended for VM/370 system programmers and VM/370 system analysts. It provides information that is needed to maintain, tune, modify, and debug VM/370. The VM/370 System Programmer's Guide is divided into four sections that discuss:

- Debugging with VM/370 - describes the procedures, commands, and techniques used to debug VM/370. This section also discusses how to read VM/370abend dumps.
- OLTSEP Control Program - provides an overview of the internal processing of the VM/370 control program. There are also topics that discuss performance guidelines, performance tunings, accounting records, virtual machine communication facilities, and system modifications that can be made by an installation.
- Conversational Monitor System (CMS) - provides an overview of the internal CMS processing. This section also discusses installation modifications to CMS.
- Remote Spooling Communication Subsystem (RSCS) - discusses the purpose of RSCS and how VM/370 uses it. Also provided is an overview of internal RSCS processing.

Refer to the latest System/370 Bibliography, GC20-0001 for the titles and abstracts of related publications.

VIRTUAL MACHINE FACILITY/370: SYSTEM MESSAGES

This publication contains messages and codes that may be encountered when using IBM Virtual Machine Facility/370 (VM/370). Conditions that generate these messages and codes are explained, the resulting system action is described, and appropriate responses are suggested.

In addition, this publication contains information on VM/370 Basic System Extensions Program Product, program number 5748-XX8 and VM/370 System Extensions Program Product, Program Number 5748-XE1.
Manual, 8 1/2 x 11 inches, 312 pgs, 9/77

IBM VIRTUAL MACHINE FACILITY/370 OLTSEP AND ERROR RECORDING GUIDE

This publication is intended for the IBM Customer Engineer (CE). The information in this book will aid the CE in performing hardware I/O maintenance from a virtual machine. It includes data on error handling, the error recording process, describes how to run the Online Test Sections (OLTS) under OLTSEP and how to use the CMS CPEREF command that interfaces with OS/VIS EREP (IFCEREPI) and error recorded data.

IBM VIRTUAL MACHINE FACILITY/370: GLOSSARY AND MASTER INDEX
The IBM VM/370 Glossary and Master Index provides a guide to the VM/370 library in three ways.

- The glossary defines terms particular to VM/370 that are not included in the IBM Data Processing Glossary, GC20-1699.
- The master index directs users to the VM/370 publications that contain information on VM/370 users.
- The command and operand summaries direct users to the publications that document each of the commands and operands available to VM/370 users.

VM/370 REMOTE SPOOLING COMMUNICATIONS SUBSYSTEM (RSCS) USER'S GUIDE

This publication provides the users of the VM/370 Remote Spooling Communications Subsystem (RSCS) with the information necessary to operate the RSCS virtual machine and supported remote terminals and stations.

Topics covered include:

- o Devices supported by RSCS
- o Line connection procedures
- o Data transmission and reception
- o RSCS operator commands
- o Remote operator commands
- o VM/370 user commands
- o Error recovery procedures

VM/370 INTERACTIVE PROBLEM CONTROL SYSTEM (IPCS) USER'S GUIDE

This is a reference publication for users of the Interactive Problem Control System (IPCS) component of VM/370. It is specifically directed to the system programmer or the IBM program support representative. IPCS standardizes the problem reporting process and provides:

- Online problem management
 - Interactive problem diagnosis
 - An online debugging facility for disk-resident CPabend dumps
 - A problem-tracking facility that can be updated either by the user or, automatically, by the system
- This publication contains IPCS command formats and instructions for their use. IPCS programs, subroutines, and files are listed.

A GUIDE TO THE IBM 3031 PROCESSOR COMPLEX AND ATTACHED PROCESSOR COMPLEX OF SYSTEM/370
 This guide presents hardware, programming systems, and other features and advantages of the IBM 3031 Processor Complex and Attached Processor Complex. Knowledge of a System/370 processor that has EC mode and dynamic address translation capabilities is assumed. This guide is intended to acquaint the reader with the components of 3031 configurations and to be of benefit in installation planning.
 Associated with this guide are three optional supplements describing programming systems for 3031 Processor that support a Virtual Storage environment. Each supplement has its own form number and must be ordered individually, if desired. The optional supplements are:

- DOS/Virtual Storage Features Supplement (GC20-1756)
- OS/Virtual Storage 1 Features Supplement (GC20-1752)
- OS/Virtual Storage 2 Single Virtual Storage (SVS) Features Supplement (GC20-1753)

INTRODUCTION TO DOS/VS SYSTEM INSTALLATION PRODUCTIVITY OPTION (IPO) PROG 5750-AA5
This manual is a general summary of the IBM DOS/VS System Installation Productivity Option (IPO). Its purpose is to provide users of the DOS/VS System IPO with an introduction to the system.

The manual has seven major parts:

- Part 1: WHAT IS THE DOS/VS SYSTEM IPO? briefly describes the major characteristics of the system.
- Part 2: DISTRIBUTION MATERIAL describes the material received by the user of the DOS/VS System IPO.
- Part 3: HOW TO BEGIN summarizes the activities necessary to begin the installation process. This part includes a description of aids provided with the DOS/VS System IPO as well as information on printing the machine readable documentation.
- Part 4: INSTALLATION PROCESS OVERVIEW describes the basic steps required to install a product.
- Part 5: VERIFICATION PROCESS OVERVIEW describes the basic steps required to verify correct installation of a product. Included is a discussion of Installation Verification Procedures (IVPs).
- Part 6: WHAT IS THE TARGET SYSTEM BEING BUILT? describes the DOS/VS System layout that will be built if the user installs the system using the recommendations within the DOS/VS System IPO. This part is divided into sections by DASD device type.
- Part 7: SYSTEM REQUIREMENTS describes the hardware and software configurations supported by the DOS/VS System IPO.

The reader is expected to have a knowledge of DOS/VS and the products to be installed.
Manual, 8 1/2 x 11 inches, 56 pages, 5/78

GC20-1868

SYSTEMS NETWORK ARCHITECTURE - LOGICAL UNIT TYPES
This book describes Systems Network Architecture (SNA) as it relates to sessions between logical units (LUs). LUs are the ports through which application programs, terminals, and terminal operators communicate across an SNA network. LU to LU sessions support communication between these end-users.

This book shows the structure of an LU and defines the characteristics of four types of LU to LU sessions (types 1 through 4). It also defines the data streams that are valid for each type of LU to LU session.

This book does not describe any specific equipment or programs that may implement SNA, nor does it describe any implementation subsets or deviations from the architecture. These matters, as well as information on product installation and system definition, are described in implementation literature for the applicable products.

This book is intended for systems programmers and others who need detailed information about SNA in order to develop or adapt a product or program to function within an SNA network.

An understanding of SNA concepts is assumed throughout this book. The basic concepts can be obtained by reading SNA General Information and SNA Introduction to Sessions Between Logical Units (order numbers GA27-3102 and GC20-1869, respectively).

Manual, 8 1/2 x 11 inches, 80 pages, 6/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

GC20-1869

SYSTEMS NETWORK ARCHITECTURE - TYPES OF LOGICAL UNIT TO LOGICAL UNIT SESSIONS

Logical units are the ports through which users communicate across an SNA session. The composition of the logical units depends on the attributes of the end users and their communication requirements. Three logical unit types are discussed in support of customer-written application program to terminal or terminal operator communication.
Manual, 8 1/2 x 11 inches, 20 pages, 6/78

GC21-5006

OS DATA MANAGEMENT SERVICES AND MACRO INSTRUCTIONS FOR IBM 1419/1275

This publication tells how to plan, write, and execute programs for the IBM 1419 Magnetic Ink Character Reader and the IBM 1275 Optical Character Reader under the MPT, MVT, VS1, and VS2 options of the operating system (OS). It is intended for system analysts, assembler language programmers, or other personnel who need information on how to use the 1419 or the 1275 under OS. The IBM 1419 and the IBM 1275 read, under control of a processing program, information transcribed on checks and other documents. They also sort these documents under program control.

This publication describes device characteristics (such as document processing times) that the user must consider and the routines he must write to use the 1419 and the 1275 under OS. This description includes data management macro instructions needed, storage requirements for IBM-supplied 1419/1275 support routines, JCL requirements, timing considerations for various OS options, and sample user-written routines.

DOS IBM 1288 BASIC UNFORMATTED READ SYSTEM: A DATA CAPTURE UTILITY PROGRAM, PROG. NO. 5736-UT1

This publication is a reference manual designed to assist you in implementing data entry applications using the IBM 1288 Optical Page Reader. The data must be printed or typed in either OSASCSOCR size A or ISOOCR-A size 1 font in the unformatted mode.

This manual describes the control and functions of 1288 Basic Unformatted Read System, which include:

- o Input and output
- o Error handling routines
- o Job control language

The program operates under the IBM System/360 Disk Operating System with either BATCH or Multiple Programming Support (MPS).

Manual, 36 pages
//////5736-UT1

SC21-5014

OS IBM 1288 BASIC UNFORMATTED READ SYSTEM: A DATA CAPTURE UTILITY PROGRAM, PROG. NO. 5734-UT3

This publication is a reference manual designed to assist you in implementing data entry applications using the IBM 1288 Optical Page Reader. The data must be printed or typed in either OSASCSOCR size A or ISO OCR size 1 font in the unformatted mode.

This manual describes the control and functions of the 1288 Basic Unformatted Read System, which include:

- o Input and output
- o Error handling routines
- o Job control language

The program operates under the IBM Operating System with:

- o MPT - multi-programming with a fixed number of tasks.
- o MVT - multi-programming with a variable number of tasks.
- o VS1 - virtual storage, 1.
- o VS2 - virtual storage, 2.

IBM DISK OPERATING SYSTEM RPG II AUTO REPORT FEATURE GENERAL INFORMATION MANUAL - PROGRAM NUMBER 5736-RG1

This manual introduces the function of the DOS RPG II Auto Report Feature for potential customer management, customer analysts, and for IBM personnel involved in marketing this feature.

Auto Report is a DOS RPG II program product feature. This feature extends the capabilities of the RPG II language and aids the RPG II user by reducing the programming effort required to code and debug his application programs.

This publication provides general descriptions of the four functions of the Auto Report Feature; discusses the compatibility and performance of Auto Report; and has an example showing an Auto Report job, from the coding needed

to produce a report, to the specifications generated by Auto Report for that job, and finally to the report produced as output. Prerequisite publications are:

- o Concepts and Facilities for DOS and TOS (GC24-5030)
 - o Introduction to RPG II (GC21-7514)
- General Information Manual, 15 pages
//////5736-RG1

SC21-5056

IBM DOS RPG II AUTO REPORT FEATURE - REFERENCE MANUAL PROGRAM NUMBER 5736-RG1

This manual contains three types of information about the RPG II Auto Report Feature:

1. Introductory and tutorial information on Auto Report for beginning users.
2. Reference information on Auto Report specifications for more experienced users.
3. Information on the internal operation of the Auto Report Feature for personnel with maintenance responsibility (replaces the program logic manual).

The Auto Report Feature is a program that operates prior to the RPG II compiler and that calls the compiler when it has finished processing. Auto Report generates complete RPG II source specifications for simple reports from simplified RPG II output specifications, standard RPG II specifications, and a special statement that copies previously catalogued specifications from a source library. Auto Report also provides for selection and sorting of input records prior to processing by the RPG II object program.

Readers of this manual must have some knowledge of RPG II.

IBM 3740 BTAM/TCAM PROGRAMMER'S GUIDE

The IBM BTAM/TCAM Programmer's Guide supplements the base access method and operating system manuals. This guide describes the access method facilities and macro instructions associated with writing an application program that defines, activates and controls a 3741 Model 2 Data Station, a 3741 Model 4 Programmable Work station, or a 3747 Data Converter with the Communications Adapter. The ETAM related information in this guide applies to these operating systems: DOS/360, DOS/370, DOS/VS, OS/360, OS/VS1, OS/VS2. The TCAM related information applies to: CS/360-370, OS/VS1, OS/VS2. This guide is for programmers who have a knowledge of teleprocessing, basic assembler, the access method and data management techniques.

OS AND OS/VS PROGRAMMING SUPPORT FOR THE IBM 3505 CARD READER AND IBM 3525 CARD PUNCH

This reference manual describes the OS and OS/VS support for the 3505 Card Reader and 3525 Card Punch and the optional features for both devices.

The manual is divided into three sections: 3505 Card Reader, 3525 Card Punch, and Appendixes.

Manual, 60 pages
370//30//3505,3525/

GC21-7514

INTRODUCTION TO RPG II REPORT WRITING

The purpose of this manual is to teach the report writing functions of the RPG II programming language. The manual is written not only for the person who has some previous knowledge of computer programming, but also for the person who knows little or nothing about data processing.

The first chapter is solely for the beginner. It contains basic information about computers and data processing. The remainder of the book explains the RPG II specifications and the RPG II specifications forms. Many job-related examples designed for a batch processing environment are used to show how the RPG II specifications apply to a real situation. The manual concludes with a sample job, which summarizes the duties of an RPG II programmer.

After completing this manual, the reader should be able

to use the various systems reference manuals to write basic RPG II programs.

DATA SECURITY THROUGH CRYPTOGRAPHY

Prevention of unauthorized physical and logical access to confidential information has been the traditional method of protecting the secrecy of computer data. Cryptography provides such protection in situations where the traditional method is not effective or possible.

Cryptography preserves the secrecy of computer data that could be accessed by the unauthorized by concealing the information using a process in which intelligible data is transformed into non-intelligible data. This manual describes the sale of cryptography in data security.
Manual, 8 1/2 x 11 inches, 40 pages, 10/77

OS/VS1 PLANNING AND USE GUIDE
 This publication contains planning information about OS/VS1, to assist installation personnel who are responsible for the selection and evaluation of an operating system.
 The use part of the Guide contains information on implementing, modifying, or extending capabilities of

VS1 control program.

The information in the Planning part is presented in two major categories: Concepts and Considerations. The Concepts section describes the facilities, features supported, and principles of operation of VS1. The Considerations section contains suggestions on how to make the most effective use of the system. The test is supplemented by illustrations showing a representative job input stream, the scheduling sequence of the system, and examples of possible partition configurations for various sized systems.

The information in the Use part of the Guide is presented in self-contained sections, each dealing with a separate capability or function of the control program.

The publication is intended for people who are familiar with the concepts and operation of the IBM System/360 Operating System. Prerequisite reading should include the IBM System/370 Advanced Operating System, System Summary, GA22-7001, and its associated Technical Newsletters.

The Use part of the publication is intended for system programmers responsible for maintaining and updating the VS1 system.

Manual, 400 pages

OS/VS1 RELEASE 1 GUIDE

This manual summarizes Operating System, Virtual Storage Option 1 (OS/VS1) release 1 System Control Programming (SCP) components. It is in three parts:

Part 1 is a functional summary of new and changed features of OS/VS1, including new and changed system parameters, system generation information, and publication support.

Part 2 contains a module directory, and list of modules in the system and their status.

Part 3 provides: ordering and distribution procedures for release 1, hardware engineering change levels, program material shipped with the system, and optional material available.

The publication provides installation managers, system programmers, and IBM field engineering personnel with information useful for planning and implementing release 1.

OS/VS1 DEBUGGING GUIDE

This publication is written for those involved in debugging application and system programs. It contains material on how to start debugging, a section on functional information (system concepts) to help the reader see the system as a whole and to give some particularly useful concepts, and a section on output formats and uses in the debugging situation. A series of appendices provide additional reference information for convenience.

Manual, 168 pages
//37//5741

GC24-5094

OS/VS1 STORAGE ESTIMATES

This publication is intended for two types of users: System programmers, and problem programmers. It contains instructions, formulas, and charts that can be used to estimate the real, virtual, and auxiliary storage requirements for VS1. Real storage is system (hardware) storage and corresponds to main storage in other IBM operating systems. Virtual storage is an addressing storage concept that provides the installation with as many as 16,777,216 bytes of storage accessible to programs. Auxiliary storage is comprised of the input/output devices required to contain virtual storage, system residence libraries, job queues, spooled data sets, and work space required by control and processing programs.

Each type of user can use this publication differently.

o System programmers can use this publication to determine the amount of real, virtual and auxiliary storage that must be allocated during system generation or Initial Program Load.

o Problem programmers can use this publication to determine the sizes of partitions in virtual storage.

Manual, 240 pages, 7/75

DOS AND DOS/VS TO OS/VS1 IMPLEMENTATION GUIDE

Provides reference information on altering DCS and DOS/VS programs and files to be compatible with the OS/VS1 system control program. It describes the similarities and differences between DOS and OS/VS1, thus helping programmers to:

o Modify existing DCS and DOS/VS programs and files only where needed, and
o Take advantage of OS/VS1 facilities not provided in DCS and DOS/VS

This manual includes many examples of equivalent DOS and DOS/VS and OS/VS1 coding. It also describes the use of the DOS emulator to effect a gradual transition from DOS to OS/VS1. The major topics in the manual are:

o System Generation
o Resource Allocation
o Performance Considerations
o Jcb Entry Subsystem (JES)
o Linkage Editor
o System Assembler
o Job Control Language
o Data Sets (Files)
o Data Management Macros
o Utilities
o Service Aids
o Telecommunications
o Emulation

The intended audience is system and application programmers in a DOS or DCS/VS installation making the transition to the OS/VS1 system control program. Readers should be familiar with DOS or DCS/VS its system facilities, and the DOS or DOS/VS versions of the compilers or assemblers used in the programs to be changed.

Prerequisite publications:

OS/VS1 JCL REFERENCE

This publication defines the facilities provided with the job control language and contains the information necessary to code job control language statements. It is intended for use by programmers who understand the concepts of job management and data management. Prerequisite publication:

OS/VS1 JCL Services, GC24-5100

Manual, 244 pages
//36//5741

GC24-5100

OS/VS1 JCL SERVICES

This publication describes the operating system services that can be requested by coding JCL (job control language) parameters. It is written for applications programmers with a basic knowledge of computer operating systems and some familiarity with JCL. Part 1 contains a brief overview of the nine JCL statements and an introduction to the organization of the services in the book. Part 2, which describes the use of JCL services, is divided into five sections: running your job; defining and describing data sets; special data sets; obtaining output; cataloged and in-stream procedures.

Not every service provided by JCL is described in the book. Included is a list of JCL services, showing the publication in which each is described, and the parameter, subparameter, or statement used to request it. JCL

parameters are discussed only in the context of requesting services. Complete parameter descriptions and syntax rules are in the Companion book. OS/VS1 JCL Reference, GC24-5099. Manual, 130 pages

GC24-5103

OS/VS1 SUPERVISOR SERVICES AND MACRO INSTRUCTIONS
This book describes how to use the services of the OS/VS1 supervisor, the macro instructions used to request these services, and the linkage conventions used by the control program to provide these services.

It is primarily intended for programmers making use of assembler language.

Use of the book requires a basic knowledge of the operating system and of OS/VS assembler language.

Manual, 240 pages

GC24-5104

OS/VS1 MASTER INDEX OF SL PUBLICATIONS
The Master Index is a consolidation of the indexes of the system library publications of OS/VS1.
Items are listed alphabetically and refer to the manual that contains the original index entry. By going to the referenced manual's index, the page number of the item can be found.

This manual is also available in microfiche, order number GCB4-5104-1.
Manual, 464 pages (5/75)
//20//5741

GC24-5109

OS/VS DISKETTE COPY PROGRAMMING SUPPORT REFERENCE MANUAL, SCP 5744-BJ1,5744-BL1

This publication provides programming and operator information necessary for the installation and use of the OS/VS Diskette Copy Programming Support.

Manual, 20 pages
//30//5744-BJ1,5744-BL1

GC24-5110

OS/VS1 IBM 3540 PROGRAMMER'S REFERENCE

This manual contains information concerning the OS/VS1 support of the IBM 3540. Reader procedures, writer procedures, and the Diskette Maintenance utility are documented. It is primarily written for application programmers and system programmers, but contains information of interest to operators and installation management.

Manual, 35 pages
//30//3540/5741

GC24-5111

OS/VS2 IBM 3540 PROGRAMMER'S REFERENCE

This manual contains information concerning the OS/VS2 support of the IBM 3540. Reader procedures, writer procedures, reader/writer utilities, and the Diskette Maintenance Utility are documented. It is primarily written for application programmers and system programmers, but contains information of interest to operators and installation management.

Manual, 35 pages
//30//3540/5752

GC24-5115

OS/VS1 SYSTEM MANAGEMENT FACILITIES (SMF)

This publication assists installation managers and system programmers in planning for, installing, and using System Management Facilities (SMF). SMF collects and records accounting, data set, subsystem, system and volume information. It also has exits that can link to user-written routines for monitoring a job or job step.

This publication describes the basic SMF functions and the relationship of SMF to the operating system and to user-written exit routines. It also explains:

- How to include SMF and user-written exit routines in the operating system.
- The additional storage required by SMF.
- How to switch and dump the SMF data sets.
- How to plan, write and test exit routines.
- When each SMF record is written and the information contained in each record.

GC24-5116

OS/VS1 RELEASE 6 GUIDE

Describes the ordering and distribution procedures, special considerations, and change activity of Release 6 of the OS/VS1 SCP (Operating System/Virtual Storage Option 1 System Control Program). It provides installation managers, system programmers, and IBM Field Engineering personnel with information useful in planning for, and implementing this release.

The three chapters of this publication contain:

1. A functional summary of features available and devices supported in this release and special considerations for generating and running this release.
2. Ordering and distribution procedures for this release, including program material shipped with the system and optional material available.
3. A summary of change activity to the system, including APARs, PTFs resolved, engineering change levels, and publications.

Manual, 44 pgs, 11/76

GC24-5122

VECTOR PROCESSING SUBSYSTEM (VPBS) PLANNING GUIDE FOR OS/VS1 AND OS/VS2 MVS

This planning guide is for data processing managers, system programmers, and application programmers. It briefly describes the IBM 3838 Array Processor and describes in general terms the programming support provided under OS/VS1 and OS/VS2 MVS. The book is for planning only. The functions and capabilities described reflect current information.

Manual, 8 1/2 x 11 inches, 40 pgs, 2/77
//30//3838/

GC24-5123

OS/VS2 MVS VECTOR PROCESSING SUBSYSTEM RELEASE GUIDE

This publication is for use by anyone involved in the planning for or ordering of OS/VS2 MVS support for the IBM 3838 Array Processor. The manual contains an overview of the product, ordering information, and a list of supporting publications.

Manual, 8 1/2 x 11 inches, 12 pgs, 7/77
//30//3838/5752

GC24-5124

OS/VS2 MVS VECTOR PROCESSING SUBSYSTEM INSTALLATION AND OPERATION GUIDE

This publication is for use by IBM or customer planning and operation personnel. It describes system requirements, system generation, system initialization, monitor commands,

and monitor messages.

Manual, 8 1/2 x 11 inches, 60 pages, 7/77
 //30//3838/5752

GC24-5125

OS/VS1 AND OS/VS2 MVS VECTOR PROCESSING SUBSYSTEM PROGRAMMER'S GUIDE

The primary users of this publication are system programmers and application programmers. It contains a Vector Processing Subsystem overview, and describes how VPSS and the 3838 relate to OS/VS1 or OS/VS2 MVS. It describes VPSS subroutines, 3838 data formats, how to handle error conditions, and each of the 3838 algorithms.

Manual, 8 1/2 x 11 inches, 150 pages, 7/77
 //30//3838/5741,5752

GC24-5126

OS/VS1 VECTOR PROCESSING SUBSYSTEM INSTALLATION AND OPERATION GUIDE, SUID 5741-606

This publication is for use by IBM or customer planning and operation personnel. It describes system requirements, system generation, system initialization, monitor commands, and monitor messages.

Manual, 8 1/2 x 11 inches, 60 pgs, 9/77

DOS/VSE MACRO USER'S GUIDE

This guide is for programmers intending to use the DCS/VS Input/Output Control System (IOCS) and the system control program macros. Chapters on file organization and concepts of access methods precede and provide background for discussions on the use of LIOCS macros to process files stored on DASD, diskette, magnetic tape, and unit record media. Device-independent system files and file processing by means of Physical IOCS (PIOCS) are also discussed. The use of the appropriate macros to obtain system control program (supervisor) functions are discussed for, among others, virtual storage control, program communications, multi-tasking, and program checkpointing.

Manual, 8 1/2 x 11 inches, 264 pages, 2/79
 Prerequisite publication: DOS/VSE Data Management Concepts.
 //30//5745-020

GC24-5140

DOS/VSE MACRO REFERENCE

This manual provides quick reference to data management and system control macro information for experienced programmers. For the most part, restrictions and programming details have been omitted in order to provide rapid access to the information in the book.

Included are sections containing descriptions of the IOCS declarative and imperative macros and the system control ("supervisor") macros. Within each section, the macros are arranged alphabetically for easy reference. Preceding these sections is a list of all the macros in the book, showing the operands valid for each one and serving as an index for the descriptions that follow.

Prerequisite publication: DOS/VSE Macro User's Guide.
 Manual, 8 1/2 x 11 inches, 160 pages, 2/78
 //30//5745-020

OS ASSEMBLER B MESSAGES, PROG. NO. 5734-AS1
This book describes the assembly error diagnostic messages and the abnormal assembly termination messages issued by Assembler B. Assembler B is an assembler-language processor for the IEM System/360 Operating System. It performs high-speed assemblies on an IBM System/360 Model 40 or higher with at least 256K bytes of main storage. This book is intended for all Assembler B Programmers. It should be used in conjunction with the OPERATING SYSTEM ASSEMBLER LANGUAGE MANUAL, Order Number GC28-6514; the ASSEMBLER B LANGUAGE SPECIFICATIONS, Order Number GC26-3771; and the ASSEMBLER B PROGRAMMER'S GUIDE, Order Number SC26-3759. For each error message, this book describes the number and text of the message, the explanation of the error, the assembler's handling of the error, and the programmer's response to correct the error. The introduction to this book describes the format, content, and placement of the error messages.

OS TSO ASSEMBLER PROMPTER USER'S GUIDE, PROG. NO. 5734-CP2
The assembler prompter is a program product that makes it easy to call Assembler B from a terminal. The prompter, which is a command processor, operates only under the Time Sharing Option (TSO) of the IBM System/360 Operating System. This book is for the assembler-language programmer who wants to use TSO to write, assemble, and execute programs from a terminal using the assembler prompter. Section 1, which supplements the manual IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION TERMINAL USER'S GUIDE (GC28-6763), explains how to use the ASM command by itself to assemble source code and obtain object code for existing source code. It also explains how to use ASM as an operand of the RUN command and of the RUN subcommand of the EDIT command to assemble, load, and execute assembler-language source code. Section 2, which supplements the book IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION COMMAND LANGUAGE REFERENCE (GC28-6732), describes the format of the ASM command and lists the operands, with a brief description of each, in alphabetic order.

GC26-3791

OS/VS1 SYSTEM GENERATION REFERENCE
This publication provides the information for generating an OS/VS1 System Control Program adapted to both the machine configuration and data processing requirements of an installation. It is intended for people who plan and select components for an OS/VS1 System Control Program and install it. This publication contains the information necessary to:

- o Plan the OS/VS1 System Control Program
- o Prepare for the generation of an OS/VS1 System

Control Program

- o Execute system generation
- o Test the system that has been generated
- o Restart system generation

In addition, this publication contains:

- o Guidelines for performing a system generation using a starter system
- o Examples of a complete, nucleus, and I/O device generation
- o The types of system generation messages produced

In using this publication, a knowledge of the information contained in the following publications is required:

- OS/VS1 Planning and Use Guide, GC24-5090
- IBM System/360 System Summary, GA22-7001
- OS/VS1 Storage Estimates, GC24-5094.

Manual, 242 pages
//34///5741

GC26-3792

OS/VS2 SYSTEM GENERATION REFERENCE

This publication is intended for system programmers who are to plan for and install an OS/VS2 system control program and a JES2 job entry subsystem.

This publication contains the information necessary to:

- o Plan for an OS/VS2 system control program and a JES2 job entry subsystem
- o Prepare for system generation and JES2 generation
- o Perform a system generation and a JES2 generation
- o Restart system generation if errors occur
- o Test the newly installed OS/VS2 system control program

In addition, this publication contains:

- o Guidelines for performing a system generation using a starter system
- o The information needed to generate JES2 multi-leaving remote terminal processor programs for job entry from remote terminals
- o Examples of parameter specifications for a complete system generation, on I/O device generation, and a JES2 generation
- o The types of system generation and JES2 generation messages produced during processing

In using this publication, a knowledge of the information contained in the following publications is required:

- Introduction to OS/VS2 Release 2, GC28-0661
- OS/VS2 Planning Guide for Release 2, GC28-0667
- OS/VS2 Release 2 Guide, GC28-0671

Manual, 250 pages

GC26-3795

OS/VS TAPE LABELS

This publication describes how VS processes magnetic tape volumes with IBM standard labels, American National Standard labels, nonstandard labels, or no labels. Included for the guidance of programmers and operations analysts are discussions of:

- o Label formats and contents
- o Tape volume layouts
- o Label processing for input, output, multiple data set, and multiple volume conditions
- o Tape characteristics
- o Nonstandard label processing routines and volume label editor routines
- o Component considerations
- o Using tape volumes created by other systems
- o External labels

Manual, 140 pages
//30///5741

GC26-3813

OS/VS LINKAGE EDITOR AND LOADER

This publication provides the information necessary to use the linkage editor or loader program to prepare the output of a language translator for execution. The intended audience is a customer applications programmer coding in a higher-level language or a system programmer responsible for installing and maintaining the system. An introductory knowledge of the concepts and facilities of OS/VS is required to use this reference guide effectively.

The linkage editor combines and edits modules to produce a single module that can be brought into real storage by program fetch for execution. It operates as a processing program rather than as part of the control program. The linkage editor provides several processing facilities that are either performed automatically or invoked in response to control statements prepared by the programmer.

The loader combines the basic editing and loading functions of the linkage editor and program fetch in one job step. It is designed for high-performance loading of modules that do not require the special processing facilities of the linkage editor and fetch, such as overlay. The loader does not produce load modules for program libraries.

Manual, 195 pages

GC26-3819

OS/VS VIRTUAL STORAGE ACCESS METHOD (VSAM) CPTIONS FOR ADVANCED APPLICATIONS

This publication is intended for system programmers who develop utility programs and system control programs using OS/VS VSAM.

VSAM is an access method for use with direct-access storage devices. It provides macros for gaining access to data. Its companion service program, Access Method Services, provides commands for working with data sets and catalogs.

This publication explains options of OS/VS VSAM for advanced applications in system programming. It tells how to gain access to the contents of a control interval instead of to individual data records; how to process the records of a VSAM index; and how to build the parameter lists of the GENCB, MODCB, SHOWCB, and TESTCB macros.

Prerequisite publication: OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838.
Manual, 30 pages
//30///5741

GC26-3829

INTRODUCING THE IBM 3800 PRINTING SUBSYSTEM AND ITS PROGRAMMING

The IBM 3800 Printing Subsystem is a non-impact, high-speed, general-purpose system printer that uses an electrophotographic process to print on single-ply computer output paper. This book briefly introduces the 3800 and its programming support. The intended audience is data processing installation managers and system analysts planning for the 3800, and others seeking an introduction to it.

New Functions available with the 3800 include:

- Printing with any two (or any four if optional character generation storage is added) of 20 different character sets intermixed for the same data set, and the ability to change these character sets between data sets without operator intervention. Character sets are available in 10, 12, and 15 pitch.
- Printing with a vertical line spacing of 6, 8, or 12 lines per inch, or an intermix of these on the same page.
- Multiple copies can be printed on single-ply paper under program control.
- Forms overlay permits printing of specialized forms as data is being printed.
- Copy modification permits changing or suppressing printing of selected data from copy to copy when multiple copies are being printed.
- Graphic character modification allows the substitution or extension of graphic characters in an already-defined character set.

Manual, 40 pages

GC26-3830

OS/VS2 SYSTEM PROGRAMMING LIBRARY: DATA MANAGEMENT

This book provides information on how to modify and extend the data management capabilities of the OS/VS2 system control program; the intended audience is system programmers.

Some topics included are:

- o Using catalog management macro instructions
 - o Maintaining the volume table of contents
 - o Executing your own channel programs
 - o Using XDAP to read from and write to direct-access devices
 - o Password protecting your data sets
- example, access method services, job control language, utility programs, access method routines) to do each of the example, access-method services, job control language, utility programs, access-method routines) to do each of the preceding. The information presented in this book (consisting of macro specifications and how to information) is intended to allow a flexible use of the data management capabilities of OS/VS2.

Other topics presented are:

- o Using system macro instructions to refer to, validate, and modify system control blocks
- o Adding to the image library and retrieving FCB images

Readers are expected to understand how to:

- o Code programs in assembler language as described in OS/VS and DOS/VS Assembler Language, GC33-4010
 - o Use the standard linkage conventions as described in OS/VS2 Supervisor Services and Macro Instructions, GC28-0683.
 - o Maintain the Catalog and VIOC as described in OS/VS Access Method Services, GC26-3836, OS/VS Utilities, GC35-0005, and OS/VS Data Management Services Guide, GC26-3783.
 - o Use the access method to do input/output using the data management macros as described in OS/VS Data Management Services Guide, GC26-3783, and OS/VS Data Management Macro Instructions, GC26-3793.
 - o Protect data sets as described under "IEBPROGM" in OS/VS Utilities, GC35-0005.
- The dash-3 level includes support for SUs 8, 10, 18, 30, 32, 60.
Manual, 116 pages

GC26-3835

OS/VS VIRTUAL STORAGE ACCESS METHOD (VSAM) SYSTEM INFORMATION

This publication provides information on the release of OS/VS Virtual Storage Access Method (VSAM) as an independent component of OS/VS1, Release 2, and OS/VS2, Release 1.6. This publication describes the OS/VS VSAM distribution tape, provides detailed information on the installation of OS/VS VSAM, and provides information that temporarily supplements other OS/VS publications.

This publication is directed to system programmers who are responsible for installing and maintaining OS/VS VSAM and to application programmers who are using OS/VS VSAM.

The following publications are required for use with this publication:

- o OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3818, which provides a complete description of the macro instructions used to code a program to process a VSAM data set.
- o OS/VS Access Method Services, GC35-0009, which provides a complete description of commands used to define, delete, load, and alter a VSAM data set.

Manual, 120 pages

GC26-3837

OS/VS1 DATA MANAGEMENT FOR SYSTEM PROGRAMMERS

Provides information on how to modify and extend the data management capabilities of the OS/VS1 system control program; the intended audience is system programmers. Some topics included are:

- o Maintaining the system catalog
- o Maintaining the Volume Table of Contents
- o Executing Your Own Channel Programs
- o Using XDAP to Read from and Write to Direct-Access Devices
- o Password Protecting Your Data Sets

The OS/VS1 system control program provides simpler ways (for example, job control language, utility programs, access method routines) to do each of the preceding. The information presented in this book (consisting of macro specifications and how-to information) is intended to provide greater flexibility of implementation methods. Other topics presented are:

- o Using system macro instructions to refer to, validate, and modify system control blocks
- o Adding a UCS image or FCB image to the system image library

This book makes reference to the DEB validity checking (DEBCHK) macro instruction and the authorized program. Readers are expected to understand how to:

- o Code programs in assembler language as described in OS/VS and DOS/VS Assembler Language, GC33-4010
- o Use the standard linkage conventions as described in OS/VS1 Supervisor Services and Macro Instructions, GC24-5103.
- o Maintain the catalog and VTOC as described in OS/VS1 JCL Services, GC24-5100, OS/VS Utilities

GC35-0005 and OS/VS Data Management Services Guide, GC26-3783.

- o Use the access method to do input/output using the data management macros as described in OS/VS Data Management Services Guide, GC26-3783 and OS/VS Data Management Macro Instructions, GC26-3793.
- o Protect data sets as described under "IEHPRGM" in OS/VS Utilities, GC35-0005.

OS/VS VIRTUAL STORAGE ACCESS METHOD (VSAM) PROGRAMMER'S GUIDE

This publication is intended for system and application programmers who use OS/VS VSAM with assembler language. It is also intended for higher level language programmers who want to convert indexed-sequential data sets to VSAM's format and to use ISAM interface.

VSAM is an access method for use with direct-access storage devices. It provides macros for gaining access to data. Its companion service program, Access Method Services, provides commands for working with data sets and catalogs.

This publication introduces programmers to OS/VS VSAM, guides them in using it, and serves as a reference. It tells how to code programs to gain access to data stored in VSAM format. Prerequisite publications:

- OS/VS Data Management Services Guide, GC26-3783
- OS/VS1 JCL Reference, GC24-5099
- OS/VS2 JCL, GC28-0692

OS/VS1 ACCESS METHOD SERVICES

This publication is intended for system and application programmers who want to establish and maintain VSAM data sets using OS/VS1 Access Method Services

Access Method Services is a multifunction service program that allows you to define data sets, alternate indexes, and catalogs, to alter or delete catalog entries, to copy and print data sets, to make a data set or catalog portable

183

between systems, and to provide for catalog recovery.

This publication introduces programmers to Access Method Services, guides them in using it, and serves as a reference. It also provides the background information about VSAM that is required to make effective use of Access Method Services. It tells how to code Access Method Services commands to establish and maintain data sets. It also provides general information about how to optimize VSAM's performance and how to use VSAM's security and integrity features through the values specified in Access Method Services commands.

Prerequisite publications:

- OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838
- OS/VS Data Management Services Guide, GC26-3783
- OS/VS1 JCL Reference, GC24-5099

GC26-3841

OS/VS2 ACCESS METHOD SERVICES

This publication applies to release 3 and is intended for system and application programmers who want to establish and maintain VSAM data sets using Access Method Services. Access Method Services is a System/370 OS/VS2 MVS multifunction service program that allows you to define data sets and catalogs to list catalogs, to alter or delete catalog entries, to copy and print data sets, to load and reload catalogs for backup, to make a data set or catalog portable between systems, to convert OS catalog entries into entries in an existing VSAM catalog in an OS/VS2 system, and to list tape volumes that were mounted at the time of a checkpoint.

This publication introduces programmers to Access Method Services, guides them in using it and serves as a reference. It also provides the background information about VSAM that is required to make effective use of Access Method Services. It tells how to code Access Method Services commands to establish and maintain data sets. It also provides general information about how to optimize VSAM's performance and how to use VSAM's security and integrity features through the values specified in Access Method Services commands.

Prerequisite publications:

- OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838
- OS/VS Data Management Services Guide, GC26-3783
- OS/VS2 JCL, GC28-0692
- OS/VS2 System programming Library: System Generation Reference, GC26-3792

PLANNING FOR ENHANCED VSAM UNDER OS/VS

VSAM (Virtual Storage Access Method) is an access method of OS/VS (Operating System/Virtual Storage). This book enables prospective users to prepare for VSAM and describes for current users the enhanced functions and capabilities that improve VSAM's performance and make it a more versatile access method for a wider range of applications.

The intended audience is data processing managers whose decisions will influence the use of VSAM, system and application programmers who will use VSAM in new and existing programs, and others seeking an introduction to VSAM.

The reader is expected to be familiar with basic concepts such as access method, direct access storage, and the distinctions between data set organization and data set processing. Appropriate sections of OS/VS Data Management Services Guide, GC26-3783, are suitable for preparatory reading.

Manual, 100 pages
//30//5752,5741

GC26-3845

OS/VS2 ENHANCED VSAM SYSTEM INFORMATION OS/VS2 ENHANCED VSAM ICR

This publication provides information on the release of OS/VS2 Enhanced Virtual Storage Access Method (VSAM) as an independent component release of OS/VS2, Release 3; the publication does not apply to VSAM support that is integral to Release 3.

This publication describes the OS/VS2 Enhanced VSAM distribution tape, provides detailed information on the installation of OS/VS2 Enhanced VSAM, and provides information that temporarily supplements other OS/VS publications.

This publication is directed to system programmers who are responsible for installing and maintaining OS/VS2 Enhanced VSAM and to application programmers who are using OS/VS2 Enhanced VSAM.

The following publications are required for use with this publication:

- o OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838, which provides a complete description of the macro instructions used to code a program and to process an Enhanced VSAM data set.
- o OS/VS2 Independent Component: Access Method Services, GC26-3843, which provides a complete description of commands used to define, delete, load, and alter an Enhanced VSAM data sets.

This publication supplements the information in:

- o OS/VS System Programming Library: Storage Estimates, GC28-0604.
- o OS/VS System Management Facilities (SMP), GC35-0004 Manual, 80 pages

APL LANGUAGE REFERENCE MANUAL

This publication is a language reference for users of the APL language. The systems under which the APL language is provided are VS APL (program Number 5748-AP1), APL Shared Variables (APLSV) Version 3, PRPQ MG6282 (Program Number 5799-AQC), and the IBM 5100 Portable Computer, Models A and C. APL is an interactive, general-purpose programming language designed for use in many disciplines and applications. Differences among the APL systems served by this manual, such as reading and writing data sets and using the auxiliary processors provided with each system, are provided in APL Shared Variables (APLSV) Version 3 User's Guide, SH20-9087, VS APL for CMS: Terminal User's Guide, SH20-9067, IBM 5100 APL Reference Manual, SA21-9213, and VS APL for VSPC: Terminal User's Guide, SH20-9066.

OS/VS AND DOS/VSE ANALYSIS PROGRAM-1 (AP-1) USER'S GUIDE

This publication is intended for operators whose systems include the IBM 3344 or IBM 3350 Direct-Access Storage. The material introduces operators and programmers to Analysis Program-1 (AP-1), its operating procedures, and its output. The material is presented in general terms and assumes that the reader knows how to operate his computer system.

AP-1 is a utility program for use with the 3344 and 3350. AP-1 examines the drive and the user's data to determine if there are errors. When AP-1 detects an error, it prints a message to the operator and prints diagnostic information on the system's printer.

OS/VS2 SVS INDEPENDENT COMPONENT: IBM 3350 & 3340/3344 REFERENCE

This book describes the OS/VS Release 1.7 SVS Independent Component Release (ICR) to support the IBM 3350 and 3340/3344 Direct Access Storage (Program number 5742-017). It is published instead of a series of Technical Newsletters (TNLS) to the OS/VS2 SVS library. The book will help system programmers install the ICR, convert data for use with the 3350 or 3340/3344, initialize volumes for storing data on these devices, and code and debug programs that process data stored on these devices. It also includes information to help an operator run an SVS system that includes this ICR.

Required publications are: Reference Manual for IBM 3350 Direct Access Storage, GA26-1638, Reference Manual for IBM 3340/3344 Disk Storage, GA26-1619, 3340/3344 Installation and Conversion Guide, GC20-1780, and OS/VS System Modification Program (SMP), GC28-0673.

OS/VS1 DATA MANAGEMENT MACRO INSTRUCTIONS

This publication contains descriptions and definitions for the data management macro instructions, other than those of VSAM (virtual storage access method), available in the assembler language. It provides application and system programmers with the necessary information to code the macro instructions.

- This publication is divided into these parts:
- o "Introduction," which contains a general description of macro instructions, the rules to be followed when macro instructions are coded, and a description of the notational conventions used throughout the publication.
 - o "Macro Instruction Descriptions," which describes the function of each macro instruction and defines how each macro instruction is to be coded.
 - o Appendix A: Status Information Following an Input/Output Operation.
 - o Appendix B: Data Management Macro Instructions Available by Access Method.
 - o Appendix C: Device Capacities.
 - o Appendix D: DCB Exit List Format and Contents.
 - o Appendix E: Control Characters.
 - o Appendix F: Data Control Block Symbolic Field Names.
 - o Appendix G: Event Control Block.
 - o Appendix H: PDABD Symbolic Field Names.
 - o Index, which provides topic references to information in this book.

Prerequisite Publications

Before coding data management macro instructions, you should be familiar with the information in the following publications:

- o OS/VS-DOS/VS-VM/370 Assembler Language, GC33-4010
- o OS/VS1 Data Management Services Guide, GC26-3874
- o OS/VS1 Supervisor Services and Macro Instructions, GC24-5103

Manual, 240 pages, 8/76
//30///5741

GC26-3873

OS/VS2 MVS DATA MANAGEMENT MACRO INSTRUCTIONS

This publication is intended for application programmers who write programs in assembler language. It contains a brief description of each macro instruction and a description of each operand that can be specified in each macro instruction for the following data management access methods:

- o Basic direct access method (BDAM)
- o Basic indexed sequential access method (BISAM)
- o Basic partitioned access method (BPAM)
- o Basic sequential access method (BSAM)
- o Queued indexed sequential access method (QISAM)
- o Queued sequential access method (QSAM)

This publication does not describe macro instructions for specialized application programs such as teleprocessing, graphics, magnetic readers, Time Sharing Option (TSO), or VSAM.

These Macro instructions are discussed in separate publications that are listed in the IBM System/370 Bibliography, GC20-0001.

Before using this publication to code macro instructions, you should be familiar with the information in OS/VS and DOS/VS Assembler Language, GC33-4010, and OS/VS2 MVS Data Management Services Guide, GC26-3875.

Manual, 240 pgs, 11/76

GC26-3874

OS/VS1 DATA MANAGEMENT SERVICES GUIDE

This book describes the services provided by the operating system that allow the programmer to organize data into data sets on auxiliary storage devices, to read information from these data sets into virtual storage, and, after processing the information, to record it on auxiliary storage devices.

This book is intended for application programmers who write assembler language programs that create and process data sets. It describes the assembler language macro instructions used to request input and output operations. The format of the macro instructions is explained in OS/VS1 Data Management Macro Instructions, GC26-3872, which should be used with this book.

In addition to describing the characteristics of data sets and direct-access storage devices, the book describes the techniques you can use to process sequential, partitioned, indexed sequential, and direct data sets. This book assumes that you have a basic knowledge of the operating system and of the assembler language. Some books that contain information about these subjects are OS/VS1 Planning and Use Guide, GC24-5090, IBM System/370 System Summary, GA22-7001. It also assumes that you are familiar with job control language, especially the DD statement, as described in OS/VS1 JCL Services, GC24-5100, and in OS/VS1 JCL Reference, GC24-5099.

This book does not discuss macro instructions used for the time sharing option or for graphics, teleprocessing, optical character readers, optical reader-scanners, magnetic character readers, or VSAM. These macro instructions are discussed in separate publications that are listed in the IBM System/370 Bibliography, GC20-0001.

GC26-3875

OS/VS2 MVS DATA MANAGEMENT SERVICES GUIDE

This publication describes how to write assembler-language programs that will create and process data sets.

- o To use this book, you must have a basic knowledge of: OS/VS2, described in OS/VS2 Planning and Use Guide for Release 2, GC28-0667.
- o Assembler Language, as described in OS/VS and DOS/VS Assembler Language, GC33-4010.
- o Job control language (JCL), as explained in OS/VS2 JCL, GC28-0692.

GC26-3876

OS/VS1 CHECKPOINT/RESTART

This publication describes Checkpoint/Restart, a technique for recording information about a job at programmer-designated checkpoints so that, if necessary, the job can be restarted at the beginning of a step or at a checkpoint within a step. It is intended for use by programmers and system analysts.

A general understanding of job control language and data management is prerequisite knowledge for understanding the information in this publication.

OS/VS ACCESS METHOD SERVICES CRYPTOGRAPHIC OPTION, LIC PROG 5740-AM8
This book describes the Access Method Services Cryptographic Option, a program product which enables a user to protect his offline data. This option is invoked by users of the Access Method Services REPRO command, which has been extended so that data can be copied to yield a data set whose contents are unintelligible. Another function of REPRO converts the data back to an intelligible form. The REPRO command uses the Programmed Cryptographic Facility program product, 5740-XY5.

The book is intended for installation managers and system programmers who are responsible for the software data security of their installations. It is assumed the reader is familiar with Access Method Services, its command language format, notational conventions, JCL requirements, etc. This information is contained in OS/VS1 Access Method Services, GC26-3840, and OS/VS2 Access Method Services, GC26-3841.

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) LIC PROG 5746-RC3, 5735-RC2, GENERAL INFORMATION: INTRODUCTION
 ACF/VTAM is a teleprocessing access method, based on VTAM, that permits communication between application programs and terminals within a single domain network and between domains in a multiple domain network.
 This publication provides an overview of ACF/VTAM Release 2, facilities, hardware and software requirements, and other information needed to evaluate the applicability of this licensed program to an installation.

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), LIC PROG 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS), GENERAL INFORMATION: CONCEPTS
 ACF/VTAM is a teleprocessing access method, based on VTAM, that permits communication between application programs and terminals within a single domain network and between domains of a multiple domain network.
 This publication provides an introduction to ACF/VTAM Release 2. It describes its facilities and provides an

overview of the major tasks involved in using ACF/VTAM (installation, operation, programming, and problem determination). It is intended for data processing managers and system programmers who may install or maintain a data communication system that uses ACF/VTAM. A more general description of ACF/VTAM facilities and requirements can be found in ACF/VTAM General Information: Introduction GC27-0462.
Manual, 8 1/2 x 11 inches, 270 pages, 9/78

SC27-0464

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) RELEASE 2, LIC PROG 5746-RC3, INSTALLATION
Provides the necessary information for defining an ACF/VTAM network in a DOS/VSE system. It describes the interfaces that must be created between the user's ACF/VTAM application program and the ACF/VTAM network. It also describes how the ACF/VTAM network can be modified to better serve the needs of the user.
This publication is intended for system programmers who are primarily concerned with system generation and ACF/VTAM network definition.
Prerequisite Publication: ACF/VTAM General Information: Concepts, GC27-0463; Corequisite Publication: ACF/VTAM Pre-Installation Planning, SC27-0465.
Manual, 8 1/2 x 11 inches, 300 pages, 4/79
/////5746-RC3

SC27-0466

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) RELEASE 2, LIC PROG 5735-RC2, 5746-RC3, OPERATION
This publication is a reference manual for system operators who run an ACF/VTAM network, either in OS/VS or in DOS/VSE. It is also a guide for system programmers who must supply operators with detailed procedures needed to run an ACF/VTAM network.
The publication provides an introduction to operating ACF/VTAM (Chapter 1), describes the fundamentals of ACF/VTAM command, and messages (Chapter 2), and explains the command usage in performing particular operations (Chapter 3-7). Appendix E summarizes the commands.
Manual, 8 1/2 x 11 inches, 150 pages, 4/79

SC27-0467

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) RELEASE 2 MESSAGES AND CODES, LIC PROG 5746-RC3
This publication is a reference manual containing the ACF/VTAM messages which DOS/VSE issues for operators and programmers. The book explains why a message was issued, what action DOS/VSE takes, and what action the programmer and operator should take. Messages are listed in alphanumeric order. Also included are TOLTEP messages and terminal user and network operator messages. The appendixes explain VSAM return and reason codes, resource status codes, ACF/VTAM function and cancel codes, and command types which appear in some of the messages.

7074 OS EMULATOR ON SYSTEM/370 REFERENCE, PROG. NOS. 360C-EU-739, 741 (OS); 5744-AJ1, AK1 (VSL, VS2)
This publication provides information about the IBM 7074 Emulator Program for the IBM System/370 Models 155, 158, 165, and 168. The emulator program is executed as a problem program under control of the MFT, MVT, VS1, or VS2 versions of the operating system. The System/370 Models 155, 158, and 165 must be equipped with the IBM 7074 Compatibility Feature #7117; the Model 168 must be equipped with the Compatibility Feature #7127. Using one of these features, the System/370 can execute programs written on the IBM 7074 Data Processing System. These 7074 programs can be run with little or no reprogramming, mixed with IBM System/360 and System/370 jobs.

Information on machine requirements, considerations for emulation, data formats, generating and executing the program, and communicating with the emulator program is included. For a thorough understanding of this publication, a basic knowledge of IBM System/370, of the operating system, and of the system to be emulated is required.

The information in this publication is intended for those responsible for emulating the IBM 7074 Data Processing System.

7080 OS EMULATOR ON MODELS 165/168: REFERENCE, PROG. NOS. 360C-EU-737 (MFT/MVT), 5744-ALI (VS1/VS2)
This publication describes the IBM 7080 Emulator Program, an "integrated emulator program" for IBM System/370 Models 165 and 168. The program executes under the MFT, MVT, VS1, or VS2 configuration of the operating system.
The publication contains the information needed to plan for and use the emulator program. The system planner can find information on planning the hardware configuration and generating the emulator. An applications programmer can find information on how the emulator program executes 7080 programs and handles 7080 data. The console operator can find information on emulator commands and messages for

communicating with the emulator program.

VIDEO/370 USERS GUIDE - PROGRAM PRODUCTS 5734-RC5, 5736-RC3
VIDEO/370 is a computer program that is used to enter information to a computer system and to check the accuracy of that information. This book is intended for the operator who will use the IBM 3277 or 3275 display station as a part of VIDEO/370. Experience with conventional keypunch equipment is helpful but not required. Before using this book, you should be familiar with the basic operation of the display station, as described in Operator's Guide for the IBM 3270 Information Display System, GA22-2742. CICS users may also find helpful the CICS Terminal Operator's Guide, SB20-1044.

This book contains three types of information:

1. General background information
2. Tutorial (how to do it) information
3. Reference information

Manual, 122 pages, 5/75

GC27-6957

DOS/VS VTAM SYSTEM PROGRAMMER'S GUIDE
This publication is a reference manual for the system programmer who must install and maintain the IBM Virtual Telecommunications Access Method (VTAM) under DOS/VS.
This book does not explain how to define specific IBM Subsystems or IBM database/data-communication programs that operate with VTAM, such as the IBM 3600 Finance Communication System. To get information on how to define those sub-systems, refer to manuals for the particular subsystem.
The book assumes that the reader is familiar with the overall concepts of VTAM, has planned his network configuration, and has chosen the major VTAM options he wants to use. A good way to achieve this familiarity and obtain the background needed to select VTAM options is to read VTAM Concepts and Planning, GC27-6998. Prerequisite Publications: Operator's Library GC27-6997, Guide & Reference Manual, and IBM 3704 and 3705 Communications Controllers (GC30-3008).

This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the pseudo order number, GT27-6957-1.
Manual, 200 pages, 8/75

VIDEO/370 SYSTEM INFORMATION MANUAL - PRCG. NOS. 5736-RC3 AND 5734-RC5
This manual describes the installation and daily operation of VIDEO/370, a program product for entering data from display stations. The manual describes how to specify editing options, define a teleprocessing configuration, initialize files, design screen formats, extract entered data for application use, and obtain production reports.
The manual is intended primarily for the system programmer -- the person who understands his shop's requirements and will install and tailor VIDEO/370 accordingly. Parts of the manual are also intended for the system console operator, who will run the VIDEO/370 programs and respond to any messages. Supervisory personnel may find useful the material about VIDEO/370's reports program, which produces statistics on entry operator entry operator efficiency.

OS/VS GRAPHIC PROGRAMMING SERVICES (GPS) FOR IBM 2250 DISPLAY UNIT
Describes macro instructions and routines provided under OS/VS to aid in writing assembler-language programs that use the IBM 2250 Display Unit, Model 1 or 3.
These programming services are useful in:

- o Displaying data in alphanumeric or graphic form
- o Controlling input/output
- o Communicating with the 2250 operator

This manual is intended primarily for application programmers coding in assembler language. It also provides installation managers, system engineers, and system programmers with general information about programming the 2250 display unit.

The reader should be familiar with the information in:

IBM System/360 Component Description:
IBM 2250 Display Unit Model 1, GA27-2701

IBM System/360 Component Description:
IBM 2250 Display Unit Model 3
IBM 2840 Display Control Model 2, GA27-2721

GC27-6972

OS/VS GRAPHIC PROGRAMMING SERVICES (GPS) FOR IBM 2260 DISPLAY STATION (LOCAL ATTACHMENT)

This manual describes macro instructions provided under OS/VS to aid in writing assembler-language programs that use the IBM 2260 Display Station (Local Attachment).

These programming services are useful in: Controlling input/output, and Communicating with the 2260 operator.

This manual is intended primarily for application programmers coding in assembler language. It also provides installation managers, system engineers, and system programmers with general information about programming the 2260 display station.

The reader should be familiar with the information in:

IBM System/360 Component Description:
IBM 2260 Display Station
IBM 2848 Display Control, GA27-2700.

Manual, 52 pages
//30//2260/5741,5742,5752

GC27-6973

OS/VS GRAPHIC SUBROUTINE PACKAGE (GSP) FOR FORTRAN IV, COBOL, AND PL/I

This manual describes how a FORTRAN, COBOL, or PL/I programmer can write graphic programs for use with the IBM 2250 Display Unit under control of OS/VS. It also describes how the graphic subroutine package may be used in a program written in Assembler Language.

The graphic subroutine package (GSP) consists of subroutines and functions for displaying characters or graphic forms on the 2250 screen and for controlling communication between the program and the 2250 operator. The subroutines may be called from a program written in the E, C, or B level of FORTRAN IV, in COBOL (P), in PL/I (P), or from a program written in Assembler Language. They are not an extension of the FORTRAN IV, COBOL, or PL/I languages, but may be used in conjunction with them.

Manual, 188 pages
//30//2250,3250,3251/5741,5742,5752

GC27-6974

OS/VS PROBLEM DETERMINATION AIDS AND MESSAGES AND CODES FOR GPS AND GSP

This manual contains aids for determining and solving problems that involve display programs that use either the Graphic Programming Services (GPS) for the IBM 2250 Display Unit and IBM 2260 Display Station or the Graphic Subroutines Package (GSP) for the IBM 2250 Display Unit. The aids are directed to the display operator, application programmer, system operator, system programmer, and system maintenance personnel.

The manual is divided into an introduction and six sections of problem determination aids:

- o Display operator aids
- o Application programmer aids
- o Messages
- o Codes
- o Generalized Trace Facility
- o Problem-related data

The reader should be familiar with information in:
OS/VS Graphic Programming Services (GPS) for IBM 2250 Display Unit, GC27-6971

OS/VS Graphic Programming Services (GSP) for IBM 2260 Display Station (Local Attachment), GC27-6972

OS/VS Graphic Subroutine Package (GSP) for FORTRAN IV, COBOL, and PL/I, GC27-6973.

DOS VERSION 4 - BASIC TELECOMMUNICATIONS ACCESS METHOD MANUAL - PROGRAM NUMBER 370N-CQ-469

This publication describes the Basic Telecommunications Access Method (BTAM) used with the System/370 Disk Operating System (DOS) control program. BTAM provides the READ/WRITE level macro instructions for the assembler-language programmer who is implementing programs for telecommunications applications.

Included are macro instruction formats and descriptions and specific information on device-dependent considerations.

For titles and abstracts of associated publications see the IBM System/370 Bibliography, GA22-6822.

Manual, 392 pages
370/C/30/DOS//

GC27-6980

OS/VS BTAM

Describes the Basic Telecommunications Access Method (BTAM) available with OS/VS. BTAM provides facilities that enable an assembler-language programmer to write a teleprocessing control program that effects communications at the Read/Write level between a System/370 and a variety of computers and terminals connected to the System/370 over common-carrier or private-wire communications networks. BTAM provides similar facilities for the local IBM 3270 Display System. BTAM employs both start-stop and binary synchronous communications (BSC) techniques, depending on the type of remote station.

Typical BTAM applications include data acquisition, message switching, and inquiry processing.

This publication explains some concepts of teleprocessing and BTAM, describes line control and message transmission techniques, and describes each of the BTAM macro instructions and facilities needed to construct a control program. The READ and WRITE macro instructions applicable for each type of remote station and line configuration are given, along with the channel programs generated for each type.

Prerequisite to use of this publication is a knowledge of System/370 assembler language and data management facilities.

Manual
/C/30//5741

GC27-6983

7094 OS EMULATOR ON MODELS 165/168 REFERENCE, PROG 360C-EU-740 (MPT/MVT), 5744-AM1 (VSI/VS2)

This manual describes the IBM 709/7090/7094/7094 II Emulator Program for the IBM System/370 Models 165, 165 II, and 168, and provides information needed to use the program. The emulator program executes object programs for the IBM 709, 7090, 7094, and 7094 II Data Processing Systems, and runs as a problem program under the MPT, MVT, VSI, or VS2 configurations of the operating system. The Model 165 or Model 165 II must be equipped with the IBM Compatibility Feature #7119. The Compatibility Feature for the Model 168 is #7129. The emulator program uses the compatibility feature to perform the more complex and frequently occurring processes of emulation.

The manual also describes three programs that are distributed with the emulator: the tape preprocessor program, the tape postprocessor program, and the emulator system-output writer. The preprocessor and postprocessor programs are data manipulation programs that change the format of 7094 data. The writer prints 7094 data spooled on the SYSOUT data set.

System planners and programmers should use this manual for planning, generating, using, and modifying the emulator. Programmers responsible for executing 7094 programs should use the manual for instructions on processing 7094 data and executing the emulator. System operators should use the manual for instructions on how to communicate with the emulator program. All messages issued by the emulator and the data manipulation programs are included in an appendix.

Programmers and planners should be experienced with the IBM 709, 7090, 7094, or 7094 II Data Processing System and with the operating system, having a working knowledge of the MPT, MVT, VSI or VS2 configuration.

Manual, 96 pages

GC27-6985

DOS/VS QTAM MPPS (MESSAGE PROCESSING PROGRAM SERVICES)

This publication is intended for the problem programmer assigned to write a message processing program to support a QTAM-controlled telecommunications system operating under DOS/VS (Disk Operating System with Virtual Storage). Included is a general discussion of message processing programs, followed by a detailed description of the services QTAM provides in support of a message processing program. The QTAM services are provided through macro-language statements such as GET, PUT, OPEN, and CICEF. Also included is a discussion of services QTAM provides to enable the programmer to examine and modify the telecommunications system.

General information of interest to the programmer writing a message processing program (such as telecommunications applications, concepts and terminology, and message formats) is contained in the publications DCB/VS QTAM Message Control Program, GC27-6986.

Manual, 56 pages
/C/30//5745-010

GC27-6986

DOS/VS QTAM MCP (MESSAGE CONTROL PROGRAM)

The first part of this publication contains information of a general nature and is of interest to anyone, including managers, system analysts, and programmers, involved in planning or implementing a QTAM-controlled telecommunications system to operate under DOS/VS (Disk Operating System with Virtual Storage). The topics discussed include: devices supported; concepts and terminology; QTAM facilities; and applications supported.

The remaining two parts of this publication, beginning with the chapters on nonaudio and audio message handling respectively, describe in detail the problem programming necessary for constructing QTAM message control programs to support telecommunications applications. A thorough understanding of this publication requires a basic knowledge

of System/370 machine concepts and DOS/VS.
Manual, 264 pages
/C/30///5745-010

GC27-6987

INTRODUCTION TO VTAM (VIRTUAL TELECOMMUNICATIONS ACCESS METHOD) (LEVEL 2)

VTAM, the Virtual Telecommunications Access Method, handles the transfer of data between application programs and telecommunications devices. It is available under DOS/VS, OS/VS1, and OS/VS2.

This manual is intended for those who will decide whether or not to use VTAM, and as preliminary information for installation managers and system programmers who will install it. It discusses:

- o Definition of VTAM to the operating system
- o Operation of a VTAM telecommunications network
- o VTAM macro instructions
- o Operation of TCAM programs under VTAM
- o Reliability, availability, and serviceability features available to VTAM.

The reader should be familiar with teleprocessing concepts. System programmers should be familiar with the operating system with which they will use VTAM. This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the pseudo order number, GT27-6987.

Manual, 76 pages (8/75)

GC27-6993

OS/VS2 HASP II V4 OPERATOR'S GUIDE, PROG 370H-TX-001

This publication tells the computer operator how to use HASP II Version 4 with OS/VS2 Release 1. It presents specific operating techniques and operator commands for:

- o Starting, stopping, and restarting the HASP System
- o Handling system input and input devices
- o Handling system output and output devices
- o Controlling devices
- o Controlling jobs

Manual, 244 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

GC27-6994

VTAM (LEVEL 2) MACRO LANGUAGE GUIDE

Describes how to write a VTAM application program. A VTAM application program is a program that contains VTAM macro instructions to request connection to and communication with telecommunications devices and subsystem supported by VTAM. This book should be used with reference publication, VTAM Macro Language Reference, GC27-6995.

The contents include:

An overview of VTAM application programs and their relation to other elements in a teleprocessing network.

Suggestions on how to organize a VTAM application program.

A discussion of the concepts, facilities, and language for opening and closing the program, and for connecting to and communicating with logical units and terminals.

Requirements and suggestions on using exit-routines, handling errors and special conditions in the network and debugging a VTAM application program. The user is assumed to be familiar with System/370 assembler language.

Prerequisite Publications: None, however; VTAM Concepts and Planning, GC27-6998, may be helpful in understanding the concepts of a VTAM network.

This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the pseudo order number, GT27-6994-0.

Manual, 290 pages, 8/75
/C/30///5741

GC27-6995

VTAM (LEVEL 2) MACRO LANGUAGE REFERENCE

This book is a reference manual that describes the VTAM macro instructions in detail.

VTAM is an access method that allows a program operating under a virtual storage operating system to communicate with the terminals of a teleprocessing network. The language that this book describes consists of the VTAM macro instructions with which the program prepares for and requests communication with the terminals.

This manual is used by installation personnel (typically systems programmers) who code the programs that provide an interface between the application programs and the teleprocessing network.

The reader should be familiar with Introduction to VTAM, (GC27-6987), Chapter 5 of VTAM Concepts and Planning, (GC27-6998), and with those parts of the OS/VS and DOS/VS Assembler Language (GC33-4010), that explains the rules for coding assembler expressions. The reader should also be familiar with the characteristics of the devices with which the program will be communicating, with the line-control discipline (start-stop or BSC) that will be used with teleprocessing concepts can read Data Communications Primer, GC20-1668.

This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the pseudo order number, GT27-6995-2.
Manual, 350 pages, 8/75
/C/30///

GC27-6996

OS/VS1 VTAM SYSTEM PROGRAMMER'S GUIDE

This publication is a reference manual for the system programmer who must install and maintain the IBM Virtual Telecommunications Access Method (VTAM) under OS/VS1.

This book does not explain how to define specific IBM subsystems or IBM data-base/data-communication programs that operate with VTAM, such as the IBM 3600 Finance Communication System or the IBM Customer Information Control System OS/VS. To get information on how to define those systems, refer to manuals for the particular system.

The book assumes that the reader is familiar with the overall concepts of VTAM, has planned his network configuration, and has chosen the major VTAM options he wants to use. A good way to achieve this familiarity and obtain the background needed to select VTAM options is to read VTAM Concepts and Planning, GC27-6998.

The following publications must be used with this book:
Operator's Library: GC27-6997

IBM 3704 and 3705 Communications Controllers: Network Control Program/VS Generation and Utilities; Guide and Reference Manual (for OS/VS and DOS/VS VTAM Users), GC30-3008.
Manual, 183 pages
/C/30///5741

GC27-6998

VTAM (LEVEL 2) CONCEPTS AND PLANNING

This publication provides a guide to planning for the installation and use of the Virtual Telecommunications Access Method (VTAM) in both DOS/VS and OS/VS. VTAM provides connection and telecommunication services between application programs and terminals. Terminals include logical units (telecommunication subsystem logic) on links using synchronous data-link control (SDLC) communication, certain devices on links using start-stop and binary synchronous communication, and local 3270 devices. The VTAM user can dynamically define, control and modify his telecommunication system; distribute function through the network; and share network resources among his application programs.

This publication describes VTAM's major concepts and facilities on both an installation and an application program level. It also describes VTAM's reliability, availability, and serviceability features, hardware and software requirements, and planning considerations for telecommunication security, resource sharing, and using VTAM other telecommunication access methods.

This publication is directed primarily to data processing managers and system programmers that are installing or considering installing a VTAM telecommunication system. A more general description of VTAM is provided in Introduction to VTAM, GC27-6987. This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the pseudo order number, GT27-6998-1.

OS/VS2 PLANNING AND USE GUIDE

This publication describes OS/VS2 to users responsible for selecting, evaluating, and implementing an OS/VS2 system. The purpose of this publication is to introduce VS2 concepts and to provide planning and use information. This publication assumes a knowledge of OS/MVT. (MVT is described in IBM System/360 Operating System: MVT Guide, GC28-6720.) This publication contains the following chapters:

- o Introduction
- o System Control Program
- o Standard Support Programs
- o Options
- o Compatibility
- o Defining the System
- o Job Management and Supervisor Services for System Programmers
- o Supervisor Macro Instructions for System Programmers
- o System Overview
- o Glossary

OS/VS OLTEP MANUAL

This publication provides customer engineers, other qualified personnel, and operators with the information required to use the Online Test Executive Program (OLTEP).

OLTEP is a standard component of OS/VS that is designed to run online test programs, under control of the operating system, for the testing of Input/Output devices.

Messages issued by OLTEP are described in OS/VS Message Library: Service Aids and OLTEP Messages, GC38-1006.

Customer engineers should refer to F.E. Diagnostic Order Procedure, Z225-0505, for ordering procedures for online tests and their documentation.

Manual, 76 pages

INTRODUCTION TO JES3 RELEASE 3

This publication provides an overview of JES3 Release 3 (selectable unit ID 5752-826). The purpose of this manual is to provide introductory and planning information about JES3 components and concepts. Included in this manual is information about the services provided by JES3 and the interaction of these services with the user and the operating system. JES3 system configuration options are discussed along with installation planning considerations and RAS features.

Manual, 8 1/2 x 11 inches, 85 pgs, 4/78

/////5752-826

GC28-0640

OS/VS DYNAMIC SUPPORT SYSTEM

A combined language reference manual and user's guide for the Dynamic Support System (DSS).

DSS is a monitoring and debugging program that is intended for use by IBM Program Systems Representatives and user-authorized personnel. DSS helps identify and provide temporary corrections to software errors in the IBM Operating System with Virtual Storage (OS/VS).

This book has six sections. Section 1 describes the functions and capabilities of DSS. Section 2 describes the DSS command language. Section 3 is a summary of Section 2. Section 4 tells how to use DSS. Section 5 describes the formatted output (dumps and displays) produced by DSS. Section 6 describes the messages issued by DSS.

Before using DSS to debug OS/VS, the reader must know the internal logic of OS/VS.

Information about OS/VS2 is for planning purposes until is available in OS/VS2 Release 2.

OS/VS2 TSC TERMINAL USER'S GUIDE

This publication describes how to use TSC command language to perform the following basic functions:

- Start and end a terminal session
- Enter and manipulate data
- Program at the terminal
- Test a program
- Write and use command procedures

No prior knowledge of TSO is required to use this publication and there are no prerequisite publications. After becoming familiar with the information presented in this manual, you should use OS/VS2 TSO Command Language Reference, GC28-0646, for further reference.

This publication applies to OS/VS2 Release 3.7 and subsequent releases until otherwise indicated, and contains information that applies to the following selectable units:

- TSO/VTAM Level 1 (VS2.03.813)

GC28-0627

OS/VS2 SYSTEM PROGRAMMING LIBRARY: JOB MANAGEMENT

This publication describes the job management facilities and is intended for use by the system programmer.

OS/VS1 SERVICE AIDS

This publication explains when, why, and how to use IBM service aids to diagnose and fix failures in system or application programs. Each service aid is discussed in a separate chapter. The service aids are:

- o GTF (Generalized Trace Facility) traces selected system events such as SVC and I/O interruptions.
- o IMCJOBQD -- Operates as a standalone program to format and print the system job queue. System events such as SVC and I/O interruptions.
- o HMBLIST -- Formats and prints object modules, load modules, and CSECT identification records; maps reenterable load module area.
- o IMCOSJQD -- Operates as a problem program to format and print the system job queue.
- o HMDDPRMP -- Formats and prints dump data sets, which may include page data sets and GTF trace data.
- o HMADPTFILE -- Updates an operating system by applying PTFs or by generating JCL statements needed to apply PTFs or ICRs in a later step.
- o HMDSADMP -- Operates as a standalone program to produce high-speed or low-speed dump of real storage. The high-speed version can also dump page data sets.
- o HMASPZAP -- Verifies and/or replaces instructions and/or data in a load module. Information about how to write PRDMP/EDIT user exit programs is provided in a separate appendix. Messages issues by the service aids are described in OS/VS Message Library: Service Aids and CLTEP Messages.

OS/VS2 MVS SYSTEM PROGRAMMING LIBRARY: SERVICE AIDS

This publication explains how, why, and when to use IBM service aids programs for MVS when diagnosing and fixing failures in system or application programs. It is intended for system programmers and IBM program support representatives.

This publication describes:

- GTF (Generalized Trace Facility) - Traces selected system events such as SVC and I/O interruptions.
 - AMBLIST - Formats and prints object modules, load modules, and CSECT identification records; maps reenterable load module area.
 - AMDDPRMP - Formats and prints dump data sets, which may include GTF trace data.
 - AMADPTFILE - Updates an operating system by applying PTFs or by generating JCL statements needed to apply PTFs or ICRs in a later step.
 - AMDSADMP - Operates as a stand-alone program to produce a dump of real and virtual storage.
 - AMASPZAP - Verifies and/or replaces instructions and/or data in a load module.
- This publication includes information related to:
- VTAM Level 2 - S01
 - Supervisor Performance #2 - S07
 - IBM 3800 Printing Subsystem - S010
 - Service Data Improvements - S017
 - Dumping Improvements - S033
 - Processor Support - S051
 - Interactive Problem Control System (IPCS) - S057

GC28-0681

OS/VS2 MVS SYSTEM PROG LIBR INITIALIZATION AND TUNING GUIDE

This book contains information on the following general topics:

- o System parameters in SYS1.PARMLIB
- o How to use the System Resource Manager (SRM)
- o How to use the System Activity Measurement Facility (MF/1)
- o System performance factors, such as those affecting VIO, catalog, device allocation, the use of SMF as a tuning aid, the pageable link pack areas, and paging data sets

Changes have been made throughout this publication to reflect a service update to OS/VS2 Release 3.7 and include the listed Selectable Units:

SUPERVISOR PERFORMANCE #2

Information was added for supervisor performance #2 in the following areas:

- A redesigned system resources manager (SRM).
- A redesigned auxiliary storage manager (ASM).

TSO/VTAM

Information was added for TSO/VTAM in the following area:

- A new parmlib member description for TSOKEY00

MSS ENHANCEMENTS

Information was added for MSS Enhancements in the following area:

- The description of the VATLSTX parmlib member has been updated to indicate the handling of MSS entries.

DUMPING IMPROVEMENTS

Information was added for Dumping Improvements in the following areas:

- Addition of the IEADMR00 parmlib member.
- Addition of new parameters to the IEAABD00 and IEADMP00 parmlib members for dumps specified by the SYSABEND and SYSUDUMP DD statements.
- Addition of information on estimating the size of the SYS1.DUMP data set for SVC dumps of multiple address spaces.

HARDWARE RECOVERY ENHANCEMENTS

Information was added for Hardware Recovery Enhancements in the following areas:

- Changes to the PAGE parameter description.
- Changes to the PLPA data set size.
- Changes to the common page data set size.

TSO/VTAM LEVEL 2

Information was added for TSO/VTAM Level 2 in the following area:

- Two new parameter descriptions for the TSOKEY00 parmlib member

MODEMODESWPROCESSOR SUPPORT

Information was added for Processor Support in the following areas:

- "The first IPL after Sysgen".
- "CPU Service".

The sectioned title "Part 2: Storage Management Overview", has been incorporated in this publication from OS/VS2 System Programming Library: Storage Estimates, GC28-0604-4.

Manual, 8 1/2 x 11 inches, 360 pgs, 5/78

GC28-0683

OS/VS2 MVS SUPERVISOR SERVICES & MACRO INSTRUCTIONS

This publication describes the services of the supervisor, the macro instructions used to request these services, and the linkage conventions used by the control program to provide these services. The book is intended for the applications programmer coding in assembler language. Changes have been made throughout this publication to reflect a service update to OS/VS2 Release 3.7 and include the following listed Selectable Units:

SUPERVISOR PERFORMANCE #2 GN28-2713

Information was added for Supervisor Performance #2 in the following areas:

- The addition of the RACHECK macro instruction for checking the authorization of RACF-protected data sets.

IBM 3800 PRINTING SUBSYSTEM GN28-2713

Information was added to support the IBM 3800 Printing Subsystem in the following areas:

- Changes to the parameters in the control block for dumps.

- Changes to the SNAP macro instruction.

SYSTEM SECURITY SUPPORT GC28-0842

Information was added for System Security Support in the

following areas:

- Additional specifications for the CLASS parameter in the RACHECK macro instruction.
- Addition of the OLEVOL parameter to the RACHECK macro instruction.

DUMPING IMPROVEMENTS GC28-0821

Information was added for Dumping Improvements in the following areas:

- SYSMDUMP has been added to the DD statements that can be specified for ABEND dumps.
- Changes to the SNAP macro instruction include the TRI, DM, ERR and I/O SDATA codes, and the STRHDR parameter.

Manual, 8 1/2 x 11 inches, 230 pgs, 3/78

GC28-0688

OS/VS2 MVS SYSTEM PROGRAMMING LIBRARY: VTAM (LEVEL 2)

Provides the necessary information for defining a VTAM network in an OS/VS2 system environment. It describes the interfaces that must be created between the user's VTAM application programs and the system. It also describes how the system can be modified to better serve the needs of the VTAM user.

This book is intended for system programmers who are primarily concerned with system generation and VTAM network definition.

Prerequisite publications are:
VTAM Concepts and Planning, GC27-6998
Manual, 300 pages, 1/76
/C30//5752

GC28-0689

OS/VS2 CONVERSION NOTEBOOK

Documents the impact of certain features and facilities on an installation's conversion process: documents experiences with OS/VS2 Multiple Virtual Storage (MVS) at internal IEM installations, field test installations, and user installations and supplements existing publications in the MVS library. Also includes conversion considerations for Selectable Units. As such, the material is not submitted to any formal IEM testing. Users must evaluate the applicability of the recommendations at their installations before implementing them.

Intended for installation managers, installation system programmers, and others responsible for converting from OS/MVT, OS/VS2 Single Virtual Storage or one MVS release level to the latest MVS release level. Reader is expected to be familiar with MVS system (such as found in IBM System/370 Summary, GA22-7001) and with the information in the applicable MVS release guide.

This book is not intended to present a comprehensive description of the conversion process, to describe the features and facilities of MVS, to replace existing publications, or to provide information on tuning and performance. This book also does not explain how to plan for operating with MVS program products (such as CICS/VS), specific industry-oriented IEM subsystems (such as the IEM 3600 Finance Communication System), and the IEM 3850 Mass Storage System.

The chapters are organized to cover these distinct conversion steps: overview and MVS planning, system generation and initialization, catalog conversion, JES2, JES3, TSO, accounting, system integrity, RAS and problem determination, multiprocessing, teleprocessing networks, and application, operator, and miscellaneous considerations. Except for the first chapter, each chapter is divided into two parts:

- o Introductory information that lists the publications relevant to that conversion step and, if necessary, background information on that topic.
- o A series of bulletins that contain hints or considerations for that conversion step.

The introductory information in each part first presents general conversion considerations and then any unique considerations for specific conversion paths.

Manual, 8 1/2 x 11 inches, 500 pgs., 5/77

GC28-0692

OS/VS2 MVS JCL

This publication contains the information necessary to code job control language (JCL), job entry subsystem 2 (JES2), and job entry subsystem 3 (JES3) statements. It is intended for use by programmers who code JCL, JES2, and JES3 control statements and who understand the concepts of job management and data management.

The publication applies to OS/VS2 MVS Release 3.7 and includes information related to the following Selectable Units (SUs):

- SU3 - JES2 Release 4.0
- SU4 - Scheduler Improvements
- SU7 - Supervisor Performance #2
- SU10 - IBM 3800 Printing Subsystem
- SU18 - JES3 3850 Mass Storage System
- SU24 - MSS Enhancements
- SU25 - JES 2 Release 4.1
- SU29 - 3838 Vector Processing Subsystem Support
- SU33 - Dumping Improvements
- SU48 - IEM 3800 Printing Subsystem - 12 lines per inch

The first part of the publication is tutorial, explaining the use of the various statements and parameters. The second part explains each parameter for the JCL, JES2, and JES3 statements. The third part contains reference tables and a glossary.

OS/VS2 SYSTEM MANAGEMENT FACILITIES (SMF)

This publication assists installation managers and system programmers in planning for, installing, and using System Management Facilities (SMF). SMF collects records accounting, data set, subsystem, system and volume information. It also has exits that can link to user-written routines for monitoring a job or job step.

The publication describes the basic SMF functions and the relationship of SMF to the operating system and to user-written exit routines. It also explains:

- o How to include user written exit routines in the operating system.
- o The additional storage required by SMF.
- o How to switch and dump the SMF data sets.
- o How to plan, write and test exit routines.
- o When each SMF record is written and the information contained in each record.

OS/VS2 DEBUGGING HANDBOOK VOLUME 1

This publication provides reference information for use in debugging user or system programs. The user of this publication should have a working knowledge of OS/VS2 functions and logic.

This two volume handbook has eight sections, as follows:
Volume 1-GC28-0708

- o Section 1 describes an approach to debugging based on identification and analysis of system status indicators.
- o Section 2 summarizes major OS/VS2 debugging aids, and includes reprints of VS2 information from the following reference cards:
OS/VS Service Aids Reference Summary, GX28-0634
OS/VS DSS Command Language Reference Summary, GX28-0690
- o Section 3 describes dump and trace output of debugging aids summarized in Section 2.
- o Section 4 summarizes major system error indicators.
- o Section 5 provides general reference information useful for debugging purposes.
- o Section 6 lists and categorizes OS/VS2 publications.

Volume 2 - GC28-0709

- o Section 1 shows how to find information in a dump.
- o Section 2 illustrates the logical relationships of major system data areas, describes the formats of data areas used frequently in debugging, and provides a directory of data areas documented in other publications.

The handbook is intended for use in conjunction with the System/370 Reference Summary, GX20-1850, a reference card that provides additional information useful in debugging.

Please note that if you use only one order number, you will only receive that volume. To receive both volumes, you must use both order numbers or the following form number: GBOF-8211.

GC28-0709

OS/VS2 DEBUGGING HANDBOOK VOLUME 2

This publication provides reference information for use in debugging user or system programs. The user of this publication should have a working knowledge of OS/VS2 functions and logic.

This handbook has eight sections, as follows:

Volume 1 - GC28-0708

- o Section 1 describes an approach to debugging based on identification and analysis of system status indicators.
- o Section 2 summarizes major OS/VS2 debugging aids, and includes reprints of VS2 information from the following reference cards:
OS/VS Service Aids Reference Summary, GX28-0634
OS/VS DSS Command Language Reference Summary, GX28-0690
- o Section 3 describes dump and trace output of debugging aids summarized in Section 2.
- o Section 4 summarizes major system error indicators.
- o Section 5 provides general reference information useful for debugging purposes.
- o Section 6 lists and categorizes OS/VS2 publications.

Volume 2 - GC28-0709

- o Section 1 shows how to find information in a dump.
- o Section 2 illustrates the logical relationships of major system data areas, describes the formats of data areas used frequently in debugging, and provides a directory of data areas documented in other publications.

The handbook is intended for use in conjunction with the System/370 Reference Summary, GX20-1850, a reference card that provides additional information useful in debugging.

Please note that if you use only one order number, you will only receive that volume. To receive both volumes, you must use both order numbers or the following order number: GBOF-8211.

OS/VS2 MVS RESOURCE MEASUREMENT FACILITY (RMP) GENERAL INFORMATION, PROG PROD 5740-XXM

The Resource Measurement Facility General Information Manual is intended for installation managers and system programmers who are responsible for tuning an OS/VS2 (MVS) system. The manual provides an overview of the application area and specifies the functions included in RMP. It provides adequate information to enable a potential user to determine whether the program would be useful to him and the information necessary to plan for its implementation.

SELECTABLE UNIT INSTALLATION GUIDE

The Selectable Unit Installation Guide is applicable to the MVS Release 3.7 (5752) and VS1 Release 6.0 (5741) systems, and introduces the concept of selectable units in the MVS/VS1 packaging process. The guide describes typical install options available to the user for single and multiple selectable units and associated service. Selectable units are discussed in general and are not specifically identified by name or number. This guide is intended for installation system programmers and other personnel responsible for supporting and servicing the MVS/VS1 system selectable units. The reader of this book is assumed to have a working knowledge of system generation and the use of the System Modification Program (SMP), as well as system control programming in general. This book is not intended to describe MVS/VS1 features, facilities, or program products; to replace existing publications, or to provide information on utilization, tuning, performance, or operation.

Manual, 8 1/2 x 11 inches, 56 pages, 10/77

OS/VS2 MVS TSC COMMAND PACKAGE, LIC PROG 5740-XI6, 5740-XE1, USER'S GUIDE AND REFERENCE

This publication provides information pertaining to functions available to TSC users after the installation of the OS/VS2 MVS TSO Command Packages program product. The publication is intended to convey how-to, command syntax, and system programmer information required for utilization OS/VS2 release 3.7 is a prerequisite to the functions OS/VS2 Release 3.7 is a prerequisite to the functions documented herein. The TSO user of this program product must use this publication in conjunction with the existing Release 3.7 TSO library to have a complete description of the overall TSO option.

With the MVS/System Extensions Release 2 (Program Number 5740-XE1) installed with this program product you now have several new functions available with the DISPLAY and ICGCN command subcommand.

OS/VS ENVIRONMENTAL RECORDING EDITING AND PRINTING (EREP) PROGRAM, SUID 5741-601, 5752-827, ICR 5742

The OS/VS Environmental Recording Editing and Printing (EREP) Program supports Releases 5 and 6 of OS/VS1 Release 1.7 of OS/VS2 (SVS) and Releases 3.0, 3.6 and 3.7 of OS/VS2 (MVS).

IFCEREPI is a service aid program that provides information for management and maintenance of a computer system across three operating systems (OS/VS1, OS/VS2 (SVS), and OS/VS2 (MVS)). An expanded parameter capability and improved history processing performance are provided. Three new reports - System Summary, Trend Report Event History and a capability of indicating shared devices have been added. The System/370 is the only computer supported by this new version of EREP.

OS/VS2 MVS SCHEDULER/IOS SUPPORT SELECTABLE UNIT SYSTEM INFORMATION, 5752-816

This publication contains general information about the Scheduler/IOS Support Selectable Unit for OS/VS2 MVS. It is divided into two major sections:

- Chapter 1: Introduction - contains overview information about the Scheduler/IOS Support Selectable Unit, and the selectable units for which the Scheduler/IOS Support Selectable Unit is a prerequisite.
- Chapter 2: Planning - contains machine requirements, programming requirements, storage requirements, publications support, and module lists for the Scheduler/IOS Support Selectable Unit.

This publication is intended to provide planning information for installation managers, system programmers, and IBM Field Engineering personnel. It is assumed that readers have a basic knowledge of OS/VS2 MVS.

For specific information about related publications, see "Publications Support" in "Chapter 2: Planning".

For general information on installing selectable units, see MVS Selectable Unit Installation Guide, GC28-0747.

In this manual, any reference made to an IBM program product is not intended to state or imply that only IBM's program product may be used; any functionally equivalent program may be used instead. This manual refers to the following IBM program product:

GC28-0886

OS/VS2 MVS PERFORMANCE NOTEBOOK

The subject of the OS/VS2 MVS Performance Notebook is performance evaluation: the process of tuning a system to meet performance expectations and to optimize use of the system resources. (Although configuration planning and capacity planning are related to performance evaluation, they are not explicitly addressed in the book; benchmarking aspects of performance evaluation also are not addressed.) The purpose of the book is to document the experience of MVS performance analysts so that the reader can evaluate the performance of his system in a disciplined way and with some degree of confidence that the evaluation will succeed in identifying his system's problem areas.

The performance Notebook is written for system programmers/analysts who are responsible for the performance evaluation of their installation's system. The reader should have experience in tuning complex systems and a thorough knowledge of MVS concepts and facilities.

Information in the book is a combination of performance theory and MVS tuning experience. It is divided into the following topics:

- An overview of the steps required for a disciplined performance evaluation.
- Planning and preparing for a performance evaluation, which includes information on defining performance objectives, selecting measurement tools, and pre-initialization MVS performance factors.
- Performance analysis, which documents a methodology for identifying potential performance problem areas in the system. This topic includes information on investigating the basic system resources (the processor, I/O resources, and real storage) and on investigating specific work that is not meeting its performance expectations.
- Performance hints, which are specific recommendations and considerations.

These topics will be expanded as more information becomes available. The information is based on MVS release 3.7 systems with SUs 5 and 7 installed.

Because the information in this book is derived from experience and has not been formally tested, the reader must evaluate the applicability of the information to his environment before implementing any of the recommendations.

OS/VS2 MVS MULTIPROCESSING: AN INTRODUCTION AND GUIDE TO
WRITING OPERATING AND RECOVERY PROCEDURES

This book describes the IBM System/370 Model 158 and Model
 168 tightly coupled multiprocessors (MPs) in terms of:

- Basic concepts of the MP environment
- Operation of the system console, operator control
 panel, and configuration control panel for each
 processor
- Common types of error conditions, how to recognize
 them, how they affect the MVS system, and possible
 operator responses to them
- Hardware and software processes involved in error
 recovery and the operator interaction with these
 recovery processes
- Guidelines for developing installation-written
 procedures to reconfigure the hardware elements
 that make up the system

The audience for the book is the person at each
 installation who is responsible for developing recovery
 exits and procedures tailored to the installation's
 requirements.

OS/VS1 AND OS/VS2 MVS PROGRAMMED CRYPTOGRAPHIC FACILITY
INSTALLATION REFERENCE MANUAL, LIC PROG 5740-XY5

This book introduces you to the concepts of the OS/VS1 and
 OS/VS2 MVS Programmed Cryptographic Facility, Program Number
 5740-XY5. It also describes the installation process and
 operating considerations for this program product.

This book is intended for:

- System programmers responsible for installing and tuning
 your installations program products and for designing
 and writing application programs coded in Basic
 Assembler Language (BAL)
- Security administrators responsible for establishing,
 maintaining, and monitoring the security of your
 installation

Specific topics in this book include:

- A short introduction to the subject of cryptography in
 general including an introduction to cryptographic
 algorithms and cryptographic keys.
- An explanation of how the Programmed Cryptographic
 Facility uses and protects cryptographic keys.
- A description of built-in security features.
- A description of installation security responsibilities.
- A description of the tasks that must be performed when
 installing this program product.
- An explanation of how to code the Programmed
 Cryptographic Facility macro instructions.
- Operating considerations.
- A glossary of terms.

IBM TIME SHARING SYSTEM COMMAND SYSTEM USER'S GUIDE
This is a reference book for users of the commands that are part of the IBM Time Sharing System. The command system gives the user the ability to (1) construct, execute, and debug programs; (2) create, modify, copy, and share data sets; (3) enter data into and retrieve data from the system; and (4) modify and add to the system-supplied commands.
Commands that are used exclusively by the system operator, system manager, system administrator, and system programmer are not presented in this book.
Three types of information make up the major part of this reference: basic information for the new user, examples, and command descriptions. Part II contains seven sections, and each section describes a different category of commands. Introductory material in Part II is provided to give the new user of the command system general knowledge of the commands. Part III contains format illustrations and descriptions of the commands. Parts II and III also contain examples that show ways of using the commands. Before reading Command System User's Guide, you should have general knowledge of TSS. For an introduction to TSS see IBM Time Sharing System: Concepts and Facilities, GC28-2003. If you enter commands through a terminal, you should be familiar with the terminal. See IBM Time Sharing System: Terminal User's Guide, GC28-2017 for instructions on operating the IBM 2741 Communications Terminal and the IBM 1052 Printer-Keyboard.
Systems Reference Library Manual, 341 pages
//36/TSS//
- GC28-2003
IBM TIME SHARING SYSTEM CONCEPTS AND FACILITIES
This publication provides an introduction to the IBM Time Sharing System (TSS), a general purpose operating system used with IBM System/370 computers that have dynamic address translation. TSS allows many users to have simultaneous access to a computing system. The combination of machine and control program creates a data processing environment for each user which can be utilized independently or shared with other users. Each user operates in a separate virtual storage address space potentially as big as the addressing capability of the machine.
The design of TSS aids program development because the functions provided support a convenient, interactive programming environment. Programs developed in this environment may be used in production mode without change. Integration of virtual storage with data management permits a novel approach to data base applications. A feature of TSS is user ownership of data with excellent security and privacy.

This publication is written for managers of data processing installations, system programmers, application programmers, end users of applications, and operators. It is an introduction to the purpose, design, and use of TSS and contains general descriptions of the control program, data management, and task management; a summary of publications relating to TSS; and information about the use of the system to support individual users and subsystem programming development projects.

There is no prerequisite reading for this publication. However, the reader should have a basic understanding of data processing techniques.

Systems Reference Library Manual, 76 pages
//20/TSS//

GC28-2004

IBM TIME SHARING SYSTEM ASSEMBLER USER MACRO INSTRUCTIONS
Provides the information necessary to code assembler language macro instructions under the IBM Time Sharing System. The intended audience is the non-privileged assembler language user.

The primary macro instruction services are program management and data management. These macro instructions aid in programming and processing time-shared tasks.

The first section of the book describes the macro instructions by functional groups, enabling the user to select the macro instructions he needs to manage his program (manage virtual storage, load and link modules, handle interruptions, transfer to command mode, communicate with SYSIN/SYSOUT and with the operator and the log, maintain timers, and create commands) and to manage data (define, connect, access, manipulate, disconnect, or remove data sets). The second portion of the book lists the macro instructions alphabetically and provides all the information needed to code the macro instructions. Appendixes detail exit lists, synchronous error exits, end-of-data processing, machine control characters, linkage conventions, DCB fields, the DDEF macro instruction, the generation of literals by macro instructions, interruption handling, the TSS Macro and Copy library, sharing virtual data sets, the OPEN/CLOSE generated parameter list, and the conditional assembly of macro instructions.

The reader must be familiar with the information presented in IBM Time Sharing System: Concepts and Facilities, GC28-2003, and Assembler Language, GC28-2000. Systems Reference Library Manual, 315 pages
//21/TSS//

GC28-2005

IBM TIME SHARING SYSTEM LINKAGE EDITOR

This publication describes the linkage editor, an optional Sharing System (TSS/360). The linkage editor connects and edits program modules that have been assembled or compiled separately to produce a single program module that can be efficiently loaded by the dynamic loader at execution time. Linkage editor facilities are illustrated in conversational and nonconversational modes of operation.

Tells how to use the time sharing system's linkage editor. This optional program can be used to join two or more related object modules into one object module, saving dynamic loader processing time. A linkage editor user can also, without having to reassemble or recompile his program, combine control sections (possibly saving external storage and reducing program execution time); rename entry points, control sections, and external references; and change control section attributes. An introduction explains: how a TSS object module is created, its structure, how control sections are named and attributes assigned, external definitions and references, the difference between static and dynamic linking. The reader is shown how to invoke the linkage editor and how to use linkage editor control statements. Examples are provided for both conversational and non-conversational users. Before using this publication, be familiar with the contents of IBM Time Sharing Systems: Concepts and Facilities, GC28-2003, and IBM Time Sharing System: Command System User's Guide, GC28-2001.

Systems Reference Library Manual, 52 pages
//31/TSS//

GC28-2006

IBM TIME SHARING SYSTEM - TIME SHARING SUPPORT SYSTEM (TSSS)
The Time Sharing Support System is an on-line program error analysis facility that provides the capability of collecting data from the Time Sharing System for analysis, and of altering the TSS storage and machine registers. This system is used only by system programmers with authority code 0 or P and is not intended to be available to any other TSS users.

The functions of TSSS may be performed on command from a terminal or dynamically during TSS execution. The programs, tables, and control blocks of real, virtual, and secondary storage can all be referred to and modified.

Part I of this publication describes the TSSS system and its capabilities in a general way. Part II describes the TSSS command language, defining the functions of the language elements and the language syntax. Part III presents additional requirements for correct use of TSSS.

The reader must be familiar with the information contained in:

IBM Principles of Operation, GA22-6821

GC28-2007

IBM TIME SHARING SYSTEM FORTRAN IV LANGUAGE

This publication describes and illustrates the use of the IBM FORTRAN IV language for the IBM Time Sharing System (TSS).

The IBM FORTRAN IV language is a symbolic programming language that parallels the symbolism and format of mathematical notation. It provides programming features and facilities that can be used in FORTRAN programs to solve mathematical problems.

The material in IBM FORTRAN IV is arranged to provide a quick definition and syntactical reference to the various elements of FORTRAN IV by means of a box format. Each element is described, with appropriate examples of possible use.

The reader should have a basic knowledge of the FORTRAN language. While some information relating FORTRAN IV to TSS is presented, most of the necessary guidance required by a FORTRAN user to perform a task is given in IBM Time Sharing System: FORTRAN Programmer's Guide, GC28-2025.

Systems Reference Library Manual, 100 pages
//25/TSS//

GC28-2008

IBM TIME SHARING SYSTEM SYSTEM PROGRAMMER'S GUIDE

IBM Time Sharing System (TSS) makes a distinction between user and system programmers. This publication is intended for persons responsible for maintaining, modifying, or extending the system and discusses:

- o Operating environment
- o Program structure
- o Coding practices and conventions
- o Privileged supervisor call instructions
- o Serviceability aids
- o System macro definitions
- o Changing TSS
- o Privilege Class E

Systems Reference Library Manual, 286 pages

GC28-2010

IBM TIME SHARING SYSTEM - SYSTEM GENERATION AND MAINTENANCE

This publication explains how an installation specifies, creates, maintains, and modifies an installation-adapted IBM Time Sharing System. The intended audience is the system programmer charged with system generation and maintenance.

Part I is an overall description of system generation and maintenance; Part II describes the creation of a basic time-sharing system; Part III describes the macro instructions used to adapt the basic system to the installation's needs; Part IV explains the system maintenance process, and Part V shows how to modify the system for the duration of a startup-to-shutdown session. The appendices contain examples of system generation, maintenance, and modification, reference material on device addressing and system libraries, a sample machine configuration, and sample system generation macro instructions.

The reader must be familiar with the information presented in: IBM Time Sharing System Concepts and Facilities, GC28-2003.

Systems Reference Library Manual, 84 pages

GC28-2017

IBM TIME SHARING SYSTEM TERMINAL USER'S GUIDE

This manual gives instructions for operating the IBM 2741 Communications Terminal, the IBM 1050 Data Communications System and the teletypewriter terminal with the IBM Time Sharing System. It is intended for programmers, system managers, and system administrators who use terminals in the IBM Time Sharing System.

Systems Reference Library Manual, 31 pages
//40/TSS//

GC28-2024

IBM TIME SHARING SYSTEM MANAGER'S AND ADMINISTRATOR'S GUIDE

This manual describes the special commands that managers and administrators of the IBM Time Sharing System (TSS) use. There are four sections in the book:

- o Section 1 introduces the command system as it relates to the job and responsibilities of a system manager or a system administrator.
- o Section 2 explains the basics of using the command system and of the command descriptions.
- o Section 3 contains the command descriptions, which are in alphabetical order.
- o Section 4 is a sample terminal session.

There are two appendixes: one that summarizes the commands that can be used by each privilege class and authorization code, and one that lists format descriptions of commands. Managers and administrators must be familiar with TSS. IBM Time Sharing System: Concepts and Facilities, GC28-2003, contains an introduction to the system. In addition, they need to know how to operate the terminals that are used with the system. Instructions on operating terminals are given in IBM Time Sharing System: Terminal User's Guide, GC28-2017.

Systems Reference Library Manual, 45 pages

Before using this book, be familiar with the contents of: IBM Time Sharing System: Concepts and Facilities, GC28-2003 and Operator's Guide, GC28-2033. Systems Reference Library Manual, 39 pages
//32/TSS//

GC28-2025

IBM TIME SHARING SYSTEM FORTRAN IV PROGRAMMER'S GUIDE!
This publication describes how to use the IBM Time Sharing System (TSS) for compiling and executing programs written in the FORTRAN IV language. It also describes how to use the services and features of TSS that, while not directly related to FORTRAN programming, are frequently of use to the FORTRAN programmer.
Systems Reference Library Manual, 162 pages
//25/TSS//

GC28-2045

IBM TIME SHARING SYSTEM PL/I LANGUAGE REFERENCE MANUAL
This publication is a companion volume to IBM Time Sharing System: PL/I Programmer's Guide, GC28-2049. Together the two books form a guide to the writing and execution of PL/I programs under the control of an IBM Time Sharing System that includes the PL/I compiler.
Systems Reference Library Manual, 353 pages
//29/TSS//

GC28-2026

IBM TIME SHARING SYSTEM FORTRAN IV LIBRARY SUBPROGRAMS
This publication describes the FORTRAN IV library subprograms provided with IBM Time Sharing System (TSS) and provides the information necessary to use the subprograms in either a FORTRAN IV or an assembler-language program.
Systems Reference Library Manual, 65 pages
//25/TSS//

GC28-2046

IBM TIME SHARING SYSTEM PL/I LIBRARY COMPUTATIONAL SUBROUTINES
This publication gives details of the computational subroutines available in the PL/I Library. These subroutines are used by the PL/I compiler in the implementation of PL/I built-in functions and of the operators used in the evaluation of PL/I expressions. Not all PL/I built-in functions and expression operators are supported by the PL/I Library; the compiler generates in-line code for a small number of them. The details provided include summaries of the mathematical methods used, and (where appropriate) figures for range and accuracy.
Systems Reference Library Manual, 49 pages
//29/TSS//

GC28-2028

IBM TIME SHARING SYSTEM TEST AND MAINTENANCE USER'S GUIDE
This publication describes, for the IBM Time Sharing System (TSS), how to use the On Line Test System (OLTS), and how to retrieve system error recordings using the Error Recording Edit and Print (EREP67/VMEREP) procedures. Device partitioning and system quiescence are described, and the error recordings interpreted.
This publication is meant for use by system monitor and/or maintenance personnel. It may be used to determine the hardware component responsible for failures, and in the testing of the component.
Systems Reference Library Manual, 58 pages
//37/TSS//

GC28-2048

IBM TIME SHARING SYSTEM - A PRIMER FOR FORTRAN IV USERS
PROG NO. 360G-CL-627
A subset of the IBM Time Sharing System (TSS) is presented in this book to allow use of basic system facilities without an extensive knowledge of the command system, by which system functions are invoked. The reader of the book is presumed to have at least a basic knowledge of FORTRAN. In addition, the user profile under which the reader will use TSS should be altered as explained in Appendix E. This can be done by the reader himself, if necessary; preferably, however, it should be done by someone in a supervisory or tutorial relationship to the reader.
The altered user profile can be changed again by the reader if he progresses to using the full command system. The full system is explained in manuals such as Command System User's Guide, Form C28-2001, and FORTRAN Programmer's Guide, Form C28-2025.

GC28-2032

IBM TIME SHARING SYSTEM ASSEMBLER PROGRAMMER'S GUIDE
This publication explains the use of the Time Sharing System (TSS) for assembler language programmers. It describes how to assemble, store, and execute programs in TSS, introduces the command system, and explains the basic rules of task and data management. Numerous examples are given showing typical user-system interaction. The appendices include information on assembler options, output, and restrictions, as well as program control system use, interrupt handling, and command creation.
Systems Reference Library Manual, 191 pages
//21/TSS//

This book contains basic information on the kinds of terminals that can be used with TSS. If more information is needed, see Terminal User's Guide, C28-2017. Manual, 51 pages
//20/TSS//

GC28-2033

IBM TIME SHARING SYSTEM OPERATOR'S GUIDE
This guide presents the basic information an operator needs to run the IBM Time Sharing System. The book is divided into four main parts. These parts present a general view of the system, descriptions of the commands used by the operator, an explanation of the operator's terminal, and procedures the operator uses to run the system. Additional information that supplements the operator's knowledge of the system is presented in the appendices. These appendices include a description of the system control panel, a definition of the types of data set names, an explanation of device addresses, and summaries of the formats of the operator's commands and the TSS commands.
The system operator should be familiar with IBM Time Sharing System: Concepts and Facilities, GC28-2003. Systems Reference Library Manual, 56 pages
//40/TSS//

GC28-2049

IBM TIME SHARING SYSTEM PL/I PROGRAMMER'S GUIDE
This publication is a companion volume to IBM Time Sharing System: PL/I Language Reference Manual, GC28-2045. Together, the two books form a guide to the writing and execution of PL/I programs under the control of an IBM Time Sharing System that includes a PL/I compiler. This publication is concerned with the relationship between a PL/I program and the Time Sharing System. It explains how to compile and execute a PL/I program, and introduces the command system, data management, and other essential features of TSS.
Systems Reference Library Manual, 245 pages
//29/TSS//

GC28-2034

IBM TIME SHARING SYSTEM MULTITERMINAL TASK PROGRAMMING & OPERATION
This publication describes how to create a multiterminal (MTT) task, which will run under the IBM System/360 Time Sharing System (TSS/360). It also explains how to write an MTT application program, and how to connect it to a multiterminal task.
The publication is meant for use by TSS/360 installations as a reference book for persons responsible for administering and/or writing an MTT application program. Manual, 48 pages
//34/TSS//

GC28-2056

IBM TIME SHARING SYSTEM DATA MANAGEMENT FACILITIES
This book is to be used as a reference guide for TSS users of data management facilities. Topics dealt with include: storage classes, unit record devices, data set characteristics, data set sharing, gaining access to data sets, and use of data management facilities. This book is equally useful to assembler, FORTRAN, or PL/I users.
The reader should be familiar with IBM Time Sharing System: Concepts and Facilities, GC28-2003. Systems Reference Library Manual, 85 pages
//30/TSS//

GC28-2038

IBM TIME SHARING SYSTEM INDEPENDENT UTILITIES
Explains the use of the independent utility programs that support the IBM Time Sharing System (TSS), and describes their features, functions, capabilities, control statements, and record formats.
The independent utility programs are primarily intended to assist the systems programmer and operator to initialize, copy, restore, and print the contents of direct access storage devices.
The programs are:
o direct access storage device initialization (DASDI)
o direct access storage device dump/restore (DASDDR)
o direct access storage device print (DADUMP)
o system/370 memory dump
o VAM2 utility (VAM2UT)

GC28-2057

IBM TIME SHARING SYSTEM REMOTE JOB ENTRY
Remote Job Entry (RJE) allows users at remote locations to submit punched-card input to, and receive printed output from, the central TSS installation.
RJE users can enter card decks in the same format as that used at the local, online card reader. Nonconversational SYSIN data sets can be entered for execution, and data-card card decks can be entered and stored as virtual storage data sets. Output can be returned to the originating location or routed to the installation's high-speed printer. SYSOUT data sets are returned to the originating location unless redirected by the system operator.
This publication describes RJE concepts, terminology, and procedures. Information required by users at remote locations, including RJE control statements, is presented;

also, commands used by the system manager, system administrator, and system operator to control the RJE system are described.
Systems Reference Library Manual, 50 pages
//38/TSS//

DOS SUBSET ANS COBOL COMPILER & LIBRARY, GENERAL INFORMATION PROG PROD 5736-CB1
This publication provides an introduction to the features of the IBM Subset American National Standard COBOL Compiler and Library, Release 2, a program product that operates under the IBM Disk Operating System. Included are a summary of the characteristics of the compiler, examples of some of the features of the language, and planning information on system requirements and compatibility characteristics.
This publication is written for installation analysts and planners. It provides them with a basis for general planning and for evaluating this product in relation to their needs. It is not meant to describe the language fully. A complete description is available in the publication IBM DOS Subset American National Standard COBOL, Order No. GC28-6403.
Manual, 12 pages
/////5736-CB1

OS FULL AMERICAN NATIONAL STANDARD COBOL COMPILER AND LIBRARY, VERSION 4, PLANNING GUIDE - PROGRAM NOS. 5734-CB2, -LM2
Describes the new features of the program product OS Full

American National Standard COBOL Compiler and Library, Version 4. Each is described in a separate chapter. System considerations and a description of the CCECL object-time subroutine library are also included.
This publication is a planning aid for system planners and analysts, and for COBOL programmers. It is supplemented by complete reference documentation in other manuals of OS American National Standard COBOL, Version 4, series.
Guide, 92 pages
/////5734-CB2,5734-LM2

SC28-6432

OS FULL ANS CCEOL COMPILER & LIBRARY VERSION 3 INSTALLATION REFERENCE MANUAL, PROG. PRCD. 5734-CB1
Contains system related information needed to make the most effective use of the Program Product IBM Full American National Standard COBOL Compiler and Library Version 3, under the control of the Operating System.

This publication consists of three sections. The first two sections, "Program Product Installation" and "Storage Estimates", are directed to the system programmer or planner who is responsible for operating system generation and maintenance. The third section, "Operating Instructions," is directed to the console operator. Each section is designed to be used with an existing Operating System publication.

"Program Product Installation" describes the system requirements for the compiler and the procedure needed to add the compiler to an operating system. This section supplements IEM OS System Generation, Order No. GC28-6554. A module summary is also included.

"Storage Estimates" defines the storage required by the compiler. This section supplements IBM CS Storage Estimates, Order No. GC28-6551.

"Operating Instructions" describes certain messages the console operator may be required to answer and presents information on Multiple Console Support (MCS). This section supplements IEM OS Operator's Reference, Order No. GC28-6991.

Manual, 8-1/2 x 11, 38 pages

SC28-6433

OS (TSO) CCECL PROMPTER TERMINAL USER'S GUIDE AND REFERENCE INFORMATION, PROG PROD 5734-CB1
This publication describes how to use the CCECL Prompter to invoke the Program Products IBM OS Full American National Standard CCECL Compiler and Library (Version 3 and Version 4) and OS/VS CCEOL under OS (TSO).

This publication is directed to the CCECL programmer, who is working at a time sharing terminal and is familiar with the Time Sharing Option.

Section 1 contains procedures for using the prompter and debugging at the terminal as well as a summary of data set naming conventions and sample terminal sessions. Messages to the terminal user are described. This section supplements OS (TSO) Terminal User's Guide, Order No. GC28-6763.

"Section 2: Reference Information" describes the CCECL command that invokes the prompter. This section is designed to be inserted in OS (TSC) Command Language Reference, Order No. GC28-6732.
Manual, 8-1/2 x 11, 54 pages
/////5734-CB1

SC28-6434

OS (TSO) CCECL PROMPTER INSTALLATION REFERENCE MATERIAL, PROG PROD 5734-CB1

This publication contains system related information needed to make the most effective use of the CCECL prompter to invoke the Program Product IBM Full American National Standard CCEOL Compiler, Version 3. The prompter operates under the control of the Time Sharing Option (TSC) of the Operating System.

The information in this manual is directed to the system programmer or planner responsible for operating system generation and maintenance. Each of the three sections is designed to be used with an existing IBM Operating System publication.

"Program Product Installation" describes the system requirements for the prompter and the procedure needed to add the prompter to an operating system. This section supplements IBM System Generation, Order No. GC28-6554. A module summary is included.

"Storage Estimates" defines the storage required by the prompter. This section supplements IBM Storage Estimates, Order No. GC28-6551.

"System Programming Techniques" describes a LCGON procedure that can be used to expedite compilation of a COBOL program under TSC. Instructions on how to help the terminal user respond to prompter messages are also given. This section supplements IBM System Programmer's Guide, Order No. GC28-6691.
Manual, 38 pages

SC28-6437

OS FULL ANS COBOL COMPILER AND LIBRARY VERS 3, PROGRAMMER'S GUIDE, PROG PROD 5734-CB1

Describes how to compile an American National Standard COBOL program using Version 3 of the IBM OS Full American National Standard COBOL compiler. It also discusses how to link edit and execute or load the program under control of the operating system. There is a description of the output of each of these steps, for example, link edit, load, and execute. In addition, there are explanations of the features of the compiler and available options of the operating system.
Manual, 344 pgs
/////5734-CB1

SC28-6438

DOS SUBSET ANS COMPILER AND LIBRARY INSTALLATION REFERENCE MATERIAL, PROG PROD 5736-SC1

Contains system related information needed to install the IBM Subset American National Standard COBOL Compiler and Library, a program product that operates under control of the Disk Operating System.

This manual consists of two sections. The first section, "Program Product Installation," is directed to the system programmer or planner who is responsible for operating system generation and maintenance. The second section, "Operator Messages," is directed to the console operator. Each section is designed to supplement an existing DOS publication. "Program Product Installation" describes the system requirements, work file requirements, IOCS module requirements, and storage requirements for the Subset COBOL Compiler and Library. The installation procedure needed to add the compiler and library to an existing operating system is also described. This section supplements DOS System Generation and Maintenance, Order No. GC24-5033.

"Operator Messages" describes the messages to the console that the operator may be required to answer. This section supplements DOS Messages and Communications, Order No. GC24-5074.

Program Product Manual, 40 pages

IBM OS COBOL INTERACTIVE DEBUG AND (TSO) CCECL PROMPTER GENERAL INFORMATION MANUAL - PROGRAM PRODUCTS 5734-CB4, 5734-CP1

This publication is directed to data processing system planners and analysts. It is intended as an aid in evaluation in planning for the use of IBM CS CCBCL Interactive Debug and/or the IBM OS (TSC) CCBOL Prompter.

These two program products operate under the Time Sharing Option (TSO) of the IBM Operating System. Detailed planning information for TSO can be found in the publication IBM System/360 Operating System: Time Sharing Guide, Order No. GC28-6698.

Both program products are designed for use with the program products IBM OS Full American National Standard COBOL Compiler, Version 4, and the IBM CS Full American National Standard COBOL Object-time Subroutine Library, Version 4. The TSO COBOL Prompter can also be used with the program product IBM OS Full American National Standard CCECL Compiler and Library, Version 3.

The CCBOL Interactive Debug program and the COBOL Prompter can be used under any release of the Operating System that supports TSO.

IBM OS FULL AMERICAN NATIONAL STANDARD CCBCL COMPILER AND LIBRARY VERSION 4, PROGRAMMERS GUIDE - PROGRAM PRODUCTS 5734-CB2 AND 5734-LM2

This publication describes how to compile an American National Standard COBOL X3.23-1968 program using Version 4 of the IBM Operating System Full American National Standard CCBCL compiler. It also discusses how to link edit and execute or load the program under control of the IBM Operating System. There is a description of the output of each of these steps, i.e., compile, link edit, load, and execute. In addition, there is an explanation of the features of the compiler and available options of the operating system.

SC28-6458

IBM OS FULL AMERICAN NATIONAL STANDARD CCBCL COMPILER AND LIBRARY, VERSION 4, INSTALLATION REFERENCE MATERIAL, PROG. NOS. 5734-CB2, LM2

This publication contains system related information needed to install and make effective use of the Program Product IBM OS Full American National Standard COBOL Compiler and Library, Version 4 (Program Number 5734-CE2) and its associated CCBCL Object-time Subroutine Library (Program Number 5734-LM2). Both program products can be installed under either CS or the Conversational Monitor System (CMS) of the IBM Virtual Machine Facility/370 (VM/370).

The section "Operating Instructions" is directed to the console operator. It describes certain messages the console operator may be required to answer and presents information on Multiple Console Support (MCS). This section supplements IBM System/360 Operating System: Operator's Reference, Order No. GC28-6691. The remaining sections of the manual are directed to the system programmer or planner who is responsible for operating system generation and maintenance.

The installation sections of the manual describe the system requirements for the program products and the procedure needed to add the program products to an operating system. The OS installation sections supplement IBM System/360 Operating System: System Generation, Order No. GC28-6554. A module summary of both the compiler and library is also included in the "Module Summary" section. The "Storage Estimates" section supplements IBM System/360 Operating System: Storage Estimates, Order No. GC28-6551.

IBM OS COBOL INTERACTIVE DEBUG: INSTALLATION REFERENCE MATERIAL - PROGRAM NUMBER 5734-CB4
This publication consists of four main sections: "Storage Requirement Estimates," "Installation Procedure," "Systems Programmer's Guide," and "Problem Determination Aids." Each contains system-related information necessary to install and use the IBM OS COBOL Interactive Debug Program Product under the control of the Time Sharing Option (TSO) of the IBM Operating System.

SC28-6478

IBM DOS/VS COBOL COMPILER AND LIBRARY PROGRAMMER'S GUIDE
This publication describes how to compile a COBOL program using the Program Product IBM DOS/VS COBOL Compiler. It also describes how to link edit the resulting object module, and execute the program. Included is a description of the output from each of these three steps: compile, link edit, and execute. This publication explains features of the DOS/VS Compiler and Library, and available options of the operating system.
This publication is primarily intended for programmers who are running COBOL programs compiled on the DOS/VS Compiler, under the control of the IBM Disk Operating System Virtual Storage.
Manual, 360 pages
/////5746-CB1,5746-LM4

The following system publications should be used in connection with this manual:

- IBM System/360 Operating System Storage Estimates, Order No. GC28-6551
- System Generation, Order No. GC28-6554
- System Programmer's Guide, Order No. GC28-6550

The first three main sections of this publication can be inserted in the corresponding system publication listed above to which it refers, if such an arrangement simplifies the use of documentation.

IBM DOS/VS COBOL COMPILER AND LIBRARY INSTALLATION REFERENCE MATERIAL - PROGRAM NUMBERS 5746-CB1 AND 5746-LM4
This publication contains system related information needed to make most effective use of the Program Product IBM DOS/VS COBOL Compiler and its associated COBOL Object-time Subroutine Library under the control of the IBM DOS/VS System.

This publication contains two sections. The first section, "Program Product Installation," is directed to the system programmer or planner who is responsible for operating system generation and maintenance. It describes the system requirements, work file requirements, IOCS module requirements, and storage requirements for the DOS/VS compiler and library. It also describes the installation procedure for adding the compiler and library to an existing operating system. This section supplements DOS/VS System Generation, Order No. GC33-5377.

The second section, "Diagnostic Messages," is directed to the console operator. Each section is designed to supplement an existing IBM DOS/VS System publication.

GC28-6470

OS/VS COBOL COMPILER AND LIBRARY, GENERAL INFORMATION, PROG PROD 5740-CB1, 5740-LM1
Contains information to aid data systems planners and analysts in evaluating and planning for the use of the OS/VS COBOL Compiler and Library Program Product.
OS/VS COBOL operates under control of OS/VS1 or OS/VS2 (with or without TSO), and with restrictions under the CMS component of VM/370; it processes COBOL source programs in an OS virtual environment. OS/VS COBOL includes all eight processing modules of American National Standard COBOL X3.23-1968 and International Standard ISO/R 1989-1972 Programming Language COBOL; COBASYL-specified and IBM-specified extensions are also included.
Brief descriptions of Compiler and Library capabilities are provided - including as major features support for VSAM entry-sequenced and key-sequenced data sets, the MERGE statement, the FIPS (Federal Information Processing Standard) Pagger, and the Lister Facility (which provides a specially formatted source listing with embedded cross references). System requirements and data set and programming compatibility are described. A complete description of the language implementation is also included.
This publication is an aid in evaluation and planning; it is not intended to be used as a specification manual.

IBM SYSTEM/360 AND SYSTEM/370 FORTRAN IV LANGUAGE
 - PROG PROD 5748-FO2

Describes and illustrates the use of the FORTRAN IV language for the Operating System and the Disk Operating System. FORTRAN IV is a mathematically-oriented language useful for writing programs for applications that involve manipulation of numerical data. The publication is primarily a reference manual for programmers who are familiar with the elements of the FORTRAN language.

OS/MVT AND OS/VS2 TSO DATA UTILITIES: COPY, FORMAT, LIST &

MERGE: USER'S GUIDE AND REFERENCE, PROG. NO. 5734-UT1
 The TSO Data Utilities: COPY, LIST, FORMAT, MERGE is a program product designed to augment the text and data manipulation capabilities of the TSO Command Language. This publication describes the syntax and use of the TSO Data Utility commands: COPY, FORMAT, LIST, and MERGE. This publication is intended for use by terminal users whose installation includes this TSO program product. This manual has two sections:

- o "How to Use the Commands" describes the operations that can be performed by using the utility commands and subcommands at a terminal.
- o "Command Descriptions" describes the syntax of the four utility commands: COPY, FCORMAT, LIST, and MERGE, and the two subcommands of the ECIT command, FCORMAT and MERGE. Examples of each command and subcommand are included.

Prerequisites and corequisites for this publication are:

USER'S GUIDE FOR THE IBM 2947 MODEL 4 CHECK COLLECTION CONTROLLER ASSEMBLY FACILITIES, PROGRAMMING - PRPQ P88003
 PROGRAM NUMBER 5799-AAH

The Assembly Facilities for the IBM 2947 Model 4 enable the user to prepare sort-control-word patterns for use in the IBM 2947 Model 4. He may use all the 2947-4 machine functions without having to convert his sort patterns into machine language. The Assembly Facilities generate actual 2947-4 code, in standard assembler format, for OS/360 or DOS/360.

Neither the 2947-4 machine operations nor examples of them will be explained in this publication. Examples of Assembly operations are given, but they are not meant to be an exhaustive list of the uses of all operands.

Effective use of this publication requires a thorough understanding of IBM 2947 Check Collection Controller, Functional Characteristics (GL22-6979).

The data management macro instructions and services for the IBM 2947-4 are called the Check Collection Controller Sequential Access Method (CSAM). The manual related to this area, for OS, is User's Guide for the IBM 2947-4 Check Collection Controller Sequential Access Method Program Supporting RPQ 888264 (GC28-6687).

OS/MVT, OS/MVT, AND OS/VS DATA SET UTILITIES SUPPORT FOR
ASCII: USER'S GUIDE, PROG. NO. 5734-UT2

This publication describes the data set utilities that support the American National Standard Code for Information Interchange (ASCII).

It describes:

- The capabilities and limitations of the utility programs when used to process ASCII data sets.
- The control statements needed to process ASCII data sets.
- The possible applications of the utility programs.

System/360 Operating System Data Set Utility Support for ASCII is a program product that assists programmers responsible for creating and maintaining operating system data. When using this support, ASCII data sets, as well as EBCDIC data sets, can be created and maintained, although all System/360 operations are in EBCDIC.

SYSTEM/360 OS (TSO CODE AND GO FORTRAN PROCESSOR TERMINAL
USER'S GUIDE, PROG PROD 5734-F01, -LM1

Provides the information necessary to use the Code and Go FORTRAN Processor for foreground programs developed in an OS (TSO) environment.

Code and Go is a compile-and-go processor that compiles at a fast rate and produces an object program directly in main storage. For the TSO foreground, Code and Go was specifically developed for users who place a premium on quick compilation and execution, and on easy and rapid debugging.

This publication, while primarily directed to engineers, mathematicians, and others who may not be full-time, professional programmers, also provides information for experienced production programmers who will be using Code and Go to write and test components of a large program for later execution in a batch environment. Readers must be familiar with the FORTRAN IV Language as described in the publication IBM System/360 and System/370 FORTRAN IV Language, Order No. CC28-6515.

Included are explanations of that portion of the TSO command language that is directly relevant to the needs of the Code and Go foreground user, a sample terminal session, a section on programming considerations, and other reference information. Also provided are a discussion of the FORTRAN syntax checker and its associated messages, and a listing (with explanations) of compiler-related and load module execution diagnostic messages.

IBM OS CODE AND GO FORTRAN AND FORTRAN IV (G1) PROGRAMMER'S GUIDE, PROG. NOS. 5734-FO1, 2, -LM1
 Directed to programmers using either Code and GO FORTRAN or the FORTRAN IV (G1) compiler. It explains how to use OS to compile, link edit, and execute programs written in the IBM System/360 and System/370 FORTRAN IV language. In addition, it contains information on processing efficiency, extended error handling, debugging specifications, and assembler language subroutine linkage conventions. This publication is directed primarily to programmers familiar with the FORTRAN IV LANGUAGE. Previous knowledge of OS is not required.

SC28-6855

OS (TSO) TERMINAL USER'S SUPPLEMENT FOR FORTRAN IV (G1) PROCESSOR AND TSO FORTRAN PROMPTER, 5734-FO2,-CP3, -LM1
 This publication describes the use of the FORTRAN IV (G1) compiler and the TSO FORTRAN Prompter from a TSO Terminal. It is intended as a supplement to the IBM System/360 OS TSO Terminal User's Guide. This book describes the G1 compiler and its features, and methods of invoking the compiler. It contains examples of the use of the G1 compiler and the Prompter, diagnostic messages that a user receives at his terminal, and reference information. It makes no attempt to cover general TSO operation, which is covered in the TSO Terminal User's Guide.

The FORTRAN IV (G1) compiler is an extended version of the FORTRAN G compiler, adapted for more efficient use from a time-sharing terminal. The Prompter provides the interface between the compiler and the user, creating a conversational environment for the G1 programmer.

This publication is intended for use by FORTRAN programmers of all levels, but its approach is essentially toward the inexperienced programmer. It is not a reference document for the system programmer.

Co-requisite publications for this book are the IBM System/360 Operating System TSO Terminal User's Guide, Order No. GC28-6763, and the IBM System/360 Operating System Time Sharing Option Command Language Reference, Order No. GC28-6732.

SC28-6856

FORTRAN IV (G1) PROCESSOR AND TSO FORTRAN PROMPTER FOR OS AND VM/370 (CMS); INSTALLATION REFERENCE MATERIAL, PROG. NOS. 5734-FO2, 5734-CP3
 Describes the information required by the central computing installation to install and run the FORTRAN IV (G1) compiler under OS or the CMS component of VM/370 and to install and run the TSO FORTRAN Prompter under OS. The information includes installation procedures for each program product, storage estimates, system information, and messages produced by the compiler and the prompter. This publication is intended for OS and VM/370 personnel responsible for installing the FORTRAN IV (G1) compiler alone at an OS or VM/370 installation or the G1 compiler together with the TSO FORTRAN Prompter at an OS (TSO) installation. It is also intended for the system programmer responsible for the maintenance of the program product within the system.

FORTRAN IV LIBRARY (MOD I) FOR OS & VM/370 (CMS); INSTALLATION REFERENCE MATERIAL, PROGRAM NUMBER 5734-LM1
 Describes the information required by the central computing installation to install and run the FORTRAN IV Library (Model 1). The information includes installation procedures, storage estimates, system information, and library-produced messages. The FORTRAN IV Library (Model 1) operates with the FORTRAN E, G, and H compilers, and with FORTRAN IV (G1), and with the Code and Go FORTRAN compiler. The library supports features not contained in the base FORTRAN IV library, such as list-directed I/O, improved data conversion, and ASCII support. The library also includes special interfaces for running in the TSO foreground.
 This publication is intended for personnel responsible for installing the library, as well as for the system programmer responsible for maintenance of the library within the system.

OS/VS1 RES SYSTEM PROGRAMMER'S GUIDE
 This guide is required by system programmers who plan, install, and maintain RES (Remote Entry Services) under VS1. The guide describes the facilities and operational requirements for both the central computer and the workstations. The procedure to be followed for generating and installing RES is explained.
 Manual, 173 pages
 //38//5741

GC28-6879

OS/VS1 RES WORKSTATION USER'S GUIDE

This user's Guide is intended for an RES workstation user who creates one or more jobs to be sent, using RES (Remote Entry Service), to a central computer for processing. In addition, this book can be used by one who merely operates the RES workstation, sending jobs created by others.

The book describes input and output queues and how the workstation user can control them. The workstation commands available to the user are described according to their function. The parameters used for various forms of the commands are explained.

For each type of RES workstation, there is a separate chapter that describes its operation. This portion of the book can be tailored to each installation's requirements by removing chapters that pertain to types of workstations not used by that installation. For a user's guide to be used only at one workstation, only the pertinent chapter need be retained.

IBM FORTRAN PROGRAM PRODUCTS FOR OS AND THE CMS COMPONENT OF VM/370: GENERAL INFORMATION, PROG PROD 5734-F01, 2, 3, 5 -LM1, 3, -CP3

This publication provides general information about the functions, capabilities, and system requirements of the following program products:

- o Code and Go FORTRAN Processor
- o FORTRAN IV (G1) Processor
- o FORTRAN IV (B Extended) Processor
- o FORTRAN IV Library (Mod I)
- o FORTRAN IV Library (Mod II)
- o TSO FORTRAN Prompter
- o FORTRAN Interactive Debug

These products, with the exception of the TSO Prompter, operate under both OS and the CMS component of VM/370.

This publication is intended as an aid to evaluation and planning and is not meant for the terminal user or applications programmer.

SC28-6885

FORTRAN INTERACTIVE DEBUG FOR OS (TSO) & VM/370 (CMS): TERMINAL USER'S GUIDE, PROG. NO. 5734-F05

This manual provides the information required to use FORTRAN Interactive Debug to debug Code and Go FORTRAN G1 programs from a TSO or CMS terminal.

FORTRAN Interactive Debug is a conversational, symbolic debugging language with which the FORTRAN programmer can dynamically control the execution of his program. While using it, he can stop and start execution, examine and change values of program variables, dynamically control the Extended Error Handling facility, display execution frequencies for program statements, and trace control transfers as they occur.

The intended audience is the TSO or CMS FORTRAN programmer who codes in Code and GO FORTRAN or FORTRAN G1. The first section of the book describes FORTRAN Interactive Debug, its invocation, and its use, and gives instructions for compiling FORTRAN programs so that they can be processed under interactive debug. The second section is a reference section containing all the FORTRAN Interactive Debug subcommands. The third section covers programming considerations. Messages issued by FORTRAN Interactive Debug are covered in the fourth section.

SC28-6886

FORTRAN INTERACTIVE DEBUG FOR OS (TSO) & VM/370 (CMS): INSTALLATION REFERENCE MATERIAL, PROG. NO. 5734-F05

Describes the information required by the central computing installation to install and run FORTRAN Interactive Debug under OS (TSO) and VM/370 (CMS). The information includes

installation procedures, storage estimates, system information, messages, and problem determination aids.

FORTRAN Interactive Debug provides a conversational symbolic debugging capability for the TSO and CMS FORTRAN programmer. Using interactive debug, the Code and Go FORTRAN or FORTRAN G1 programmer can dynamically control the executive of his program, examine and change values of program variables, dynamically control the Extended Error Handling Facility, display execution frequencies for program statements, and trace control transfers as they occur.

This publication is intended for OS and VM/370 personnel responsible for installing FORTRAN Interactive Debug, as well as for the system programmer responsible for maintaining it within the system.

FORTRAN IV LIBRARY (MOD I) FOR OS & VM/370 (CMS), PRG. PROD. 5734-LM1 FUNCTIONAL DESCRIPTION

This document contains a functional description of FORTRAN IV Library (Mod I) which augments the FORTRAN IV Library by supporting the following:

1. List-directed I/O statements
2. Direction of PAUSE and STOP statement messages to a terminal
3. More accurate conversion routines for all data, providing the same results as conversions by the FORTRAN IV (G1) and Code and Go FORTRAN compilers
4. Under OS, tape data sets written in the American National Standard Code for information interchange (also referred to as ASCII)

VS BASIC, PROG PROD 5748-XX1, SPECIFICATIONS
 The VS BASIC processor, which operates in time-sharing and batch environments, is used for compiling and executing programs written in the BASIC language. With VS BASIC, the user can execute a program immediately after compilation or can store it and execute it later.
 VS BASIC is designed to operate in virtual storage systems. It operates in the time-sharing environments: CMS (Conversational Monitor System) of VM/370 and TSC (Time Sharing Option) under OS/VS2 and VSPC (Virtual Storage Personal Computing) under OS/VS1, OS/VS2, and DOS/VS. It operates as a batch compiler under control of OS/VS1, OS/VS2, DOS/VS, and CMS Batch. This publication replaces the Program Product Design Objectives, GX28-8301, at release time. It is aimed at customer employees and prospective customers responsible for planning and maintaining an installation. It provides information upon which the IBM Warranty and License Agreement for the product are based. It describes the program product functions and capabilities, programming system information, compatibility considerations, reference material, and Programming Service classification.

OS TCAM (LEVELS 4 & 5) USER'S GUIDE: VS2 REL 1.6, 1.7
OS REL 21.8

The TCAM User's Guide is for systems analysts and programmers who must design, write, and install a TCAM program. It is both a guide for diagnosis and a problem determination handbook. Information provided includes:

- o An overview of TCAM
- o Functional checklists for coding and diagnosing sections of a TCAM program
- o Coding considerations
- o Checklists of possible errors
- o How and when to dump TCAM and its service aids
- o How to read TCAM dumps
- o Relationships between OS and TCAM control blocks
- o A summary of TCAM macros and operands
- o A detailed description of each field in a TCAM formatted dump

Prerequisites:

IBM System/360 Operating System Telecommunication Access Method (TCAM) Concepts and Facilities, GC30-2022 OS TCAM Programmer's Guide and Reference Manual, GC30-2024. Manual, 238 pages

OS/VS TCAM LEVELS 5 & 6 PROGRAMMER'S GUIDE: VS2 REL 1.6, 1.7

For users of TCAM (Telecommunications Access Method), Level 5 and above; VS1 and VS2. Incorporates ISC (VS2 only). This book is a coding guide for the programmers who must construct or modify a TCAM message control program (MCP) or write a TCAM-compatible application program. It also explains how to use a variety of auxiliary service facilities. It also has information that might be of use in planning and setting up a teleprocessing system incorporating TCAM. The reader should be familiar with OS TCAM Concepts and Facilities, Order No. GC30-2022.

Manual, 820 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

GC30-2045

OS/VS TCAM (LEVELS 8 & 9) USER'S GUIDE

The OS/VS TCAM User's Guide is a publication for systems analysts and programmers who must design, write and install a TCAM program. It is both a guide for diagnosis and a problem determination handbook.

Manual, 350 pages
/C/30///5741,5752-802

GC30-2046

OPERATOR'S LIBRARY: OS/VS2 TCAM (LEVELS 8 & 9)

For users of TCAM (Telecommunications Access Method). This book familiarizes the operator with TCAM procedures and commands, and provides a convenient reference. For more details on Level 8 TCAM and the operator commands, see the TCAM Programmer's Guide, order OS/VS2, No. GC30-2040.

Manual, 40 pages
/C/30///5752

GC30-2047

OPERATOR'S LIBRARY: OS/VS1 TCAM (LEVELS 8 & 9)

The OS/VS1 TCAM Operator's Library is a module in the OS/VS Operator's Library for the operator of teleprocessing systems using the VS1 Operating System and the Telecommunications Access Method (TCAM). It familiarizes the operator with TCAM procedures and commands, and provides a convenient reference. A familiarity with data processing is assumed, however a knowledge of teleprocessing would be helpful.

The material in this publication was previously contained in the Operator's Library: OS/VS TCAM, GC30-2037 which was a combination VS1 and VS2 publication. Beginning with VS1 release 3.1 this publication contains VS1 TCAM Operator's Library information, while VS2 TCAM Operator's Library information continues in the publication Operator's Library: OS/VS TCAM, GC30-2037

A summary of the commands has been placed at the beginning of this guide for easy reference.

Technical terms used in this publication are defined in A Data Processing Glossary, GC20-1699. For more details about OS/VS TCAM and the operator commands, see the OS/VS TCAM Programmer's Guide, GC30-2054. Manual, 30 pages
/C/30///5741

GC30-2049

OS/VS TCAM (W/NCP/VS FOR SNA) CONCEPTS & APPLICATIONS

This is a new publication that introduces the Telecommunications Access Method (TCAM) with direct network control program/virtual storage (NCP/VS) support. This version of TCAM supports IBM's System Network Architecture (SNA) without the Virtual Telecommunications Access Method (VTAM); it operates with OS/VS1, Multiple Virtual Storage (MVS), or Single Virtual Storage (SVS). This manual is for persons requiring a general knowledge of TCAM: data processing managers, system programmers, and application

programmers. It describes how TCAM operates with an IBM 3704 or 3705 Communications Controller in network control mode.

TCAM can also operate with an IBM 2701 Data Adapter Unit, an IBM 2702 or 2703 Transmission Control Unit, an IBM 7770 Audio Response Unit, or with an IBM 3704 in emulation mode. The reader who plans to use TCAM with any of these control units or with the emulation program should refer to the OS/VS TCAM Concepts and Facilities, GC30-2042. OS/VS Concepts and Applications includes information on:

- o Basic TCAM concepts, such as buffering and queuing
- o How TCAM and NCP/VS operate in a teleprocessing network
- o SNA sessions and changes made to TCAM's structure to add SNA support
- o The message control program and message handlers
- o Use of the Time Sharing Option (TSO) in a TSO-only and a TSO/TCAM mixed environment
- o Design consideration for application programs
- o Network control using application-program macros and operator commands.
- o TCAM's service facilities--online tests, operator control, checkpoint/restart, and debugging aids
- o Hardware configurations supported.

Manual, 76 pages, 6/76

GC30-2050

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM, GENERAL INFORMATION, PROG PROD 5735-RC1

This publication introduces Advanced Communications Function for the Telecommunications Access Method (ACP/TCAM). This program product supports IBM's System Network Architecture (SNA) and operates with OS/VS1, Multiple Virtual Storage (MVS), or Single Virtual Storage (SVS). This manual is for persons requiring a general knowledge of ACP/TCAM: data processing managers, system programmers, and application programmers. It describes how ACP/TCAM operates with an IBM 3704 or 3705 Communications Controller in network control mode.

ACP/TCAM can operate with an IBM 2701 Data Adapter Unit, an IBM 2702 or 2703 Transmission Control Unit, an IBM 7770 Audio Response Unit, or with an IBM 3704 or 3705 in emulation mode. The reader who plans to use ACP/TCAM with any of these control units or with the emulation program should refer to the OS/VS TCAM Concepts and Facilities, GC30-2042, for information on:

- o Line control
 - o Invitation and selection of terminals
 - o Polling and addressing
 - o Error-recovery procedures.
- Advanced Communications Function for TCAM General Information includes information on:
- o Basic ACP/TCAM concepts, such as buffering and queuing
 - o How ACP/TCAM and NCP/VS operate in a teleprocessing network
 - o SNA sessions and SNA support
 - o How ACP/TCAM operates in a multiple-domain network
 - o The message control program and message handlers
 - o Use of the Time Sharing Option (TSO) in a TSO-only and TSO/TCAM mixed environment
 - o Design consideration for application programs
 - o Network control using application-program macros and operator commands
 - o TCAM's service facilities: online tests, operator control, checkpoint/restart, and debugging aids
 - o Hardware configurations supported

Migration considerations.
Manual, 8-1/2 x 11 inches, 90 pgs, 10/76

OS/VS TCAM MACRO REFERENCE GUIDE, TCAM LEVEL 10 (SU ID 5741-602 AND 5752-836)

This manual presents detailed information on the macro instructions used with the Telecommunications Access Method (TCAM) with direct Network Control Program/Virtual Storage (NCP/VS) support. All of the TCAM and TCAM/TSO macros are discussed at the operand level. The appendixes contain the TCAM message error record, internal and transmission code charts, and macro return codes.

This manual is a reference guide containing no tutorial information. It is assumed that the user is thoroughly familiar with the TCAM System Programmer's Guide before using this book for coding. The reader must also have a basic understanding of systems network architecture.

The user of this manual should be a TCAM system programmer and must be able to code in Assembler language. Manual, 8 1/2 x 11 inches, 626 pgs, 3/77

GC30-3001

IBM 3735 PROGRAMMER'S GUIDE (OS, DOS, AND VS SYSTEMS)

This publication provides system programmers, application programmers, and operators with the information they need to use IBM 3735 Programmable Buffered Terminal facilities in a teleprocessing system.

All readers should have a general knowledge of System/360 and System/370 data processing techniques in a teleprocessing environment. Those responsible for designing or installing part or all of a system that includes IBM 3735 terminals should have a detailed knowledge of teleprocessing systems.

All users of this book should be familiar with the information contained in IBM 3735 Programmable Buffered Terminal Concept and Application, GA27-3043, which describes the operating characteristics and features of the 3735 terminal.

Programmer's Guide, 200 pages
//30//3735/

GC30-3003

3704 AND 3705 COMMUNICATIONS CONTROLLERS ASSEMBLER LANGUAGE

This publication is a reference manual for the systems programmer, the systems engineer and the applications programmer coding in the IBM Communications Controller Assembler Language.

The publication is similar to the IBM System/360 Operating System Assembler Language publication, GC28-6514. The Communications Controller Assembler is similar to the OS Assembler (level F) and the DOS Assembler (level D). The similarity is intended to aid the Communications Controller programmer who already has OS or DOS Assembler knowledge.

Chapter 1 introduces the assembler language and describes the major differences between the language and the OS and DOS Assembler language. Chapter 2 presents basic assembler language concepts. Chapter 3 describes instruction alignment, machine instruction mnemonics, machine formats and briefly describes the extended mnemonics.

Chapter 4 discusses the instructions to the assemblers, including symbol definition, data definition, program sectioning and linkages, symbolic linkages, base register instructions, listing control and program control instructions. Chapter 5 describes the macro language and the procedures for its use.

Appendixes A through E contain a summary of assembler language features and usage. Appendix F describes the job control language and the storage requirements necessary to produce an assembly, and Appendix G contains messages and codes helpful in debugging a program.

Before using this publication, the reader should be familiar with basic programming concepts and techniques. The prerequisite publication is Introduction to the IBM 3705 Communications Controller, GA27-3051. Prerequisite to this publication is the IBM 3705 Communications Controller Principles of Operation, GC30-3004.

The contents of this publication apply to both OS and DOS users unless noted differently in the text.
Manual, 116 pages
//30//3705,3704/

GC30-3004

IBM 3704 AND 3705 COMMUNICATIONS CONTROLLERS PRINCIPLES OF OPERATION

This publication is the machine reference manual for the IBM 3704 and 3705 Communications Controllers. It provides a direct comprehensive description of (1) the controllers' functional components, (2) the arithmetic, logical, branching, status switching, and input/output operations, and (3) the priority interrupt scheme.

It is intended to provide any 3704/3705 user with the

knowledge of the controller hardware requirements needed to write or modify a 3704 or 3705 control program. The reader is assumed to have a basic knowledge of data processing and teleprocessing systems and to have read the Introduction to the IBM 3704 and 3705 Communications Controllers, GA27-3051, which describes the system briefly and describes the features available.
Manual, 168 pages
//09//3705,3704/

GC30-3005

3704 & 3705 COMMUNICATIONS CONTROLLERS, EMULATION PROGRAM STORAGE & PERFORMANCE REFERENCE MANUAL
This publication has two purposes (1) to assist you in determining the storage requirements for the IBM 3705 Emulation Program, and (2) to assist you in determining the 3705 line attachment capability and proper arrangement of lines on the Communications controller's internal priorities for best Emulation Program performance. The publication is intended for systems analysts and systems programmers responsible for defining and generating an Emulation Program, and for IBM systems engineers and salesmen.

Chapter 1 summarizes the contents of the book. Chapter 2 defines storage requirements. Chapter 3 defines formulas and procedures for establishing line speeds and priorities for best performance.

You should be familiar with the information contained in The IBM 3705 Communications Controller Emulation Program Generation and Utilities, Guide and Reference Manual, GC30-3002. A related publication is the IBM 3705 Communications Controller Principles of Operation, GC30-3004.
Manual, 30 pages
//30//3705,3704/

GC30-3006

STORAGE ESTIMATES & PERFORMANCE PLANNING FOR 3704 & 3705 NCP
This publication is a guide to determining the storage requirements of the network control program, versions 1, 2, and 5 (NCP 1, NCP 2, and NCP 5). It is also a guide to help in the planning for the NCP's performance. (The network control program is a control program for the IBM 3704 and 3705 Communications Controllers. It is generated by the user from a library of IBM supplied modules). The manual is directed to systems analysts, systems programmers, IBM systems engineers, and IBM salesmen who are planning for NCP storage estimates and performance. The manual's user should be thoroughly familiar with the generation and utilities manual appropriate for his version of NCP, as follows:

- NCP 1 - GC30-3000
 - NCP 2 - GC30-3007
 - NCP 5 - GC30-3008
- Manual, 93 pages, 10/76
//30//3705,3704/

GC30-3007

3704 & 3705 CONTROL PROGRAM GENERATION & UTILITIES GUIDE & REFERENCE MANUAL (OS/VSE TCAM LEVELS 5 & 6 IN VSI; VS2 REL 1.6, 1.7, 2, SCP 5744-BA1)
Provides the information necessary to (1) define and generate a network control program/VSE for an IBM 3704 or 3705 Communications Controller, (2) load the program into the controller, and (3) dump the contents of controller storage.

The network control program/VSE is capable of performing two major categories of functions: network control functions and emulation functions. Either or both categories can be included in a specific network control program. Network control functions control the transmission of data between the central processing unit to which the controller is attached and the remote stations of a teleprocessing network. Limited message processing, such as insertion of data and time into message block the controller to operate as an IBM 2701, 2702, or 2703 Transmission Control Unit, or any combination of the three.

This publication is directed to the systems analyst or systems programmer responsible for defining and generating a network control program and loading it into a 3704 or 3705 communications controller.

The chapters of this book are:

- o Introduce the network control program/VSE and summarize the content of the book.
- o Describe the characteristics of the teleprocessing network and the program options that must be considered when defining a program.
- o Give the macro instructions necessary to code a program tailored to a specific installation.
- o Describe the program generation procedure
- o Explain how to use the independent Loader and Dump utility programs.

The appendixes list the teleprocessing devices with which the communications controllers can communicate using the network control program/VSE, give diagnostic messages associated with the generation, loading, and dump procedures and provide other reference information.

Prerequisite to use of this publication is a basic understanding of teleprocessing and teleprocessing access methods. A general knowledge of the purposes of the communications controllers is helpful; this may be obtained from Introduction to the IBM 3704 and 3705 Communications Controllers, GA27-3051.

Manual, 320 pages
//30//3704,3705/5742

GC30-3008

3704 & 3705 CONTROL PROGRAM GENERATION & UTILITIES GUIDE & REFERENCE MANUAL (TCAM 10 SVS - 5742-017) SCP 5742, 5744-ANI/BA2, 5747-AGI/AJ2

Provides the information necessary to (1) define and generate a Network Control Program/VSE for a local or remote IBM 3704 or 3705 Communications Controller; (2) load the program into the controller; and (3) dump the contents of controller storage.

This publication is directed to the systems analyst or systems programmer responsible for performing the above actions.

Prerequisite to use of this publication is a basic understanding of teleprocessing and teleprocessing access methods. A general knowledge of the purposes of the communications controllers may be obtained from the Introduction to the IBM 3704 and 3705 Communications Controllers (GA27-3051).

Manual, 8 1/2 x 11 inches, 216 pages, 1/77

GC30-3020

TELEPROCESSING PREINSTALLATION GUIDE FOR IBM 3704 AND 3705 COMMUNICATIONS CONTROLLERS
Teleprocessing Preinstallation Guide for IBM 3704 and 3705 Communications Controllers (GC30-3020)

This publication lists the equipment characteristics of the teleprocessing network and communications controller that the user must specify when coding an emulation program or network control program. The publication consists of a series of tables, one for each type of station supported by the program and one for each type of line set with which the controller can be equipped. Each table gives the appropriate values to code for the station or line set represented. For some characteristics several values are listed, the appropriate choice depending on how the user's station is equipped (for instance, which transmission code it employs) or in which of alternate modes he wishes the station or line to operate. In these cases, accompanying notes suggest where the user may learn the values appropriate for his installation.

A companion publication, Teleprocessing Installation Record for IBM 3704 and 3705 Communications Controllers (GC30-3021), is useful for recording the equipment characteristics of a particular teleprocessing installation as a guide for coding programs for the communications controller.

Manual, 128 pages
//09//3704,3705/

GC30-3021

TELEPROCESSING INSTALLATION RECORD FOR IBM 3704 AND 3705 COMMUNICATIONS CONTROLLERS

This publication provides the user with a convenient means for recording the details of his 3704 or 3705 based teleprocessing configuration existing or planned that he must know before coding an emulation program or network control program. As furnished, the publication consists of a series of formatted charts, each of which as appropriately labelled spaces representing the information items pertinent to a particular type of communication line (such as a multipoint line) and the stations associated with that line. A chart is also provided for recording the hardware units installed in the communications controller, along with related information such as line interface and subchannel addresses used.

From the package of charts provided the user selects the number and types appropriate to his teleprocessing configuration. Upon filling in the information indicated and assembling the charts into a binder, he has a convenient record of his configuration that gives such of the information needed to code a program appropriate to his installation. (The charts also contain spaces for related information not needed in coding the program; for example, common-carrier circuit numbers.)

A companion publication, Teleprocessing Preinstallation Guide for IBM 3704 and 3705 Communications Controllers (GC30-3020), provides guidance in selecting many of the parameters to be documented in the installation record.

Manual, 20 pages
//09//3704,3705/

GC30-3026

3767 COMMUNICATION TERMINAL: SETUP INSTRUCTIONS

Describes the procedures for setting up the IBM 3767 Communication Terminal without the assistance of an IBM Customer Engineer. The publication is directed to terminal operators or other persons who will be responsible for setting up the terminal.

Major subjects include checking the decibel level, attaching cables, attaching features and accessories, and loading forms into the terminal.

Prerequisite publication: None.

Manual, 24 pages

GC30-3028

IBM 3773, 3774, AND 3775 PROGRAMMABLE COMMUNICATION TERMINALS PROGRAMMER'S GUIDE

This manual contains programming information about the IBM 3773, 3774, and 3775 Programmable Communication Terminals. It is directed to the application programmer who codes the 3770 programs, and to the system programmer who generates

the system and installs the 3770 programming capability. Some of the descriptions in the manual are:

- o Programming characteristics of the terminal.
- o Functions that can be performed by the 3770 programs.
- o How to code the 3770 programs, including a list of all the programming statements.
- o How to code the supervisor (job control) programs.
- o Host services that are necessary to assemble, validate, test, and prepare the program for inclusion into the 3770 program library.

The programmer using this manual should have a thorough understanding of the operating system, access method, and teleprocessing system to which the 3770 is attached.

A prerequisite publication for this manual is IBM 3770 Communication System, System Components, GA27-3097. Manual, 450 pages
//30//3773,3774,3775/

GC30-3033

INTRODUCTION TO ADVANCED COMMUNICATIONS FUNCTION

Provides an introductory description of the types of data communication network configurations that are supported by the three principal programming components of Advanced Communications Function: ACF/VTAM (Advanced Communications Function for Virtual Telecommunications Access Method), ACF/TCAM (Advanced Communications Function for Telecommunications Access Method), and ACF/NCP/VS (Advanced Communications Function for Network Control Program/Virtual Storage). This publication (1) explains the concepts of single-domain networks, and networking; (2) summarizes the capabilities and functions of Release 2 of ACF/VTAM, Version 2 Release 2 of ACF/TCAM, and Release 2 of ACF/NCP/VS; (3) explains the further capabilities and functions provided by Release 3 of ACF/VTAM, Version 2 Release 3 of ACF/TCAM, and Release 3 of ACF/NCP/VS; (4) lists the communication systems and stations supported by the program products listed in (3); (5) contains some preinstallation planning considerations for users intending to install or upgrade a network based on the IBM Systems Network Architecture (SNA); and (6) contains a glossary of terms and abbreviations used in describing SNA-based networks.
Manual, 8 1/2 x 11 inches, 56 pages, 10/76

GC30-3036

OS/VS TCAM (LEVEL 10) APPLICATION PROGRAMMER'S GUIDE
SUIDS 5741-602, 5752-836, ICR 5742

This manual describes how to write application programs for the TCAM environment. The TCAM application programming environment is described in detail, and all the OS/VS and TCAM MCP requirements are discussed. All of the TCAM application Program macros are presented, and the rationale for each macro is discussed.

This manual is both a tutorial and a reference guide. It is organized from general to specific. This is so the new programmer can begin at Chapter 1, and progress through the book as his knowledge of TCAM increases. The programmer who is experienced with TCAM can use the manual as a reference guide by turning directly to the area that he is interested in.

The user of this manual should be an application programmer, and must be able to code programs in either Assembler language, COBOL, or PL/I. The TCAM system programmer may also occasionally want to refer to this manual.

Manual, 8 1/2 x 11 inches, 160 pgs, 2/77
/C/30///5742,5741-602,5752-836

GC30-3037

OPERATOR'S LIBRARY: OS/VS TCAM (LEVEL 10), SUID 5741-602, 5752-836, ICR 5742

This manual is primarily a reference guide. It describes how a TCAM telecommunication network can be controlled through TCAM operator control commands. Since this manual will be used in a telecommunication environment, a typical telecommunication network is described and discussed. Next, the format and syntax of the TCAM operator control commands is discussed and described. Immediately preceding the detailed discussion of what each command does, a discussion on how to issue the commands is given.

One chapter is a quick reference guide on how to code each command. This chapter may be removed from the manual for use at the terminal that has been designated as the operator control terminal. The last chapter is a list of all the operator awareness messages that may be returned as a result of issuing an operator control command.

The user of this manual should be familiar with the concept of operator control through a keyboard device. The TCAM system programmer may have need to refer to this manual occasionally, and if you plan to write a programmed operator (that is, a TCAM application program that is designed to control your network by issuing operator control commands), you should use this manual in conjunction with the TCAM Application Programmer's Guide GC30-3036.

GC30-3038

OS/VS2 SVS TCAM (5742-017) COMPONENT RELEASE GUIDE, TCAM LEVEL 10, FEATURES 5074 OR 5075

This publication contains changes and additions to OS/VS2 (SVS) publications as a result of component release 10 of

OS/VS TCAM.

Publications updated by this document are:
OS/VS Message Library: VS2 System Messages, GT38-1002
OS/VS Message Library: VS2 System Codes, GT38-1008
OS/VS Message Library: Routing and Descriptor Codes, GC38-1004

OS/VS 2 Storage Estimates, GT38-0604

TCAM Level 10 enhances TCAM's support of NCP/VS to include Systems Network Architectures (SNA). This support includes terminals and subsystems on Synchronous Data Link Control (SDLC) lines as well as ESC and start/stop terminals. TCAM's direct support of NCP/VS extends IBM's support of SNA. TCAM/NCP direct eliminates the need to use TCAM-through-VTAM to obtain SNA support through TCAM.

TSO support of SELC Leased Lines is provided for 3767 Communication Terminal and 3270 Information Display System. The 3770 Communication System in 3767 compatibility mode is also supported via SELC leased lines. TCAM direct support of NCP/VS also offers TSO general poll for 3270 ESC.

OS/VS TCAM INSTALLATION AND MIGRATION GUIDE LEVEL 10
SELECTABLE UNIT (SU) IDENTIFIERS; 5741-602 (OS/VS1 SU ID)
5742-UY99915 (OS/SVS ICR); 5752-836 (OS/MVS SU ID)

This publication will help shorten the time required to install a TCAM-10 system or to migrate from an existing TCAM system to TCAM-10. This manual provides sample message control programs (MCPs) and a network control program (NCP) for three system configurations: TCAM only, TSO only, and TCAM mixed operation. These samples are to be used as adjunct information to that contained in TCAM System Programmer's Guide GC30-2051 and the TCAM Macro Reference Guide GC30-2052. Both of these manuals as well as the TCAM 10 Program Directory document should be at hand as this guide is read. This manual points to detailed information in the other publications.

This manual is intended for system programmers and those responsible for installing TCAM-10.

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM CONCEPTS AND
PLANNING

This publication provides an overview of Advanced Communications Function for the Telecommunications Access Method (ACF/TCAM). The ACF/TCAM program product supports IBM's systems network architecture (SNA) and operates with OS/VS1, Multiple Virtual Storage (MVS), and Single Virtual Storage (SVS). All information in this manual pertaining to multiple-domain configurations and cross-domain operations applies to ACF/TCAM systems with the Multisystem Networking Facility. The manual is directed primarily to data processing managers and the system programmers who will design, install, or maintain a data communication system that uses ACF/TCAM. The application programmer can also use the manual to understand the context in which ACF/TCAM application programs execute.

ACF/TCAM, VERSION 2 GENERAL INFORMATION: INTRODUCTION
RELEASE 3, LIC PROG 5735-RC3

This publication provides an overview of Advanced Communications Function for the Telecommunications Access Method (ACF/TCAM), Version 2, Releases 1, 2, and 3. The ACF/TCAM program product supports IBM's Systems Network Architecture (SNA) and operates with OS/VS1 and OS/VS2 MVS. The manual describes ACF/TCAM's operation using an IBM network control program (either NCP/VS, Version 5 - for single-domain networks or ACF/NCP/VS - for multiple-domain

networks) in an IBM 3705 Communications Controller. The manual is intended for data processing managers, their technical staff, and others who desire evaluative information on the product. The reader should be familiar with the basic concepts of data communication.
Manual, 35 pages
/////5735-RC3

personnel who provide program maintenance on ACF/TAP.

A general knowledge of traces, SNA (SDLC and networking), VTAM or TCAM access methods, and communications controllers is a prerequisite for using ACF/TAP. This publication has no prerequisite manuals.
Manual, 8 1/2 x 11 inches, 100 pgs, 10/76

GC30-3058

ACF/NCP/VS NETWORK CONTROL PROGRAM SYSTEM SUPPORT PROGRAM GENERAL INFORMATION

Provides a general introduction to the ACF/NCP/VS program product (Advanced Communications Function/Network Control Program/Virtual Storage) and the System Support Programs for ACF/NCP/VS program product. This edition summarizes the specific functions provided by Releases 2 and 3 of ACF/NCP/VS and explains the relationship between the network control program and the communication access methods (ACF/TCAM and/or ACF/VTAM) executed in host processors.

This publication is directed primarily to data processing managers and data communication network designers intending to install or upgrade an ACF/NCP/VS-based network or to consolidate existing networks.

Prerequisite to use of this publication is a general knowledge of data communication. A knowledge of the basic concepts of Systems Network Architecture is also helpful. Related publications:

NETWORK CONTROL PROGRAM: STRUCTURE OVERVIEW FOR START/STOP AND BSC LINE CONTROL

This manual describes how the start-stop and BSC line controls work in the network control program. It should be used by experienced system programmers and systems engineers who wish to understand in more detail the NCP's support of start-stop and BSC terminals.

To thoroughly understand the start-stop and BSC line controls in the NCP, the reader should be intimately familiar with the NCP PLM, SY30-3013 or LY30-3030; the 3705 Principles of Operations, GC30-3004; and the NCP program level 5 microfiche listings. He should also understand the NCP generation process and therefore, be familiar with the 3705 Control Program Generation and Utilities manual, SC30-3016 or GC30-3008. The Program Reference Handbook, SC30-3029 or GY30-3012, is also necessary for an understanding of the data areas and control blocks discussed in this manual.

SC30-3114

STORAGE ESTIMATES AND PERFORMANCE PLANNING FOR THE 3705 COMMUNICATION CONTROLLER

This manual assists the reader in determining storage estimates for the network control program and in planning for the performance of a data communication system. The publication is directed to systems analysts, system programmers, IBM systems engineers, and IBM salesmen who are planning for ACF/NCP/VS storage estimates and performance. The only prerequisite publication for this manual is the ACF/NCP/VS Generation and Utilities Reference Manual, SC30-3116.

SC30-3115

ACF/TAP USER'S GUIDE (ADVANCED COMMUNICATION FUNCTION/TRACE ANALYSIS PROGRAM) SSP 6 - 5735-XX3

The Advanced Communications Function Trace Analysis Program User's Guide, SC30-3115, describes how to use the Advanced Communications Function Trace Analysis Program (called ACF/TAP), which is an IBM service aid that increases the usefulness of trace data by providing:

- A common trace analysis facility for ACF/VTAM, ACF/TCAM, and ACF/NCP trace data.
- Output reports that show SNA and SDLC network trace data in formats that are easy to read and understand.

This publication has two purposes, each independent of the other:

- It describes how to use ACF/TAP.
- It provides a general overview of ACF/TAP maintenance information.

This user's guide is for IBM Customer Engineers, Program Support Representatives, and Systems Engineers who use ACF/TAP to provide hardware and program maintenance for customer data communication networks. It is also for IBM

SC30-3116

IBM 3705 ADVANCED COMMUNICATIONS FUNCTION FOR NETWORK CONTROL PROGRAM/VS GENERATION AND UTILITIES, REFERENCE, PROG PROD 5735-XX1, -XX3

Provides the information necessary to (1) define and generate an ACF/NCP/VS for an IBM 3705 Communications Controller (under OS/VS and DOS/VS); (2) load the program into the controller; and (3) dump the contents of controller storage.

The ACF/NCP/VS can perform two major categories of functions: network control functions and emulation functions. Network control functions control the transmission of data between the access method (TCAM, ACF/TCAM, VTAM, ACF/VTAM) in the host processor and the SDLC (synchronous data link control), start-stop, and binary synchronous stations of a data communications network. Emulation functions enable the controller to operate as an IBM 2701, 2702, or 2703 transmission control unit, or any combination of the three, for transmission of data between the host processor and start-stop and/or binary synchronous stations. The user may generate an ACF/NCP/VS to include network control functions only, or both network control and emulation functions.

(This publication may also be used to generate a stand-alone emulation program to be executed in an IBM 3704 or 3705 Communications Controller.)

This publication is directed to the systems analyst or systems programmer responsible for defining and generating an ACF/NCP/VS and loading it into a 3705 communications controller.

The chapters of this book:

- Introduce the ACF/NCP/VS and summarize the content of the book.
- Describe the characteristics of the data communications network (including SDLC, binary synchronous, and start-stop stations) and the program options that must be considered when defining a program.
- Give the macro instructions necessary to code a program tailored to a specific installation.
- Describe the program generation procedure.
- Explain how to use the loader and dump utility programs under both OS/VS and DCS/VS.

The appendices list the data communications devices with which the communications controllers can communicate using ACF/NCP/VS (and the emulation program), explain diagnostic messages related to the generation, loading, and dump procedures, and provide other relevant information about the program options.

Prerequisite to use of this publication is a basic understanding of data communications and data communications access methods. A general knowledge of the purposes of the communications controllers may be obtained from the Introduction to the IBM 3704 and 3705 Communications Controllers (GA27-3051).

SC30-3117

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM, LIC PROG 5735-RC1, SYSTEM PROGRAMMER'S GUIDE

This book is for users of the telecommunications access method (TCAM). It is a coding guide for the system programmer who must construct or modify a TCAM message control program (MCP) supporting IBM's Advanced Communications Function (ACF). It explains how to write an ACF/TCAM MCP using assembler language coding conventions and how to use a variety of auxiliary service facilities. This book contains information that might be of use in planning and setting up a data communication system incorporating ACF/TCAM and systems network architecture (SNA). The reader is expected to be familiar with ACF/TCAM Concepts and Planning (GC30-3049) and to have a basic understanding of SNA.

Manual, 8 1/2 x 11 inches, 688 pgs, 12/77
/////5735-RC1

SC30-3118

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM MACRO REFERENCE GUIDE

This publication is a reference guide that contains detailed information on the macro instructions used with the Advanced Communications Function for TCAM (ACF/TCAM) with direct network control program/virtual storage (NCP/VS) support. It includes the ACF/TCAM and ISO macro instructions, the message error record, internal and transmission code charts, and macro return codes. This manual is for a system programmer who is thoroughly familiar with the ACF/TCAM System Programmer's Guide and is ready to code a message control program (MCP). It is essential that the user refer to the ACF/TCAM System Programmer's Guide for a functional explanation of ACF/TCAM; this book is not tutorial and contains only a lower-level explanation of the macros with specific operand-coding considerations. The reader should also be familiar with the contents of the ACF/TCAM Installation and Migration Guide, the ACF/TCAM Concepts and Planning manual, and the ACF/TCAM Application Programmer's

Guide. The reader is also assumed to have basic understanding of systems network architecture (SNA). Manual, 8 1/2 x 11 inches, 444 pgs, 12/77

 ////5735-RC1

SC30-3121

ADVANCED COMMUNICATION FUNCTION FOR TCAM, LIC PROG 5735-RC1, INSTALLATION AND MIGRATION GUIDE

This publication provides a general description of the concepts you should be familiar with to install or migrate to an ACF/TCAM system. It's purpose is to help reduce the time required to migrate to or install an ACF/TCAM controlled data communication network. More detailed information about the concepts and topics discussed in this Guide is provided in other publications in the ACF/TCAM library. The primary reference source, however, is the ACF/TCAM System Programmer's Guide.

This Guide is intended for systems programmers and IBM systems engineers who have a thorough knowledge of operating systems as well as experience in how to install a TCAM system. It is organized in four chapters and four appendixes as follows:

"Chapter 1. Introduction" summarizes the ACF/TCAM functions for single-domain and for multiple-domain networks. It also provides a general description of Systems Network Architecture and ACF/TCAM as well as the ACF/TCAM Multisystem Networking Facility. An understanding of the information contained in this chapter is required to construct a data communication network controlled by ACF/TCAM.

"Chapter 2. ACF/TCAM Installation Guidelines" describes the channel and device configurations of a sample multiple-domain network that utilizes the program examples described in Chapter 3.

"Chapter 3. Sample Program Descriptions" contains the descriptions of two message control programs, three network control programs and five application programs that are used in the sample multiple-domain network configuration described in Chapter 2. The source listings for these programs are in Appendix D.

"Chapter 4. Migration" contains a summary of ACF/TCAM migration considerations for single-domain and multiple-domain networks. This chapter also describes the changes required for current TCAM systems to migrate to an ACF/TCAM system.

"Appendix A. Macros Required to Define and ACF/TCAM Message Control Program" describes the new or modified macros used to define an ACF/TCAM message control program.

"Appendix B. Macro Changes for OS/VS TCAM and ACF/TCAM Releases" describes, in chart form, the TCAM macros and operands for TCAM release 5F through ACF/TCAM. This information may be used as a migration aid. It identifies the differences in the macros and their operands between one release of TCAM and another.

"Appendix C. Storage Estimates" describes the storage requirements for an ACF/TCAM message control program.

"Appendix D. Program Listings" contains the source listings for the sample message control programs, network control programs and the application programs used in the sample network configuration described in Chapter 2. The source listings represent executable examples of the program definition directions described in the ACF/TCAM library of manuals. These programs may be used as patterns when you code your message control program, or they can be installed with the appropriate modifications to make them match your hardware configuration. The descriptions of the sample programs are in Chapter 3. The JCL associated with the MCPs and the application programs are also in this Appendix.

SC30-3122

ADVANCED COMMUNICATION FUNCTION FOR TCAM, LIC PROG 5735-RC1, DEBUGGING GUIDE

This manual can be used three ways: as a source of hints for originally coding the ACF/TCAM message control program (MCP) in a manner that facilitates the detection, handling, and diagnosis of error conditions that occur while the ACF/TCAM network is running; as an aid in diagnosing certain

problems that occur due to incorrect coding of MCP macros; and as a guide to the selection and running of ACF/TCAM diagnostic aids that facilitate troubleshooting and debugging in a running ACF/TCAM network that is experiencing trouble.

Manual, 8 1/2 x 11 inches, 224 pgs, 12/77
 ////5735-RC1

SC30-3123

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM, PROG PROD 5735-RC1, OPERATORS GUIDE

Program No. 5735-RC1 with base feature No. 9001 and networking feature No. 6008. This manual describes the ACF/TCAM operator control commands and how these commands are used to control and monitor ACF/TCAM networks. It is primarily a comprehensive reference for an experienced OS/VS system operator who has been designated as the ACF/TCAM operator. System programmers and application programmers may also occasionally use this manual.

This manual contains five chapters. Chapter 1 briefly reviews some telecommunications concepts pertaining to ACF/TCAM and then describes the physical and logical elements of both single- and multiple-domain ACF/TCAM networks. Chapter 2 describes how to format and enter operator commands and how to respond to ACF/TCAM reply messages to operator commands. Chapter 3 describes the operator commands, including an explanation of the function of the commands and their operands. Chapter 4 is a summary of the operator commands. Chapter 5 lists the message number and text for messages that the operator is likely to receive after entering one of the operator commands.

ACF/TCAM VERSION 2, SERVICE FACILITIES, SYSTEM SERVICE PROGRAMS AND UTILITIES ACF/TCAM 5735-RC3; V01 5741-TC221; MVS 5752-TC221

This publication describes the ACF/TCAM service facilities, system service programs, and utilities, all of which are auxiliary routines designed to help the message control program (MCP) in directing message traffic through the network.

ACF/TCAM service facilities include checkpoint/restart, dynamic accounting, security and authorization, message logging, and startup/restart message generation. Among the ACF/TCAM system service programs are basic and extended operator control, online retrieval, save/restore message queues, internodal awareness, and internodal sequence number synchronization. ACF/TCAM utilities include the message queue data set preformatting utility (IEDQXA), CCREDIT print utility (IEDQXB), message queue data set dump utility (IEDQXC).

This publication includes explanations of these facilities and examples of procedures and techniques. It should be used as a reference for the system programmer responsible for the planning and coordination of a network with ACF/TCAM.

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM (ACF/TCAM) WITH A FEATURE FOR MULTISYSTEM NETWORKING, DESIGN OBJECTIVES, PROG PROD 5735-RC1

This Program Product Design Objectives (PPDC) describes the design objectives and provides the estimated availability date of the subject Program Product. Advanced Communication Function for Tcam (ACF/TCAM) is an IBM Telecommunications Access Method program product. ACF/TCAM will be available for use in OS/VS1, OS/VS2, SVS, and OS/VS2 MVS system environments. ACF/TCAM is queued, general purpose teleprocessing access method, a component of IEM System Network Architecture (SNA) that controls the resources of a TCAM single domain network. A TCAM single domain network consists of a System/370 host processor, the host access method (ACF/TCAM), and the resources under control of that access method. Use of ACF/TCAM requires the concurrent installation of prerequisite TCAM system control Programming (SCP). This prerequisite SCP should only be installed by ACF/TCAM users.

EMULATOR PROGRAM, EXTENDED FEATURES PRPQ, PROG 5799-ATD, DESIGN OBJECTIVES
This document describes design objectives of the 3705 Extended Features PRPQ which provides additional functions to the 3705 Emulation Program. These additional functions give the 3705 II user new capabilities which make his total teleprocessing system more flexible.

The additional functions made available by this PRPQ are:

- Multiple Host support (Maximum of 4 Type 4 channel adapters)
- Operator Console support
- Statistics Gathering
- System/CPU Select for Some START/STOP Terminals
- Automatic Speed Selection
- Code Conversion

The Extended features are totally compatible with the Multiple Subchannel Line Access (MSLA) facility in EP V3M0. The MSLA feature may be used in a multiple host environment to provide line recovery operations in the event of a host malfunction. Should one host processor go down, all or some of its teleprocessing load may be transferred to a second host processor. Communication over the same lines resumes via the MSLA paths.

OS PL/I OPTIMIZING COMPILER - PROGRAMMER'S GUIDE
PROGRAM NUMBERS 5734-PL1, 5734-LM4, 5734-LM5

This manual is a companion volume to OS PL/I Optimizing and Checkout Compilers: Language Reference Manual (SC33-0009) and OS/360 Time Sharing Option: PL/I Optimizing Compiler (SC33-0029). The three manuals form a guide to the writing and execution of PL/I programs using the optimizing compiler and the associated resident and transient libraries in the batch and time-sharing environments of the IBM Operating System.

The programmer's guide is concerned with the relationship between a PL/I program, the optimizing compiler, and the operating system. It explains how to compile, link-edit, and execute a program in a batch environment, and it introduces job control language, the linkage editor, and the loader, data management, and other operating system features that may be required by a PL/I programmer.

SC33-0007

SYSTEM/360 OPERATING SYSTEM PL/I CHECKOUT COMPILER
PROGRAMMER'S GUIDE - PROGRAM NUMBERS 5734-PL2, 5734-LM5

This manual is a companion volume to OS PL/I Optimizing and Checkout Compilers: Language Reference Manual, Order No. SC33-0009, and the OS Time Sharing Option: PL/I Checkout Compiler, Order No. SC33-0033. The three manuals form a guide to the writing and execution of PL/I programs using the checkout compiler and the transient library in the batch and time-sharing environments of the IBM Operating System.

The programmer's guide is concerned with the relationship between a PL/I program, the checkout compiler, and the operating system. It explains how to use the checkout compiler to run a PL/I program in a batch environment, and introduces job control language, the linkage editor, the loader, data management, and other operating system features that may be required by a PL/I programmer.

SC33-0008

DOS PL/I OPTIMIZING COMPILER: PROGRAMMER'S GUIDE - PROGRAM
PRODUCTS 5736-PL1, 5736-LM4 AND 5736-LM5

This manual is a companion volume to the DCS PL/I Optimizing Compiler: Language Reference Manual (Order Number GC33-0005). The two manuals form a guide to the writing and execution of PL/I programs using the optimizing compiler and the associated resident and transient libraries under the IBM Disk Operating System.

The programmer's guide is concerned with the relationships between a PL/I program, the optimizing compiler, and the operating system. It explains how to compile, link-edit, and execute a PL/I program, and it introduces job control language, the linkage editor, data management, and other operating system features that may be required by a PL/I programmer.

OS PL/I CHECKOUT AND OPTIMIZING COMPILERS: LANGUAGE REFER-
ENCE MANUAL, PROG. NOS. 5734-PL1-2, LM4-5 (ALL - 5734-PL3)

This publication is the primary source of information on the language implemented by the PS PL/I Optimizing and Checkout Compilers. It is a reference manual rather than a tutorial text, and the reader is assumed to have some previous knowledge of PL/I.

The manual contains information on how to write a PL/I source program. For information on how to compile, link-edit, and execute the program, reference should be made to the appropriate programmer's guide.

DISK OPERATING SYSTEM/360 PL/I OPTIMIZING COMPILER:
EXECUTION LOGIC PROGRAM NUMBERS 5736-PL1, 5736-LM4,
5736-LM5

This publication describes the object module produced by the DOS PL/I Optimizing Compiler, and explains how the compiled code uses subroutines from the resident and transient libraries of the optimizing compiler.

The topics covered include program initialization, storage management, input/output, error handling, and interlanguage communication. The use of storage dumps for debugging is also explained.

The manual is intended primarily for programmers concerned with maintenance of the compiler and its libraries. It will also be useful for applications programmers who require an understanding of the processes of execution (for example, to link PL/I and Assembler-language routines).

OPERATING SYSTEM PL/I OPTIMIZING COMPILER: MESSAGES PROG. NOS. 5734-PL1, 5734-LM5
This publication lists all the messages that may be issued by the OS PL/I Optimizing Compiler and the associated transient library during processing of a PL/I program. Both the long and short forms of each message are listed where applicable. The messages are in three groups:

- o Compile-time messages (generated by the compiler during compilation of a PL/I source program)
- o Execution-time messages (generated by the transient library during execution of the compiled program)
- o Prompter messages (generated by the compiler when it is used in a time-sharing environment)

Where appropriate, explanations of the messages and suggested programmer responses are included.

SYSTEM/360 OPERATING SYSTEM PL/I CHECKOUT COMPILER EXECUTION LOGIC MANUAL - PROGRAM NUMBERS 5734-PL2 5734-LM5
The PL/I Checkout Compiler operates in two distinct stages: translation and interpretation. During translation, the original PL/I source program is converted into an intermediate code. During interpretation, this code is interpreted to achieve the effect of object-time execution.
This manual describes those aspects of interpretation which are common to all PL/I programs processed in this way. The topics covered include program initialization; input/output; storage management; error handling; conversational processing; the use of storage dumps for debugging; and interlanguage communication.
The manual is intended primarily for programmers responsible for the maintenance of the compiler and its library. It will also be useful for application programmers who require an understanding of the process of execution.

SC33-0034

SYSTEM/360 OPERATING SYSTEM PL/I CHECKOUT COMPILER: MESSAGES MANUAL - PROGRAM NUMBERS 5734-PL2, 5734-LM5
This manual is an essential source of reference for users of the PL/I checkout compiler in either the batch or TSC environment. It describes the components of the messages that can be produced by the compiler when processing a PL/I program. Then it lists each message and provides additional information in many cases.
The messages are divided into two groups -- those that can be produced by the compiler during preprocessing, translation, and interpretation (in conjunction with the PL/I Transient Library), and those that can be produced by the PL/I Prompter when invoking the compiler in a TSC environment.
As users of the PL/I checkout compiler, readers should have an understanding of the information in the PL/I Optimizing and Checkout Compilers Language Reference Manual (SC33-0009), and the PL/I Checkout Compiler Programmer's Guide, (SC33-0007), and also, for TSO users, the manual TSC: PL/I Checkout Compiler (SC33-0033).

OS PL/I OPTIMIZING COMPILER: CMS USERS GUIDE - PROGRAM NUMBER 5734-PL1
This manual provides the information required to use the OS PL/I Optimizing Compiler under CMS. Using the OS PL/I Optimizing Compiler under CMS allows PL/I source programs to be compiled, debugged, and executed from a terminal with the maximum efficiency.
The book is intended for all programmers who use the OS PL/I Optimizing Compiler under CMS. It contains a brief tutorial introduction followed by reference data covering:

1. The syntax and options of PLIOPT, the command that

- invokes the OS PL/I Optimizing Compiler.
- The compile-time and execution-time options that can be used with the OS PL/I Optimizing Compiler.
 - The restrictions that apply to PL/I when it is used under CMS.

OS PL/I CHECKOUT COMPILER: CMS USER'S GUIDE - PROGRAM NUMBERS: 5734-PL2,5734-LM5
 This book explains, for the users of the Conversational Monitor System (CMS), how to invoke the PL/I Checkout Compiler and use its conversational facilities. The reader is assumed to have a basic knowledge of PL/I and of CMS. The book provides enough information to allow the reader to enter, compile, debug, and execute a straightforward PL/I program under CMS, together with a full description and examples of how to use the interactive debugging facilities of the checkout compiler. It also contains reference data covering:

- The special restrictions and conventions that apply to PL/I when it is compiled by the checkpoint compiler and executed under CMS.
- The syntax of the PLIC and PLICR commands, subcommands, and options.
- The restrictions and conventions that apply to PL/I statements used in immediate mode.

CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (CICS/VS) V1 REL 4, LIC PROG 5740-XX1 (OS/VS), 5746-XX3 (DOS/VS) GENERAL INFORMATION
 This manual introduces the CICS/VS program product primarily to data processing management and to system/application designers. Readers are assumed to have had some experience of computer applications - either in management, programming or operations.

Selected chapters of this manual also serve to introduce CICS/VS to other specific groups of personnel, namely: users of applications to be run under CICS/VS (chapter 2); programmers responsible for coding CICS/VS applications (chapter 3); programmers responsible for installing and preparing a CICS/VS system (chapter 4); and the operations personnel responsible for running a CICS/VS system (chapter 5). A brief introduction to how CICS/VS works is given in chapter 6; a summary of the system requirements for running CICS/VS is given in Appendix A; and a list of terminals and subsystems supported by CICS/VS is given in Appendix B. A summary of the new facilities announced for CICS/VS Version 1, Release 4 is given in Appendix C.
 Note: In this publication, the term VTAM refers exclusively to the program product AC/VTAM, program number 5746-RC3 (for CICS/DOS/VS) or 5735-RC2 (for CICS/OS/VS).

For further information concerning CICS/VS, a list of IBM publications is given.

1410/7010 DCS EMULATOR ON MODELS 145/155 REFERENCE MANUAL PROGRAM NUMBER 370N-EU-490

This publication describes the 1410/7010 Emulator Program, and "integrated emulator" program executed under control of DOS. It is a multi-purpose document covering several topics related to the emulator. Included is information about Physical Planning, considerations, data processing, generation, execution and communications with the emulator.

Manual, 106 pages

GC33-2006

MODEL 20 DOS EMULATOR ON SYSTEM/370 REFERENCE (370N-IC-002)

This publication provides information about the System/360 Model 20 Emulator Program for the System/370 Models 135 and 125. The emulator program is executed as a problem program under control of DOS (version 4) on the IEM Compatibility Feature #7520. Using the emulator program and the compatibility feature, the System/370 Model 135 or 125 can execute Model 20 Data Processing System.

It also provides information about Device Independence, the ability to execute Model 20 unit record operations using the System/370 tape and disk units.

GC33-2008

1401/1440/1460 OS EMULATOR ON SYSTEM/370 REFERENCE MANUAL PROGRAM NUMBERS 360C-EU-735 AND 5744-AB1

This manual describes the IBM 1401/1440/1460 Emulator Program for the IBM System/370 Models 135/145/155/155 IL/158 and provides the information needed to use the program. The emulator program runs as a problem program under the OS/MFT, OS/MVT, OS/VS1, and OS/VS2 control programs and executes programs written for the IEM 1401, 1440, and 1460 Data Processing Systems (the Model 135 must be equipped with IEM Compatibility Feature #4457; the Model 145 with IEM Compatibility Feature #4457 or 4458; the Model 155 with IEM Compatibility Feature #3950). Note that CS/MVT and CS/VS2 do not run on the Model 135. In addition, this manual describes the 1401/1440/1460 simulator, which enables 1401/1440/1460 programs to be executed on System/370 Models 135 through 168 under the control of OS/VS1 and OS/VS2, without the need for the compatibility feature (the functions of the compatibility feature are performed by simulator routines).

Also described in this manual are three programs that are distributed with the emulator, the tape preprocessor program, the tape postprocessor program, and the disk formatting program. These programs handle compatibility between 1401/1440/1460 data formats for tape and disk.

The manual contains information for system planners and programmers on how to plan, generate, use, and modify the emulator; for programmers on how to process 1401/1440/1460 data and execute the emulator; and for operators on how to communicate with the emulator. All messages issued by the emulator and the data manipulation programs are included as an appendix.

Programmers and planners should be familiar with the IBM 1401/1440/1460 Data Processing Systems and with the appropriate OS control program.

GC33-2010

MODEL 20 EMULATOR ON SYSTEM/370 USING DOS AND DOS/VS PLANNING - PROG. NO. 360N-IC-002; COMPONENT NO. 5745-SC-E20

This publication provides planning information about the System/360 Model 20 Emulator Program for the System/370 Models 135, 125, and 115. The emulator program is executed as a problem program under control of DOS or DOS/VS on a System/370 Model 135, 125, or 115 equipped with the IBM Compatibility Feature Number 7520. Using the emulator program and the compatibility feature, the System/370 Model 135, 125, or 115 can execute programs written for the System/360 Model 20 Data Processing System.

It also provides planning information about Device Independence, the ability to execute Model 20 unit record operations using the System/370 tape and disk units, and the Data Interchange program that creates DOS disk files from Disk Programming System files, or the reverse.

The information in this publication is intended for installation personnel responsible for selecting, evaluating, and implementing System/370 Model 135, 125, or 115 configurations.

DOS TO OS EMULATOR - REFERENCE PROGRAM NUMBER 360C-EU-738

The DOS Emulator Program executes under CS/MFT and OS/MVT. It enables DCS programs to execute in an OS environment. The emulator may be multiprogrammed with other OS jobs, and it can run the multiprogramming options of DCS.

This publication provides information for programmers and operators to help them code and run DCS jobs with the emulator. Emulator operation, requirements, facilities and messages are described, and sample jobstreams are provided.

It is assumed that readers of this publication are familiar with DOS and OS/MFT or OS/MVT. Note: DOS to OS Emulator-Reference, GC26-3777 is now obsolete.

1401/1440/1460 OS/MFT AND OS/MVT EMULATOR ON SYSTEM/370 (360S-EU-735) REFERENCE

This manual describes the IBM 1401/1440/1460 Emulator Program for the IBM System/370 Models 135/145/155, and provides the information needed to use the program. The emulator program runs as a problem program under the CS/MFT and OS/MVT control programs and executes programs written for the IBM 1401, 1440, and 1460 Data Processing System (the Model 135 must be equipped with the IBM Compatibility Feature #4457; the Model 145 with IBM Compatibility Feature #4457 or #4458; the Model 155 with IBM Compatibility Feature #3950).

Also described in this manual are three programs that are distributed with the emulator - the tape preprocessor program, the tape postprocessor program, the disk formatting program. These programs handle compatibility between 1401/1440/1460 data formats and System/370 data formats for tape and disk.

The manual contains information for system planners and programmers on how to plan, generate, use, and modify the emulator; for programmers on how to process 1401/1440/1460 data and execute the emulator; and for operators on how to communicate with the emulator. All messages issued by the emulator; and for operators on how to communicate with the emulator. All messages issued by the emulator and the data manipulation programs are included as an appendix.

Programmers and planners should be familiar with the IBM 1401/1440/1460 Data Processing Systems and with the appropriate OS control program.

GC33-2019

1410/7010 OS/VS EMULATOR ON SYSTEM/370, REFERENCE - PROG. NO. 5744-AG1

This manual describes the IBM 1410/7010 Emulator program for the IBM System/370 Models 145/155/155-II/158, and provides the information needed to use the program. The emulator program runs as a problem program under the OS/VS1 and OS/VS2 control programs and executes programs written for the IBM 1410 and 7010 Data Processing Systems (the Model 155 with IBM Compatibility Feature #3950).

Also described in this manual are three programs that are distributed with the Emulator - the tape preprocessor program, the tape postprocessor program, and the disk formatting program. These programs handle compatibility between 1410/7010 data formats and System/370 data formats for tape and disk.

The manual contains information for system planners and programmers on how to plan, generate, use, and modify the

and Os required when coding in machine language makes coding easier to write, understand, and change. The assembler can process a program written in assembler language to produce output in machine language suitable for link editing and subsequent execution.

The book is divided into four parts:

- Part I. Coding and Structure
- Part II. Function and Coding of Machine Instructions
- Part III. Functions of Assembler Instructions
- Part IV. The Macro Facility

The first part describes the statements, character set, terms, literals, and expressions that make up the assembler language, and give the rules and conventions for writing code. The second part describes the alignment, statement formats, mnemonic operations codes, and operand entries of machine instructions. The third part describes the assembler instructions used for program sectioning, addressing, symbol and data definition, and controlling the assembler. Finally, the fourth part gives an introduction to the macro facility for beginners, and then describes the macro definition, the macro instruction, and the conditional assembly language, a language that can alter the contents and sequence of the output produced by the assembler.

DOS SORT/MERGE PROGRAMMER'S GUIDE - PROGRAM NUMBER 5743-SM1

This manual enables a programmer to prepare input to perform a sort or merge using program product 5743-XM1, and to link to the program his own assembler-language routines to perform such tasks as summarizing, altering, inserting or deleting records. Specifically, it describes:

- o Program Organization
- o Environmental requirements
- o Label processing
- o Control statements
- o Program Modification
- o Linking to user routines
- o Efficiency considerations
- o Storage requirements
- o Program initiation
- o Compatibility/conversion aids

It also lists messages produced by the program, and describes the appropriate responses.

The user should have a good understanding of the Disk Operating System and its job control language.

OS/VS, VM/370 ASSEMBLER PROGRAMMER'S GUIDE

This manual complements OS/VS - DOS/VS - VM/370 Assembler Language, Order No. GC33-4010. It is intended for the programmer writing assembler language programs to be run under OS/VS and/or VM/370. The manual contains the following major sections:

- o Job control statements to run the assembler
- o Including macro definitions in a library
- o Interpreting the assembler listing
- o Programming considerations
- o Assembler language programming under CMS

Other topics, covered in appendices, are assembler data set requirements, the object module produced

by the assembler, invoking the assembler dynamically, and the assembler error messages. Prerequisite reading is Introduction to OS, VM/370 introduction, and OS/VS DOS/VS - VM/370 Assembler Language.

SYSTEM/360 DCS PLANNING GUIDE FOR PROGRAMMING THE 3330 DIRECT ACCESS STORAGE FACILITY

This publication is a planning guide for programmers, programming managers, and systems analysts who are intending to use an IBM System/370 configuration with the IBM 3330 Direct Access Storage Facility under the Disk Operating System.

The information in this document is divided into the following three sections:

- o An introduction that explains the functions of the IBM 3330 DASF supported by the Disk Operating System
- o A section explaining the changes to DOS IOCS to support the 3330 DASF
- o A section describing the changes required to other programming components

This publication explains only the changes to current DCS IOCS, which is described in full in IBM System/360 Disk

Operating System, Supervisor and Input/Output Macros (GC24-5037).

DOS VERSION 4 SYSTEM GENERATION
This reference publication describes the planning and the procedures necessary to generate and to maintain an installation-tailored IBM Disk Operating System (DOS) that provides support for IBM-supplied DOS programs you desire, as well as for your own programs. The major topics discussed are:

- o Planning the installation-tailored DOS supervisor
- o Planning the installation-tailored DOS operational pack(s)
- o Procedures for generating and for maintaining the DOS system
- o Sample problems for testing the IBM-supplied DOS programs

The information in this publication is of particular interest to anyone responsible for the planning and/or implementation of system generation and maintenance for DOS. This includes installation managers, system analysts, programmers, and machine operators.

GC33-5370

INTRODUCTION TO DOS/VSE
Provides a general summary of the IBM Disk Operating System Virtual Storage Extended (DOS/VSE). The purpose is to introduce new users of the operating system to its operational concepts and to discuss, on a general level, the major computing services the operating system provides. For users familiar with DOS or DOS/VSE, the publication includes a summary of the abilities and functions newly available for use at a DOS/VSE controlled installation. In addition, the publication contains an overview of separately available programming support, licensed or nonlicensed, as an aid for planning an operational DOS/VSE; not included in that overview are IBM supplied application programs.

An overview of available DOS/VSE publications (in the form of a reading guide) is also included.
Manual, 8 1/2 x 11, 136 pages, 2/78
//20///5745-020

GC33-5371

DOS/VSE SYSTEM MANAGEMENT GUIDE
This manual is a guide to the IBM Disk Operating System/Virtual Storage Extended (DOS/VSE). The system in its entirety is discussed on a conceptual and functional level. System Management refers not only to the way DOS/VSE is organized, but also to the way the user can efficiently manage the system facilities at his disposal. This manual, therefore, does more than describe the functions and interaction of the system control and system service programs that constitute DOS/VSE. It also describes how the system planner, systems programmer, and applications programmer, or operator can use DOS/VSE to your best advantage.
Manual, 8 1/2 x 11 inches, 276 pages, 2/79
//34///5745-020

GC33-5372

DOS/VSE DATA MANAGEMENT GUIDE
Provides conceptual and functional information about the data management facilities offered by DOS/VSE. These facilities concern primary items such as record design, file organization, and file processing, as well as secondary items like file labeling, data security, data integrity, and symbolic device names.

The intended audience is a systems designer who has to decide on a certain type of file organization and a method of file maintenance for a given application, and an application programmer who needs general background information about the access methods he will use in his programs. Prerequisite publication: Introduction to DOS/VSE, GC33-5370.
Manual, 300 pages
//30///

GC33-5373

DOS/VSE SUPERVISOR AND I/O MACROS

This publication is for the programmer planning to use the DOS/VSE Input/Output Control System macro instructions and supervisor macro instructions. These macro instructions can be combined with problem programs to produce generalized or specific file processing programs. The major subjects describe the macro types and their usage, label processing; the IOCS macros for the various access methods (SAM, DAM, ISAM, and VSAM); physical IOCS, supervisor, multitasking, program linkage, and other miscellaneous macros.
Manual, 420 pages
//30///

GC33-5374

DOS/VSE TAPE LABELS

The types of labels that may be written on magnetic tape by DOS/VSE are defined and described in this reference manual. The processing performed by the system, and the described. The processing of standard, user-standard and specifications that the user must supply to the system, are nonstandard labels, and unlabelled files, is explained, primarily in regard to the functions performed for volume, header, and trailer labels when the user gives specifications directly to IOCS through DTF entries.

Illustrations of volume layouts depict the various arrangements of labels and data records that can be handled by the four programming systems. For a thorough understanding of this manual, the reader should have a basic knowledge of the Input/Output Control Systems (IOCS).

The manuals providing this information are: DOS/VSE Data Management Guide, GC33-5372, and DOS/VSE Supervisor and I/O Macros, GC33-5373.
Manual, 8 1/2 x 11 inches, 58 pages, 2/79
//30///5745-020

GC33-5375

DOS/VSE DASD LABELS

The types of labels that may be written on magnetic disks by DOS/VSE are defined and described in this reference manual. The processing performed by the system, and the specifications that the user must supply to the system, are described. The processing of standard and user-standard labels is explained primarily for SAM, DAM, and diskette files.

Illustrations of volume layouts depict the various arrangements of labels and data records that can be handled by the programming systems.

This publication is divided into four major chapters: Introduction, Label Processing, Label Fields, and Glossary.
Manual, 8 1/2 x 11 inches, 108 pages, 2/79
//30///5745-020

GC33-5376

DOS/VSE SYSTEM CONTROL STATEMENTS

This manual is provided for those who need to know about the control statements that relate to the SCP (system control programming) and the VSE/Advanced Functions of DOS/VSE (Disk Operating System/Virtual Storage Extended). The manual consists of the following:

- The sections, Initial Program Load and Job Control, describe these general programs of DOS/VSE. These sections are of interest to anyone using the system, including system analysts, programmers, and operators. Detailed attention routine, job control statement, and job control command formats are given.
- The sections, Linkage Editor and Librarian, are of interest to persons responsible for maintaining the resident system. These sections fully describe the control statements for the linkage editor and librarian programs.
- The section, System Buffer Load (SYSBUFID) Program, is of interest to DOS/VSE users who have an IBM 1403U, 3203, 5203, or PRT1 printer attached to their system. The section describes the purpose of SYSEUPLI and how to use it.

Manual, 248 pages, 2/79
//36///5745-020

GC33-5378

OPERATOR'S LIBRARY DOS/VSE OPERATING PROCEDURES

This manual contains the information required by system operators to run jobs under DOS/VSE. It is intended primarily for system operators who have acquired a basic

knowledge of data processing and computer equipment. The introduction of the manual familiarizes the operator with the major concepts and components of DOS/VSE and provides the basis that is required to understand the subsequent sections of the manual. The section, Procedures, tells the operator how to run jobs under control of DOS/VSE; the procedures are illustrated by examples. The section, Reference Information contains details of all operator commands and job control statements. A glossary defines a number of terms frequently used in a DOS/VSE System Operator's environment.
Manual, 242 pages, 2/79
//40///5745-020

GC33-5379

DOS/VSE MESSAGES

This publication lists and interprets the messages which DOS/VSE issues to the operator and to the programmer. It enables him to decide on the action they have to take in reply to the message received.

Each message is preceded by an identifying number so that it can easily be found in the book. This message of listing also ensures that messages issued by the same programmer are grouped together. Not included are:

- Any language messages, except assembler messages that cause job termination
- System/370
- Any Licensed Program Product messages, except VSE/Advanced Functions.
- OLTEP messages
- Subsystem Support Services messages
- System/370 Emulator messages

These messages can be removed from the application publications and inserted in this manual, if required. A tab is provided for these messages.

Manual, 8 1/2 x 11 inches, 532 pages, 2/79
//40///5745-020

GC33-5380

DOS/VSE SERVICEABILITY AIDS AND DEBUGGING PROCEDURES

The manual provides detailed guide and reference information, including procedures, for isolating the cause of system and program malfunctions by operators and programmers.

The manual recommends when and how to use the IBM supplied serviceability aids, which are programs designed to collect relevant information about malfunctions. It includes examples of storage dump printouts that show how to locate important control blocks in such printouts.

The publication assumes that operators using it are familiar with DOS/VSE Operating Procedures, GC33-5378; programmers using it are familiar with the Principles of Operation manual applicable to their installation; the publication DOS/VSE Messages is always available for quick reference.

///5745-020

GC33-5381

DOS/VSE SYSTEM UTILITIES

This reference publication describes to programmers the use of the IBM DOS/VSE System Utilities. The programs described are:

- Assign Alternate Block
- Assign Alternate Track
- Backup and Restore System
- Surface Analysis
- Clear Disk
- Format Emulated Extent
- Copy and Restore Diskette
- Copy File and Maintain Object Module (OBJMAINT)
- Printer Train Cleaning
- Fast Copy Disk
- Initialize Tape
- Initialize Disk
- Print Hardcopy File (PRINTLOG)
- VTOC Display

Supplementary information is provided for those system utilities that can run in stand-alone mode.

Manual, 8 1/2 x 11 inches, 160 pages, 2/79
//32///5745-020

GC33-5382

DOS/VS ACCESS METHOD SERVICES USER'S GUIDE

This book describes the use of Access Method Services, a group of programs that provide utility functions vital to Virtual Storage Access Method (VSAM). This publication provides all the VSAM information needed to use Access Method Services in order to establish and maintain VSAM files. For complete information about VSAM, see the DOS/VS Data Management Guide.

Manual, 396 pages, 4/77
//30///5745-010

GC33-5383

DOS/VSE OLTEP

This reference publication describes the Disk Operating System (DOS) Online Test Executive Program (OLTEP) that controls online testing of I/O units under the DOS/VS supervisor. It explains the functions of the program and gives procedures for running the test programs which are obtained from the IBM Customer Engineer.

Supplementary information is contained in the following

publications:

- DOS/VS Operating Procedures, GC33-5378
- DOS/VS System Generation, GC33-5377
- DOS/VS Tape Labels, GC33-5374
- DOS/VS DASE Labels, GC33-5375

GC33-5384

1401/1440/1460 DOS/VS EMULATOR ON SYSTEM/370 REFERENCE PROG PROD 5747-CC3

This publication describes the 1401/1440/1460 Emulator Program for the IBM System/370 Models 115, 125, 135, 135-3, 138, 145, 145-3, 148, 155-II, and 158. The emulator program is executed as a problem program under control of the Disk Operating System/Virtual Storage (DOS/VS) on an IBM System/370 equipped with the appropriate compatibility feature. Using the program and the compatibility feature, the System/370 can execute programs written for the IBM 1401, 1440, and 1460 Data Processing Systems.

The information in this publication is intended for installation personnel, programmers, and operators.

Manual, 8 1/2 x 11 inches, 168 pages, 4/77

GC33-5388

MODEL 20 DCS/VS EMULATOR ON SYSTEM/370 REFERENCE

This publication describes the program that emulates the System/360 Model 20 on the System/370 Models 115, 125, 135, 135-3, and 138. The emulator program is executed as a problem program under control of the Disk Operating System/Virtual Storage (DCS/VS) on an IBM System/370 equipped with the Compatibility Feature #7520. Using the program and the compatibility feature, the System/370 can execute programs written for the system/360 Model 20.

The information in this publication is intended for installation personnel, programmers, and operators.

GC33-5405

DOS/VS POWER/VS WITH RJE, SNA GUIDE

This manual contains information for customers who intend to use the Remote Job Entry facilities of POWER/VS with RJE SNA for IBM 3770 Communication Terminal configurations using Synchronous Data Link Control (SDLC). Power/VS with RJE SNA can also be generated to include Remote Jcl Entry support for IBM 2770, 2780, 3741, and 3780 terminals, using the BSC method of communication, as well as for IBM 3770 terminals in 2770/3780 mode. Prerequisite reading material is formed by the following manuals:

- DCS/VS System Management Guide, GC33-5371
- DOS/VS System Control Statements, GC33-5376
- DOS/VS System Generation, GC33-5377
- DOS/VS Operating Procedures, GC33-5378
- DOS/VS Messages, GC33-5379

The guide provides information, additional to that contained in these publications.

DOS/VS RPG II GENERAL INFORMATION - PROG PROD 5746-RG1
This publication is an introduction to DOS/VS RPG II. The topics discussed are basic structure, devices supported, basic features, performance, compatibility and the functions of Auto Report.

The manual is intended primarily for persons who need to have an overview of the DOS/VS RPG II program.
Manual, 8 1/2 x 11 inches, 50 pgs, 4/77
/////5746-RG1

SC33-6031

DOS/VS RPG II LANGUAGE, PROG PROD 5746-RG1, SYSTEM LIBRARY
The publication describes RPG II, a problem-oriented language, as implemented for compilation by the DOS/VS RPG II compiler. RPG II uses a set of specification forms on which the user specifies his input data, the calculations to be performed and the desired output. The DOS/VS RPG II compiler uses these specifications to generate a report program. In addition to a description of the language, the manual provides system related information needed to compile an RPG II program, to link-edit that program and to execute it. Debugging aids are also provided. To use this manual, the reader should be familiar with the concepts of the access methods available to users of DOS/VS as discussed in DOS/VS Data Management Guide, GC33-5372.
Manual, 8 1/2 x 11 inches, 424 pgs, 7/77
/////5746-RG1

SC33-6032

DOS/VS RPG II INSTALLATION REFERENCE, LIC PROG 5746-RG1
The publication provides system-related information needed to install DOS/VS RPG II, a licensed program that operates under DOS/VS. The information is presented in separate sections dealing with installation requirements and installation planning and with the installation procedure. The sample programs shipped by IBM with the licensed program are also described in the manual.
Manual, 52 pgs, 5/77
/////5746-RG1

SC33-6033

DOS/VS RPG II MESSAGES, LIC PROG 5746-RG1
This publication lists and interprets the diagnostic messages issued by the DOS/VS RPG II Compiler and Auto Report.
Manual, 8 1/2 x 11 inches, 116 pgs, 5/77
/////5746-RG1

SC33-6034

DOS/VS RPG II AUTO REPORT MANUAL, LIC PROG 5746-RG1
The publication describes the use of Auto Report, which is part of the DOS/VS RPG II Compiler, licensed program 5746-RG1. The Auto Report facility is designed to further simplify the coding of desired calculations and report formats for an RPG program.

The reader of the manual should be able to code RPG II programs that include basic operations such as the proceeding of disk files, listing records on a printer, and doing simple calculations and group totals. A reader lacking this experience may acquire it either by attending an appropriate IBM education course or by reading Introduction to RPG II, GC21-7514.
Manual, 116 pgs, 5/77
/////5746-RG1

SC33-6035

SYSTEM/3 DOS/VS RPG II CONVERSION PREPROCESSOR INSTALLATION AND REFERENCE, PROG PROD 5735-CV1
Provides for System/3 users planning to migrate to DOS/VS the information needed to install and use the System/3 DOS/VS RPG II Conversion Preprocessor. Includes also a list of possible diagnostic messages, the CCP program control flow, and a sample conversion.

Readers of the publication should be familiar with RPG II.
Manual, 8 1/2 x 11 inches, 120 pgs., 6/77

DOS/VS ENTRY USER'S GUIDE
This manual is a guide to installing and using DCS/VS. It is for new users of DOS/VS on System/370 Models 115 or 125. The functions and facilities of DOS/VS are described in sufficient detail to install and initially use the system. An introduction to the Virtual Storage Access Method (VSAM) is included.
Manual, 8 1/2 x 11 inches, 228 pgs, 9/77
3115,3125//34///5745-010

GC33-6048

DOS/VS POWER/VS INSTALLATION GUIDE AND REFERENCE REL 34
This manual is designed as a reference source for all DCS/VS users interested in using POWER/VS, primarily in the local environment.

Chapter 1 is an introduction to POWER/VS.
Chapter 2 describes the storage requirements for POWER/VS and the macros, options, and procedures for the POWER/VS generation.
Chapter 3 lists the central operator commands, the JECL statements, and the AUTOSTART statements. It also discusses POWER/VS job accounting, output segmentation, and cross-partition communication.
Chapter 4 illustrates how to use POWER/VS: to start and to stop the system, and to start, control, and stop POWER/VS tasks.

The three appendixes discuss the data compaction support, the I/O specifications for the RJE, SNA support, and the LOGON BIND parameter requirements for VTAM.
Manual, 8 1/2 x 11 inches, 160 pages, 4/77

DOS/VSE MAINTAIN SYSTEM HISTORY PROGRAM (MSHP) USER'S GUIDE
The manual gives an overall view of the scope and functions of the Maintain System History Program (MSHP) and the program's operating environment; it provides procedures for installing and servicing DOS/VSE and fully describes the MSHP control statements.

The audience addressed are persons responsible for installing and servicing DOS/VSE - for tasks such as installing program packages and making corrections to a system by means of PTFs and local fixes.

The program supports the installation and servicing of IBM program packages; it maintains a record of installation and system service activities in the system history file.

Familiarity with the concept of DOS/VSE as described in 'DOS/VSE System Management Guide', and with the system generation process as described in 'DOS/VSE System Generation' is required.

VSE/INTERACTIVE COMPUTING AND CONTROL FACILITY, LIC PROG 5746-TS1
This publication provides information on the warranted functions of the Virtual Storage Extended/Interactive Computing and Control Facility (VSE/ICCF) and describes the specified operating environment. The publication is intended for readers concerned with installation planning and administration.

VSE/ICCF is an online interactive computing facility that provides local and remote terminal users with conversational access to the computer resources of a DOS/VSE controlled central processor. It allows terminal users to enter, store in libraries, edit and retrieve data, and also to write, update, compile, test and debug programs with the results displayed back at the terminal or directed to a printer, or both. If VSE/POWER is available terminal users can also submit batch jobs for processing in DOS/VSE partitions. Terminal management for VSE/ICCF is handled either by the Terminal Transaction Facility (TTF) or by CICS/VS.

VSE/IBM SYSTEM/3-3340 DATA IMPORT, LIC PROG 5746-AM3, DESIGN OBJECTIVES
Describes the design objectives for the subject licensed program and provides data on the program's specified operating environment, the available service for the program, and the program's availability.
Single Sheet, 8 1/2 x 11 inches, 2 pages, 1/79
////5746-AM3

GC33-6077

DATA SECURITY UNDER DOS/VSE
This manual provides information for the DCS/VSE user, who is concerned with data security and wants to become familiar with the data protection facilities available with DCS/VSE and DOS/VSE program products. The reader should be familiar with DOS/VSE as discussed in the Introduction to DOS/VSE, and in the DOS/VSE System Management Guide.

This manual does not attempt to cover all aspects of data security and the implications involved. It introduces general aspects of data security, and concentrates on DOS/VSE access control functions and system facilities that help to prevent inadvertent or intentional misuse of data.

The publication does not cover the subject of data backup and recovery. This topic is discussed in detail in the appropriate DOS/VSE and program product publications.
Manual, 8 1/2 x 11 inches, 68 pages, 4/79

VSE/FAST COPY DATA SET PROGRAM, LIC PROG 5746-AM4, GENERAL INFORMATION
This manual gives a general description of the functions

available with the VSE/FAST Copy Data Set program, an extended version of the Fast Copy Disk Utility program that is available as part of VSE/Advanced Functions.

The publication, in addition, discusses customer responsibilities regarding program installation and provides timing and throughput as well as compatibility information. The publication is intended as an aid in deciding about the program's usefulness at a DOS/VSE installation.
Manual, 8 1/2 x 11 inches, 16 pages, 1/79

GC33-6093

VSE/ADVANCED FUNCTIONS PROG 5746-XE8 RELEASE 2GENERAL INFORMATION

The manual introduces the functional improvements over Release 1 of VSE/Advanced Functions. In addition, it discusses, on a general level, the installation of VSE/Advanced Functions, Release 2, and the compatibility of this support with user-written programs that have been executed under DOS/V5 or DOS/VSE in the past.

The manual is intended as a source of information for persons who are engaged in evaluating software products for their use at a data processing installation.

Release 2 of VSE/Advanced Functions is comprised of SCP and licensed code; it is the minimum operating system support for the use of an IBM central processor under DOS/VSE.

Manual, 8 1/2 x 11 inches, 28 pages, 1/79

VSE/ADVANCED FUNCTIONS PROG 5746-XE8, GENERAL INFORMATION

This manual describes the functions available when the licensed program VSE/Advanced Functions is installed. It is intended primarily for those who need to have an overview of VSE/Advanced Functions.

VSE/Advanced Functions is designed to operate with the DOS/VSE SCP, to which it provides a number of functional enhancement and performance improvements.

Manual, 8 1/2 x 11 inches, 28 pages, 1/79
////5746-XE8

SC13-6107

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8 SYSTEM INFORMATION

This manual provides information for installing the licensed support package VSE/Advanced Functions in the DOS/VSE environment and shows how to generate support for the various functions available with the package.

Topics discuss the interdependencies between this support package and the DOS/VSE SCP, and the prerequisites for the installation of this package and its use. Procedures show how to install the package; the supervisor generation macros as relating to the package are presented in detail. For planning purposes, information is given on processor storage and library requirements.

The functions discussed include asynchronous operator communication, operation with up to seven partitions, the controlling of shared resources (such as files, libraries, and disk volumes), up to 15 extents for the page data set, and access control. Procedures shipped with the package allow the VSE/Advanced Functions supervisors to be initialized with a minimum of operator/system interaction.

The audience addressed are persons responsible for the installation, generation, and availability of an installation's operating system.

Use of the manual assumes the reader to be familiar with VSE/Advanced Functions General Information, GC33-6106; it should be used with the DOS/VSE publications: DOS/VSE System Generation, and DOS/VSE Maintain System History Program (MSHP) User's Guide.

Manual, 32 pages, 2/79

SYSTEM/7 LINKAGE EDITORS PROG. NOS. 360A-TX-015,025, 5744-AC1, 5747-AC1, AND 5707-AP1

This manual provides you, the IBM System/7 user, with the information necessary to use the MSP Host Program Preparation Facilities II Linkage Editor (Link/7). Link/7 aids in preparing System/7 modular application programs using an IBM System/360 or System/370 host system operating under control of either System/360 Operating System or Disk Operating System (DOS).

LINK/7 aids in the preparation of System/7 programs by combining modules, resolving external references, relocating programs, adding subroutines, preparing overlay modules and maintaining a load module library.

The reader is assumed to be a user (programmer or system analyst) who has a working knowledge of the System/7

assembler (ASM/7) and FORMAT/7.

Prerequisite reading for this publication is: IBM System/7 Summary GA34-0002, System/7 Macro Assemblers GC34-0018.

Prerequisite Publications:
IBM System/7 Modular System Programs (MSP/7) Host Program Preparation Facilities II on System/360 or System/370: Introduction, GC34-0007
IBM System/7 Macro Assemblers, GC34-0018
Introducing the Enhanced MSP/7: Executive Briefing, Manual, 84 pages

DISTRIBUTED INTELLIGENCE SYSTEM: GENERAL INFORMATION MANUAL 5744-BR1

Introductory in nature, this manual serves two purposes. First, it explains a Distributed Intelligence System, in manufacturing terms, to production-line managers and industrial executives. Second, it explains the System, in software terms, to programmers and system designers.

A Distributed Intelligence System united all the information-gathering resources of a production-line into one network, with a System/370 as its central computer.

Manual, 20 pages
//36//5744-BR1

GC34-0057

DISTRIBUTED INTELLIGENCE SYSTEM PROGRAM REFERENCE GUIDE PROG 5744-ER1

Describes the Distributed Intelligence System. It tells how to include the code for Distributed Intelligence System functions in System/7 or System/370 programs, for user application programmers, and IBM System Engineers.

The manual includes both introductory and reference information on the macros and high-level call statements that are used to transmit information between the System/7 and the System/370.

Prerequisite Publications:

Distributed Intelligence System General Information Manual, GC34-0056
Distributed Intelligence System: Operations Manual, GC34-0058.
Distributed Intelligence System: Operations Manual, GC34-0058.
Manual, 164 pages
//36//5744-ER1

GC34-0058

DISTRIBUTED INTELLIGENCE SYSTEM, LIC PROG 5744-ER1, OPERATIONS

Contains the information and instructions necessary to install and operate the Distributed Intelligence System on System/370 and System/7. This information is required by people responsible for the following functions in Distributed Intelligence System installations:

- o Designing and performing an OS/VS1 SYSGEN
- o Installing a Distributed Intelligence System on a System/370 operating under OS/VS1
- o Coding Distributed Intelligence System nucleus for a System/7
- o Executing and controlling a Distributed Intelligence System from the System/370 operator console
- o Using Customer Information Control System (CICS) with the Distributed Intelligence System
- o Using Information Management System (IMS) with the Distributed Intelligence System
- o Using Distributed Intelligence System tools in program debugging

The Distributed Intelligence System is a system control program that operates under OS/VS1, resides in its own partition in a System/370, and logically connects that System/370 to one or more System/7s. Once installed, the Distributed Intelligence System enables all processors in the network to function as if they were a single processor.

Prerequisite publications:

Distributed Intelligence System: Program Reference Guide, GC34-0057. OS/VS1 System Generation Reference, GC26-3791. MSP/7 Installation and Nucleus Generation Guide, GC34-0031. Manual, 124 pages

OS/VS2 MVS INTERACTIVE PROBLEM CONTROL SYSTEM (IPCS), SYSTEM INFORMATION, SUID 5752-857
This manual provides information needed to plan for the installation and use of the OS/VS2 MVS Interactive Problem Control System (IPCS), a Selectable Unit that allows the user to analyze and manage system software problems in a TSO environment.
The manual contains three sections:
• Introduction: General information about IPCS.
• Planning: IPCS hardware and software requirements.
• Supplemental information - Publications and module information.
The manual is intended to provide planning information for installation managers, system programmers, and IBM field engineering personnel. A basic knowledge of OS/VS2 MVS and TSO is assumed.
Manual, 8 1/2 x 11 inches, 19 pages, 3/78
//37//

GC34-2005

OS/VS2 MVS INTERACTIVE PROBLEM CONTROL SYSTEM (IPCS) SPECIFICATIONS, SUID 5752-857
This publication describes the functions, prerequisites, and system requirements for the OS/VS2 MVS Interactive Problem Control System (IPCS) Selectable Unit.
Flyer, 8 1/2 x 11 inches, 1 page, 3/78

GC34-2006

OS/VS2 MVS IPCS, SUID 5752-857 USER GUIDE AND REFERENCE
This manual describes the functions and uses of the Interactive Problem Control System (IPCS) and the syntax of the IPCS subcommands. The audience is system programmers, customer engineers, and anyone who needs to examine dumps or debug them. IPCS is an online facility for examining dumps and for maintaining centralized information about problems and their related data. IPCS operates as a TSO command and provides subcommands to manipulate problems and their associated data sets and to examine unformatted dumps at the user's terminal.
This manual describes the preparations for an IPCS session and the control the user has over a session; how to use IPCS subcommands to manipulate problems and data sets associated with them; how to examine unformatted dumps; and the function, syntax, and operands of the subcommands.
Manual

OPERATOR'S LIBRARY: SYSTEM/370 MODEL 135 PROCEDURES
 This manual provides operating and reference information for operators of the IBM System/370 Model 135, and Model 135-3 (includes the performance enhancement feature). The Models 135 and 135-3 operate the same except during Initial Microprogram Load (IMPL) procedures. These procedure differences are explained in the manual. References in the manual made to the Model 135 also apply to the Model 135-3 unless otherwise specified.
 The reader is assumed to have a working knowledge of "Introduction to IBM Data Processing Systems," GC20-1684, and some previous data processing experience.
 The manual describes how to operate the following system hardware and compatibility feature:
 o IBM 3135/3135-3 Processing Unit - the system processing unit.
 o IBM 3210 and 3215 Console Printer-Keyboard - the operator's primary link with the system.
 o IBM 3277 Display Station - a secondary stand-alone console.
 o 2314/3340 Compatibility feature - IPL procedure, direct access storage devices data volume conversion, and feature description.
 For operating information of IBM input/output devices that attach to the processing unit channels and/or integrated adapters, see "IBM System/370 Bibliography," GC20-0001. Also, see the Bibliography for program operating systems that support the system.
 Manual, 108 pages

IBM SYSTEM/370 MODEL 145 OPERATING PROCEDURES
 This System Library Manual contains information necessary to operate the following units of the IBM System/370 Model 145:
 IBM 3145 Processing Unit
 IBM 3210 Console Printer-Keyboards
 IBM 3215 Console Printer-Keyboards
 IBM 3047 Power Unit
 The reader is assumed to have basic computer knowledge and experience, or computer operating experience on a similar system or other related data processing equipment. The information in this manual is written for all levels of operator experience for training as well as system operation. This manual has five major sections:
 o System Control Panel Indicators, Switches, and Keys - Describes the purpose of individual indicators, switches, and keys. It does not describe the applications of these facilities within operating procedures. Service-personnel usage is not included.
 o Console File - Contains location, handling, flexible disk insertion and removal information, and the necessary cautions associated with flexible disks.
 o Console Printer-Keyboards - Contains initial setup and operator adjustments, 3210 print element cleaning procedures, associated manual FR-KB operations, and a description of indicators and controls.
 o Operating Procedures - Describes in detail procedures necessary for system operation. Initialization and error recovery procedures are included. Operating procedures for System Error Record Editing Program (SEREP) and System Test 370 (ST370) are also in this section.
 o Handling Abnormal Situations - Includes text and flowcharts used in analyzing the four major types of abnormal situations encountered:
 1. Cannot power system on
 2. Cannot start any job
 3. Cannot continuously run any job
 4. Cannot power system off
 Manual, 96 pages

SYSTEM/370 MODEL 138 OPERATING PROCEDURES

This manual contains information for operators of the IBM System/370 Data Processing System Model 138. The reader is assumed to have a working knowledge of Introduction to IBM Data Processing Systems, GC20-1684. Some previous operating experience on either a similar system or related data processing equipment is helpful. The information in this manual is for all levels of operator experience - for training as well as for system operation.

- The manual describes how to operate the following:
- o IBM 3138 Processing Unit and Console Display-Keyboard
 - o IBM 3046 Power Unit - major source of electrical power for the processing unit
 - o IBM 3286 Printer - the optional console printer
 - o Input/Output devices that are attached to the CPU integrated adapters
 - o 2314/3340 Compatibility Feature - IPL procedure, data volume conversion, and feature description.

OPERATOR'S LIBRARY: IBM SYSTEM/370 MODEL 148 OPERATING PROCEDURES

This manual contains information necessary to operate these units of the IBM System/370 Model 148:

- IBM 3148 Processing Unit
- Console Display-Keyboard
- IBM 3286 Printer
- Console File.

The reader is assumed to have basic computer knowledge and experience or to have computer operating experience on a similar system or other related data processing equipment. The information in this manual is for all levels of operator experience, for training as well as system operation. The five major sections are:

- o System Control Panel Indicators, Switches, and Keys, describes the purpose of individual indicators, switches, and keys. It does not describe the applications of these facilities beyond normal operating procedures.
- o Console File, contains procedures for handling, insertion, and removal of magnetic disk cartridges.
- o Console Display-Keyboard, contains D-KB manual operations, keyboard keys and functions, and description of indicators and controls. Also includes 3286 Printer operation, controls, and procedures for forms insertion and ribbon replacement.
- o Operating Procedures, contains procedures for system operation, initialization, and error recovery.
- o Handling Abnormal Situations, contains flowcharts and text for analyzing abnormal situations.

GC38-0033

IBM 3031 PROCESSOR COMPLEX OPERATOR'S GUIDE

This publication describes the basic procedures performed by the operation of an IBM 3031 Processor Complex or 3031 Attached Processor Complex at the IBM 3036 Console. These procedures, in conjunction with corresponding procedures provided in the appropriate operating system reference manuals, enable the operator to power the machine system, load and execute control and problem programs, and to receive and issue messages to communicate with the system. The reader is assumed to have basic computer knowledge and experience and some operating experience on a similar system.

Manual, 8 1/2 x 11 inches, 88 pages, 7/79

GC38-0110

OPERATOR'S LIBRARY: OS/VS1 REFERENCE

This reference manual contains VS1 system operator and RES (Remote Entry Services) commands. It is part of the Operator's Library and is for the system operator and the operator at the central computer of an RES system, but some sections are also of interest to operators at secondary consoles, such as those in the tape or disk pool. Appendix A describes procedures for single and multiple console configuration and contains information formerly found in Operator's Library: OS/VS Console Configurations, GC38-0120.

This publication documents only operator initiated commands. Parameters to be issued in response to messages appear in the System Messages manual and operator instructions for a particular console are in the applicable Operating Procedures manual.

Manual, 150 pages
//40//5741

GC38-0220

OPERATOR'S LIBRARY: OS/VS2 TSO

This publication provides the basic system information necessary for a console operator to run TSO under OS/VS2. A knowledge of the information included in the IBM Basic Operator Training Course is assumed.

This publication includes the commands and procedures necessary to: start TSO, modify TSO parameters, communicate with terminal users, cancel a terminal session, control the background reader, and stop TSO.

Manual, 32 pages
//39//5742

GC38-0225

OPERATOR'S LIBRARY: OS/VS2 REMOTE TERMINALS (JES2)

This guide is for operators and users of JES2 remote workstations who enter one or more jobs to be sent, using JES2, to a central computer for processing.

This book describes input/output queues and how the workstation user can control them. The workstation commands available to the user are described according to their function. The parameters used for various forms of the commands are explained.

For each type of workstation (1130, S/360, S/360 Model 20, 2922, S/3, 3780, 2780, 2770) there is a separate chapter that describes its operation. This part of the book can be tailored to each installation's requirements by removing sections that do not apply.

Manual, 120 pages
/C/38//5752

GC38-0228

OPERATOR'S LIBRARY: OS/VS2 REMOTE TERMINALS (JES3)

This publication consists of a general section and a self-contained section for each of the remote terminals supported by JES3. Each such section provides information necessary to operate the remote terminal and to recover from errors that may occur during operation. The publication is designed primarily for the remote terminal user.

Manual, 72 pages

GC38-0229

OPERATOR'S LIBRARY: OS/VS2 MVS SYSTEM COMMANDS
This publication describes system functions, commands, and procedures used by a system console operator in running a System/370 under OS/VS2 Release 3.7.

- The following topics are discussed in this publication:
- o an overview of OS/VS2, JES2, and JES3
 - o allocating and controlling configuration and devices
 - o the commands and procedures for starting, quiescing, and stopping the system
 - o controlling the system
 - o controlling jobs
 - o controlling the external writer
 - o controlling time sharing
 - o recording system information
 - o dynamic device reconfiguration
 - o shared DASD option
 - o system command summary

Installations which have JES2 or JES3 installed should also refer to the following publications:

- o Operator's Library: OS/VS2 MVS JES2 Commands, GC23-0007
- o Operator's Library: OS/VS2 MVS JES3 Commands, GC23-0008

NETWORK OPERATION SUPPORT PROGRAM GENERAL INFORMATION, PROG PROD 5735-XX2

This publication is a general description of the Network Operation Support Program. It is intended for customer executives, system administrators, system analysts, system programmers, application programmers, and terminal operators. The first part of this publication provides an overview of the Network Operation Support Program in a complex data communications network. The second part is a functional description of the program including its major functions. The remaining sections discuss terminal and program support and compatibility considerations.
Manual, 8 1/2 x 11 inches, 28 pages, 10/76

GC38-0254

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) GENERAL INFORMATION, PROG PRODS 5735-RC2, 5746-RC3

This manual is intended for those who will decide whether or not to use ACF/VTAM (an IBM program product), and is a preliminary source of information for installation managers and system programmers who will install it.
It discusses:

- o Definition of ACF/VTAM to the operating system
- o Operation of an ACF/VTAM network
- o ACF/VTAM macro instructions
- o Reliability, availability, and serviceability features available to ACF/VTAM

The reader should be familiar with teleprocessing concepts. System programmers should be familiar with the operating system with which they will use ACF/VTAM.
Manual, 8 1/2 x 11 inches, 50 pgs, 10/76
//40//5735-RC2,5746-RC3

GC38-0255

OPERATOR'S LIBRARY: OS/VS1 DISPLAY CONSOLES

Tells system operators how to use cathode ray tube (CRT) display devices as operator consoles to run a VS1 operating system. The display devices supported are:

- o 2250 Display Unit
- o 2260 Display Station

The book summarizes the basic procedures for operating a system through display consoles and includes detailed instructions for each device telling:

- o How to start the system
- o How to enter commands
- o How to delete messages
- o How to control the screen
- o How to use the CONTROL command

The book must be used in conjunction with Operator's Library: OS/VS1 Reference, GC28-1001.
Manual, 80 pages

SC38-0256

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) MACRO LANGUAGE GUIDE, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This publication describes how to write an ACF/VTAM application program. An ACF/VTAM application program is a program that contains ACF/VTAM macro instructions to request connection to and communicate with telecommunications devices and subsystems supported by ACF/VTAM. This manual should be used with reference publication, ACF/VTAM Macro Language Reference, SC38-0261.

The contents include:

- an overview of ACF/VTAM application programs and their relation to other elements in a teleprocessing network;
- suggestions on how to organize an ACF/VTAM application program;
- a discussion of the concepts, facilities, and language for opening and closing a program, and for connecting to and communicating with terminals and logical units;
- requirements and suggestions on using exit routines,

handling errors and special conditions in the network and debugging an ACF/VTAM application program. The user is assumed to be familiar with Basic Assembler Language.

Prerequisite Publications: None, however; ACF/VTAM Concepts and Planning, GC38-0282, may be helpful in understanding the concepts of an ACF/VTAM network.
Manual, 8 1/2 x 11 inches, 276 pgs, 7/77

SC38-0257

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) PROGRAM OPERATOR GUIDE, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (CS/VS)

This book describes how to write the Program Operator portion of an ACF/VTAM application program. It supplements the information on writing ACF/VTAM application programs contained in ACF/VTAM macro Language Guide, SC38-0256. The primary audience for this book is the ACF/VTAM application programmer who is writing a Program Operator application program. The secondary audience is the system programmer who requires background information for planning and maintaining an ACF/VTAM network.
Manual, 8 1/2 x 11 inches, 88 pgs, 7/77
//40//5735-RC2,5746-RC3

SC38-0258

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) SYSTEM PROGRAMMER'S GUIDE, PROG PROD 5735-RC2

Provides the necessary information for defining an ACF/VTAM network in an OS/VS system. It describes the interfaces that must be created between the user's ACF/VTAM application program and the system. It also describes how the system can be modified to better serve the needs of the user.

Prerequisite publication: Advanced Communications Function for VTAM (ACF/VTAM) Concepts and Planning, GC38-0282

Corequisite publication: Advanced Communications Function for VTAM (ACF/VTAM) Installation Guide, SC38-2069

This book is intended for system programmers who are primarily concerned with system generation and ACF/VTAM network definition.
Manual, 8 1/2 x 11 inches, 300 pgs, 12/77

SC38-0259

ACF/VTAM NETWORK OPERATING PROCEDURES FOR OS/VS - PROG PROD 5735-RC2

This publication is a reference manual for system operators who run an ACF/VTAM network in OS/VS. It is also a guide for system programmers who must supply operators with the detailed information that they need to run the ACF/VTAM network.

The publication provides an introduction to operating ACF/VTAM (Chapter 1), describes the fundamentals of ACF/VTAM commands and messages (Chapter 2), and explains the use of commands in performing particular operations (Chapters 3-7). The commands are presented on the basis of function and the network elements they act upon. Command formats can be found either where the command is first discussed or in Appendix D, which summarizes the commands and their functions.

Manual, 8 1/2 x 11 inches, 120 pgs, 12/77

SC38-0261

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) MACRO LANGUAGE REFERENCE, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This publication is a reference manual that describes the ACF/VTAM macro instructions in detail.

ACF/VTAM is an access method that allows a program operating under a virtual storage operating system to communicate with terminals and logical units of a teleprocessing network, or optionally to communicate with terminals and logical units of several combined teleprocessing networks.

This manual is used by installation personnel (typically system programmers) who code the programs that provide the interface between the application program and the teleprocessing network and is designed to be used in conjunction with the ACF/VTAM Macro Language Guide, SC38-0256.

Prerequisite Publications: None. However, the reader should be familiar with the parts of the OS/VS and DOS/VS Assembler Language (GC33-4010) that explains the rules for coding assembler statements.
Manual, 8 1/2 x 11 inches, 350 pgs, 7/77

SC38-0269

ACF/VTAM INSTALLATION GUIDE FOR OS/VS, LIC PROG 5735-RC2
This publication provides an overview of the steps required to install ACF/VTAM, including the Multisystem Networking Facility. "Installing" is defined to include planning requirements coding customer programming, and testing the programming with ACF/VTAM and related products. The intended audience is the customer or IBM system engineers who must do the installing. This publication refers to and must be used with other publications in the ACF/VTAM library and with related product publications, such as ACF/NCP/VS publications.

This publication contains:

- o An introductory chapter
- o A installation chapter describing specific planning, coding, and testing steps to take and referring to publications that contain required information
- o A chapter describing possible stages in migrating from a pre-ACF VTAM system chapter describing the coding and operating requirements of a hypothetical customer using the Multisystem Networking Facility

ACF/VTAM Concepts & Planning, GC38-0282, is a prerequisite publication. ACF/VTAM System Programmer's Guide for OS/VS, SC38-0258 is a corequisite publication.

/////5735-XX2

GC38-0282

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) CONCEPTS AND PLANNING, PROG PROD 5735-RC2, 5746-RC3

This publication describes the major concepts and facilities of the program product Advanced Communication Function for the Virtual Telecommunications Access Method (ACF/VTAM). ACF/VTAM is a data communication access method that performs network control and data-transmission functions for a network attached to a single host computer, or with the Multisystem Networking Facility, performs the functions for a network that includes a multiple host computers or multiple data-communication access methods. ACF/VTAM supports terminals on SDLC, EBC, and start-stop lines as well as locally attached Systems Network Architecture (SNA) terminals and locally attached non-SNA terminals.

The publication is written for data processing managers card system programmers who are considering use of ACF/VTAM or who are planning for installation and use of the product. The publication also aids application programmers and network operators in becoming familiar with the overall characteristics and capabilities of the access method. The publication provides a comprehensive description of the system with a moderate of detail. A more general description of ACF/VTAM is provided in ACF/VTAM General Information, GC38-0254.

The description of the access method is divided into chapters dealing with:

- The basic structure and components of an ACF/VTAM system
- Defining an ACF/VTAM system
- Starting, controlling, and stopping an ACF/VTAM system
- Coding application programs
- Using reliability, availability, and serviceability characteristics of the system
- Defining, controlling, and communication with BCS terminals, start-stop terminals and local non-SNA terminals

Basic planning considerations and requirements are also provided, although detailed planning information must be obtained by using this publication with the ACF/VTAM Installation Guide and the ACF/VTAM System Programmer's Guide for the operating system under which ACF/VTAM will be used.

OPERATOR'S LIBRARY OS/VS1 RES - PROGRAM NUMBER 5741-SC1-EE

This book is required by the operator of a central computer that is using RES (Remote Entry Services) under VS1. It explains what functions the central operator can perform under RES. The book describes how the central operator uses the automated IPL option and how he starts and stops RTAM, the access method used by RES. Included in the book are the commands available to the central operator; these RES commands provide the means for performing such functions as displaying RES information, changing line status, controlling job processing, and sending messages to workstation users.

This book is part of the Operator's Library and need be included in the library only when RES is used. It is assumed that the library contains the publication Operator's Library: CS/VS1 Reference, Order No. GC38-0110.

Manual, 48 pages
 //38//5741

GC38-0335

OPERATOR'S LIBRARY: OS/VS1 CRJE

This publication contains information pertinent to the central computer operator for starting, stopping, and running Conversational Remote Job Entry (CRJE) under OS/VS1. It should be used in conjunction with Operator's Library: OS/VS1 Reference, GC38-0110.

All the messages received by the operator as a result of CRJE commands are documented in OS/VS Message Library: VS1 System Messages, GC38-1001.

Manual
 //38//5741

OS/VS MESSAGE LIBRARY: MASS STORAGE SYSTEM (MSS) MESSAGES

This publication is part of the OS/VS Message Library. It documents the mass storage system messages (with prefixes ICB and ICG) and the reason codes returned from the mass storage system communicator. "ICB" prefixed messages from the mass storage system communicator (including mass storage volume control message) are documented. "ICG" prefixed messages from the mass storage control table create program and the mass storage control trace report programs are documented.

Manual, 100 pages
 //30//3850,3851/5741,5752

GC38-1001

OS/VS1 SYSTEM MESSAGES

This manual is the basic manual of the message library for OS/VS1 systems. It contains messages for most system control program functions, including scheduler, supervisor, data management, system generation, and checkpoint/restart.

VS1 System Messages, when used with other appropriately chosen message library publications, enables effective use of VS1 messages. For messages documented, it contains pertinent data about:

- o an expanded explanation of the message text,
- o the resulting action of the system,
- o the response required of the operator and/or programmer,
- o and how to obtain the information necessary for problem determination.

It is written for operators, programmers, system support personnel - anyone who responds to system messages.

Manual, 400 pages
 //40//5741

GC38-1002

OS/VS MESSAGE LIBRARY: VS2 SYSTEM MESSAGES

This publication lists, explains, and suggests appropriate response to the messages issued by most IBM-supplied components of OS/VS2 MVS including scheduler, supervisor, data management, and system generation. The messages are presented in alphabetic order.

This publication includes the following selectable unit information:

VTAM2 VS2.03.801

OS/VS LINKAGE EDITOR AND LOADER MESSAGES

This publication lists, explains, and suggests appropriate responses for the messages issued by the OS/VS linkage editor and loader programs. The messages are grouped by component and listed in alphanumeric order.

The associated publication is:

o OS/VS Linkage Editor and Loader, GC26-3813
 Manual, 21 pages
 //31///5741

GC38-1008

OS/VS MESSAGE LIBRARY: VS2 SYSTEM CODES

This publication lists, explains, and suggests appropriate responses for the system codes and state codes produced by IBM-supplied components of OS/VS2 MVS. The codes are presented in alphanumeric order.

This publication includes the following Selectable Unit information:

Supervisor Performance #1	VS2.03.805
Supervisor Performance #2	VS2.03.807
Data Management	VS2.03.808
JES3 Release 2	VS2.03.812
TSO/VTAM Level 1	VS2.03.813
Service Data Improvements	VS2.03.817
JES3 3850 Mass Storage System	5752-818
JES3 Release 3	5752-826
Dumping Improvements	5752-833
TCAM Level 10	5752-836
Attached Processor System for Models 158/168	5752-847
Processor Support	5752-851
Hardware Recovery Enhancements	5752-855
TSO/VTAM Level 2	5752-858

This publication also includes the following Program

Product information:
 MVS/System Extensions Release 1 5740-XE1
 RMF Version 2 Release 2 5740-XY4

Manual, 8 1/2 x 11 inches, 92 pages, 6/78

GC38-1009

OS/VS MESSAGE LIBRARY: VS2 TSO MESSAGES

This publication lists, explains, and suggests appropriate responses for the messages issued by the TSO control program and associated routines such as the PL/I and FORTRAN IV syntax checkers. Messages are grouped by component and listed in alphanumeric order.

Manual, 58 pages
 //39///5742

GC38-1010

OS/VS1 RES RTAM AND ACCOUNT MESSAGES

This book is intended for users of RES (Remote Entry Services) under VS1. The book contains messages produced by RTAM (Remote Terminal Access Method) and by the account facility. The messages are presented in message number order. In addition to the text of the message, an explanation of it is given together with the action the system takes and the expected response, if any, of the operator and/or programmer.

This book is part of the Message Library and need be included in the library only when RES is used.
 Manual, 80 pages

OS/VS2 MVS RACF MESSAGES & CODES, PROG PRCD 5740-XXB

This publication lists the messages and codes produced by Version 1 Release 2 of the RACF program product. It contains explanations for RACF system operator messages, routing and descriptor codes, completion codes, command messages, and other messages issued by RACF.

It is intended for system operators and RACF-defined users who issue RACF commands, run RACF utilities, and maintain RACF-protected resources.

Manual, 8 1/2 x 11 inches, 40 pgs, 5/77
 //40///5740-XXB

GC38-1045

IFCEREF0 MESSAGES

This publication lists the messages produced by the IFCEREF0 and IFCEREF1 programs. Each message is explained, and where appropriate a programmer response is suggested.

Manual, 8 1/2 x 11 inches, 12 pgs, 12/77
 //40///5741,5749,5752

GC38-1046

OS/VS MESSAGE LIBRARY: VS2 TSO TERMINAL MESSAGES

This publication contains TSO messages that may be sent to the terminal user or may appear in the output from a background job. The message descriptions include the message text, a brief description of why the message was issued, the modules associated with the message, and the external name of the program that issued the message.

This publication applies to OS/VS2 Release 3.7 and all subsequent releases until otherwise indicated, and contains information that applies to the following selectable units:

TSO/VTAM Level 1 (VS2.03.813)
System Security Support (5752-832)
TSO/VTAM Level 2 (5752-858)

Manual, 8 1/2 x 11 inches, 58 pages, 10/78
 //40///5752,5752-IT#

GC38-1101

OS/VS1 ROUTING & DESCRIPTOR CODES

This publication lists the routing and descriptor codes of OS/VS1 messages as they are assigned by IEM. Most messages in the system are issued by the WTO and WTCR macro statements, which have routing and descriptor code parameters.

This is a reference publication for a limited and specific audience: those who wish to alter the code assignments. It can be helpful, for example, to the user whose system has multiple console support (MCS) and who is rerouting messages to certain consoles.

In this manual, message identifiers (IDs) are listed in alphanumeric order; message texts are not given. Descriptor codes appear to the left of the message IDs, and the routing codes to the right.

For additional information like message texts and explanations, you must refer to other publications in the OS/VS Message Library.

Manual, 30 pages, 11/76
 //40///5741

GC38-1102

OS/VS MESSAGE LIBRARY: VS2 ROUTING AND DESCRIPTOR CODES

This publication documents the routing and descriptor codes assigned by IEM programming to OS/VS2 MVS messages through WTO/WTOR macro parameters. The message IDs are presented in alphanumeric order.

This publication includes the following Selectable Unit information:

SD23-0003

SUPPLEMENT FOR OS/VS2 MVS SYSTEM PROGRAMMING LIBRARY I/O INITIALIZATION AND TUNING GUIDE, 5740-XE1
MVS/System Extensions does not support system activity measurement facility (MF/1) and dynamic support system (DSS). All references to MF/1 including "Part 4: How to use System Activity Measurement Facility (MF/1)", have been deleted. In addition, the section, "Changes to Initialization Parameters" found in Part 2 has been deleted. For a list of parameters that have changed or that are no longer supported, see VS2 Conversion Notebook, GC28-0689-4.
The following is added in support of MVS/System Extensions:

- o The ALT parameter is added to identify an alternate nucleus.
- o A new member (IECIOSxx) is added to SYS1.PARMLIB to provide installation control of channel selection algorithms.
- o Changes to SYS1.PARMLIB member IEAIPsxx provide installation control of:
 - SRE execution time included in the service definition.
 - Target multiprogramming levels by specifying target control keywords.
 - Dispatching priorities including: Automatic Priority group (APG) function, fixed, xstate, and mean-time-to-wait groups, and time slicing.
 - I/C requests that are deferred on a logical channel.
- o Demand (logical) swapping is added as a resource use function of the SRM
- o Maintenance changes are included throughout the publication.

This supplement provides updated information to support MVS/System Extensions Release 2 as follows:

- A new SYS1.PARMLIB member IEAICSxx, which provides a central place for assigning performance groups.
 - Addition of many internal SRM constants to the IEAOPtxx SYS1.PARMLIB member.
 - Improvements in resource control:
 - Storage isolation
 - Selectivity of Storage, CPU, and I/C load balancers
 - Extended I/C priority queueing
 - TSO response time objective
- Manual, 8 1/2 x 11 inches, 248 pages, 5/79
////5740-XE1

SD23-0005

SUPPLEMENT FOR OS/VS2 MVS TO SYSTEM MANAGEMENT FACILITIES (SMF), 5740-XE1

The changes that support MVS/System Extensions are as follows:

- o Additional fields have been added to the relocate section for Record Types 4 and 34.
- o Relocate sections for job related service data have been added to Record Types 5 and 35.
- o References to the new fields have been added to "Appendix A: Field-to-record Cross-Reference".
- o Changes have been made to "Appendix C: CPU Time".

This supplement provides updated information to support MVS/System Extensions Release 2 as follows:

- Addition of four new records:
 - type 23 - SMF Status Record
 - type 30 - Common Address Space Work Record
 - type 32 - TSO User Work Accounting Record
 - type 90 - System Status Record
 - Addition of a new SMS dump program (IFASMPDP)
 - Addition of new parameters to define the use of SMF (SMFPRMxx)
 - Addition of the SET SMF and DISPLAY SMF commands
 - Addition of a user-exit routine (IPF084)
 - Addition of five new macro instructions to facilitate writing of user-exit routines
 - Provide a new direction in billing (transaction billing)
 - SMF recording is now done on VSAM data sets
- Manual, 8 1/2 x 11 inches, 236 pages, 5/79
////5740-XE1

SD23-0006

SUPPLEMENT FOR OS/VS2 SYSTEM PROGRAMMING LIBRARY TO SUPERVISOR, 5740-XE1

This supplement to S.P.L. Supervisor includes the following changes in support of MVS/System Extensions:

- o The addition of four new macro instructions.
 - INTSECT--Intersect with the dispatcher.
 - PGFIXA--Fast path to fix virtual storage contents.

- PGFREEA--Fast path to free virtual storage contents.
- PROTPSA--Disable/enable low address protection.
- o The RPSGNL macro instruction has been changed to add the MEMSWT parameter.
- o The SCHEDULE macro instruction has been changed to add the LLOCK, FRR, CLEAR, COMPAT, and DISABLED parameters.
- o The SETLOCK macro instruction has been changed to support additional specifications for the TYPE parameter.
- o The STATUS macro instruction has been changed to support additional specifications for the SRB parameter.
- o The RESUME macro instruction has been changed to support a conditional/unconditional RESUME.
- o Locking- changes have been made in the functions of the Global dispatcher lock (DISP) and the general cross memory services lock (CMS). A new lock, ENQ/DEQ cross memory services lock (CMBEQDQ), has been established.

This supplement to SPL: Supervisor includes the following changes in support of MVS/System Extensions Release 2.

- Addition of the SMP cross memory services lock (CMSMP)
 - Addition of a description on using the SRM reporting interface
 - Addition of the SYBEVENT macro instruction
- Manual, 8 1/2 x 11 inches, 116 pages, 5/79

PREFACE TO PL/I PROGRAMMING IN SCIENTIFIC COMPUTING

In a brief and simple manner, this manual:

- lists some problems arising in industry, business, science, and engineering
- Survey the mathematical, statistical, and operations research (OR) by which these problems are solved
- Tells how a few of such techniques and models are programmed for computers using the PL/I language

The major portion of the manual concentrates on PL/I. The essentials are brought out mostly by the many short examples and the summary exhibits.

Manual

GE20-0599

IBM 3895 DEPOSIT PROCESSING SYSTEM INPUT CONTROL PROCEDURES

This publication describes the personnel training and document flow activities necessary to achieve optimum throughput with the IBM 3895 Document Reader/Inscriber. The manual is divided into four parts.

- Input Control Requirements
- Teller Education
- Large Commercial Account Education
- Input Preparation

The appendixes contain a suggested class outline for teller training, forms for analyzing large commercial accounts, and an input preparation section.

This manual assumes the reader has a basic understanding of bank data processing operations.

Application Manual, 42 pages, 4/78
//04//3895/

GE20-0633

IBM 3895 DEPOSIT PROCESSING SYSTEM WORKSTATION PROCEDURES

This publication is intended to be used as a guide by those preparing workstation procedures, and developing training manuals for personnel who will perform the deposit processing activities at each work station. The guide is organized by task and should be used in conjunction with related IBM program product publications, machine operator guides, and user bank materials. The user bank should set up up its own procedures and manuals for the workstation operators and supervisors, since internal bank systems and procedures vary from bank to bank.

Application manual, 78 pages, 1/79

INSTALLATION MANAGEMENT BIBLIOGRAPHY

This bibliography lists and categorizes selected IBM publications on the management of data processing, data security, auditability, and generally useful application development techniques and includes texts, manuals, briefs, and articles as well as certain forms, templates, bibliographies, and indexes.

In most cases, the publications are applicable to various IBM data processing systems; publications applicable to a specific data processing system can be found in that system's bibliography.

303X TESTING USING A S/370

This paper presents some considerations for MVS users in reference to doing 303X preinstall testing on a M158 or M168 and provides a guide to 3036 console operations for the operator familiar with MVS on a M168.

Users installing MVS on a 303X will find that they can do most, if not all, of their preinstall testing on a S/370 with suitable features and configuration. One important feature that may be required is the S/370 Extended Feature/Facility which is standard on the 303X models and optional on the M158 and M168. This feature is required only if MVS/SE (5740-XB1) is added to MVS.

Two basic points should be recognized:

- 1) Although some programs such as MVS/SE are dependent on CPU-features, few programs are dependent on a particular CPU model.
- 2) Extensive hands-on training is not required for operators because of the new 3036 console.

DATA LANGUAGE/I-ENTRY DOS/VS (DL/I-ENTRY DCS/VS) GENERAL INFORMATION MANUAL, PROG. PROD. 5746-XX7

This book introduces DL/I-Entry DOS/VS to the executive, system programmer, or application programmer and gives a general picture of what DL/I-Entry is.

The DL/I-Entry data base system makes data handling easier for application programs, and centralizes the data required by more than one application program. Both batch programs running under DOS/VS and online programs running under the Customer Information Control System/DOS/VS (CICS/VS) can use DL/I-Entry.

This book explains the advantages of using data bases, gives a general description of DL/I-Entry data bases and of how application programs use them, and lists machine configuration requirements. Examples are provided of using DL/I-Entry to control the ordering and distribution of products, to produce a bill of materials in a manufacturing application, and to provide a complete system for order entry and production planning and control in the process industry.

Prerequisite to understanding this book is some familiarity with the use of computers to process data.

GH12-5122

IBM SYSTEM/370 IMS/VS DATA BASE ANALYZER GENERAL INFORMATION MANUAL PROGRAM PRODUCT 5740-XXR (OS/VS)

IMS/VS Data Base Analyzer (DB analyzer) is an Information Management System/Virtual Storage (IMS/VS) productivity aid that analyzes the structure of an existing IMS/VS data base with hierarchical direct (HDAM or BIDAM) organization. It produces reports on distribution of pointers and free space, to allow monitoring of the efficiency of data base space allocation in storage. It also checks pointer integrity, examining whether recovery procedures have been applied successfully.

This manual includes a general description of the program components and their interaction, computing system and system control program requirements, and sample output.

This publication is intended primarily for data base administrators and system analysts. The reader is assumed to be familiar with IMS/VS data bases and their pointer structures. Publications providing this background are IMS/VS Utilities Reference Manual, SB20-9029 and IMS/VS System/Application Design Guide, SB20-9025.

Manual, 8 1/2 x 11 inches, 24 pgs, 12/76

GH12-5128

SYSTEM/370 AND 4300 PROCESSORS VSE/POWER RELEASE 1.0, LIC PROG 5746-XE3 GENERAL INFORMATION.
This manual introduces VSE/POWER together with the VSE/POWER Remote Job Entry feature. It is intended for users of DOS/VSE with VSE/Advanced Functions. After an introduction that acquaints the reader with the concept of VSE/POWER and its applicability, the following topics are covered in this manual:

- A general description of VSE/POWER
- A discussion of the input for the system, the output produced, and the processing that is done by VSE/POWER
- A summary of the machine and programming environment in which VSE/POWER operates

The reader of this manual should be familiar with the data processing terminology. In particular, basic knowledge of DOS/VSE or DOS/VS will be helpful in evaluating the advantages of this program product.
Manual, 8 1/2 x 11 inches, 30 pages 1/79
/////5746-XE3

GH12-5129

SYSTEM/370 AND 4300 PROCESSORS JOB ENTRY PROGRAM, LIC PROG 5146-XE6 AND FILE TRANSFER PROGRAM, LIC PROG 5748-XE6.
This manual introduces the IBM program products Job Entry Program and File Transfer Program. These programs are designed to interconnect one or more decentralized computing systems with one or more central data processing installations.

With the Job Entry Program, jobs may be transferred for processing from one installation, thus enabling the user, for example, to utilize resources such as data bases, programs, or peripheral devices available only at the receiving location. The File Transfer Program additionally allows the user to transfer sequential files on tape or disk from one installation to another.

The reader of this manual should be familiar with the data processing terminology. Additional knowledge of IBM operating systems (DOS/VSE, OS/VS1, and OS/VS2) will be helpful to the reader in evaluating the applicability of the Job Entry Program and the File Transfer program.
Manual, 8 1/2 x 11 inches, 28 pages 2/79

GH12-5130

SYSTEM/370 AND IBM 4300 PROCESSORS VSE/ACCESS CONTROL - LOGGING AND REPORTING GENERAL INFORMATION, LIC PROG 5746-XE7
The VSE/Access Control - Logging and Reporting program product consists of a set of programs designed as part of the data security package for the DOS/VSE user.

The main functions of this program product are (1) the monitoring of accesses to protected resources and (2) the logging and reporting of unauthorized usage of programs, libraries, and files.

This manual provides a general description of VSE/Access Control - Logging and Reporting and its relation to the data security package. It describes the system configuration requirements and explains the use of VSE/Access Control - Logging and Reporting for auditing security events in a DOS/VSE data processing environment.

The reader of this manual should be familiar with the data processing terminology and the concepts of IBM operating systems. A list of prerequisite and corequisite publications is provided in the Bibliography.

SYSTEM/370 AND 4300 PROCESSORS VSE/POWER - REMOTE JOB ENTRY USER'S GUIDE, LIC PRG 5746-XE3 FEATURES 6066-6071
This publication is intended for DOS/VSE users who wish to execute jobs under control of VSE/POWER, using remote terminals. This operation is made possible by the optional Remote Job Entry feature of VSE/POWER (VSE/POWER RJE), which may be installed in addition to the basic VSE/POWER program product.

This manual gives a brief description of all terminals supported by VSE/POWER in native mode and explains their use in a VSE/POWER environment. Information on terminals supported in compatibility mode is not contained in this manual; for details on this subject, refer to the documentation describing the respective terminal.

Before using this manual, the reader should be familiar with the publications listed in the Bibliography. For a quick reference on VSE/POWER RJE commands, experienced users may also refer to the VSE/POWER Reference Summary: Remote Processing, SH12-5434.

SH12-5329

SYSTEM/370 AND 4300 PROCESSORS VSE/POWER, LIC PRG 5746-XE3, INSTALLATION AND OPERATIONS GUIDE FEATURES: 6066-6071
The VSE/POWER program product is packaged in two parts: the basic material, VSE/POWER, and the optional feature, VSE/POWER Remote Job Entry

This publication is intended for application programmers, system programmers, and operators. It describes the major functions of the basic part and their usage and gives some general information on the program feature.

To install VSE/POWER, information is given on:

- The supported hardware
- The system requirements
- The preparations needed for program installation
- The steps to be performed for program generation.

To execute programs under VSE/POWER, the programmer will find information on:

- The possible program functions
- The data that must be specified to use these functions
- The different possibilities of controlling VSE/POWER jobs.

Manuals related to this publication are listed in the Bibliography. For a quick reference on commands and statements, refer to the VSE/POWER reference summaries, SH12-5434 and SH12-5435.

SYSTEM/370 AND 4300 PROCESSORS VSE/ACCESS CONTROL - LOGGING AND REPORTING PROGRAM REFERENCE AND OPERATIONS MANUAL, LIC PROG 5746-XE7
VSE/Access Control - Logging and Reporting is part of the data security functions offered for batch users of DOS/VSE. These security functions are designed for auditing purposes of a DOS/VSE data processing installation. Data access, library access, and program access can be checked and logged for security reasons.

This manual provides a description of the functions, the installation, and the operating procedures of VSE/Access Control - Logging and Reporting and contains information related to a sample execution of this system as part of the DOS/VSE data security features. The information in this manual is intended for the use of system programmers and operators.

This manual should be used in conjunction with the existing DOS/VSE documentation listed in the Bibliography. The reader should have a basic knowledge of DOS/VSE and be familiar with the DOS/VSE terminology.
Manual, 8 1/2 x 11 inches, 64 pages, 2/79

SH12-5411

DL/1 DOS/VS APPLICATION PROGRAMMING REFERENCE MANUAL PROGRAM PRODUCT 5746-XX1
This manual describes how to write a DL/1 ECS/VS application program for execution in the batch or online environments. It is intended for COBOL, PL/1, or Assembler language application programmers who wish to employ DL/1 DOS/VS functions in their programs, and for data base

administrators who are designing DL/I DOS/VS applications.

DL/I DOS/VS is a data management control system that assists the user in creating, accessing, and maintaining large common data bases. In conjunction with the Customer Information Control System (CICS/DOS/VS), DL/I DOS/VS can be used in an online teleprocessing environment. This manual contains four main sections: an overall view of how a DL/I DOS/VS application program is written and executed, a description of the function codes, the considerations to apply for an online application program, and a description of the advanced programming functions. A glossary of DL/I terms is also included.

Readers of this manual must be thoroughly familiar with the use of DOS/VS, and of CICS/DOS/VS if DL/I DOS/VS is to be used in the online environment.

Manual, 90 pages
 ////5746-XX1

SB12-5412

DL/I DOS/VS UTILITIES AND GUIDE FOR THE SYSTEM PROGRAMMER PROGRAM PRODUCT 5746-XX1

This manual describes each of the DL/I DOS/VS utility programs and explains how to execute them under DOS/VS. This manual is written for data base administrators and system programmers who are concerned with maintaining and reorganizing data bases and creating data base control blocks.

DL/I DOS/VS is a data management control system that assists the user in creating, accessing, and maintaining large common data bases. In conjunction with the Customer Information System (CICS/DOS/VS), DL/I DOS/VS can be used in an online teleprocessing environment. This manual describes procedures used for creating control blocks and utilities for data base recovery, for data base reorganization, and for the resolution of data base logical relationships.

Readers of this manual must be thoroughly familiar with the use of DOS/VS, and of CICS/DOS/VS if DL/I DOS/VS is to be used in the online environment. Before using the DL/I DOS/VS utilities and procedures described in this manual, users should read DL/I DOS/VS System/Application Design Guide, SB12-5413.
 Manual, 262 pages
 ////5746-XX1

SB12-5413

DL/I DOS/VS SYSTEM/APPLICATION DESIGN GUIDE PROGRAM NO. 5746-XX1

This manual presents a general description of DL/I DOS/VS and the considerations to apply when designing a DL/I DOS/VS system. It is intended for DP managers who want a general picture of DL/I DOS/VS and for system analysts and data base administrators who are planning and designing a system.

DL/I DOS/VS is a data management control system that assists the user in creating, accessing, and maintaining large common data bases. In conjunction with the Customer Information Control System (CICS/DOS/VS), DL/I DOS/VS can be used in an online teleprocessing environment. This manual contains descriptions of planning a DL/I DOS/VS system, designing data base structures, controlling and executing data base systems, designing application programs, selecting an access method and employing the DL/I DOS/VS utilities. Also included is a section on estimating DL/I DOS/VS storage requirements.

Readers of this manual must be thoroughly familiar with the use of DOS/VS, and of CICS/DOS/VS if DL/I DOS/VS is to be used in the online environment.

Manual, 170 pages

SB12-5415

DATA LANGUAGE/I-ENTRY DOS/VS (DL/I-ENTRY DOS/VS) APPLICATION PROGRAMMING REFERENCE MANUAL, PROG. PROD. 5746-XX1

This book explains to the application programmer how to work with DL/I-Entry DOS/VS. Using this book, the application programmer can write and run COBOL, RPG II, PL/I, or Assembler programs which can use DL/I-Entry with DL/I-Entry DOS/VS. Using this book, the application programmer can write and run COBOL, RPG II, PL/I, or Assembler programs which use DL/I-Entry.

The DL/I-Entry data base system makes data handling easier for application programs, and centralizes the data required by more than one application program. Both batch

programs running under DCS/VS and online programs running under the Customer Information Control System/COS/VS (CICS/VS) can use DL/I-Entry.

This book introduces DL/I-Entry concepts, explains both the mechanics and the techniques of writing application programs which use DL/I-Entry, shows how to run them, and provides examples. The use of DL/I-Entry calls and the definition of program communication block (PCB) masks are described in detail. A glossary explains DL/I-Entry terms used in the book.

Prerequisite to using this book is a knowledge of how to program in COBOL, RPG II, PL/I, or Assembler, and some familiarity with COS/VS. Online programmers must in addition be familiar with CICS/VS programming conventions.

Manual, 168 pages, 02/76

SB12-5418

IBM DL/I-ENTRY UTILITIES REFERENCE SUMMARY

This reference card provides system personnel with a guide to using the DL/I-Entry DOS/VS utilities. Using this card, the data base descriptions (DBDs) and program specification blocks (PSPs) necessary to use DL/I-Entry data bases can be generated.

The DL/I-Entry data base system makes data handling easier for application programs, and centralizes the data required by more than one application program. Both batch programs running under DOS/VS and online programs running under the Customer Information Control System/DOS/VS (CICS/VS) can use DL/I-Entry.

This card presents in condensed form the information on DL/I-Entry utilities covered in the DL/I-Entry DOS/VS Design and Implementation Guide, SB12-5311. Some familiarity with the book is therefore a prerequisite to using the card.

SB12-5420

DATA LANGUAGE/I-ENTRY DOS/VS (DL/I-ENTRY DOS/VS) LOW-LEVEL CODE/CONTINUITY CHECK FEATURE, REFERENCE/OPERATIONS - PROG. PROD. 5746-XX7

Low-level coding and continuity checking are established techniques for production planning and control in a manufacturing industry. The DL/I-Entry DCS/VS low-level code/continuity check feature generates, performs continuity checks upon and updates such low-level codes. The feature is a subroutine called by batch DL/I-Entry application programs written in COBOL, PL/I, or Assembler.

This book describes the DL/I-Entry LLC/CC feature, and explains to the application programmer and data base administrator how to work with it. First a general description is given of the LLC/CC feature and the data bases it requires; then an explanation of how to use the feature in application programs is given. Information follows on generation, operation, and system and programming requirements.

For the application programmer, prerequisite to using this book is a knowledge of how to write DL/I-Entry programs as explained in the DL/I-Entry DOS/VS Application Programming Reference Manual, SB12-5415. For the data base administrator, prerequisite to using this book is a knowledge of DL/I-Entry data base concepts as explained in the DL/I-Entry DOS/VS Design and Implementation Guide, SB12-5311.

GH19-6044

TERMINAL BUSINESS SYSTEM/VS TO CICS/VS CONVERSION GUIDE

This publication is intended for users of Terminal Business System/VS, who are planning to move their applications onto an in-house CICS/VS system. Because it is anticipated that most users will be considering the DOS/VS version of CICS/VS, attention is focused on this product. However, most of the points covered will apply equally to CICS-OS/VS.

Systems programmers will find that this publication will give them an understanding of the application designer's requirements, but not detailed information about, or assistance with, installing a CICS/VS system. These subjects are covered in other publications.

Manual, 8 1/2 x 11 inches, 84 pgs, 1/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SH19-6045

TERMINAL BUSINESS SYSTEM/VS ANALYST'S GUIDE RELEASE 8.1

This reference manual is meant for analysts responsible for installing applications on Terminal Business System. It includes full descriptions of all the stages involved in such installations including prospect analysis, file design, conversational system considerations, utility usage, security and recovery, and cost estimation. It also includes sections on the use of GIS and DL/I.

Manual, 8 1/2 x 11 inches, 208 pages, 6/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

GH19-6047

TERMINAL BUSINESS SYSTEM/VS TO IMS/VS CONVERSION GUIDE

This manual provides information for users of Terminal Business System/VS who are planning to transfer their applications onto an in-house IMS/VS system. It discusses how to plan and perform the conversion and gives technical information on those points that should be taken into consideration.

The reader is assumed to be a systems analyst or designer, or an IBM systems engineer, having a knowledge of both IMS/VS and Terminal Business System/VS.
Manual, 8 1/2 x 11 inches, 58 pgs, 8/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SH19-6048

INTERNATIONAL FIELD PROGRAM VS PERSONAL COMPUTING PL/I
TERMINAL USERS GUIDE PROGRAM NUMBER 5785-EAE

This book explains to users of VSPC terminals how to develop programs using VS Personal Computing PL/I (VSPC PL/I), whose compiler is an upward-compatible subset of the IEM OS PL/I Optimizing Compiler. The reader is assumed to have some experience of writing programs in PL/I.

VSPC PL/I is a language processor operating under one of the IBM program products: VS Personal Computing (OS/VS1), program number 5740-XR5, or VS Personal Computing (OS/VS2), program number 5740-XR6. It combines the interactive nature of VS Personal Computing and the problem solving nature of the PL/I language to provide a powerful tool for program development from the convenience of the user's own terminal.

This book summarizes the structure of VSPC, the operation of available terminals, and outlines the VSPC commands needed for developing and running programs. A sample terminal session is given, showing step-by-step the method of constructing a program at the terminal.

Prerequisite to this book is a familiarity with the VSPC PL/I language as explained in VSPC PL/I Language Reference Manual, SB19-6049.

Manual, 8 1/2 x 11 inches, 114 pgs, 7/77
/////5785-EAE

SH19-6049

INTERNATIONAL FIELD PROGRAM VS PERSONAL COMPUTING PL/I
LANGUAGE REFERENCE MANUAL PROGRAM NUMBER 5785-EAE

This manual contains reference information for VS Personal Computing PL/I (VSPC PL/I), a language processor operating under one of the IBM program products: VS Personal Computing (OS/VS1), program number 5740-XR5 or VS Personal Computing (OS/VS2), program number 5740-XR6.

VSPC PL/I brings together the interactive nature of VS Personal Computing and the problem-solving nature of PL/I to provide the user with a powerful tool for developing programs at a terminal.

The manual is intended for use by programmers who already have some experience in using the IEM OS Optimizing Compiler. It is not intended to teach PL/I. It is organized in two parts: the first discusses the elements of PL/I, its components and the general structure of PL/I programs as they are compiled and run under VSPC. The second part discusses the syntax of individual PL/I statements. There are four appendices including a set of sample programs. A glossary explains PL/I terms used in the book.

Prerequisite to the book is a familiarity with PL/I as described in the IBM OS PL/I Optimizing and Checkout Compiler Language Reference Manual, GC33-0009.

Manual, 8 1/2 x 11 inches, 184 pgs, 7/77

VS PERSONAL COMPUTING (VSPC) FOR DCS: ONLINE CENTRE
SERVICES TERMINAL USER'S GUIDE

This manual explains to S/370 OS/VS2 VSPC users how to make use of the VSPC Online Centre Services to transfer VSPC files to and from OS sequential and direct data sets. The manual includes:

- An introduction to the OLCS concepts
- A discussion of the different ways in which OLCS can be invoked; a description of attention handling, command syntax, and how to interpret OLCS messages
- A description of the OLCS immediate commands
- A description of the IEM-distributed set of procedural commands - the commands that initiate data transfer into and out of VSPC.

Manual, 8 1/2 x 11 inches, 54 pgs, 3/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

SH19-6053

VS PERSONAL COMPUTING FOR DCS:
BASIC LANGUAGE CONVERSION PROGRAM USER'S GUIDE

This guide explains the use of the BASIC Language Conversion Program (LCP) for users of IEM Data Center Services who are transferring their BASIC programs from a CALL service to a VS Personal Computing (VSPC) service.

The BASIC LCP converts CALL:BASIC source programs to VS BASIC Release 3 source programs. It is an interactive application, written in VS APL, that runs under VSPC. To use the LCP, it is necessary to be connected to a Data Center which has a VSPC system installed with VS APL Release 2.

This book explains how to use the conversion program, describes the difference between the CALL:BASIC and VS BASIC languages, and explains conversions which cannot be handled by the LCP. Language differences which the LCP cannot

diagnose are described, and several sample programs are included.

Manual, 8 1/2 x 11 inches, 52 pgs, 9/77

SH19-6054

IBM PROGRAMMING PRODUCTIVITY SERVICE: OVERVIEW

The purpose of this manual is to introduce the functions and facilities of the Programming Productivity Service (abbreviated to PPS in this manual) and the benefits and savings resulting from its use. Additionally, the Improved Programming Technologies (IPT) are introduced, the benefits of IPT are presented, and hints are given on getting started in IPT using the facilities of PPS.

This publication is intended as preparatory reading for both DP managers and programmers planning to use PPS.

The information on IPT has been extracted from specialized IPT publications to serve as an overview only. For further detailed reading on IPT, refer to the Bibliography at the end of this publication. Your IBM representative will be pleased to obtain copies of these publications for you on request.

APL/360 PRIMER, STUDENT TEXT
This primer provides an introduction to the APL/360 system and to the APL programming language. It discusses the mechanics of using the system, and shows how to write representative programs for a variety of applications. The treatment is elementary, and for a discussion of advanced system features and available operations, refer to the APL/360 User's Manual.

INFORMATION MANAGEMENT SYSTEM/360, VERSION 2, GENERAL INFORMATION MANUAL; PROG. PROD. 5734-XX6
The Information Management System/360 is an Operating System/360 processing program designed to facilitate the implementation of medium to large common data bases in a multiapplication environment. This environment is created to accommodate both online message processing and conventional batch processing, either separately or concurrently. The system permits the evolutionary expansion of data processing applications from a batch-only to a teleprocessing environment.
This manual includes a general description of the system and its various facilities and programs, listings of typical and minimum configurations, and sample applications.
Manual, 112 pages

GH20-0850

APL/360 - OS (5734-XM6) AND APL/360 - DOS (5736-XM6) GENERAL INFORMATION MANUAL
This publication provides a general introduction to the use, operation, and installation of APL/360. APL/360 is a conversational time-shared terminal system utilizing APL (A Programming Language), a concise notation which makes use of well known mathematical symbols, plus a number of symbols that are used for designating other simple and powerful functions. Because APL is closely related to mathematical notation, and its functions operate on sets of information as well as individual data items, the user can write effectively in this language with a minimum of instruction.
APL/360 is designed to operate under either (a) the IBM System/360 Operating System (OS/360), Multiprogramming with a Fixed Number of Tasks (MFT with subtasking) or Multiprogramming with a Variable Number of Tasks (MVT) or (b) the IBM System/360 Disk Operating System (DOS/360).
The manual is in three parts:
Part I describes APL/360 as viewed by a user at a typewriter-like terminal. The statements and commands used to describe the operations to be performed by the APL/360 system are summarized.
Part II describes APL/360 as viewed from the central data processing system location. The system features which facilitate the management and operation of an APL/360

System are summarized.

Part III describes the items to be considered in planning for the installation of an APL/360 System. Minimum machine requirements and storage requirements are provided.
Manual, 65 pages

IBM GENERALIZED INFORMATION SYSTEM VERSION 2 (GIS/2) APPLICATION DESCRIPTION, PROG. NO. 5734-XX1
This manual surveys the operational concepts and system capabilities of the Generalized Information System, Version 2. The manual introduces the language of GIS/2 and describes the file organization and processing actions supported by GIS/2.

The Generalized Information System operates under control of the Operating System on System/360 and System/370 and supports a wide variety of applications by providing information-handling capabilities against many typical data base organizations. GIS/2 provides facilities for defining, maintaining, and retrieving data from user files under direction of the using installation and its personnel.

APL/360-OS (5734-XM6), APL/360-DOS (5736-XM6), USER'S MANUAL

This publication provides information necessary to use the APL/360 system. It discusses procedures and equipment required for interacting with the system, how to establish connection between terminal and central computer, how to start and end work sessions, and how to apply system control features. Application of the APL language to user problems is thoroughly discussed, and appendices give both elementary and advanced examples of actual terminal sessions.

INFORMATION MANAGEMENT SYSTEM/360 VERSION 2 MASTER INDEX PROGRAM NUMBER 5734-XX6
This is a consolidated alphabetic index to all the documents in the set of eleven IMS/360 Version 2 manuals. The titles of the individual manuals, along with abbreviated titles and order numbers, are as follows:
General Information Manual - GIM (GB20-0765)
System/Application Design Guide - SADS (SB20-0910)
Application Programming Reference Manual - APRM (SB20-0912)
System Programming Reference Manual - SPRM (SB20-0911)
Operator's Reference Manual OPRM (SB20-0913)
Utilities Reference Manual - UTRM (SB20-0915)
Messages and Codes Reference Manual - M & C (SB20-0914)
System Manual, Volume I - Text - SM (LY20-0629)
System Manual, Volume II - Flowcharts - SM-II (LY20-0630)
System Manual, Volume III - DP Microfiche - SM III (LYB0-0631)
System Manual, Volume IV - DC Microfiche - SM-IV (LYB0-0632)

The reader's attention is called to the fact that many of the commas in the index are used in the SORT program and do not necessarily indicate a reversal of word sequence.
Program Product Manual, 60 pages

STAT/BASIC FOR SYSTEM/3 MODEL 6, ITF, AND VM/370-CMS: GENERAL INFORMATION, PROG. NOS. 5703-XA1, 5734-XA3
STAT/BASIC is a comprehensive set of interactive statistical programs for System/3 Model 6 and ITF (DOS, OS, or TSO). It consists of 40 BASIC programs, providing the user with procedures for data generation, elementary statistics, regression and correlation analysis, multivariate analysis, analysis of variance, nonparametric statistics, time series analysis, and biostatistics. The interactive features include instructional messages, flexible control of calculations, extensive error checking, and data editing.

This manual provides an overview of STAT/BASIC, describing the program features, usage, maximum problem sizes, precision, timing, system requirements, and customer responsibilities. It also includes a sample problem to illustrate the use of STAT/BASIC.
Manual, 40 pages

CUSTOMER INFORMATION CONTROL SYSTEM (CICS) DCS-ENTRY (CICS/DOSE) DOS-STANDARD (CICS/DOSS) OS-STANDARD V2 (CICS/OS) GENERAL INFORMATION MANUAL PROGRAM NUMBERS 5734-XX7, 5736-XX6, 5736-XX7
The IBM Customer Information Control System (CICS) is a Transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications: message switching, inquiry, data collection, order entry, and conversational data entry.
CICS is available in three systems--two for DOS users and one for OS USERS. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small DOS data base/data communication configuration and move up through DOS into OS.
This manual is designed for persons interested in a general description of CICS and its data base/data communication capabilities.
Manual, 84 pages

IBM GENERALIZED INFORMATION SYSTEM VERSION 2 (GIS/2) PROGRAM DESCRIPTION MANUAL, VOLUME 1: SYSTEM OVERVIEW AND CONTROL, PROG. PROD. 5734-XX1
The IBM Generalized Information System, Version 2, abbreviated GIS/2, consists of an integrated set of programs to provide general-purpose information handling. User input statements initiate and direct the system functions of creating, querying, and maintaining formatted data files variously structured. GIS routines are completely coded in the Assembler Language and operate under the overall control of OS with MPT or MVT.
This manual is presented in three volumes, the first of which describes the GIS monitor program and the capabilities associated with it. Data Description (file definition) facilities and Procedural Language facilities are specified in Volumes 2 and 3, respectively.
Program Product Manual, 40 pages
/////5734-XX1

SB20-1032

IBM GENERALIZED INFORMATION SYSTEM, VERSION 2 (GIS/2) OPERATIONS MANUAL - PROGRAM NUMBER 5734-XX1
This manual addresses operations personnel intending to run the Generalized Information System, Version 2 (GIS/2), under the Operating System with Multiprogramming with a Fixed Number of Tasks or Multiprogramming with a Variable Number of Tasks. Contents include SYSGEN procedures, execution procedures, and diagnostic messages available to the system user.

INTERACTIVE QUERY FACILITY (IQF) FOR IMS/360 VERSION 2
PROGRAM NUMBER 5734-XX6 - GENERAL INFORMATION MANUAL

The Interactive Query Facility (IQF) is provided as a feature for users of the IBM Information Management System (IMS/360) Version 2, Program Product 5734-XX6. IQF offers the capability for spontaneous online query capability, and retrieval and display of data maintained within IMS/360 teleprocessing data bases. IQF runs as a standard IMS/360 application program under IMS/360 Version 2 and uses standard IMS/360 resources for describing data, accessing data, and communicating with the user's terminal.

This manual provides a general description of IQF and its various facilities and programs, describes the IQF query language and the required IQF-IMS/360 machine configurations, and includes sample applications (examples of terminal queries that a user might employ).

IQF operates with all System/360 and System/370 computers supported by IMS/360 version 2. All references to IMS/360 Version 2 in this manual assume Modification Level 1 or higher, with the full Data Base/Data Communication System.

This manual has been prepared for both data processing and non-data processing management and personnel. Knowledge of the information contained in the MIS/360 Version 2 General Information Manual (GH20-0765) will be helpful in understanding the relationship of IQF to IMS.

MATH/BASIC FOR SYSTEM/3 MODEL 6, ITF, AND VM/370-CMS GENERAL INFORMATION MANUAL, PROG. NOS. 5703-XM2 (SYSTEM/3) AND 5734-XM8 (ITF AND VM/370-CMS)
 MATH/BASIC provides easy-to-use powerful mathematics problem-solving tools to the user of BASIC. The program operates on the IBM System/3 Model 6 or under the Interactive Terminal Facility (ITF) or under VM/370-CMS for System/360 or System/370. It consists of 44 BASIC routines covering the solution of linear questions, matrix eigen problems, polynomial equations, numerical quadrature, numerical differentiation, interpolation, approximation, smoothing, solution of systems of ordinary differential equations, fast Fourier transform, special functions and linear programming.

The user can employ any of the programs as stand-alone or can merge one or more of them into his own programs. The modules of MATH/BASIC can be applied to many problems that occur in science, engineering, and related fields.

This manual provides an overall view of MATH/BASIC. It describes the program features, usage, maximum problem size, precision, timing, system requirements, and customer responsibilities. Examples are included to illustrate the use of the program.

BUSINESS ANALYSIS/BASIC GENERAL INFORMATION MANUAL, PROG. NOS. 5703-XM3 (SYSTEM/3 MCDL 6) AND 5734-XM6 (ITF-OS/DCS/TSO AND VM/370-CMS)

Business Analysis/BASIC is a comprehensive set of interactive routines for use on System/3 Model 6, System/360 or System/370 with ITF (DCS, OS, or TSO) or VM/370-CMS. It consists of 30 routines written in the BASIC language, providing the problem-solving professional with procedures for data generation and maintenance, spread sheet analysis, investment analysis, break-even or cost-volume profit analysis, depreciation analysis, and time series analysis. The program is designed so that a detailed knowledge of programming is not required. Interactive features include instructional messages, flexible control of calculation, extensive error checking and data editing.

This manual provides an overview of Business Analysis/BASIC, describing the program features, data file concepts, usage, maximum problem sizes, precision, timing, system requirements, and customer responsibilities. It also includes an "Application Handbook" consisting of a number of case studies illustrating use of the routines.

IQF TERMINAL USERS REFERENCE GUIDE (INTERACTIVE QUERY FACILITY) (IMS/360) - PROGRAM NUMBER 5734-XX6

The Interactive Query Facility (IQF) is provided as a feature for users of the IBM Information Management System (IMS/360) Version 2, Program Product 5734-XX6. IQF offers the capability for spontaneous online query and retrieval and display of data maintained within IMS/360 data bases.

IQF analyzes user queries, determines the most efficient search technique for data selection, gathers data, formats the output, and prints it at the inquiring terminal.

This guide has been prepared for both data processing and non-data processing management and personnel and provides a quick reference to rules pertaining to use of the IQF query language.

A complete listing of IQF diagnostic message is included in appendix A of this publication. Sign-on procedures for IQF-supported terminals are described in Appendix E.

This publication assumes that the reader is familiar with the contents of Introduction to the IQF Language (GH20-1222) and knows how to enter queries at his terminal.

DATA LANGUAGE/I DISK OPERATING SYSTEM/VIRTUAL STORAGE (DL/I DOS/VS) GENERAL INFORMATION MANUAL - PROGRAM NUMBER 5746-XX1

Data Language/I Disk Operating System/Virtual Storage (DL/I DOS/VS) is a data management control system developed to assist the user in implementing data base processing appli-

cations. It provides data organization methods that are conducive to the creation of, access to, and maintenance of large common data bases. DL/I DOS/VS permits the evolutionary expansion of data processing applications from a batch-only environment to a teleprocessing environment such as the Customer Information Control System DOS/VS (CICS/DOS/VS).

This manual includes a general description of the system and its various facilities and programs, listings of typical and minimum configurations, and sample applications. Program Product Manual, 60 pages

GH20-1251

DISPLAY MANAGEMENT SYSTEM II (DMS II) GENERAL INFORMATION MANUAL - PROGRAM PRODUCTS 5734-XC4 AND 5736-XC4
 The Display Management System II (DMS II) is a set of programs designed to simplify the implementation of online data processing operations using the 3270 Information Display System. The display management, file management, and message handling capabilities offered by DMS II make it possible to implement many new or existing applications in an online environment with little or no user programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection; file operations such as data entry, inquiry, record update, and file search; and message routing between display stations. Application specification is simplified through the use of DMS II forms on which the user describes data files, designs 3275/77 Display Station Images (panels), and describes the utility operations required by the application.

The Display Management System II operates under control of the IBM Customer Information Control System (CICS).

This manual provides an overview of the Display Management System II functions. Statements of customer responsibilities, programming system requirements, and system configuration are included.

Manual, 60 pages

GH20-1260

IMS/VS GENERAL INFORMATION MANUAL, PROG. PROD. 5740-XX2
 IMS/VS is an OS/VS system program designed to facilitate user implementation of data base system in a batch and/or online environment supporting a wide variety of applications.

The purpose of this manual is twofold. First, by providing an overview description of the IMS/VS product, it enables new and prospective users to acquaint themselves with IMS/VS functions and the hardware and software products prerequisite to using IMS/VS. This information is fundamental to being able to consider how using IMS/VS can satisfy business needs. Second, it informs current users of new IMS/VS facilities and enables them to consider whether the new facilities can be applied at their installation.

This manual includes a general description of the system and its various facilities and programs, diagrams of typical hardware configurations, sample applications, and a guide for using the IMS/VS manuals.

BUSINESS ANALYSIS/BASIC FOR ITP AND VM/370-CMS OPERATIONS GUIDE, PROG. NO. 5734-XMB

Business Analysis/BASIC contains 30 routines which permit the user to interact with the computer. All routines are written in the BASIC language for implementation on ITP (OS, DOS, TSO) and VM/370-CMS. The routines are designed to ask the user to enter his problem parameters and data and to make decisions at key points in the analysis. Options are provided for enhanced operating convenience and flexibility.

This manual provides the information needed to generate, run, and maintain Business Analysis/BASIC. It is assumed that the user has an installed ITP system.

ASYMMETRIC MULTIPROCESSING SYSTEM OPERATOR'S MANUAL, PROG. NO. 360A-CX-15X

This manual contains instructions that enable the computer operator to run the ASP system. ASP console operations are similar in most respects to those of the System/360 and System/370 Operating System (OS). Therefore, to avoid repetition of documentation, the material in this manual has been prepared with the assumption that the operator is familiar with the IBM Operating System. Details on OS operations are given in IBM System/360 Operating System: Operator's Reference (GC28-6691), IBM System/360 Operating System: Operator's Procedures (GC28-6692), Operator's Library OS/VS2 Reference (GC38-0210), and in their prerequisite and recommended publications.

Manual, 204 pages

BTS (BATCH TERMINAL SIMULATOR) PROGRAM DESCRIPTION/OPERATIONS MANUAL - IUP NUMBER 5796-PBD
 The Batch Terminal Simulator (BTS) is a batch-oriented program designed to simulate IMS/360 with regard to the execution of application programs, both batch and teleprocessing. The facilities inherent in the BTS design philosophy provide the user with a comprehensive means of checking and debugging:

- o Application Program Logic
- o S/360 interfaces
- o Teleprocessing activity
- o Data base interaction

In addition, BTS provides a number of debugging aids and application performance impact statistics. This publication provides a general description of BTS, and describes in detail the program's functional abilities and how to use them. The publication also includes explanations of BTS messages, and describes the BTS output listing. Manual, 68 pages

SB20-1359

S/370 CICS/COBOL CALL INTERFACE NATIONAL BANK OF DETROIT 5796-ABG DESCRIPTION/OPERATIONS
 Current users of the Customer Information Control System (CICS) who are writing application programs in ANS COBOL usually with Assembler Language macros in the middle of their application programs. This procedure requires the use of the CICS Preprocessor Program and two compilations of the program, one for the Assembler Language macros and one for the COBOL. This program provides a COBOL/CICS interface technique

which eliminates the use of the CICS Preprocessor Program and makes the writing and debugging of ANS COBOL/CICS application programs considerably easier. The system consists of 12 modules, one for each of the CICS management functions, and a Resident Interface Module. When the COBOL application programmer requires a CICS service, rather than write an Assembler Language macro, he simply codes a predefined COBOL CALL statement passing a list of parameters depending upon the service requested. The test CICS macro is then issued in the subsequently called CICS Service Handler and control is returned to the requesting COBOL program upon completion of the CICS service. Manual, 178 pages

SB20-1361

TEST DATA GENERATOR: IUP 5796-PBP DESCRIPTION/OPERATIONS
 Test Data Generator constructs data used in testing an application program. The user describes the characteristics of the data and supplies the "seed" for a random number generator; the program constructs test files containing randomly generated data and optionally gives the user a listing of what was generated. The use of Test Data Generator to create data for testing the logic of application programs should provide savings by not having to prepare test data manually, thus reducing programming time and eliminating the heavy volume of keypunching normally required to establish test files. It should also provide less biased data for the actual test. Frequently, it can eliminate or postpone the writing and testing of data file load programs. This manual is intended for use by an application programmer who desires to use the Test Data Generator to construct test files for his program. A general knowledge of System/360 and System/370 concepts is assumed, as well as knowledge of the job control language. Manual, 180 pages

3270 SCREEN IMAGE PROCESSOR FOR IMS AND IMS/VS - IUP 5796-AFC DESCRIPTION/OPERATIONS
 The Screen Image Preprocessor is a productivity aid which simplifies the design and implementation of IMS/3270 applications. Each 3270 screen format added to an IMS system necessitates the preparation of many detailed control statements as input to the Message Format Language Utility. Using a single control statement and only one card image for each line to be represented on the screen, the Preprocessor generates the required IMS input statements. Each line of the screen image is coded exactly as it is to appear on the 3270 screen. Field control information (attribute bytes), position at the beginning of each field, must also be coded to specify the desired field types. The Preprocessor output includes a printed representation of the screen layout in addition to generated control statements which may be printed or passed to the Utility. Manual

DISPLAY MANAGEMENT SYSTEM II -- DOS/VS (DMS II) PROGRAM REFERENCE MANUAL, PROG. PROD. 5736-XC4

DMS II DOS/VS is a set of programs to simplify the implementation of online operations using the 3270 information Display System. Application specification is simplified by means of DMS II forms. Preprogrammed facilities are provided to perform paging and panel selection, file operations and message routing. This manual is intended primarily for panel designers and programmers setting up applications under DMS II. It contains a general description of DMS II functions and features, followed by reference material describing system use.

Manual, 258 pages

DOS/VS REMOTE JOB ENTRY WORKSTATION PROGRAM (PROGRAMMING RPO WFO358) GENERAL INFORMATION MANUAL PRG. NO. 5799-WBX
 This publication, a general description of the DOS/VS Remote Job Entry Workstation Program, is intended primarily as an aid in evaluating the program and may also serve as a guide in planning the implementation of a DOS/VS workstation.

After listing the program's advantages, the manual presents an overview of the program, then discusses its structure and functions, the operation of the workstation, and finally the generation and installation of the program.

Manual, 26 pages
 ////5799-WBX

SH20-1589

DOS/VS REMOTE JOB ENTRY WORKSTATION PROGRAM - PROGRAMMING RPO WFO358 OPERATION & INSTALLATION GUIDE, PROG. NO. 5799-WBX

This publication describes the operation and installation of the DOS/VS Remote Job Entry Workstation Program. It is intended for use by the system programmer responsible for installing and maintaining the system and by the operator at the workstation computer.

The manual explains the use of commands to control processing and lists the messages produced by the program. It also defines the generation parameters and describes how to install and generate the program.

Manual, 96 pages
 ////5799-WBX

SH20-1590

DOS/VS REMOTE JOB ENTRY WORKSTATION PROGRAM (PROGRAMMING RPO WFO358) REFERENCE, LIC PROG 5799-WBX

This publication defines and describes the facilities provided by the DOS/VS Remote Job Entry Workstation Program and contains the information necessary to plan for utilization and installation. It is intended for use by the system programmer responsible for installing and maintaining the system. Additional information on the operation and use of the DOS/VS Remote Job Entry Workstation Program is directed to computer data center personnel responsible for operation planning.

The manual describes the program, explains the internal structure in terms of functions provided, and discusses the operating procedures. It also describes the device support, storage and programming system requirements, and performance

considerations.
Manual, 76 pages
/////5799-WRX

SH20-1592

DOS/VS REMOTE JOB ENTRY WORKSTATION PROGRAM, LOGIC, PROGRAMMING RPQ WF0358, PROG. NO. 5799-WHX
This publication describes the functions of the DOS/VS Remote Job Entry Workstation Program and its relationship to DOS/VS and to the operating system used at the central computer. It is intended primarily for use in maintaining the program.

The manual contains diagrams and supplementary text describing the functional organization of the program, and outlines the key functions of each program module. It also provides a directory to the program code, defines the format of control bytes, and contains information for diagnostic purposes.

Manual, 244 pages

VM/370 SYSTEM FOR ONLINE TAPE AND DISK LIBRARIES - IUP 5796-AGN, DESCRIPTION/OPERATIONS

The VM/370 System for Tape and Disk Libraries is an IUP for the control of user tape and disk libraries. It works online under CMS with commands to control the assignment and accounting for user volumes. The system operator can add, delete, and modify a record associated with a particular mountable volume. It can make a large pool of tapes and disks accessible to a large number of time sharing users by providing the storage location and accounting information available online. The benefits are improved data security, quicker location of volumes, quicker response to mount commands, automatic bookkeeping and improved system control.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

Manual

SH20-1610

DOS TO OS CONVERSION SYSTEM - IUP 5796-AFZ DESCRIPTION/OPERATIONS

The DOS to OS Conversion System IUP automates the conversion process for JCL, COBOL, RPG, SORT and some utility programs. DOS JCL and DOS programs are displayed side by side with their OS equivalents. The OS equivalents are punched with JCL ready for compilation and cataloging for testing. COBOL D programs are processed by the Language Conversion Program to bring them to the ANS COBOL Level before conversion. COBOL programs with End of Page indicators are modified for handling of the carriage control tape. All CALL subroutines are identified for further resolution. DOS RPG FILENAMES are converted to OS RPG DDNAMES through the use of cards provided during the conversion process. All SORT Control Cards are handled automatically. A management report is provided as part of the process which shows the status of the conversion on a dynamic basis.

The Envirotech Corporation converted 1,200 routines to OS/VS from four geographically separated divisions while consolidating their operations at Salt Lake City, Utah. They did this with one system programmer and three part-time clerical personnel in six months through the use of the Conversion System. They estimate that two-thirds of all time and effort were saved over manual alternatives.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

SH20-1619

VM/370 GRAPHIC MONITOR, IUP 5796-PDT, DESCRIPTION/OPERATION

The purpose of this manual is to provide the user with sufficient information to understand, install and successfully use the VM/370 Graphic Monitor program.

The VM/370 Graphic Monitor Installed User Program enables the privileged user of the VM/370 system to observe the operation of the VM/370 system and users logged into the system. It allows the user to observe the utilization of the CPU resource as it is being distributed, the rate each user connected to the VM/370 system is utilizing the system and rate of utilization of DASD and tape devices. This is accomplished via individual screen displays for system, user and device utilization, which are then written to each support graphic device available.

TSO - 3270 STRUCTURED PROGRAMMING FACILITY (SPF), GENERAL INFORMATION - PROGRAM NO. 5740-XT2

The Structured Programming Facility (SPF) is a programming development tool designed to increase productivity in the TSO environment. It supports any VS2-TSC user who has a 24-line IBM 3270 display terminal equipped with a full EBCDIC keyboard, including 1.2 program function keys. It increases programmer productivity through:

- o display presentations which prompt the user and simplify command/data entry
- o time-saving use of program function keys for commonly performed operations

- o features that facilitate structured programming in a TSO environment
 This manual provides an overview and functional description of SPF.
 Manual, 24 pages

DB/DC DRIVER SYSTEM: GENERAL INFORMATION MANUAL, PROG. PRDD. 5740-XXA
 This manual is intended primarily to define the scope of applicability of the DB/DC Driver System for customer executives, system analysts, and programmers. It describes the facilities of the DB/DC Driver System and includes a general discussion of the DB/DC Driver System system configuration, terminal processing, system structure and control, and system support and maintenance facilities, as provided within the DB/DC Driver System Program Product.
 The DB/DC Driver System provides tools for testing and driving data base/data communications application programs. It is terminal oriented, thereby permitting the online development of test cases. A special language is provided to aid in the creation of test cases; a terminal command language is provided to permit modification of test cases as well as library management operations. In addition, offline utilities can be used to build the DB/DC Driver System, initialize it, and manipulate the driver system data base.

GH20-1735

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED FUNCTION
(TCS-AF) CONCEPTS AND FACILITIES, PROG PROD 5740-XXD

The IBM telecommunications Control System - Advanced Function (TCS-AF) program product provides control for network systems incorporating one or more CPU's, each with terminals and/or application programs. Based on and enhancing IBM's Telecommunications Access Method (TCAM), TCS-AF controls traffic between terminals and application programs, message switching between terminals, and message transfer between applications. Lines and terminals may be shared among applications on the same CPU, or different CPU's connected by communications lines. Both user application programs and complex subsystem environments such as IMS/VS and CICS/VS may be supported. Queuing and priority facilities for handling fixed message types may optimize line and speed delivery of inquiry/response messages.

A TCS-AF message control program (MCP), customized by the user with TCS-AF and TCAM macro instructions and assembler language, operates in each network computer, usually in a different storage-protected region or partition from application programs. Support facilities include:

- o operator control for complex networks
- o online statistics gathering and security/ authorization capabilities.
- o load-balancing over multiple intercomputer links
- o alternate path and indirect routing capabilities
- o message integrity safeguards
- o start/stop, binary synchronous communications, and (via VTAM) SNA synchronous data link control device support equivalent to TCAM's
- o aids for minimizing application program device-characteristic dependencies, including extended support for the IBM 3270 Information Display System
- o capabilities for interfacing to non TCS-AF systems in multicomputer networks

VSAM ACCESS SUBROUTINES IUP 5796-AJW, DESCRIPTION/OPERATIONS
VSAM Access Subroutines provide a common interface to VSAM
data sets for users of Assembler, COBOL, FORTRAN, and PL/I.

This manual describes the capabilities of the system, installation procedures and instructions for application and system programmers. It is both an installation and operations reference manual.

50 pages, 1/76

SB20-1781

CENTRAL HUDSON GAS & ELECTRIC VSAM ACCESS SUBROUTINES
DESCRIPTION/OPERATIONS, IUP 5796-AJX

VSAM Access Subroutines provide a common interface to enhanced VSAM data sets for users of Assembler, COBOL, and FORTRAN languages in the CCS/VS environment.

This manual describes the capabilities of the system, installation procedures and instructions for application and system programmers. It is both an installation and operations reference manual.

Manual, 50 pages, 4/76

SB20-1782

DOS/VS PRE-SORT PROCESSOR, IUP 5796-AJI,
DESCRIPTION/OPERATIONS

This manual describes the capabilities of the system and programs. Discussion of the design and potential modification areas are included. This manual is both a system description and an installation and operations reference document.

Manual, 18 pages, 12/75

SB20-1787

OS/DOS CICS/VS COBOL CALL INTERFACE, IUP 5796-ABK,
DESCRIPTION/OPERATIONS

CICS/VS CCECL CALL Interface was developed as an alternate linkage between the ANS CCECL program and the Customer Information Control System (CICS/VS). Use of this interface eliminates the use of the CICS/VS Preprocessor and assembly steps. It also provides the ANS COBOL programmer with a set of "easy-to-use" ANS COBOL CALL statements for communication with CICS/VS.

This manual describes the capabilities of the CICS/VS COBOL CALL Interface and the specifications of its program modules. Each ANS COBOL CALL format is fully described with examples of its use. Installation procedures for both the DOS/VS and OS/VS user are included.

IUP 5796-ABG CICS/COBOL Call Interface is a prerequisite. It must be installed first to obtain the source code which is updated by this IUP. The availability notice for IUP 5796-ABG is G320-8089. Its PDOM is SB20-1359. This PDOM addresses both IUPS and can be used solely once the IUPS are installed.

Manual, 216 pages, 11/75

SB20-1800

VS BASIC INTERACTIVE SYSTEM IUP 5796-PPI,
DESCRIPTION/OPERATIONS

The VS BASIC Interactive Data System provides facilities to permit an individual to create and maintain his own data files, through the use of the collection of programs that make up the system. Each of the several programs are

described in detail, showing the function of the program and providing detail about the use of the program and its capabilities.

This manual describes the various programs which comprise the VS BASIC Interactive Data System, showing the various functions which can be used and which individual programs provide each of the functions. It provides the user with the knowledge of what he can accomplish with each of the programs and with the total set of programs.

The manual is organized so that each of the programs is described in general terms, to provide the user with a knowledge of the functions provided. Following the general descriptive section is an operations section, where information is presented which describes how to use the programs in each of many environments.

Since the VS BASIC Interactive Data System operates in a wide variety of environments, each section of the manual is subsetting to show the functional and operational characteristics in the specific environments possible. For example, the operation of the system in a batch environment under DOS/VS is different from the operation of the system in an interactive environment under TSO.
Manual, 78 pages, 12/75

SH20-1802

DL/I HDAM DATA BASE TRAINING AID, IUP 5796-AKF, DESCRIPTION/OPERATIONS

The HDAM Reorganization Utility is designed to provide more effective use of DL/I DOS/VS HDAM. Its purpose is to predict and tune HDAM data base performance during system design, and to maintain that performance with an optimum reorganization procedure after implementation.

This manual describes the capabilities of the system and the programs. It contains a discussion of design assumptions and system limitations. This manual is both a system description and an installation and operations reference document.
Manual, 30 pages, 1/76
