The Data Entry Management and Audit System facilitates transition to and operation of diskette data entry media. It provides an input control system for multiple remote input locations. It includes auditing and recovery facilities and can be used as an archival system for economical storage of historical data.

This manual contains all that is necessary to install and operate the system. It includes sample output which shows how the audit trail is maintained.

IMS SPACE MANAGEMENT UTILITIES, IUP 5796-PFW, DESCRIPTION/OPERATIONS

The IMS Space Management Utilities can improve system performance and programmer productivity. They are designed to assist in managing OS, OS/VS, IMS/360 and IMS/VS data space, to detect and report IMS H.D. pointer discrepancies and to assist with segment restructuring during data base reorganization. This manual describes the function of the three IMS Space Management Utilities, how to specify input to them, and how to interpret the utility output. In addition, it describes the operating instructions, lists error messages, and provides installation guidelines. This manual is both a system description and an installation and operations reference document.

IMS TRANSACTION PROFILES IUP 5796-PGG, DESCRIPTION/OPERATION
This Installed User Program consists of two serially executed routines named DCPROF and TXPROF. DCPROF generates multi-faceted profiles of IMS Data Communications transaction activity on a chronological basis from log records routinely written by IMS during on-line activity. TXPROF produces a similar profile for each transaction code

from log records extracted by DCPROF and sorted into sequence on PSB name and transaction code.

This manual describes the programs, procedures for installing the programs on the user's system, input parameters, output formats, examples of each report, and error messages.

DOS/VS PERFORMANCE TOOL, IUP 5796-PGK DESCRIPTION/OPERATIONS
DOS/VSPT is a software tool that monitors the performance of an existing IEM System/370 running DOS/VS. It uses both dynamic event tracing and periodic statistical sampling to record system status on an output tape or DASD data set. Subsequently, a series of reports can be produced to evaluate hardware performance during either the entire monitoring period or any portion thereof.

This manual describes the capabilities of DOS/VSPT and provides the information necessary to install and use the programs.
Manual, 140 pages, 9/76

BATCH TERMINAL SIMULATOR II, IUP 5796-PGT,
DESCRIPTION/OPERATIONS

The Batch Terminal Simulator II allows IMS/VS batch and online application programs to be tested in an IMS/VS batch environment without the use of teleprocessing hardware. BTS II provides information about each transaction and message as it progresses through the IMS/VS system. The facilities inherent in the BTS II design philosophy provide the user with a comprehensive means of checking and debugging:

- o Application program logic
- o Interfaces between application programs and IMS/VS
- o Data base activities
- o Teleprocessing activity
- o 3270 format control blocks

In addition, BTS II provides a number of debugging aids and application program performance statistics.

This publication provides a general description of BTS II and describes in detail the programs' functional capabilities and how to use them. The publication also includes explanations of BTS II messages and codes.

APL FUNCTION EDITOR FOR APLSV (IUP 5796-PGX), APL FUNCTION
EDITOR FOR VSAPL (IUP 5796-PGY), DESCRIPTION/OPERATION

The purpose of this manual is to provide the user with sufficient information to install and successfully use the APL Function Editor Installed User Programs.

The APL Editor Installed User Programs are comprehensive packages for the development and modification of APL functions. They bring to the APL user a powerful interactive tool which can be used to edit in context, search, copy or list any function in his workspace. The resulting ease of modification provides greater productivity through the automation of time-consuming activities like variable name changing and searching through functions for particular character strings.

The Editor has been patterned after the CMS Editor of VM/370. Those functions of the CMS Editor which appeared useful for the editing of APL functions were implemented. Several more, uniquely useful in an APL environment, were added to give the Editor more function.

This program requires the installation of APL Shared Variables Release 2.1, Program Number 5799-AJP PRPQ WE1191, or APL Shared Variables Release 3, Program Number 5799-AQC PRPQ MG6282.

DISPLAY MANAGEMENT SYSTEM/VS VERSION 1 (DMS/VS) GENERAL
INFORMATION: LIC PRG 5740-XC2 (OS/VS), 5746-XC2 (DOS/VS)

The Display Management System/VS version 1 (DMS/VS) is a set of programs designed to simplify the implementation of online data processing operations using the 3270 Information Display System. The display management, file management, and message handling capabilities offered by DMS/VS make it possible to implement many new or existing applications in an online environment with little or no user programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection; data base and file operations such as data entry, inquiry, record update, and search; and message routing between display stations. Application specification is simplified through the use of DMS/VS forms on which the user describes data files, designs 3275 or 3277 Display Station images (panels), and describes the utility operations required by the application.

The DMS/VS operates under control of the IBM Customer Information and Control System/VS (CICS/VS).

This manual provides an overview of the DMS/VS functions. Statements of customer responsibilities, programming system requirements, and system configuration are included.

Manual, 76 pages, 11/76

/////5740-XC2, 5746-XC2

SB20-1865

DMS/VS VERSION 1, LIC PRG 5740-XC2 (OS/VS), 5746-XC2
(DOS/VS), PROGRAM REFERENCE

Display Management System/Virtual Storage (DMS/VS) is an application management offering which simplifies implementing online information systems using the 3270 Information Display System. The DMS/VS DL/I data base and file management, display management, and message handling capabilities make it possible to implement many new or existing applications in the online environment with reduced programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection, data base and file operations (data entry, inquiry, record update, and search), and message routing between display stations. Application specification is simplified through the use of DMS/VS forms on which the user describes data files, 3275 or 3277 Display Station images (panels), and the batch utility operations required by the application. The Customer Information Control System version 1.2 (CICS/VS) is a prerequisite to DMS/VS. Application security through use of CICS/VS and DMS/VS sign-on procedures can be used to control operator access to

predetermined applications.

The purpose of this manual is to provide sufficient information to enable the user to understand the functions of the system, the programs constituting the system, and the effort required for successful installation. The manual contains a system-oriented description of DMS/VS, provides guidance in installing the system, and describes the input and results.

Statements of customer responsibilities, programming system requirements, and system configuration are included. Manual, 328 pgs, 11/76

SH20-1872

VS APL FOR TSO, IUP 5796-ALB, TERMINAL USER'S GUIDE
 This manual describes the use of VS APL when it is under control of TSO using Installed User Program 5796-ALB (VS APL for TSO). It contains detailed information on the terminals that can be used and the procedures that must be followed in using VS APL under TSO. This book also describes the commands presented by TSO and VS APL relevant to the needs of the VS APL user, and the auxiliary processors and workspaces distributed with the product. It is assumed that the user is familiar with the APL language, but has limited experience with TSO.

This manual is based upon the "VS APL for CMS: Terminal User's Guide" and has been modified to include instructions for executing VS APL in the TSO environment.

The information contained in this manual is essential to the proper execution of VS APL in the TSO environment. Manual, 168 pages, 8/76

JES3 MONITORING FACILITY (JMF), IUP 5796-PBR, DESCRIPTION/OPERATIONS
 JES3 Monitoring Facility (JMF) is a software monitor that provides the ability to measure and evaluate the performance of an existing IBM system operating under JES3.

This manual provides all the material necessary to install and operate the JMF Installed User Program (IUP). It is intended for the systems programmer(s) responsible for maintaining and tuning the JES3/MVS operating system.

As in-depth knowledge of JES3 internals is required for proper and effective use of this program. This document does not provide that knowledge. Manual, 8 1/2 x 11 inches, 100 pages, 1/77
 ////5796-PBR

SH20-1882

SMF JOB DATA COMPRESSION AID (JDCA) - IUP 5796-PHN, DESCRIPTION/OPERATION
 This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The Job Data Compression Aid (JDCA) is an IBM program that analyzes data recorded by OS/VS system management facilities (SMF). It is designed to edit and arrange SMF data for the convenient production of application programs and reports which deal with SMF-based data set and job information. SMF records relevant to this information area are aggregated at the job level; data fields are checked for validity and edited; values for data not directly provided by SMF are calculated; and a Base File is generated in time sequence.

To assist detailed report analysis, an interpreter is provided at the lowest level available in the data: the Base File record. Each release or update of the programs in JDCA has a unique version description. For example, a program such as JDCA10 will be released as JDCA10A and subsequent versions as JDCA10B, JDCA10C, and so on.

The program is a prerequisite for using IBM's Installed User Program 5796-PBP, the Storage Device Migration Aid (SDMA), to which the Base file generated by JDCA serves as

input. SDMA produces a variety of detail and summary reports at the data set and job levels which are designed to assist the personnel of a data-processing installation operating under OS/VS in planning, implementing, and tracking the migration of data sets to new I/O devices. Manual, 8 1/2 x 11 inches, 116 pgs, 3/77
 ////5796-PBN

SH20-1883

STORAGE DEVICE MIGRATION AID (SDMA) - IUP 5796-PBP, DESCRIPTION/OPERATION

This publication is a guide for installing and using the Storage Device Migration Aid (SDMA) program. SDMA contains a set of procedures that process and analyze system management facilities (SMF) data collected during the operation of IBM OS or VS systems. SDMA is intended for the installation management and for those system programmers who plan, implement, and track a data migration to a new storage device or storage subsystem. The SMF Job Data Compression Aid (JDCA), IBM Installed User Program 5796-PHN, is a prerequisite to running SDMA; the Base file generated by JDCA serves as input to the SDMA procedures. Manual, 8 1/2 x 11 inches, 240 pgs, 4/77

SH20-1889

DOS/VS SYSTEM PROGRAMMING AID, IUP 5796-ALX, DESCRIPTION/OPERATION

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The DOS/VS System Programming Aid, consisting of several online CICS/VS programs operating in a DCS/VS environment, was developed by the city of Garland, Texas, in order to increase the productivity of the city's programming and operations staff. The aid addresses a major limitation of online usability of CICS/VS to the system and application programmers. Despite the power of CICS/VS to user groups, programming personnel still submit coding sheets to keypunch, verify card decks, and submit jobs for batch execution. This aid provides inquiry for displays of file information such as VTOC, directory contents, DASD space availability and standard label contents. An additional display provides CPU status information such as paging rate and page pool size and partition data such as real and virtual storage allocation, job identification and I/O device assignment. Use of this aid can reduce the need to run many batch utilities.

Manual, 8 1/2 x 11 inches, 80 pages, 1/78

SH20-1921

GIS LIBRARY MAINTENANCE, IUP 5796-ANG, DESCRIPTION/OPERATION
 This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The GIS2 and GIS/VS Library Maintenance Program

(Installed User Program 5796-ANG) aids an installation in the management of its GIS library data sets.

Many GIS users have found that maintenance of their GIS.LIB data set (i.e., GIS 2.LIB or GIS VS.LIB) presents certain difficulties. The directory of this partitioned data set often gets filled or an excessive number of members use the space allocated to the members thus causing system termination. Many of the members and directory entries are unnecessary. Some are on the data set because later GIS.LIB modules of multistep jobs remain on the library when an earlier step fails to complete. Others were once intentionally SAVED but were not deleted when their counterpart GIS.ILS (i.e., GIS 2.ILS or GIS VS.ILS) members were deleted.

The job of cleaning up this PDS is further compounded by the problem of identifying for whom or for what reason the members have been kept. The purpose of this IUP is to automate the determination of GIS library and directory entries which are no longer valid.
Manual, 24 pages, 3/77

SB20-1923

FORTRAN INTERACTIVE SUBROUTINE LIBRARY - IUP 5796-PBT, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The FORTRAN Interactive Subroutine Library (FISLIB) Installed User Program consists of a set of FORTRAN callable subroutines which can be used by a FORTRAN programmer to give more flexibility to interactive FORTRAN programs. FISLIB is used where the interaction of human decision making ability with the computer program is essential to permit users to choose between alternatives at key points during program execution. The interactive program produced can be run under: VM/CMS; any of the TSO options - OS/MVT, OS/SVS or OS/MVS; VSPC FORTRAN; or DOS FORTRAN P utilizing the operating console.

The subroutines written in FORTRAN are designed to be system independent. They provide a simplified method of allowing the terminal program user to: specify program functions to be executed; specify parameters to be varied, reset or incremented; use a comprehensive desk calculator mode for intermediate computations; create procedures, a series of commands, executable by procedure name.
Manual, 72 pgs, 2/77

SB20-1924

APL DECISION TABLE PROCESSOR (DTABL) - IUP 5796-PJB, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The APL Decision Table Processor and Code Generator Installed User Program 5796-PJB is a set of interactive APL programs designed to help the user construct and maintain a library of limited entry decision tables and to compile the decision tables into procedural code in a high level language (COBOL, PL/I, APL, ALGOL). The usual concerns of program debugging may thereby be eliminated, allowing the end-user to concentrate on the decision-making logic of the application. Decision tables can be edited and validated for completeness and consistency. ALGOL, APL, COBOL, and PL/I code generators are provided. APL programs can be generated for immediate execution and testing. Programs in the other languages can be filed on a data set and be used as input to other language processors. A full coverage test case sequence for validating the object code is optionally produced.

A questionnaire processor is available as part of this system to guide an application user through a series of "yes/no" to produce a decision table map. The questionnaire is also useful for interactive checkout of table logic.
Manual, 48 pages, 3/77
/////5796-PJB

SB20-1927

DISK WORKFILE MANAGER FOR DOS/VS - IUP 5796-ANK, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The Disk Work File Manager helps provide partition independence to DOS/VS users by dynamically allocating disk work files from pools of disk space which are internally maintained for each partition. A user may specify one or more pools for each partition, a pool of space assigned to one partition cannot be shared by other partitions. Typically requiring 2K bytes in the shared virtual area, this IUP handles program requests for disk work files by

intercepting and modifying incoming job control statements. In this manner, the same job (and same JCL) running in two different partitions will automatically be assigned different temporary disk space areas.

SB20-1952

IMS SPACE MANAGEMENT UTILITIES II, LIC IUP 5796-PJJ, DESCRIPTION/OPERATION

The IMS Space Management Utilities II can improve system performance and programmer productivity. They are designed to assist in managing OS, OS/VS, IMS/360 and IMS/VS data space, to detect and report IMS R.D. pointer discrepancies, to provide statistics and information for R.D. tuning and to assist with segment restructuring and reloading during data base reorganization.

This manual describes the function of the four IMS Space Management Utilities, how to specify input to them, and how to interpret the utility output. In addition, it describes the operating instructions, lists error messages, and provides installation guidelines. This manual is both a system description and an installation and operations reference document.

DBPROTOTYPE II, IUP 5796-PJK, DESCRIPTION/OPERATIONS

The DBPROTOTYPE II Installed User Program consists of a set of programs that provide data base design evaluation support of Information Management System/Virtual Storage (IMS/VS). DBPROTOTYPE II enables the IMS/VS data base evaluator to obtain performance information about a data base and its application programs before they are implemented. DBPROTOTYPE II includes a program which estimates performance characteristics of the data base from its description. Other programs enable the evaluator to create model data bases and skeletal application programs to run against these data bases. By analyzing different design parameters, the user can select the system design best suited to the needs of the installation.

This manual describes the functions and use of the DBPROTOTYPE II programs; how to specify the characteristics of the system being modeled, and; how to interpret the resulting performance data. It includes sections on modeling methodology, usability, sample problems, installation and operating procedures, program

descriptions, error messages, and an index

DISPLAY EDITING SYSTEM FOR CMS, IUP 5796-PJP, USER'S GUIDE
This guide contains usage and reference information for Display Editing System for CMS, a full-screen editing system that operates under the Conversational Monitor System. (CMS component of IBM Virtual Machine Facility/370 (VM/370)).

The Display Editing System Installed User Program is a full-screen editing system for the Virtual Machine Facility/370 Conversational Monitor System (VM/370 CMS) designed to utilize the features of both local and remote terminals. In addition to a comprehensive array of cursor and command oriented data manipulation functions, the IUP has direct usability in a wide range of user applications. Display terminals supported are the IBM 3277 model 2 and the IBM 3278 model 2, including both the TEXT PROCESSING and APL keyboards.

The Display Editing System accommodates CMS files of all types, including program source material, documentation, and data. It permits users to change portions of the display without program intervention. By placing the cursor on the position(s) requiring change, the user may re-enter the correct character(s). The Display Editing System checks for modifications made to the display image and makes permanent copies of the changes to the file.

TSO-3270 DISPLAY SUPPORT AND STRUCTURED PROGRAMMING FACILITY (SPF) VERSION 2 GENERAL INFORMATION, PROG PROD 5740-XT8

SPF is a programming aid that operates in the Time Sharing Option (TSO) environment and is designed to increase productivity in developing and modifying programs. SPF supports VS2-TSO users who have a 24-line IBM 3270 display terminal equipped with a full keyboard, including 12 program function keys. SPF increases programmer productivity through:

- display presentations which prompt the user and simplify command and data entry.
- time-saving use of program function keys for commonly performed operations.
- features which facilitate structured programming in a time sharing environment.

This manual provides an overview and functional description of SPF.

VM/370 NETWORKING PRPQ P09007, PROG 5799-ATA, REFERENCE AND OPERATIONS

This publication provides the VM/370 system programmer and operator with the information necessary to install the VM/370 Networking PRPQ (VNET) and operate the VNET virtual machine. Use of the VNET facility by the VM/370 terminal user is described.

VNET is a virtual machine subsystem for VM/370. It manages the transmission and reception of data between a VM/370 system and other S/370s operating in a Networking Job Interface (NJI) communication network.

Topics covered include:

- o Network Job Interface (NJI) concept
- o Descriptions of VNET components and the VNET virtual machine
- o VNET installations and operation
- o VNET commands and messages
- o VM/370 terminal user guide
- o VNET supported remote terminals and stations

Prerequisite publications:

Network Job Interface, General Information Manual, order no. (GH20-1941)

Virtual Machine Facility/370: Introduction, order no. (GC20-1800)

ASP NETWORKING (PRPQ P09908) USER'S GUIDE, FROG 5799-ATE

This publication is intended for application programmers using ASP systems in which the ASP Networking PRPQ 5799-ATE has been installed. It describes the additional functional capabilities that this PRPQ makes available to the application programmer and the means by which the programmer can make use of them. It is assumed that the user is familiar with the ASP Application Programmer's Manual. Related reading:

- IBM System/360 and System/370 ASP Version 3 Asymmetric Multiprocessing System, Application Programmer's Manual (GH20-1291)
- Network Job Interface (NJI), General Information Manual (GH20-1941)

SH20-1979

ASP NETWORKING (PROGRAMMING RPQ P09008) REFERENCE AND OPERATIONS - FROG 5799-ATE

This publication is intended for system programmers responsible for installation and maintenance of ASP and for ASP system operators. It describes how to install the ASP Networking PRPQ 5799-ATB in an existing ASP system and how to operate the network interface.

The system programmer should be familiar with the generation process for ASP. The system operator should be familiar with the operator procedures and commands for ASP.

This publication is comprised of five major parts and two appendixes.

- GENERAL DESCRIPTION contains an overview of the ASP Network Job Interface, a discussion of the hardware assumed, and description of the format of the distribution tape.
- INSTALLATION PROCEDURE contains a step-by-step procedure to be used to install ASP NJI in an existing production system.
- INITIALIZATION describes the new and changed initialization cards to be placed in the ASP startup deck.
- OPERATOR PROCEDURES describes the procedures and commands for starting, stopping, and controlling network operations.
- NJI MESSAGES describes the messages issued by the system.
- The two appendixes describe the line logging facility and operation in RJP mode.

HASP NETWORKING USER'S GUIDE, PRPQ P09009 PROG 5799-ATC

This publication is designed to be both a guide and a reference for the user of a HASP II Version 4.0 system with the HASP Networking PRPQ installed (HASP/NJI). It is assumed that the reader is familiar with the standard HASP II Version 4.0 and the use of HASP control statements. For a detailed description of standard HASP control statements, see the OS/VS2 HASP II Version 4 Operator's Guide (GC27-6993).

In this publication, the first section, What Is NJI? gives an overview of the new capabilities of NJI. The next three sections, Extended Control Statement Facilities, Job and SYSOUT Transmission, and Bulk Data Transfer, describe the new capabilities in detail. They include descriptions of the control statements to be used to take advantage of these capabilities, and illustrations of how to use them. Appendix A contains a summary of the HASP/NJI control statements and their parameters. Appendix B contains sample job streams that can be used to accomplish a Bulk Data Transfer (See Terms Used in This Publication). Appendix C illustrates and explains the error messages that can be produced by HASP/NJI. Appendix D illustrates and explains system NOTIFY messages that can be produced by HASP/NJI.

HASP NETWORKING SYSTEM PROGRAMMER'S GUIDE, PRPQ P09009 PROG 5799-ATC

Functional modifications have been made to HASP II, Version 4.0 to provide for the communication of jobs for execution, print and punch formatted data streams to Network Job Entry for JES2 (NJE) systems, and HASP, ASP and other VM/370 Systems when running with their respective Network Job Interface (NJI) support. Modifications have been provided to perform the actual networking functions between NJE and NJI systems. These modifications also provide compatibility with existing installations, and extend the networking functions to existing Remote Job Entry work stations.

These modifications include changes to the standard HASP

modules and the addition of two new modules, one to handle job transmission and the other to handle the receipt of SYSOUT data streams.

This manual provides system programmers step by step instructions on how to install the BASP Networking PRPQ (BASP/NJI).

/////5799-ATC

SB20-1982

BASP NETWORKING OPERATIONS, PRPQ P09009 PROG 5799-ATC
This publication is a guide and reference for the operator of a BASP II Version 4 system with the BASP Network PRPQ (BASP/Network Job Interface) installed. It assumes that the operator is familiar with the Standard BASP II Version 4 Operator's Guide (GC27-6993). It presents specific operating techniques and operator commands related to computer networking only.

The BASP/NJI system is managed essentially by the standard BASP commands. Therefore, to avoid duplication, this publication coverage is limited to:

- New commands
- New parameters in existing commands
- Existing commands which operate differently or for which system responses have changed

In addition, appendixes to this publication list:

- BASP/NJI messages
- Print separator page
- BASP control card formats

Please refer to BASP II Version 4 Operator's Guide (GC27-6993) for items not covered in this publication.

SB20-2000

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED FUNCTION VERSION 4, PROG PROD 5740-XXD, MODEL MESSAGE CONTROL PROGRAM (MODEL MCP)

This manual contains an assembler listing and a narrative discussion of the Model Message Control Program (Model MCP) that is supplied with Telecommunications Control System - Advanced Function (TCS-AF).

The model MCP is intended to facilitate adaptation of TCS-AF to the user's specific requirements and resources by serving as an example for study and as a model containing tested and readily adaptable code. The model MCP may actually be run if the network definition corresponds (or is changed to correspond) to the user's resources.

Although efforts are made to keep all TCS-AF manuals current, the user should refer to the actual assembler listing of the model MCP, as received with TCS-AF, when using it to plan, or to aid in making modifications to his MCP.

Manual, 8 1/2 x 11 inches, 132 pages, 8/77

GB20-2007

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), LIC PROG 5740-XY3, CONCEPTS AND FACILITIES

This manual describes the IBM Telecommunications Control System - Advanced Communications Function (TCS-ACF) program product, which provides control for single CPU network systems incorporating terminals and/or application programs. Based on and enhancing IBM's Telecommunications Access Method (TCAM), TCS-ACF controls traffic between terminals and application programs, message switching between terminals, and message transfer between applications. Lines and terminals may be shared among applications. Both user application programs and complex subsystem environments such as CICS/VS may be supported. Queuing and priority facilities for handling mixed message types may optimize line use and speed delivery of inquiry/responses messages.

A TCS-ACF message control program (MCP), customized by the user with TCS-ACF and TCAM macro instructions and assembler language, operates in the network computer, usually in a different storage-protected region or partition from application programs.

Support facilities include:

- operator control for complex networks
- online statistics gathering and security/authorization capabilities
- alternate path and indirect routing capabilities
- message integrity safeguards
- start/stop, binary synchronous communications, and SNA synchronous data link control device support equivalent to TCAM's
- aids for minimizing application program device-characteristic dependencies, including extended support for the IBM 3270 Information Display System

Note: This manual describes the Basic TCS-ACF program and does not apply to the multicomputer Networking Feature.

DISPLAY MANAGEMENT SYSTEM/VIRTUAL STORAGE (DMS/VS)
LIC PROG 5740-XC2, APPLICATION PROGRAM DESIGN GUIDE
 Display Management System/VS (DMS/VS) is a set of programs designed to simplify the implementation of online data processing operations using the 3270 Information Display System. The display management, file management, and message handling capabilities offered by DMS/VS make it possible to implement many new or existing applications in an online environment with little or no user programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection; data base and file operations such as data entry, inquiry, record update, and search; and message routing between display stations. These preprogrammed facilities will tend to simplify the design process and can lead to adoption of a standardized application design.

This manual presents a number of topics and coding examples which will help in the design and implementation of many DMS/VS applications. The manual is intended to be used as a reference document to complement information contained in the DMS/VS Program Reference Manual (SH20-1865), the DMS/VS Operations Guide (SH20-1864), and the DMS/VS Logic Manual (LY20-2266).

MSS TRACE/SMF CORRELATION AID PD/OM, IUP 5796-PJX

This manual is a guide for installing and using the MSS Trace/SMF Correlation Aid Installed User Program. The IUP contains a set of procedures that process and analyze MSS trace data collected during the operation of the IBM 3850 Mass Storage System. In addition, it will accept data processed by the SMF Job Data Compression Aid (JDCA), IUP 5796-PEN, that can be correlated with the MSS trace data.

The purpose of this IUP is to edit and arrange the trace data and optionally the JDCA SMF job related data in such a manner that the operational aspects of the IBM 3850 MSS are made visible to the user in various sequences that are useful in making the IBM 3850 process user data in a more efficient manner.

The MSS Trace/SMF Correlation Aid reports the various aspects of the operation of the IBM 3850 MSS on user control card requests.

This publication consists of an introductory overview and three main parts:

1. Part 1 (Chapter 2) describes the individual reports in detail.

2. Part 2 (chapters 3-4) explains how to install and run the IUP's procedures.

3. Part 3 (chapter 5, Appendix) explain how to use the reported information to accomplish MSS tuning.

SH20-2057

3800 HIGH VOLUME PRINTING, IUP 5796-ARA, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The 3800 High Volume Printing Program, Installed User Program 5796-ARA, developed by Donnelley Marketing of Nevada, Iowa, can print high volume output online to the IEM 3800 Printing Subsystem in an OS/VS environment. The product was designed to maximize throughput rates of the IEM 3800 while minimizing utilization of system resources.

The use of QSAM for processing of the input print image records allows the program to be device independent of the storage media used to hold the print image records.

A wide variety of input record formats are supported; blocked or unblocked; Fixed or variable; and ASA, Machine control characters or no control characters. In addition, reformatting of 3-line mailing labels (4-up or 5-up) is done by the program allowing these labels to be printed on either a 3800 or an impact printer.

Keyword parameters specified by the operator facilitate control over each execution of the program. 3800 features of PLASE, COPYMOD character sets (CEAR), table recognition characters (TRC), and BURST can be used along with the IUP.

Input device independence and the variety of input and output formats of this IUP along with the IBM 3800 Printing Subsystem increases the printing flexibility of a data processing installation.

IMS/VS RESPONSE TIME MONITOR IUP 5796-ARB
DESCRIPTION/OPERATION

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The IMS/VS Response Time Monitor developed by Philadelphia National Bank is a real-time, table driven system of IMS/VS programs which interact to measure the transaction scheduling capability of an IMS/VS D.C. System. The user sets criterion for acceptable response time for each message and the Response Time Monitor measures these response times at regular intervals while the IMS/VS control region is active. Message classes, whose response times exceed the user-selected criteria, are logged and time stamped and the IMS Master Terminal Operator is notified as delays occur. Action can then be taken to alleviate the response time problem or investigate it further. The IMS/VS Response Time Monitor assists the IMS operations personnel in avoiding serious response problems.

SB20-2060

GENERAL CROSS ASSEMBLER GENERATOR, PD/OM, IUP 5796-PKD
This Program Description/Operations Manual provides the user
with sufficient information to understand, install and
successfully use the program.

The Cross Assembler Generator is a system of programs designed to dramatically reduce the time and cost to create basic program assemblers for a wide variety of computer architectures. The entire system is implemented in APL. A cross-assembler is an assembler which runs on one computer to assemble code for another computer. The first computer is called the "host computer", and the second is called the "target computer." The Cross Assembler Generator takes advantage of the fact that only 25-30% of an assembler is dependent on the design of the target computer. If the host computer is held constant, then only target computer dependencies need be changed to vary from one assembler to another. Furthermore, the portion of the assembler that is changed has a high degree of regularity and usually can be generated from only one or two pages of descriptive material.

Systems integrators will find this particularly attractive since they can debug machine language programs for hardware before they actually take delivery. This will reduce dependence on the supplier's delivery schedule.

Colleges and universities can use the Cross Assembler Generator in both practical laboratory work and in classrooms as a teaching tool.

Manufacturers can use the Cross Assembler Generator for preliminary programming and thus reduce cost and time in programming support. In addition, these manufacturers can also more cheaply support experimental process or design.

Time sharing vendors and in-house time sharing systems will find this of use to existing users as well as a means of attracting smaller hardware integration to their time sharing services.

Highlights

- Provides end users capability to rapidly define computer assembler
- Can run in any VSAPL, APLSV environment
- Users need not know APL
- Prompting module to lead user through assembler definition
- Core patching capability

IBM 3800 - 90 DEGREE PRINT PROGRAM, IUP 5796-ARE,
DESCRIPTION/OPERATIONS

The IBM 3800 - 90 Degree Print Program, Installed User Program 5796-ARE, developed by the New York State Legislature in Albany, provides printing at 90 degrees to normal printer output. Full pages are rotated 90 degrees one at a time and printed using the 90 degree characters provided. Applications requiring printing at greater density than 60 or 80 lines per page can be run on the IBM 3800 printing subsystem utilizing the paper width rather than the paper depth for printing. Many 3800 installations can benefit from the flexibility of being able to use either 8 1/2 x 11 inch or 11 x 8 1/2 inch form sizes without changing the paper in the machine. Also, for 14 7/8 x 11 inch paper, using the width of the paper as the depth allows

36 percent more lines to be printed at 12 lines per inch and has the effect of reducing the resultant 3800 Monthly Use Charge by the same percentage.

VSAMZAP OS/VS IUP 5796-PJQ, DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

When errors are introduced into a file, whether because of programming problems, I/O errors, power failures or for other reasons, correcting them can be difficult and time consuming. This is especially true with VSAM because often the actual location of the data is not known precisely. An effective solution to this problem is to access the VSAM Control Blocks and extract the information necessary to find and examine and, if necessary, modify the data. VSAMZAP does just this; it allows an authorized person to access, verify and replace any data in any type of VSAM Data Set. The program can be run using either card input and printer output or the systems console. It can also be run interactively under Time Sharing Option - TSO (OS) or Entry Time Sharing System - ETSS (DOS). The integrity of files is protected using the password facility of VSAM if it is implemented on the system. Care should be exercised, however, in changes; especially the key field in a RSDS Data Set.

Manual, 8 1/2 x 11 inches, 36 pages, 1/78

OS/VS1 PRIORITY QUEUE AGING PROCESSOR, IUP 5796-ARG,
DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The VS1 Priority Queue Aging Processor is designed to ensure a consistent level of service for all jobs processed in a system. Under the VS1 Priority Queue Aging Processor all jobs are periodically aged or advanced in priority within the input queue. Thus, low priority jobs will eventually reach the highest dispatching priority and be executed in a timely fashion.

Highlights:

- Variable, time initiated processing of the job queue
- Ages both centrally submitted (local) and RJI (remote) jobs
- Operator query and modification of the scan time period
- Executes in a normal batch partition
- Employs standard interfaces to the OS/VS1 operating system

SB20-2077

QUERY BY EXAMPLE, IUP 5796-PKT, DESCRIPTION/OPERATIONS

This manual is intended for those operations personnel responsible for the installation, application, and maintenance of Query-by-Example in the end-user environment. It is also intended for the end user who is a data processing professional.

The Query-by-Example Installed User Program is a VM/370 CMS-based facility. It is intended for use with an IBM 3277 (Model 2) Display Station in an interactive mode. It does, however, have a linear syntax for use in batch processing and with non-3277 input terminals. Query-by-Example provides the end user community with a simple and unified approach to manipulating data stored on a Query-by-Example data base. The major feature of Query-by-Example is its high-level language which is simple to learn and use while providing a powerful capability for defining, retrieving, updating, inserting, and deleting Query-by-Example stored data. The Query-by-Example language provides for:

- Definition of tables.
- Definition of access control (user authority).
- Retrieval of data from tables via query operations.
- Flexible update, insert, and delete operations.
- Query storage and recall.
- Disk and printer output control.

Additional system features include:

- A bulk-loading facility for entering data into QBE.
- An IMS extract facility which provides a selection capability for incorporating, via the bulk-loading facility, subsets of operational IMS data bases into Query-by-Example.
- A set of utilities for backup, restore, analysis, and compaction of data.
- An application programming interface for PL/I and APL programs executing in the VM/CMS environment.

Manual, 8 1/2 x 11 inches, 144 pages, 9/78
/////5796-PKT

SB20-2078

QUERY BY EXAMPLE, IUP 5796-PKT, TERMINAL USER'S GUIDE

This manual is intended for a wide range of users, from people with little or no computer experience to those who know computers well and use them professionally. Therefore, the manual is organized into three general areas: introduction, language examples, and reference material. The first two sections contain introductory information; they tell you about computers and teach you how to use Query-by-Example. The next four sections show you how to use all of the facilities of the Query-by-Example language to retrieve, update insert, and delete data from tables, as well as how to create tables of your own, authorize others to use your tables, store queries for later use, and manipulate your output. The last section contains reference material to be used after you have learned the language. Appendices contain additional reference material. Query-by-Example is a powerful and flexible language which can be used to manipulate tabular information; that is, information arranged by rows and columns. Query-by-Example lets you look at, update, create, add to, and delete from this data in a convenient and simple manner. For example, you might want to obtain the names of all employees who work second shift in the Chicago area. To obtain a list of these names, you fill in a blank table by typing in the required information, thus asking Query-by-Example to get the list for you. The list of names appears in front of you on a display screen. You can then either act on this information by updating the data or make a new request.

SB20-2079

VM/370 SPOOLING SUPPORT FOR 328X PRINTERS, IUP 5796-PKZ,
DESCRIPTION/OPERATIONS

The purpose of this manual is to provide the VM/370 system programmer, operator and user with sufficient information to understand, install and successfully use the VM/370 Spooling Support for Local 328X Printers.

This program product enables the VM/370 user to direct his spool files to the appropriate IBM 328X Printer through the use of the VM/370 CP Spool and TAG commands as he would to any other location appointed by RSCS (Remote Spooling Communications Subsystem component of VM/370) or VNET (VM/370 Networking PPPQ 5799-ATA). The program accepts, deblocks, and prints the user spool files by interfacing with RSCS or VNET virtual machine and the VM/370 system.

SB20-2100

IBM S/370 FORTRAN B EXTENDED OPTIMIZATION ENHANCEMENT,
IUP 5796-PKR, DESCRIPTION/OPERATIONS

This manual contains reference information for the IBM System/370 Fortran B Extended Optimization Enhancement.

The Optimization Enhancement provides a higher level of optimization for the compilation of Fortran language source programs into executable object programs. It also provides faster versions of the most commonly used mathematical subroutines in the Fortran library and of the interpretation and conversion subroutines necessary for formatted input and output. The Optimization Enhancement requires no changes to Fortran source programs.

The Optimization Enhancement generally results in object programs which run faster than those executed under the standard Fortran B Extended compiler and library. The amount of improvement varies from program to program and from one System/370 model to another. In general, the best results are observed for larger programs on larger systems.

The Optimization Enhancement runs under VM/CMS, OS/VS1, and OS/VS2 using the same conventions as the standard Fortran B Extended compiler and library.

ACP/VTAM AND NOSF DEFINITION AID,
IUP 5796-PKY, DESCRIPTION/OPERATIONS

This manual is a guide for installing and using the ACP/VTAM and NOSF Definition Aid Installed User Program. It is intended for the systems programmer(s) responsible for defining and maintaining an ACP/VTAM multiple domain network.

The IUP can be used to generate the cross domain resource (CDRSC) definitions for ACP/VTAM and the resource routing default (RFD) definitions for NOSF.

Written in System/370 Assembler language and designed to operate with OS/VS1 Release 6 and OS/VS2 (SVS Release 1.7 and MVS Release 3.7), it uses only sequential access methods. The formats of the definitions generated are compatible with ACP/VTAM and the Network Operation Support Program (NOSP).

/////5796-PKY

SB20-2105

IMS/VS EMERGENCY LOG TERMINATOR, IUP 5796-ATN,
DESCRIPTION/OPERATIONS

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

The IMS/VS Emergency Log Terminator program is to be used when an IMS/VS System Log Tape cannot be otherwise closed through normal programs and procedures. This typically occurs following a catastrophic failure such as a power failure.

Expeditious closing of the IMS/VS System Log Tape is required in order to attempt IMS/VS Emergency Restart as soon as possible after a system failure. This is frequently successfully done by the existing IMS/VS System Log Termination Utility Program (DFSIFLOT). When DFSIFLOT is not successful, such as when the system dump is not available, due to a power failure, the log must be closed in some other way before an Emergency Restart can be attempted. In both on-line and batch IMS/VS environments, the properly closed log is also needed to effect data base recovery. To insure the integrity this requires, use of the IMS Write Ahead Log features is a prerequisite for this IUP.

Manual, 8 1/2 x 11 inches, 40 pages, 9/78

/////5796-ATN

SB20-2106

IMS/VVS MESSAGE REQUEUEER, IUP 5796-ATP DESCRIPTION/OPERATIONS
 IMS/VVS Message Requeueing permits an installation to reinsert input and output messages back into an IMS/VVS system from IMS/VVS log tapes after IMS/VVS has normally or abnormally terminated. The messages are reinserted with their original timestamp and are inserted in original time sequence. An audit trail is produced recording messages that could not be reinserted because of changes in the IMS/VVS environment, such as the elimination of transaction codes or logical terminal names. IMS/VVS Message requeueing is designed to be used for the following purposes:

1. To carry unprocessed messages across an IMS/VVS System.
2. To recover messages if IMS/VVS Emergency Restart of Normal Restart fails.
3. To extract specific transactions (up to 100 codes) from log tapes to be processed correctly by an application program previously in error.
4. To stress test or regression test an IMS/VVS System.

TELECOMMUNICATIONS CONTROL SYSTEM ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), NETWORKING, CONCEPTS AND FACILITIES MANUAL

This manual introduces the Networking feature of TCS-ACF, which may be ordered with TCS-ACF Base program. The Networking feature enriches the functions provided by ACP/TCAM with the Multisystem Networking Facility. The Networking feature of TCS-ASF:

- Extends device support provided by ACP/TCAM MSGNP
- Provides enhanced routing capability and traffic management facilities.
- Provides an integrated inter-host message switching capability.
- Simplifies network definition in a multi-host network.
- Provides a structure for incorporation of foreign (non-SNA) hosts, foreign links, or multiple SNA networks into a single network.
- Provides a Model Message Control Program that can be run without change, or tailored to the user's requirements.

Manual, 36 pages, 1/79

SB20-2161

RACP/CODES UPDATE SYSTEM, IUP 5796-PLK DESCRIPTION/OPERATIONS

The RACP/Codes Update System Installed User Program is a

fully automated password generation and auditing system. It provides the installation with the ability to update RACF user type passwords and/or audit their users within any desirable time frame. With the use of the system, a RACF installation can centralize the control of the password assignment and change functions which are normally a RACF user responsibility.

The RACF/Codes Update System is designed to be used with "snap-out" form-type mailers, which are readily available from various forms vendors. The program prints the new password, name and address, and any user message on the cover sheet of the special form. This cover sheet is removed and held as the master listing and is used for the auditing process. The new password and message are printed only on the cover sheet and on the inside part of the form. This is accomplished by the arrangement of carbons within the mailer envelope. The new password is visible only when it is separated from the envelope portion of the multipart form.

Manual, 20 pages, 1/79
 ////5796-PLK

SE20-2164

PL/I LANGUAGE CONSTRUCTION PRE-PROCESSOR, 5796-PLL
DESCRIPTION/OPERATIONS

The PL/I Language Construction Preprocessor is a general purpose preprocessor for PL/I, similar in many ways to the built-in preprocessor, but far more efficient when a large number of new language statements must be defined. Using it, one may create a "language within a language" - i.e., a set of commands for simulation, data base access, graphics, etc., which will be translated to PL/I code. The program will take as input a file consisting of new language commands and, optionally, interspersed PL/I statements, and produce a file of PL/I statements acceptable as input to the PL/I compiler. Command names can be identified by context, so that it is unnecessary to prohibit their use as PL/I variable or array names. The user must supply an external PL/I procedure for each new language statement, to generate the appropriate expansion. He is allowed full use of the PL/I language (as opposed to the limited use permitted by the built-in preprocessor). Efficiency is achieved by pre-compiling the language expansion routines, and by avoiding any extra processing for an unreferenced command. It is designed to operate with OS/VS1, OS/VS2 MVS and VM/370 CMS.

SE20-2169

HIGH-SPEED SEQUENTIAL RETRIEVAL OF IMS/VS DATA BASES, IUP
5787-LAA, DESCRIPTION/OPERATIONS

Many IMS/VS installations run batch DL/I jobs which sequentially process large physical DL/I data bases. If the installation is an online system, these batch runs may have to be made at night while the data bases are not being updated. In both cases there may be a need to increase the system throughput. High-Speed Sequential Retrieval (HSSR) was designed as a high performance option to improve throughput for sequential processing of IMS/VS physical data bases. The reduction in CPU-time depends on the Data Base environment, but could reach up to 80% of the CPU-time needed by DL/I.

With HSSR, an installation may:

- Reduce the time required for batch processing
- Find that new batch applications are now feasible
- Run online for a longer period of time

This Installed User Program was developed by, and is running at, the Swiss Bank Corporation, Basel, Switzerland.

SE20-2171

VSE PERFORMANCE TOOL, IUP 5796-PLQ, DESCRIPTION/OPERATIONS

The performance of an IBM System 4300 operating under DOS/VSE with VSE/Advanced Functions of an IBM System 370 operating under DOS/VS2 or DOS/VS depends on many complex and interrelated factors. Manual or theoretical methods cannot adequately evaluate machine/system performance. The VSE/PT Installed User Program is a software tool that provides the ability to measure and report many performance-related factors of such a system.

It uses dynamic event tracing and/or periodic statistical sampling to record system status on an output data file. Subsequently, a series of reports can be produced to aid in the evaluation of software and hardware performance during the entire monitoring period or any portion thereof.

Used on a regular basis, VSE/PT can help answer some key performance questions. It can measure the changing environment to aid in an understanding of the system's internal operations. The measurement detail can be used to identify where changes to the system may produce an improvement in overall performance. Subsequent analysis can verify that the changes produced the desired result. Finally, an analysis of the VSE/PT reports can assist in determining which resources are available for the future growth of the system.

SE20-2191

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF) - NETWORKING LIC PROG 5740-XY3
MODEL MESSAGE CONTROL PROGRAM (MODEL MCP)

This manual contains an assembler listing and a narrative discussion of the Model Message Control Program (Model MCP) that is supplied with Telecommunications Control System - Advanced Communications Function (TCS-ACF), Base Program with Networking Feature.

The model MCP is intended to facilitate adaptation of TCS-ACF to the user's specific requirements and resources by serving as an example for study and as a model containing tested and readily adaptable code. The model MCP may actually be run if the network definition corresponds (or is changed to correspond) to the user's resources.

Although efforts are made to keep all TCS-ACF manuals current, the user should refer to the actual assembler listing of the model MCP, as received with TCS-ACF, when using it to plan, or to aid in making modifications to his MCP.

GH20-2195

DEVELOPMENT MANAGEMENT SYSTEM/CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (DMS/CICS/VS), LIC PROG 5746-XC4
(DOS), 5740-XC5 (OS), GENERAL INFORMATION

Development Management System/CICS/VS (DMS/CICS/VS) is a set of programs designed to simplify the implementation of online data processing operations using the 3270 Information Display System. The display management, file management, and message handling capabilities offered by DMS/CICS/VS make it possible to implement many new or existing applications in an online environment with little or no user programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection; data base and file operations such as data entry, inquiry, record update, and search; and message routing between display stations. Application specification is simplified by the application generation facility. The user describes data files, display station images (panels), and application processing either interactively from a display station or through the use of DMS/CICS/VS forms.

Calculation/edit statements may be used to perform arithmetic operations, editing of data fields for validity and movement of data between fields. The DMS/CICS/VS processing flow may be altered through the use of these calculation/edit statements. The number of user exit routines previously needed to perform these functions should be significantly reduced.

DMS/CICS/VS operates under control of the IBM Customer Information Control System/VS (CICS/VS). This manual provides an overview of the DMS/CICS/VS functions. Statements of customer responsibilities, programming system requirements, and system configuration are included.

The DMS/CICS/VS online functions and offline maintenance facilities are distributed as part of the DMS/CICS/VS base program products (5740-XC5 and 5746-XC4). The batch and interactive application definition facilities and the batch application generation facility are distributed as the DMS/CICS/VS Application Generation feature.

VM/CMS 3270 DISPLAY SUPPORT STRUCTURED FACILITY
(SPF/CMS), LIC PROG 5748-XT3, GENERAL INFORMATION

This document contains a description of the Structured

Programming Facility for VM/CMS. SPF/CMS is functionally equivalent to the SPF/TSO program product, 5740-XT8, Version 2.2. The two products are fully compatible in display formats and operation, except for those features that are explicitly oriented to the VS2/TSO or VM/CMS environment (see Appendix B).

SH20-2198

TELECOMMUNICATIONS CONTROL SYSTEM ADVANCED COMMUNICATION FUNCTION (TCS-ACP) BASE PROGRAM, LIC PROG 5740-XY3
MODEL MESSAGE CONTROL PROGRAM (MODEL MCP)

This manual contains an assembler listing and a narrative discussion of the Model Message Control Program (Model MCP) that is supplied with Telecommunications Control System, Advanced Communications Functions (TCS-ACP), Base Program.

The model MCP is intended to facilitate adaptation of TCS-ACP to the user's specific requirements and resources by serving as an example for study and as a model containing tested and readily adaptable code. The model MCP may actually be run if the network definition corresponds (or is changed to correspond) to the user's resources.

Although efforts are made to keep all TCS-ACP manuals current, the user should refer to the actual assembler listing of the model MCP, as received with TCS-ACP, when using it to plan or to aid in making modifications in this MCP.

DOS/VSE RJE WORKSTATION RELEASE 1, LIC PROG 5746-RC9
GENERAL INFORMATION

This publication, a general description of the DOS/VSE Remote Job Entry (RJE) Workstation Program, is intended primarily as an aid in evaluating the program and may also serve as a guide in planning the implementation of a DOS/VSE workstation.

After listing the program's advantages, the manual presents an overview of the program, then discusses its structure and functions, the operation of the workstation, and finally the generation and installation of the program.

DOS/VSE REMOTE JOB ENTRY WORKSTATION PROGRAM, LIC PROG 5749-RC9, PROGRAM REFERENCE

This publication defines and describes the facilities provided by the DOS/VSE Remote Job Entry Workstation Program and contains the information necessary to plan for utilization and installation. It is intended for use by the system programmer responsible for installing and maintaining the system. Additional information on the operation and use of DOS/VSE Remote Job Entry Workstation Program is directed to computer data center personnel responsible for operation planning.

The manual describes the program, explains the internal structure in terms of functions provided, and discusses the operating procedures. It also describes the device support, storage and programming system requirements, and performance considerations.

DEVELOPMENT MANAGEMENT SYSTEM/CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (DMS/CICS/VS), LIC PROG 5746-XC4 (DOS/VS), 5740-XC5 (OS/VS), APPLICATION DESIGN GUIDE

Development Management System/CICS/VS (DMS/CICS/VS) is a set of programs designed to simplify the implementation of online data processing operations using the 3270 Information Display System. The display management, file management,

and message handling capabilities offered by DMS/CICS/VS make it possible to implement many new or existing applications in an online environment with little or no user programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection; data base and file operations such as data entry, inquiry, record update, and search; and message routing between display stations. These preprogrammed facilities will tend to simplify the design process and can lead to adoption of a standardized application design.

This manual presents a number of topics and coding examples which will help in the design and implementation of many DMS/CICS/VS applications.

Manual, 164 pages, 4/79
/////5740-XC5

SH20-2209

DEVELOPMENT MANAGEMENT SYSTEM/CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (DMS/CICS/VS), LIC PROG 5740-XC5 (OS/VS), 5746-XC4 (DOS/VS), PROGRAM REFERENCE

Development Management System/CICS/VS (DMS/CICS/VS) is an application management offering which simplifies implementing online information systems using the 3270 Information Display System.

The DMS/CICS/VS DL/I data base and file management, display management, and message handling capabilities make it possible to implement many new or existing applications in the online environment with reduced programming. Preprogrammed facilities are provided to perform display operations such as paging and panel selection, data base and file operations (data entry, inquiry, record update, and search), and message routing between display stations.

Application specification is simplified through the use of DMS/CICS/VS forms on which the user describes data files, Display Station images (panels), and the batch utility operations required by the application. The Customer Information Control System Version 1.4 (DICS/VS) is a prerequisite to DMS/CICS/VS. Application security through use of CICS/VS and DMS/CICS/VS signon procedures can be used to control operator access to predetermined applications.

The purpose of this manual is to provide sufficient information to enable the user to understand the functions of the system, the programs constituting the system, and the effort required for successful installation. The manual contains a system-oriented description of DMS/CICS/VS provides guidance in installing the system, and describes the input and results.

Statements of customer responsibilities, programming system requirements, and system configuration are included.

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) - RELEASE 1.1, LIC PROG 5740-XX7, SPECIFICATIONS
 Describes the warranted specifications of the program.
 The Generalized Information System/Virtual Storage, Version 1, Release 1, Modification Level 1 (GIS/VS R1.1), provides additional functions and enhancements over GIS/VS 1.0, while remaining compatible with and retaining the functional capabilities of GIS/VS 1.0.
 GIS/VS is designed to support a wide variety of information processing activities by providing the facilities for defining, maintaining, and processing OS/VS and DL/I data files required in many application areas. GIS/VS is designed to provide broad, general purpose, processing capabilities by generating tailored processing

modules on the basis of system-resident data file descriptions together with user-entered, high-level, procedural language statements. The generated modules are then executed to provide the requested file processing actions.

IMS/VS VERSION 1 APPLICATION PROGRAMMING REFERENCE MANUAL
 PROG PROD 5740-XX2
 Information Management System/Virtual Storage (IMS/VS) is a processing program (control system) designed to facilitate the implementation of medium to large common data bases in a multiapplication environment. This environment is created to accommodate both online message processing and conventional batch processing, either separately or concurrently. The system permits the evolutionary expansion of data processing applications from a batch-only to a teleprocessing environment. This manual is a guide for the application analyst and programmer. Its contents will assist them in the design of an IMS/VS system as well as in the design and coding of the application systems which will run under IMS/VS. IMS Applications Programming Testing Aids are also described. Manual, 304 pgs, 7/77
 ////5740-XX2

 PROG PROD 5740-XX2
 This publication is designed for programmers, system analysts and computer operators and describes how to execute the Information Management System/Virtual Storage (IMS/VS) utility programs under the operating system. Individual Chapters provide information on (1) Data Base Description Generation and the control statements used as input to DBDGEN; (2) Programs Specification Block Generation and the control statements used as input to PSBGEN; (3) Application Control Block Maintenance Utility in creating and maintaining a consolidated library of data base and program descriptions used by the DE/DC System; (4) Data Base Reorganization/Load Processing utilities in reorganizing a data base; (5) Data Base Recovery System utilities in reconstructing a data base; (6) Utility Control Facility and how it implements the functions of the recovery and reorganization utilities; (7) Log Maintenance Utilities and how to produce a new system log from one containing read errors and how to recover log data; (8) Log Data Formatting utilities that perform analysis on and print reports from the system log tape; (9) Performance Reporting utilities for organizing, formatting, and printing performance-related reports; (10) System Service utilities, which include the SPOOL SYSOUT Print and Multiple Systems Verification utilities; (11) Fast Path MSOB offline utilities, which initialize, load, maintain, and reconstruct MSDBE; (12) Fast Path DEDB utilities for initializing, maintaining, and reorganizing DEDBs. The reader should be familiar with the concepts and terminology described in IMS/VS General Information (GH20-1260), System/Application Design Guide (SH30-9025), and Application Programming Reference Manual (SH20-9026). Manual, 8 1/2 x 11 inches, 518 pgs, 7/77

IMS/VS VERSION 1 MESSAGES AND CODES REFERENCE MANUAL
 PROG PROD 5740-XX2
 This publication listsabend codes, status codes, and messages produced by the IBM-supplied components of the IMS/VS system. In addition to the explanation that accompanies each code and message, the action (if any) required of the user is provided. The publication is designed to advise programmers, operators, and system support personnel of the status of their programs and the action required to correct a problem. Manual, 8 1/2 x 11 inches, 324 pgs, 7/77

GH20-9035

GENERALIZED INFORMATION SYSTEM VIRTUAL STORAGE (GIS/VS) GENERAL INFORMATION MANUAL - PROGRAM NUMBER 5740-XX7
 This manual surveys the operational concepts and system capabilities of the Generalized Information System/Virtual Storage. The manual introduces the language of GIS/VS and describes the file organization and processing actions supported by GIS/VS. The Generalized Information System operates on System/370 Virtual Storage Systems and supports a wide variety of applications by providing information handling capabilities against many typical data base organizations. GIS/VS provides facilities for defining, maintaining, and retrieving data from user files under direction of the using

installation and its personnel.
Manual, 76 pages
/////5740-XX7

SB20-9036

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) USER'S GUIDE, PROG. PROD. 5740-XX7
The User's Guide contains information to introduce the program to both the technically oriented user and the nontechnical end user and includes instructions for the guidance of both in the use of the Program Product GIS/VS.
Manual, 84 pages
/////5740-XX7

SH20-9037

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) SYSTEM PROGRAMMER'S REFERENCE MANUAL, 5740-XX7
Designed for system programmers and data base administrators with responsibility for system and data base planning, design, installation, and details of system operation. Security is discussed in detail, data description for all file types is included, as well as recovery and reorganization techniques, SAM/ISAM to VSAM conversion, and diagnostic aids and techniques to assist in quick diagnosis of problem situations.
Manual
/////5740-XX7

SH20-9038

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) LANGUAGE REFERENCE MANUAL - 5740-XX7
The LRM is a reference manual for users. Procedural language utilities, task input parameters, and terminal command language are described. Language syntax and conventions are detailed, and examples are included to illustrate the proper use of the various language functions. Major functions, such as QUERY, UPDATE/CREATE, MODIFY, DL/I, and IMS/VS terminal entry are discussed.
Manual

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) MESSAGES AND CODES, PROG. PROD. 5740-XX7
This publication lists completion codes, status codes, and messages produced by the IBM supplied components of the GIS/VS system. In addition to the explanation that accompanies each code and message, the action (if any) required of the user is provided unless this information is implicit in the explanation. The publication is thus designed to advise programmers and system analysts of the status of their programs and to alert them of the action required to correct a problem.
The information in this manual corresponds to parts of the GIS/2 Operations Manual.
Manual, 130 pages
/////5740-XX7

SH20-9040

GENERALIZED INFORMATION SYSTEM/VIRTUAL STORAGE (GIS/VS) PLANNING AND OPERATION GUIDE FOR THE ADVANCED QUERY FEATURE, PROG. PROD. 5740-XX7
This document describes the characteristics of the Advanced Query Feature of GIS/VS. This feature provides the means by which a person can employ GIS/VS in conjunction with Information Management System/VS (IMS/VS). The user of this feature must have installed either the Data Base System of IMS or the combined Data Base/Data Communication System of IMS. The discussion is at a level sufficient for planning the installation of the feature. The two major sections deal with the AQP Data Base Support and the AQP Terminal Support.
The terminal interface is discussed in detail while the command language is only briefly described.
Manual, 80 pages

SB20-9046

IBM SYSTEM/370 LOW-LEVEL CODE/CONTINUITY CHECK IN DATA LANGUAGE/I DOS/VS PROGRAM REFERENCE AND OPERATIONS MANUAL, PROGRAM NUMBER 5746-XX1
This manual is intended for application programmers who want to use the services of Low-Level Code/Continuity Check in Data Language/I DOS/VS (LLC/CC in DL/I DOS/VS). It describes the functions and the operation of the system, and contains all the information required to generate and execute LLC/CC in DL/I DOS/VS.
Low-Level codes are used primarily in the manufacturing

industry to indicate the lowest level at which at particular part number is found in all product structure trees. The product structures must not contain any loops. Therefore, a continuity check is applied to ensure proper assembly-to-subassembly continuity.

The reader is assumed to have a working knowledge of the functions and the facilities of Data Language/I Cisk Operating System/Virtual Storage (DL/I DCS/VS). He should be familiar with the contents of the following publications:

- o DL/I DOS/VS Application Programming Reference Manual, SB12-5411
- o DL/I DOS/VS Operator's Reference Manual and Messages and Codes SB12-5414
- o DL/I DOS/VS Utilities and Guide for the System Programmers, SB12-5412

Manual, 52 pages

SH20-9047

INFORMATION MANAGEMENT SYSTEM/VIRTUAL STORAGE (IMS/VS), LOW-LEVEL CODE/CONTINUITY CHECK IN DATA LANGUAGE/I, REFERENCE AND OPERATIONS - PROG. PROD. 5740-XX2
LLC/CC in DL/I of IMS/VS provides a callable subroutine to assign low-level codes to parts recorded in a parts data base as used in manufacturing industry.
Low-level codes indicate the lowest level at which a part number is found in all product structure trees. To prevent loops in product structures, a continuity check is applied to ensure proper assembly-to-subassembly continuity. This manual is intended for application programmers. It describes the functions and the operation of the system, and contains all information to generate and execute the program.
The reader is assumed to have a working knowledge of the functions and facilities of IMS/VS. He should be familiar with the contents of the following publications: IMS/VS System/Application Design Guide, SB20-9025, IMS/VS Application Programming Reference Manual, SB20-9026, IMS/VS System Programming Reference Manual, SB20-9027, IMS/VS Utilities Reference Manual, SB20-9029, IMS/VS Messages and Codes Reference Manual, SB20-9030.

SH20-9053

IMS/VS VERSION 1 MESSAGE FORMAT SERVICE USER'S GUIDE, PROG PROD 5740-XX2
The purpose of this manual is to describe the IMS/VS Message Format Service (MFS). This manual contains information for designers of MFS, and for the person(s) responsible for the administration of all MFS application systems used by the IMS/VS installation. Contents include a description of all MFS functions, information on application design and programming, and descriptions and examples of the MFS language and service utility programs. MFS supports the IEM 2740/2741 Data Communication Terminals, the IBM 3270 Information Display System, the IBM 3600 Finance Communication System, and the IBM 3790 Communication System. Prerequisite publication for all readers are: IMS/VS General Information Manual, SH20-1260 (which includes a guide to other IMS/VS publications); IMS/VS System/Application Design Guide, SB20-9025 (information on the IMS/VS Data Communication feature); IMS/VS Operator's Reference Manual, SB20-9028 (information on operation of devices supported by MFS); Systems Summary and/or component descriptions for devices used that are supported by MFS.
For MFS application programmers: IMS/VS Application Programming Reference Manual, SB20-9026 (information on application programming using the IMS/VS Data Communication feature).

SH20-9054

IMS/VS VERSION 1 ADVANCED FUNCTION FOR COMMUNICATIONS, PROG PROD 5740-XX2
This manual provides planning and reference information. It is intended to guide the application programmer of advanced communicating with IMS/VS via a network that includes VTAM and NCP. Detailed network communications procedures are included that could be useful to systems analysts, system programmers, host application programmers, etc., who are working with an IMS/VS - Advanced Function Communications System.
Only those areas of IMS/VS that are directly affected are addressed. Refer to other IMS/VS manuals for additional IMS/VS information. A knowledge of IMS/VS, particularly the data communication feature, is required to understand this manual. Readers should be familiar with the system network architecture (SNA) and VTAM concepts and facilities program *and a VTAM logical unit.
Prerequisite publications: Advanced Function for Communications System Summary, GA27-3099; IMS/VS General Information Manual, SB20-1260; IMS/VS Installation Guide, SB20-9081; VTAM Concepts and Planning, GC27-6998; Systems Network Architecture General Information Manual, GA27-3102.
3600 SYSTEMS: IEM 3600 Finance Communication System; System Summary, GC27-0001; Programming Installation Guide for the IBM 3600 Finance Communication System, GC27-0009.
3790 SYSTEMS: An Introduction to the IEM 3790 Communication System, GA27-2767; IBM 3790 Communication System; Programming Statements guide GC27-0015; IBM 3790 Communication System Programming Statements Reference, GC27-0016.

APL SHARED VARIABLES (APLSV) VERSION 3.0 SPECIFICATIONS, PROGRAMMING RPO MG6282, PROG 5799-AQC

APL SHARED VARIABLES (APLSV) VERSION 3.0 SPECIFICATIONS
Interactive system designed to give rapid response to a large number of terminal users. This publication is aimed at customer employees and prospective customers responsible for planning and maintaining an installation. It describes the enhancements which make APLSV differ from its predecessor, APL/360, and describes the ways in which it differs from earlier releases of APLSV.

The following are described: operation, programming Systems Supported, System Requirements, Compatibility among APL systems, conversion considerations, reference material, and programming service classification.

It is the preferred APL system to be used in OS/VS1 or OS/VS2 environments where BSAM and/or BDAM are the access methods in use. Since it provides its own EXCP-level terminal access method, it may be considered for use where main storage requirements are to be minimized.

The Program Product Specifications (PPS) describe the warranted specifications of the subject Program Product. Flyer, 4 pages, 7/76

GH20-9104

DB/DC DATA DICTIONARY GENERAL INFORMATION PROG PROD 5740-XXF (OS/VS), 5746-XXC (DOS/VS)

The DB/DC Data Dictionary is an IMS/VS or DL/I DOS/VS application system that serves as a tool for data base design, maintenance, and administration. Through the dictionary programs, users can create a central, organized collection of definitions of their data resources, including non-DL/I data sets as well as DL/I data bases, which can then be effectively evaluated and controlled. With batch commands, users can enter definitions directly from COBOL copy libraries (or sequential files containing COBOL source statements) and DL/I DED and PSB libraries and then add, change, copy, search, delete, and retrieve definitions as desired. In addition, through the IBM 3277 Display Station Model 2, IMS/VS DB/DC users can enter most commands online and can enter and display DL/I definitions on display forms presented by an interactive display forms facility. Machine and human readable output includes varied reports, programming language data structures, DL/I data base descriptions (DBDs), and program specification blocks (PSBs). This manual explains the purpose of the dictionary and gives examples of its use. It outlines responsibilities in installing the system; machine, programming, and storage requirements; and compatibility with the previous IBM field-developed IBM Dictionary System and its enhancements.

SH20-9105

OS/MVT 3350 and 3330 MODEL II PROGRAMMER'S GUIDE, PROG 5799-ARG, RPO EG4653

This manual is intended for installation managers and system programmers who require planning, conversion, and system generation information to install the IBM 3350 Direct Access Storage and the IBM 3330 Model II Disk Storage on their systems.

This manual also contains information on how to use the 3350 or 3330 Model II which is intended for the application and system programmers who write programs using the 3350 or 3330.

One section describes operating considerations for the operator when using OLTEP, HASP, and AP-1 with the 3350 and 3330.

A messages and codes section describes the new messages supported. There is no prerequisite reading for the understanding of this manual; however, a basic knowledge of computers and direct-access storage devices is assumed.

OS/MVT ANALYSIS PROGRAM-1 (AP-1) USER'S GUIDE: PROG 5799-ARG, RPO EG4653 FOR 3350 & 3330 MODEL II ON SYSTEM/370

This manual is intended for operators and programmers whose systems include the IBM 3350 Direct Access Storage. The material introduces operators and programmers to Analysis Program-1 (AP-1), its operating procedures, and its output. One section describes how to invoke AP-1 and another section describes the messages produced by AP-1.

There is no prerequisite reading for the understanding of this manual; however, it is assumed that the reader knows how to operate his computer system.

VS TSIO GUIDE AND REFERENCE, PROG PROD 5740-XR9

This publication describes how to use, install, and operate VS TSIO. VS TSIO is an auxiliary processor which allows a VS APL user under VSPC to perform input and output operations from a VS APL terminal to and from operating system data sets on disk, tape, line printer, and other devices. SYSOUT and job submission capability are also provided.

A knowledge of the information in the APL Language manual, GC26-3847, especially the use of shared variables, and the VS APL for VSPC Terminal User's Guide, SH20-9066, is essential to full understanding of the use and facilities of VS TSIO.

This publication is intended for all VS TSIO users, operators, installers, planners, and analysts.

OS/VS2 MVS SEQUENTIAL ACCESS METHOD-EXTENDED (SAM-E) GENERAL INFORMATION, PROG PROD 5740-AM1, -AM3
 Sequential Access Method-Extended (SAM-E) is an enhancement to the existing System Control Program (SCP) version of the Sequential Access Method (SAM). SAM-E improves the performance of SAM for DASD operations. This general information manual enables the prospective user to prepare for using SAM-E. The manual's audience is data processing managers and others seeking information on SAM-E.
 The reader is expected to be familiar with basic concepts such as access methods, direct-access storage, and the distinction between data-set organization and data-set processing. The sections dealing with those concepts in OS/VS Data Management Services Guide, GC26-3783, are suitable for preparatory reading.

HASP/MVT/3800 OPERATOR GUIDE, PRPG MJ0792, LIC PROG 5799-ATQ
 This publication tells the computer operator what the differences are between HASP II Version 4 and HASP/MVT/3800. In order to use the information supplied in this publication properly, a copy of OS/VS2 HASP II version 4 Operator's

Guide, GC27-6992, is required.
 Manual, 8 1/2 x 11 inches, 200 pgs, 8/77
 //5799-ATQ

SH20-9136

HASP/MVT/3800 USER'S GUIDE, PRPG MJ0792 - LIC PROG 5799-ATQ
 HASP is an optional program not required for the operation of an OS/MVT system. This book is intended for programmers at installations that have chosen to install HASP.
 This book is divided into four sections: Routing a job through the system with HASP, obtaining output with HASP, coding JCL in the HASP environment, and coding HASP control statements.
 Note: The external characteristics of HASP can be greatly influenced by the parameters used at HASP generation. This book does not describe all of those options. Also, HASP is often modified by an installation to provide different external characteristics. Thus, the descriptions herein should not be regarded as typical. If your installation's system programming staff has made changes to HASP, be sure you understand the effects of those changes.

 //5740-AM3

SH20-9145

IMS/VS VERSION 1, LIC PROG 5740-XX2, PRIMER
 This publication is intended for first-time users of the Information Management System/Virtual Storage (IMS/VS). It provides system analysts, data base administrators, system programmers, and application programmers with the information necessary for the design, installation, and operation of their initial applications, using a subset of the data base or data base/data communication facilities of IMS/VS. Included is the information the user would ordinarily need to:
 • Plan for IMS/VS use
 • Design DL/I data bases
 • Design, write, and test IMS/VS programs
 • Install IMS/VS
 • Operate IMS/VS
 • Maintain IMS/VS
 The IMS/VS Primer is designed to be used with IMS/VS Primer Master Terminal Operator's Guide - ETAM (SH20-9146), IMS/VS Primer Master Terminal Operator's Guide - VTAM (SH20-9147), IMS/VS Primer Remote Terminal Operator's Guide (SH20-9148), and the IMS/VS Primer Sample Listings (SH20-9149). The only other IMS/VS manuals the user of the subset would normally have to refer to are the IMS/VS General Information Manual (GH20-1260) and the IMS/VS Messages and Codes Reference Manual (SH20-9030).
 By using the approach suggested in the IMS/VS Primer, users can avoid much of the complexity usually associated with IMS/VS. Many of the steps required to install IMS/VS can be shortened, simplified, and/or accomplished in a more orderly manner.
 Manual, 8 1/2 x 11 inches, 500 pages, 9/78
 //5740-XX2

SH20-9146

IMS/VS VERSION 1, LIC PROG 5740-XX2, PRIMER MASTER TERMINAL OPERATOR'S GUIDE: ETAM
 This publication is a guide for the master terminal operator to operate the online Information Management System/Virtual Storage (IMS/VS) as described in the IMS/VS Primer (SH20-9145) that uses the Basic Telecommunications Access Method (BTAM). Included is an introduction to IMS/VS,

information on how to operate the master terminal, and a glossary of frequently used terms. Also included are descriptions of:

- The flowcharts, forms, and tables that are used with detailed IMS/VS operating instructions.
 - The format and function of the IMS/VS subset commands.
 - The configuration of the online IMS/VS system.
- This guide should be used together with the IMS/VS Primer which describes a subset of IMS/VS. In addition, the IMS/VS Messages and Codes Reference Manual (SH20-9030) and the IMS/VS Primer Remote Terminal Operator's Guide (SH20-9148) should be used.
- Manual, 8 1/2 x 11 inches, 120 pages, 9/78
 ////5740-XX2

SH20-9147

IMS/VS VERSION 1, LIC PROG 5740-XX2, PRIMER MASTER TERMINAL OPERATOR'S GUIDE: VTAM
 This publication is a guide for the master terminal operator to operate the online Information Management System/Virtual Storage (IMS/VS) as described in the IMS/VS Primer (SH20-9145) that uses the Virtual Telecommunications Access Method (VTAM), information on how to operate the master terminal, and a glossary of frequently used terms. Also included are descriptions of:

- The flowcharts, forms, and tables that are used with detailed IMS/VS operating instructions.
- The format and function of the IMS/VS and VTAM subset commands.
- The configuration of the online IMS/VS system.

This guide should be used together with the IMS/VS Primer, which describes a subset of IMS/VS. In addition, the IMS/VS Messages and Codes Reference Manual (SH20-9030) and the IMS/VS Primer Remote Terminal Operator's Guide (SH20-9148) should be used.

Manual, 8 1/2 x 11 inches, 124 pages, 9/78
 ////5740-XX2

SH20-9148

IMS/VS VERSION 1, LIC PROG 5740-XX2, PRIMER REMOTE TERMINAL OPERATOR'S GUIDE
 This publication is a guide for the remote terminal operator and the master terminal operator to operate a terminal connected to the online Information Management System/Virtual Storage (IMS/VS) system. Included is an introduction to IMS/VS and descriptions of some system concepts and terms. Also included are descriptions of the basic hardware operating procedures for terminals connected to IMS/VS; the interface to IMS/VS; IMS/VS commands; recovery and operating procedures.

In addition to this guide, refer to the Operator's Guide for the IBM 3270 Information Display System (GA27-2742) and the IBM 3270 Problem Determination Guide (GA27-2750) for information about the IBM 3270 Information Display System (IDS).

 ////5740-XX2

SH20-9149

IMS/VS VERSION 1, LIC PROG 5740-XX1, PRIMER SAMPLE LISTINGS
 This publication is a companion to the IMS/VS Primer (SH20-9145) and the IMS/VS Primer Master Terminal Operator's Guide (SH20-9146 for BTAM and SH20-9147 for VTAM). It contains detailed documentation of the sample IMS/VS application system used throughout the manuals referenced above. Individual chapters contain:

- The source listings of all the programs used in the sample application system; listing of Data Base Descriptions (DBD), Program Communication Blocks (PCB), and message formats used in the sample; a listing of the sample data to be loaded into the sample data bases.
- The lists of all the JCL, utility control and macro statements used to generate IMS/VS, install the sample application and exercise the sample application.
- The output from selected jobs of the sample application. Additionally, directions on how to obtain the machine readable version of the sample job and source statements is included.

Manual, 8 1/2 x 11 inches, 500 pages, 9/78

SH24-5001

DL/I DOS/VS GUIDE FOR NEW USERS, PROGRAM PRODUCT 5746-XX1
 DL/I DOS/VS is a data management control system that assists the user in creating, accessing, and maintaining large common data bases. In conjunction with the Customer Information System (CICS/DOS/VS), DL/I DOS/VS permits expansion of data processing applications from a batch-only environment to an online teleprocessing environment.

This manual is intended for first-time users of DL/I DOS/VS. It provides system analysts, data base specialists, system programmers, and application programmers with the information necessary for the design, installation, and operation of initial applications using the data base management facilities of DL/I DOS/VS. Through extensive use of examples and references to sample application programs supplied with DL/I DOS/VS, the manual reinforces the user's knowledge of data base concepts and the functions provided by DL/I; describes organizing, creating, and maintaining data bases; guides the user in writing data base application programs; and provides workable examples for setting up a specific data base application such as an online order entry and inventory system.

Readers of this manual are expected to be familiar with the concepts of DL/I data bases and the functions provided by DL/I through the information contained in DL/I DOS/VS General Information, GH20-1246.

DL/I DOS/VS DIAGNOSTIC GUIDE, PROG PROD 5746-XX1
 DL/I DOS/VS is a data management control system developed to assist the user in implementing data base processing applications. It provides data organization methods that are conducive to the creation of, access to, and maintenance of large common data bases. DL/I DOS/VS permits the expansion of data processing applications from a batch-only environment to a teleprocessing environment such as the Customer Information Control System DOS/VS (CICS/DOS/VS).

This manual gives general descriptions of JCL statements, partition and control block relationship, DL/I calls, and data base organization. In addition, diagnostic aids are given for control flow, scheduling errors, trace entries, online wait state, and interpreting and debugging DL/I dumps. A brief description of various DL/I programs is given.

This manual is intended primarily for the IBM Program Support Representative. In some installations those involved in system programming and system maintenance will find it helpful.

The reader should be familiar with the information contained in:

- DOS/VS System Control Statements, GC33-5376
 - DL/I DCS/VS Logic Manual, LY12-5016
 - DL/I DOS/VS Utilities and Guide for the System Programmer, SH12-5412

SJA0-0300

OS/VS2 REL 868 DEMF
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 2 cards, 12/77
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SJA0-0302

SINGLE VIRTUAL SYSTEM/DATA EXCEPTION MONITORING FACILITY
PROGRAM, (SVS/DEMF), 5742-017
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 2 cards, 1/78
 SLSS - ORDER NO. SUBSCRIPTION ONLY

LJA0-0303

VIRTUAL SYSTEMS EXTENDED/INTERACTIVE PROBLEM CONTROL SYSTEM
LIC PROG 5746-SA1 MICROFICHE LISTINGS
 Microfiche listings for VSE/TPCE.
 Microfiche reduced 45x, 8 cards, 1/79
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB1-0402

ACP/VTAM FOR OS/VS, PROG PROD 5746-RC3,
COMPONENT 5745-SC-VTM-G03, ASSEMBLY LISTING MICROFICHE
 This document contains microfiche of assembly listings of ACP/VTAM for use by FE Service personnel for correction of design errors.
 Microfiche, 3 1/4 x 7 3/8 inches, 138 cards, 12/77
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB1-0403

ACP/VTAM MULTISYSTEM NETWORKING FEATURE (MSNF) PROG PROD
5746-RC3, COMPONENT 5745-SC-VTM-G04 ASSEMBLY LISTING FICHE
 This document contains microfiche of assembly listings of ACP/VTAM Multisystem Networking Feature for use by FE Service Personnel for the correction of program design errors.
 Microfiche, 3 1/4 x 7 3/8 inches, 15 cards, 11/77
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SJB1-0404

VTAM SCP MODULES FOR USE WITH ACP/VTAM, PROG PROD 5747-CF1
COMPONENT 5745-SC-VTM-721
 This document contains microfiche of the assembly listings for the VTAM SCP (which is used with ACP/VTAM). It is used by FE Service personnel for correction of design errors.
 Microfiche, 3 1/2 x 7 3/8 inches, 27 cards, 11/77
 SLSS - ORDER NO. SUBSCRIPTION ONLY

- LJB1-0405
NOSP FOR DOS/VS: NETWORK OPERATION SUPPORT, PROG PROD 5735-XX2, ASSEMBLY LISTING MICROFICHE
 This document contains microfiche of the assembly listings for NOSP. It is used by FE Service Personnel for correction of design errors.
 Microfiche, 3.25 x 7.375 inches, 18 cards, 9/77
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- SJB1-0406
BTAM SCP FOR DOS/VSE BASIC TELECOMMUNICATION ACCESS METHOD SYSTEM CONTROL PROGRAMMING, SCP 5747-GC1 MICROFICHE LISTING
 This document contains microfiche of the assembly listings for BTAM SCP for DOS/VSE. It is used by FE Service Personnel for correction of Design Errors.
 Microfiche, 3.25 x 7.375, 4 Cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- LJB1-0407
BTAM-ES FOR DOS/VSE, BASIC TELECOMMUNICATIONS ACCESS METHOD, EXTEND SUPPORT FOR DOS/VSE SCP 5746-RC5, MICROFICHE LISTINGS
 This document contains microfiche of the assembly listings for BTAM-ES. It is used by FE Service Personnel for corrections of Design Errors.
 Microfiche, 3.25 x 7.375 45x, 3 Cards,
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0417
OS/VS1 NETWORK OPERATIONS SUPPORT PROGRAM 5735-XX2 MICROFICHE LISTINGS
 Microfiche for all purchasers of this product to VS1 6.7.
 Microfiche reduced 45x, 16 cards, 12/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0418
OS/VS1 VIRTUAL TELECOMMUNICATIONS (SNA3) 5735-RC2 MICROFICHE LISTINGS
 Microfiche for all purchasers of this product to VS1 6.7.
 Microfiche reduced 45x, 149 cards
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0419
OS/VS1 VIRTUAL TELECOMMUNICATION (SNA3) 5735-RC22 MICROFICHE LISTINGS
 Microfiche for all purchasers of this product to OS/VS1.
 Microfiche reduced 45x, 14 cards, 3/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0421
OS/VS1 VIRTUAL COMMUNICATION (SNA3) 5735-RC2 MICROFICHE LISTINGS
 Microfiche for all purchasers of this product to VS1 6.7.
 OS/VS1.
 Microfiche reduced 45x, 3 cards
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0431
NETWORK OPERATION SUPPORT PROGRAM (NOSP) PROG 5735-XX2 LISTINGS FOR OS/VS2 MVS COMPONENT 5735-XX200-E74
 This document contains microfiche of the assembly listings for NOSP. It is used by FE Service Personnel for correction of design errors.
 Microfiche reduced 45x, 16 cards, 6/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0432
ACF/VTAM FOR SVS, PROG 5735-RC2 COMPONENT 5742-SCI-23-202
 This document contains assembly listings for ACF/VTAM for use by FE Service Personnel for the correction of program design errors.
 Microfiche reduced 45x, 147 cards, 6/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB1-0433
ACF/VTAM MULTISYSTEM NETWORKING FOR SVS, PROG 5735-RC2 COMPONENT ID 5742-SCI-23-FO3
 This document contains assembly listings for the ACF/VTAM Multisystem Networking Feature for use by FE Service Personnel for correction of program design errors.
 Microfiche reduced 45x, 4 cards, 6/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- SJB1-0434
VTAM SCP FOR OS/VS, PROG 5742-017 COMPONENT 5742-SCI-23-571
 This document contains microfiche of the assembly listings for NOSP. It is used by FE Service Personnel for correction of design errors.
 Microfiche reduced 45x, 35 cards, 6/78
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB1-0461
SVS VTAM ICR - OS/VS SCP 5742-017
 Microfiche Source Code of OS/VS2 R1.7 (SVS) Modules used in the SVS VTAM ICR (5742-017) that provides the SVS user support of SNA terminals.
 Intended primarily for IBM Programming Support
- Representatives requiring the SCP program listings for VTAM, SSS, TOLTEP, and prerequisite PTF's.
 Microfiche, 7/76
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9000
OS/VS2 REL 3.0 SMP 5752-VS2 PROGRAM LISTINGS
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche 7/76
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9001
VS2 REL 1.7 SMP 5742-017 PROGRAM LISTINGS
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 7/76
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9003
OS/VS2 REL 01.7 - OBR/EREP/RDE MICROFICHE LISTINGS
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 41 cards, 2/77
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9004
OS/VS2 RELEASE 03.6- OBR/EREP/RDE
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 41 cards, 2/77
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9006
OS/VS2 SVS PROCESSOR SUPPORT, SCP 5742-017, ICR UY99951
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 15 cards, 3/78
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9007
OS/VS2 MVS PRCESSOR SUPPCRT 2
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, reduced 45x, 110 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SJB2-9008
OS/VS2 MVS PRCESSOR SUPPORT 2 MICROFICHE LISTINGS
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche, 96 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- LJB2-9500
OS/VS2 - RMF - PROG PROD 5740-XXM, LISTINGS
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY
- LJB2-9501
OS/VS2 DASD TSO COMMAND PACKAGE, PROG 5740-XT6
 Listings for the above OS/VS1 and/or OS/VS2 program.
 Microfiche

 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB2-9508

OS/VS2 MVS SYSTEM EXTENSIONS 1.0, LIC PROG 5740-XE1, LISTINGS
Listings for the above OS/VS1 and/or OS/VS2 program.
Microfiche, 117 cards, 2/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB2-9509

OS/VS2 853 - RMF VERSION 2 REL 2 SYSTEM EXPANSION SUPPORT
Listings for the above OS/VS1 and/or OS/VS2 program.
Microfiche, 33 cards, 2/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB2-9510

VS2 839 PROGRAMMED CRYPTO FACIL, LIC PROG 5740-XY5, LISTINGS
Listings for the above OS/VS1 and/or OS/VS2 program.
Microfiche reduced 45x, 7 cards, 4/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB2-9511

OS/VS1 PROGRAMMED CRYPTOGRAPHIC FACILITY, LIC PROG 5740-XY5 MICROFICHE LISTING
Microfiche for all purchasers of this product to VS1 6.7.
Microfiche reduced 45x, 6 cards, 11/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB2-9512

MVT 3031/3032/3033 PROCESSOR SUPPORT PRPQ, ICR S99951
Contains Type I OS program listings as specified in the title.
Microfiche, 40 cards, 6/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0001

IBM 3350/3330-11 PRPQ (US99931) FOR USE WITH OS/MVT (21.8) PROG 5799-ARG
Microfiche listing for subject PRPQ.
Microfiche, 17 cards, 2/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0002

DATA MANAGEMENT SUPPORT (DASDR), LIC PROG 5740-UT1 MICROFICHE LISTINGS
Microfiche for all users of this product:
OS/MVT - Release 21.8
OS/VS1 - Release 5, 6, 6.7, 7
OS/VS2 (SVS) - Release 1.7
OS/VS2 (MVS) - Release 3.7, 3.8
Microfiche reduced 45x, 5 cards, 11/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0003

INFORMATION MANAGEMENT SYSTEM/VIRTUAL STORAGE VERSION 1 (IMS/VS V1) PROG PROD 5740-XX2 FAST PATH FEATURE LISTINGS
Microfiche listings for Information Management System/Virtual Storage Version 1 (IMS/VS V1) Program No. 5740-XX2 Fast Path Feature.
Microfiche, 26 cards, 7/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0004

IMS/VS V1 LIC PROG 5740-XX2, IMS PSEUDO MODULE LISTINGS
This set of microfiche contains listings of sample edit routines, sample programs and primer function programs associated with all the IMS/VS features. Additionally, it contains five pseudo modules: module directory; control block DSECTS; symbol where used cross reference; macro directory; macro where used cross reference. This sample and diagnostic information can be used by customer personnel and field engineering representatives.
Microfiche, 4/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0008

IBM HASP/MVT/3800 MICROFICHE LISTINGS, PRPQ MJ0792, PROG 5799-ATQ
Listings for the above OS/VS1 and/or OS/VS2 program.
Microfiche, 9 cards, 8/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0009

OS/VS1 CITOPS (ARGOT UTILITY) 5748-UT2 MICROFICHE LISTINGS
Microfiche for all purchasers of this product to VS1 6.7.
Microfiche reduced 45x, 3 cards
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0010

OFFLINE IBM 3800 UTILITY, DOS/VS REL 34, LIC PROG 5748-UT2, LISTINGS
Contains program listings as specified in the title.
Microfiche, 9 cards, 10/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0014

IMS/VS V1, LIC PROG 5740-XX2, DATA BASE SURVEYOR UTILITY FEATURE LISTINGS
Microfiche listings for Information Management System/Virtual Storage Version 1 (IMS/VS V1) Program No. 5740-XX2 Data Base Surveyor Utility Feature.
Available to each licensee under the licensing agreement from IBM Program Control Center. Available to IBM personnel from IBM Distribution Center.
Microfiche, 2 cards, 8/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0015

OS/VS1 DATA MANAGEMENT, LIC PROG 5740-AM8, MICROFICHE LISTINGS
Microfiche for all purchasers of this product to VS1 6.7.
Microfiche, reduced 45x, 4 cards, 11/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0024

OS/VS2 MVS VSPC (VS PERSONAL COMPUTING) DATA AREAS, LIC PROG 5740-XR6, MICROFICHE LISTINGS
Microfiche Listing of OS/VS2 MVS VSPC (VS Personal Computing) Data Areas, 5740-XR6.
Microfiche 1 card, 9/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0025

OS/VS2 MVS VSPC SYMBOLIC NAME CROSS REFERENCE TABLE, LIC PROG 5740-XR6 MICROFICHE LISTINGS
Microfiche Listing of OS/VS2 MVS VSPC (VS Personal Computing) Symbolic Name Cross Reference Table 5740-XR6.
Microfiche 3 cards, 9/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LJB6-0034

No abstract available
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6002

OS/VS2 ANALYSIS PROGRAM 1 (AP-1) PROGRAM LISTING - SCP COMPONENT 5752-SC1-31
Listings for the above OS/VS1 and/or OS/VS2 program.
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6003

DOS/VS ANALYSIS PROGRAM 1 (AP-1) LISTINGS - SCP COMPONENT 5745-SC-APC
Contains SCP program listings for OS/VS1 and/or OS/VS2 as specified in the title.
AP-1 is a program designed to provide testing capacity to analyze the operational status of a 3350/3344 in reading, writing and arm movement. It can also scan for unreadable data and determine whether an error is drive or media related.
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6004

OS/VS1 ANALYSIS PROGRAM 1 (AP-1) LISTINGS - SCP COMPONENT 5741-SC1-31
Microfiche program listings for OS/VS1 Analysis Program 1 (AP-1); Program Number 5741-VS1.

Microfiche, 4/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6006

IBM 3800 PRINTING SUBSYSTEM ICR (UY99914) 5742-017
INDEX
Microfiche program listings for IBM 3800 Printing Subsystem for SVS ICR (UY99914). Intended for IBM support personnel and system programmers who diagnose and fix errors in the ICR Source code listings for the ICR.
Microfiche, 10/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6007

OS/VS2 (SVS) ICR FOR THE 3850 MSS AND ENHANCED VSAM
INDEX
Microfiche Program Listings for Program Number 5742-017 (SVS) for the 3850 MSS and Enhanced VSAM.
Microfiche, 246 cards, 1/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6008

OS/VS2 (SVS) ICR FOR THE 3850 ALLOCATION TO MOUNTED VOLUMES
Microfiche Program Listings for Program Number 5745-017 (SVS) for the 3850 Allocation to Mounted Volumes ICR.
Microfiche, 45:1 reduction, 38 cards, 6/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJB6-6009

DOS/VS POWER/VS IBM 3800 PRINTING SUBSYSTEM ICR PROGRAM LISTING MICROFICHE

Microfiche, 9 cards
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-0001

SYSTEM/370 MODELS 158/168 SYSGEN ICR OS RELEASE 21.6
PROGRAM NO. 360S-OS-609
Contains Type I OS program listings as specified in the title.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1100

OS REL. 21.0- 21.7, VS1 REL. 1.0- 3.0, VS2 REL. 1.0- 1.6
SYSTEM MODIFICATION PROGRAM LISTINGS, PROG. NO. 360S-DN-611
AND COMPONENT NOS. 5741-SCI-30, 5742-SCI-30
Contains Type I OS program listings as specified in the title.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1480

IBM OPERATING SYSTEM/360 DOS EMULATOR PROGRAM FOR
SYSTEM/370 MODELS 145 AND 155 - PROGRAM NUMBER 360C-EU-738
Microfiche Assembler Listing DOS Emulator under OS/MPT and OS/MVT.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1640

EMULATOR OS 165/7094, PROG 360C-EU-740 VERSION 3
LEVEL 0, COMPONENT OF SBOF-6443
This document contains Type I OS program listings and DOS/OS PTF listings.
Included is Version 3 level 0 for 360C-EU-740
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1641

EMULATOR OS 165/7070-74 PROG 360C-EU-739 VERSION 2
LEVEL 0, COMPONENT OF SBOF-6445
This document contains Type I OS program listings and DOS/OS PTF listings.
Included is Version 2, level 0 for 360C-EU-739
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1642

7080 EMULATOR FOR SYSTEM/370 MODEL 165 UNDER OFFERATING
SYSTEM/360, LISTINGS - PRG 360C-EU-737, CCMFONENT
OF SBOF-6442
Included is Version 2 level 0 for 360C-EU-737
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-1643

EMULATOR FOR 7074 ON S/370 MODEL 155 UNDER OS
COMPONENT OF SBOF-6444, LISTINGS - PROG 360C-EU-741
This document contains Type I OS program listings and DCS/OS PTF listings.
Microfiche, 3/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-2063

DISK OPERATING SYSTEM MODEL 155 EMULATOR
MICROFICHE LISTINGS - PROGRAM NUMBER 360N-EU-490
These cards contain assembled program listings for the DOS/360 Model 155 Emulator.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-2100

EMULATOR FOR 1401/1440/1460 ON THE SYSTEM/370 MODEL 155
UNDER OS MICROFICHE LISTING - PROG. NO. 360C-EU-735
Contains Type I OS program listings as specified in the title.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-2150

EMULATOR FOR THE IBM 1410/7010 ON THE SYSTEM/370 MODEL 155
UNDER OS - PROG. 360C-EU-736, LISTINGS
No abstract available.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-4601

MODEL 20 EMULATOR ON S/370 USING DOS (V4) - PROGRAM NUMBER
370N-IC-002
Microfiche assembly listings of Model 20 Emulator on System/370 using DOS (V4).
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-4602

S/370 USING DOS/VS IBM EMULATOR FOR HW S200, LISTINGS
PROG. NO. 5799-ADR
Microfiche assembly listings of IBM emulator for Honeywell series 200 on S/370 using DOS/VS.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

GJD1-4603

S/370 USING DCS/VS IBM EMULATOR FOR RCA 301, LISTINGS
PROG. NO. 5799-ADR
Microfiche assembly listings of IBM emulator for RCA 301 on S/370 using DOS/VS.
Microfiche
SLSS - ORDER NO. SUBSCRIPTION ONLY

SJD2-0001

IBM 2501 CARD READER, MODELS A AND B RPQ FEATURES
This publication describes two RPQ features; i.e. second
stacker and 51/80 column card features.
To use this publication effectively, the reader must
be familiar with the operations of the standard IBM 2501
Models A1, A2, B1, and B2. The operations of the 2501
Models A1 and A2 are described in the publication, IBM

SYSTEM/360 MODEL 20, 2501 CARD READER, Form A26-5892. The operations of the 2501 Models B1 and B2 are described in the publication, IBM 2501 MODELS B1 AND B2, COMPONENT DESCRIPTION AND OPERATING PROCEDURES, Form A21-9026. Systems Reference Library Manual, 16 pages
360,370//14//2501/

GL21-9225

IBM 7460-4 STUB CARD READER RPQ EE7595 INSTALLATION MANUAL-- PHYSICAL PLANNING

This manual provides the dimensions, weight, power requirements, operating and non-operating environment, heat output, and a plan view for the IBM 7460 Model 4 Stub Card Reader.

Manual, 4 pages
//15//7460/

GL22-6936

IBM 2914 SWITCHING UNIT MODEL 1, RPQ 880882, CUSTOM FEATURE: INSTALLATION MANUAL - PHYSICAL PLANNING

This manual contains physical planning data necessary to install the IBM 2914 Switching Unit Model 1. The planning requirements of this unit are subject to modification by engineering developments.

In any multiple-equipment installation, specifications for the most critical unit must be met.

Manual, 22 pages
//15//2914/

GL22-6937

SYSTEM/360 AND SYSTEM/370 CUSTOM FEATURE DESCRIPTION: 2914 SWITCHING UNIT MODEL 1 - RPQ 880882

This publication describes the organizational, functional, and operational characteristics of the IBM 2914 Switching Unit Model 1, which attaches to the IBM System/360 Models 25, 30, 40, 44, 50, 65, 67, 75, and 85. Attachment to a System/360 is via the standard System/360 I/O interface of a selector or multiplexer channel.

Manual, 19 pages
360,370//14//2914/

GL22-6979

IBM 2947 MODEL 4 CHECK COLLECTION CONTROLLER (RPQ 888264) FUNCTIONAL CHARACTERISTICS - REFERENCE MANUAL

This publication describes the overall functions, organization, and operation of the IBM 2947 Model 4 Check Collection Controller. Information concerning reader-sorter and printer operations with the required definitions for initialization data, sort control words, printer control and formatting data, and sense and status data are provided.

Although generally the information is written to an audience level of a systems engineer, it may be of interest to anyone seeking information about the general characteristics and operation of the 2947 Model 4. In particular, the information required to supplement the Assembly Facility User's Guide (LC28-6689) in writing assembly language user programs for the 2947 Model 4 is provided.

The reader is assumed to have an understanding of banking data processing and a basic knowledge of the IBM 1419 Model 1 Magnetic Character Reader and the IBM 1403 Model N1 Printer as described in IBM 1219 Reader Sorter, IBM 1419 Magnetic Character Reader (GA24-1499), and IBM 1403 Printer Component Description (GA24-3073).

This information is subject to engineering development modification.

Systems Library Manual, 68 pages
360,370//14//2947/

GL22-6982

IBM 2947 CHECK COLLECTION CONTROLLER MODEL 4 (RPQ 888264) INSTALLATION MANUAL PHYSICAL PLANNING

This manual contains all physical planning data necessary to install the IBM 2947-4 Check Collection Controller.

If a unit is to be installed in conjunction with a computer system, specifications for the most critical unit must be met. Similarly, units installed in conjunction with the 2947-4 require specifications to be met for the most critical unit in the installation.

Data follows the same format and uses the same standardized symbols as IBM System/360 Installation Manual Physical Planning (GC22-6820).

Manual, 6 pages
//15//2947/

GL22-7015

IBM 7441-1/1980-9 CUSTOM TERMINAL FUNCTIONAL CHARACTERISTICS OPERATING PROCEDURES AND PHYSICAL PLANNING

This manual describes the operations, controls and special features of the IBM 7441 Buffered Terminal Control (Model 1) and the IBM 1980 Buffered Terminal (Model 9). The communication facilities that can be used with the teleprocessing terminal are described. Appendixes containing the physical planning specifications, RPQ numbers, a glossary of terms, terminal service procedures, a problem identification chart and character coding are provided.

Manual, 52 pages
360,370//14//7441,1980/

GL22-7025

2914 STORAGE CONTROL INTERFACE SWITCH MODEL 2 (RPQ 8P0290) PRODUCT DESCRIPTION AND PHYSICAL PLANNING

This publication provides systems engineers with both introductory and reference information about the IBM 2914. It includes the characteristics, operation, and physical planning information about the 29144, an operator-controlled facility for switching storage devices of the IBM System/360 Model 195 and System/370 Models 115 through 195.

Manual, 28 pages
360,370//14//2914/

GL24-3570

IBM 2946 TERMINAL CONTROL SUBSYSTEM COMPONENT DESCRIPTION AND OPERATING GUIDE

This reference publication describes the IBM 2946 Terminal Control Subsystem used with an IBM Programmed Airlines Reservations System (PARS), or equivalent. Subsystem components are: IBM 2946 Terminal Control Unit Model 1 and 2, and 4 (RPQ 810480, RPQ 810491, and RPQ 810555), IBM 4505 Model 22 Keyboard (RPQ 8G0019), IBM 4505 Model 23 Video Display (RPQ 8G0016), and IBM 1980 Model C24 Printer (RPQ 888126). Presented for reservations system planners, programmers, and terminal operators are: unit descriptions, line control, message formats, operator controls, and operating procedures.

Manual, 32 pages
//14//2946/

GL24-3571

IBM 2946 TERMINAL CONTROL SUBSYSTEM INSTALLATION MANUAL PHYSICAL PLANNING

This publication provides physical planning information for the IBM 2946 Terminal Control Unit Models 1, 2, and 4 (RPQ 810480, RPQ 810491, and RPQ 810555), and associated input/output units used in an IBM Programmed Airlines Reservation System (PARS): IBM 4505 Model 22 Keyboard (RPQ 8G0019), IBM 4505 Model 23 Video Display (RPQ 8G0160), IBM 1980 Model C24 Printer (RPQ 888126), and IBM 7411 Model 1 Remote Terminal Control Unit (RPQ 8R0142). Included are physical specifications and cable, electrical, and environmental requirements.

For related publications, see IBM System/360 and System/370 Bibliography, GA22-6822.

Manual, 20 pages
//15//2946/

GL24-3618

2956 MODEL 8 CARD READER RPQ 810582 CUSTOM UNIT DESCRIPTION AND PHYSICAL PLANNING

The 2956 Model 8 Card Reader is a punched card input (manual) to the IBM 3270 information display system. This Manual describes the 2956 Model 8-its operation and physical planning. The reader should have a basic knowledge of punched cards and the IBM 3277 Display Station.

Manual, 8 pages
//14//2956/

GL24-3628

IBM 3203 BOOK BRAILLE PRINTING FEATURE RPQ S00293 DESCRIPTION AND OPERATOR'S GUIDE CUSTOM FEATURE

This publication contains the description and operating information for the interchangeable device (RPQ S00293) that converts an IBM 3203 Printer to braille printing. For the description and operation of the IBM 3203 Printer, refer to IBM 3203 Printer Component Description and Operator's Guide, Order No. GA33-1515.

Manual, 12 pages (5/75)
//14//3203/

GL24-3629

IBM 3203 PROGRAMMER BRAILLE PRINTING RPQ S00305 CUSTOM FEATURE DESCRIPTION AND OPERATOR'S GUIDE

This publication contains the description and operating information for the RPQ feature that converts an IBM 3203 Printer to braille printing using (through programming) the period on the standard train cartridge. For the description and operation of the IBM 3203 Printer, refer to IBM 3203 Printer Component Description and Operator's Guide, Order No. GA33-1515.

TSO COMMAND LANGUAGE FOR APPLICATION PROGRAMMERS - A PRIMER TERMINAL-ORIENTED SELF-STUDY TEXT
A subset of the TSO Command Language related to an applications programmer is presented in this text for use at a terminal by a student having a basic knowledge of FORTRAN, COBOL, or PL/1. The non-professional programmer (problem-solver) should use the ITP:PL/1, ITP:BASIC, or Code-and-Go FORTRAN texts. The teaching strategy is to guide the student through the entire task which he generally performs (create test data, write programs, compile and execute programs, and re-cycle as necessary). Provided for an application programmer who has used at least one programming language. He may or may not be familiar with the Operating System. Prerequisites:
1. A knowledge of how to use the type of terminal that will be used in conjunction with this text.
2. A general knowledge of the higher-level programming language which will be used (FORTRAN, COBOL, or PL/1).
3. Availability of a terminal on-line to a TSO system.
Terminal Oriented Self-study Text, 60 pages
NOT AVAILABLE UNDER SLSS

SR20-4194

TSO COMMAND LANGUAGE FOR ADMINISTRATIVE APPLICATIONS A PRIMER: TERMINAL-ORIENTED SELF-STUDY TEXT
The objective of this self-study modular terminal oriented text is to teach the student how to use the TSO Command Language, at an IBM 2741 terminal, for data entry and text editing.
The student is defined as a typist, secretary or card punch operator.
Upon completion of the text and having successfully performed the terminal exercises the student, depending upon the modules selected, should be able to use the TSO Command Language at a 2741 terminal to perform at least one or more of the following jobs:
o Enter, save, and list coded source program statements. Modify the program after it has been entered.
o Enter, save, and list data, (Names, Addresses, Part Numbers, etc.) Modify the data after it has been

entered.

- o Enter, save, and list text. Modify the text after it has been entered.
 - o Produce a formatted output of an unformatted text entry.
- Terminal Oriented Self-study Text, 170 pages
NOT AVAILABLE UNDER SLSS

GR20-4260

INTRODUCTION TO VIRTUAL STORAGE IN SYSTEM/370 STUDENT TEXT
This student text explains the concepts of dynamic relocation, dynamic address translation and virtual storage and it defines all related terminology. The student text describes a theoretical virtual storage system that is closely related to the implementation of OS/VS and DOS/VS, and it then describes how virtual storage is implemented in the OS/VS and DOS/VS systems on System/370.
Student text, 96 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SR20-4438

CMS FOR PROGRAMMERS -- A PRIMER: (VM/370) TERMINAL-ORIENTED SELF-STUDY TEXT
This terminal oriented self-study text is intended to be an introduction to CMS the Conversational Monitor System for the programmer who performs the function of coding, testing, debugging, and documenting applications for data processing. It is assumed that the individual using this text already has a knowledge of a programming language (Assembler, CECIL, FORTRAN, or PL/I), an operating familiarity with the terminal to be used, and a VM/370 system with the terminal attached.
The text is divided into 5 major areas:
Gaining Access to VM/370
Creating and Maintaining Data Files
Program Development and Execution
Program Debugging
Program Documentation
The sections on Program Development and Program Debugging are further divided according to the programming language selected.
Manual, 128 pages
NOT AVAILABLE UNDER SLSS

SR20-4460

IBM SYSTEM/370 OPERATOR'S REFERENCE GUIDE
This manual is intended for System 370 operators of all levels and models.
Topics include: problem determination chart, S/370 general information, CPU manual procedures for Models 115 to 195, operator commands (for OS/VS1 and VS2, DOS/VS and POWER, VM 370, RES, etc.), IPL procedures for DOS/VS and OS/VS1 and VS2, I/O devices information (status and sense bytes, restart procedures, operating hints), and utilities information. Also provided are a glossary, bibliography, and index.
Manual, 310 pages

SR20-4482

INTRODUCTION TO DATA COMMUNICATIONS NETWORK DESIGN, STUDENT TEXT
This self-study text deals with basic elements of data communication design. It is intended for use primarily by personnel desiring an introduction to network design, i.e., students in marketing training program, qualified marketing representatives, and systems engineers, who have not been trained in network design. The manual method of data communications network design is used with emphasis on line utilization rather than response time as the design criteria. It is expected that this text will provide students with a base for the standard and advanced course in network design and related subjects.

GR29-0280

COMPUTING SYSTEMS FUNDAMENTALS OVERVIEW
 Computing Systems Fundamentals: Overview was written for you if you will interface with or make use of data-processing facilities in your organization. It will give you a basic knowledge of computing systems. This short course takes less than four hours of study, and will provide a bases for interaction with a data-processing department.
 This book and COMPUTING SYSTEMS FUNDAMENTALS: TECHNIQUES constitute an introductory course for people who intend to become computer operators or programmers. The second book contains five additional, more detailed study units covering computing systems, programming languages, programming techniques, and numbering systems. It provides a firm foundation for future programming language courses.
 Although the course is illustrated with examples of IBM computer hardware, the content applies to all computing systems, regardless of the hardware manufacturer.
 Manual, 100 pages

GR29-0281

COMPUTING SYSTEMS FUNDAMENTALS TECHNIQUES
 This is the second in a two-book course that constitutes an introduction to computing concepts for prospective programmers and systems operators.
 You should complete the first book, COMPUTING SYSTEMS FUNDAMENTALS: OVERVIEW, before you begin this one. This first book presents a framework for understanding data processing and introduces key concepts. It can be used by itself as a short (four-hour) course for persons who do not intend to become programmers or operators but who need to interface with a data-processing department.
 The first book presents the conceptual forest. This one focuses on the trees; it develops the concepts presented in the OVERVIEW. When you have finished the two books, you will understand the most important techniques used in solving data-processing problems and will be able to describe how computers implement the solutions. You will know what goes on both inside and outside the computer as a program is processed. You will have the background to pursue as much additional information about any phase of data processing or computer operation as you need to

learn.

Before you begin Chapter 1, turn to the OVERVIEW book to review the Introduction and the instructions on how to answer the programmed instruction frames.

A programmed NOTEBOOK accompanies this text. Be sure you have it. By filing it in after you complete each chapter, you will provide yourself with a concise summary of this course.
 Manual, 40 pages

GR29-0296

IBM 3705 EMULATION - REFERENCE CARD
 This reference summary will be updated from time to time; however, the basic documentation is the authoritative source and will be the first to reflect changes. Information herein is extracted from the Guide to Using the IBM 3704 Communications Controller Control Panel (GA27-3086), Guide to Using the IBM 3705 Communications Controller Control Panel (GA27-3087), IEM 3704 and 3705 Communications Controller Principles of Operation (GC30-3004), and the IEM 3704 and 3705 Program Reference Handbook (GY30-3012).

- GX20-1711
IBM SYSTEM/360 RECORD LAYOUT WORKSHEET
Padded forms showing double word, word, halfword and byte boundaries. Bytes marked to accommodate packed-decimal digits. Provides for two records of 256 positions each, both in hexadecimal and decimal numbering.
Padded form, 11 x 6-1/2 inches, 50 sheets per pad
NOT AVAILABLE UNDER SLSS
- GX20-1751
IBM 2260 DISPLAY FORMAT
This coding sheet is used in designing displays for the 2260. The form provides space for a display to be transmitted from System/360 to a 2260, and expected operator response.
Padded Form, 25 sheets, 8 1/2" x 11"
NOT AVAILABLE UNDER SLSS
- GX20-1759
IBM 1287 OPTICAL READER DESIGN FORMATS
This sheet contains formats for laying out forms to be read by the 1287. The form includes standard mark-read column designs, hand-printed blocks from two to seven digits and optical reference marks.
Padded Form, 25 sheets, 8 1/2" x 11"
NOT AVAILABLE UNDER SLSS
- GX20-1761
MATHEMATICAL PROGRAMMING INPUT FORM
SYSTEM/360 - 1130
This is a Mathematical Programming Input Form 25 sheets to a pad, 8 1/2 x 11, 3 hole punch.
Padded Form, 25 sheets, 8 1/2" x 11"
NOT AVAILABLE UNDER SLSS
- GX20-1787
DEBUGGING AID
DIRECT EVALUATION OF FLOATING POINT NUMBERS IN HEXADECIMAL
The following tables can be used to evaluate a floating point number represented in hexadecimal form. The technique uses a table lookup in the hexadecimal integer table, and a table lookup in the hexadecimal fraction table. The user unites the integer from the first table with the fraction from the second table, to form one number, and then performs a calculation to obtain the value of the floating point number.

150/10/6 PRINT CHART
This 11" x 18" chart is printed in green ink and provides 150 printing positions (at 10 positions per inch horizontally) for a printer carriage space-setting of 6 lines per inch. This form replaces GX20-1776 which allowed for a printing span of 144 characters. Printer charts requiring 150-character spans (3211 with 18 additional print position feature) may be prepared using this chart. This chart may be reproduced using most standard office copying machines. The grid and other preprinted information may be "dropped-out" using a green filter.
Padded Form, 11 x 18, 25 sheets

IBM 3270 INFORMATION DISPLAY SYSTEM REFERENCE SUMMARY
This publication is intended for use by application programmers. The booklet, consisting of tables of EBCDIC and ASCII codes and related graphics for basic data, control functions, addressing, etc., will be updated from time to time to reflect system changes. The reader is cautioned, however, that the authoritative source of information for this booklet is the IBM 3270 Information Display System Description (GA27-2749), which will be first to reflect changes.

VM/370 QUICK GUIDE FOR USERS REFERENCE SUMMARY
This publication describes the essential VM/370 operations for the new user. It also provides a brief description of

all VM/370 commands for the experienced user. Only a limited amount of prior VM/370 knowledge is assumed for the section on VM/370 operations. See the "Preface" for prerequisite publications. The user of the command descriptions section should have a thorough understanding of VM/370 command syntax and usage.
Summary booklet, 200 pages

3277 TEXT KEYBOARD FORM FOR PROGRAM-ASSIGNABLE CHARACTERS
This handy reference form, which fits on the cover of the IBM 3277 Model 2 text keyboard, provides a means for the operator to record code/key character assignments. The 3277-2 text keyboard may be programmed so that an operator can enter repetitive data, text, controls, commands, etc., with a single keystroke in CODE shift. The ATMS-II program product, for example, permits an operator to assign up to 217 characters for each of 28 keys.
A two or three word summary of an assignment can be written in on the key on the front of the form, and the key strokes to be entered can be written or typed on the reverse side.

When unfolded, the form is legal size and can be duplicated on a copying machine.

QUERY BY EXAMPLE: IUP 5796-PKT, REFERENCE SUMMARY CARD
Query-by-Example is a powerful and flexible language which can be used to manipulate tabular information; that is, information arranged by rows and columns. Query-by-Example

lets you look at, update, create, add to, and delete from this data in a convenient and simple manner. For example, you might want to obtain the names of all employees who work second shift in the Chicago area. To obtain a list of these names, you fill in a blank table by typing in the required information, thus asking Query-by-Example to get the list for you. The list of names appears in front of you on a display screen. You can then either act on this information by updating the data or make a new request.

This manual is intended for a wide range of users, from people with little or no computer experience to those who know computers well and use them professionally. Therefore, the manual is organized into three general areas: introduction, language examples, and reference material. The first two sections contain introductory information; they tell you about computers and teach you how to use Query-by-Example. The next four sections show you how to use all of the facilities of the Query-by-Example language to retrieve, update, insert, and delete data from tables, as well as how to create tables of your own, authorize others to use your tables, store queries for later use, and manipulate your output. The last section contains reference material to be used after you have learned the language. Appendices contain additional reference material.

GX22-7005

IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MODEL 145

Equipment template on 8-1/2 x 11 inch acetate sheet, 2 pages for planning machine room layout. Scale: 1/4 inch equals 1

foot. Includes 3145 Processing Unit Models GE, GFD, H, HG, I, H2, HG2, I2, IH2 and J2. Also includes 3046 Power Unit Model 1, 3047 Power Unit Model 1, 3210 Console Printer-Keyboard Model 2, and 3345 Storage and Control from Models 1 to 5.

Template, 2 pages
3145//15//

GX22-7006

IBM PHYSICAL PLANNING TEMPLATE SYSTEM/370 MODEL 155
Equipment templates on 8-1/2 x 11 inch acetate sheets, 2 pages, for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes one 3155 composite of Models H-J, one 3155 composite of Models JI and K, and one 3210-2. Positioning is also shown for 3210-1 and 3215.
Acetate Template, 2 pages
3155//15//

GX22-7007

IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MODEL 165
Equipment templates on 8-1/2 x 11 inch acetate sheets, three pages, for planning machine room layouts. Scale: 1/4 inch equals one foot. Includes one composite 3165 Models I and J with 3360's, one composite 3165 Models JI and K with 3360's, one composite 3165 Model KJ with 3360's, one 3066-1, and one 3067.
8-1/2 x 11 inch acetate templates, three pages
3165//15//

GX22-7008

IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MODEL 135
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page, for planning machine room layouts. Scale: 1/4 inch equals one foot. Includes one 3135 with five attached disk storage drives and one 3046-1.
Acetate template, 8-1/2 x 11 inches, 1 page
3135//15//

GX22-7021

IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MODEL 125
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes configurations of 3125 with 5425 and 3203 and 3125 with 3203.
8-1/2 x 11 inch acetate template
3125//15//

GX22-7022

SYSTEM/370 MODEL 168 PHYSICAL PLANNING TEMPLATE
IBM System/370 Model 168, Model 168 Multiprocessing, and Model 168 Attached Processor equipment template on 8-1/2 x 11 inch acetate sheets, for planning machine room layout. Scale: 1/4 inch equals 1 foot. Includes 3168 Processing Unit, 3168-3 Processing Unit, 3062 Attached Processing Unit Model 1, 3066 System Console Models 2 and 3, 3067 Power and Coolant Distribution Unit Models 2 and 3 (SN below 61000), 3067 Power and Coolant Distribution Unit Models 2, 3, and 5 (SN above 61000), and 3068 Multisystem Communication Unit Model 1.
Acetate Template, 5 pages, 7/76
3168//15//

GX22-7023

IBM S/370 MODEL 158 AND MODEL 158 ATTACHED PROCESSOR, MULTIPROCESSING PHYS PLANNING TEMPLATE
Equipment templates on 8-1/2 x 11 inch acetate sheet for planning machine room layout. Scale: 1/4 inch equals 1 foot. Includes 3158 Processing Unit, 3158-3 Processing Unit, 3056 Remote System Console, and 3213 Printer.
8 1/2 x 11 inch acetate templates, 3 pages, 11/76
3158//15//

GX22-7024

3033 PROCESSOR PHYSICAL PLANNING TEMPLATE
IBM Physical Planning Template: IBM 3033 Processor Complex consisting of a 3033 Processor, 3036 Console Model 1, and 3037 Power and Coolant Distribution Unit Model 1.
Equipment Template for planning machine room layouts. Scale: 1/4 equals 1 foot.
Acetate template, 8 1/2 x 11 inches, 2 pgs, 4/77
3033//15//

GX22-7025

3032 PROCESSOR COMPLEX TEMPLATE INCLUDES 3027 POWER AND COOLANT DISTRIBUTION UNIT AND 3036 CONSOLE
IBM Physical Planning Template: IBM 3032 Processor Complex including IBM 3036 Console Model 1 and IBM 3027 Power and Coolant Distribution Unit Model 1.
For planning machine room layouts. Scale 1/4 inch equals 1 foot.
Acetate Template, 8 1/2 x 11 inches, 2 pgs 10/77
3032//15//

GX22-7026

3031 PROCESSOR COMPLEX TEMPLATE INCLUDES 3017 POWER UNIT MODEL 1 AND 3036 CONSOLE MODEL 1
IBM Physical Planning Template: IBM 3031 Processor Complex

including IBM 3036 Console Model 1 and IEM 3017 Power Unit Model 1.

For planning machine room layouts. Scale 1/4 inch equals 1 foot.

Acetate Template, 8 1/2 x 11 inches, 2 pgs 10/77
3031//15//

GX22-7028

IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MODEL 115
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layout. Scale: 1/4 inch equals 1 foot. Includes Model 115, 3115 Processing Unit.
Acetate template, 1 page
3115//15//

GX22-7029

3340 DISK STORAGE MODELS A2, B1 AND B2 AND 3344 DIRECT ACCESS STORAGE MODELS B2 AND B2F FOR SYSTEM/370 - PHYSICAL PLANNING TEMPLATE
Equipment Template on 8-1/2 x 11 inch acetate sheet, for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 3340 Disk Storage Models A2, B1, and B2 and 3344 Direct Access Storage Models B2 and B2F.
Acetate template, 1 page, 7/76
//15//3344,3340/

GX22-7030

3420 MAGNETIC TAPE UNIT MODELS 3 TO 8 & 3803 TAPE CONTROL MODELS 1-3 FOR SYSTEM/370: PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 3420 Magnetic Tape Unit Models 3 to 8 and 3803 Tape Control Models 1 - 3 for System/370.
Acetate template, 1 page, 7/76
//15//3420,3803/

GX22-7031

3890 DOCUMENT PROCESSOR: PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet (2 pages) for planning machine room layouts. Scale: 1/4 inch equals one foot
Includes: Models A1-A6 and B1-B6
Microfilm Frame
8-1/2 x 11 inch acetate template, 2 pages
//15//3890/

GX22-7032

3704 COMMUNICATIONS CONTROLLER FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layout. Sale: 1/4 inch equals 1 foot. Includes 3704 Communications Controller Model 1.
Acetate template, 1 page
//15//3704/

GX22-7035

3410 MAGNETIC TAPE UNIT MODELS 1 TO 3 AND 3411 MAGNETIC TAPE UNIT AND CONTROL MODELS 1 TO 3 FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 3410 Magnetic Tape Unit Models 1, 2, and 3, and 3411 Magnetic Tape Unit and Control Models 1, 2, and 3.
Acetate template, 1 page
//15//3410,3411/

GX22-7037

2401 MAGNETIC TAPE UNIT MODELS 1 TO 6 AND 8, FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2401 Magnetic Tape Unit Models 1 to 6 and 8.
Acetate template, 1 page
//15//2401/

GX22-7038

2415 MAGNETIC TAPE UNIT AND CONTROL MODELS 1 TO 6, FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2415 Magnetic Tape Unit and Control Models 1 to 6.
Acetate template, 1 page
//15//2415/

GX22-7039

2420 MAGNETIC TAPE UNIT MODELS 5 AND 7, FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2420 Magnetic Tape Unit Models 5 and 7.
Acetate template, 1 page
//15//2420/

- GX22-7041
2495 TAPE CARTRIDGE READER MODEL 1, FOR SYSTEM/370:
IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2495 Tape Cartridge Reader Model 1. Acetate template, 1 page
//15//2495/
- GX22-7042
2803 TAPE CONTROL MODELS 1 TO 3, FOR SYSTEM/370:
IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2803 Tape Control Models 1 to 3. Acetate template, 1 page
//15//2803/
- GX22-7043
2804 TAPE CONTROL MODELS 1 TO 3, FOR SYSTEM/370:
IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2804 Tape Control Models 1 to 3. Acetate template, 1 page
//15//2804/
- GX22-7044
2816 SWITCHING UNIT MODEL 1, FOR SYSTEM/370:
IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 2816 Switching Unit Model 1. Acetate template, 1 page
//15//2816/
- GX22-7045
3540 DISKETTE INPUT/OUTPUT UNIT MODELS B1 AND B2 FOR SYSTEM/370: IBM PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, 1 page for planning machine room layout. Scale: 1/4 inch equals 1 foot. Includes 3540 Models B1 and B2. Template, 1 page
//15//3540/
- GX22-7047
IBM PHYSICAL PLANNING TEMPLATE: 3330 DISK STORAGE MODELS 1, 2, AND 11; 3333 DISK STORAGE & CONTROL MODELS 1 AND 11 FOR S/370; 3830 STORAGE CONTROL MODELS 1, 2 AND 3 FOR S/370
Equipment template for planning machine room layouts. Scale: 1/4 inch equals 1 foot.
Includes: 3330 Models 1, 2 and 11
3333 Models 1 and 11 for 370
3830 Models 1, 2 and 3 for 370
Acetate template, 8-1/2 x 11 inches, 3 pages, 8/76
//15//3330,3333,3830/
- GX22-7051
3705 COMMUNICATIONS CONTROLLER FOR SYSTEM/370:
PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 by 11 inch acetate sheet for planning machine layouts. Scale: 1/4 inch equals one foot; includes 3705 Communications Controller and 3705 Expansion Module.
8-1/2 x 11 inch acetate template, 1 page
//15//3705/
- GX22-7052
IBM PHYSICAL PLANNING TEMPLATE FOR 3881 OPTICAL MARK READER MODELS 1 TO 3 AND 3886 OPTICAL CHARACTER READER MODELS 1 AND 2
Equipment template on 8-1/2 x 11 inch acetate page for planning machine room layouts.
Scale: 1/4 inch equals one foot.
Includes: 3881 Models 1 to 3
3886 Models 1 and 2
Acetate Template, 1 page
//15//3881,3886/
- GX22-7053
IBM 3851 MASS STORAGE FACILITY PHYSICAL PLANNING TEMPLATES
Equipment template for planning machine room layouts. Scale: 1/4 inch equals one foot
Includes: 3851 Models A1 to A4 and B1 to B4.
Acetate Template/ 1 page
//15//3850,3851/
- GX22-7054
3800 PRINTING SUBSYSTEM FOR SYSTEM/370: PHYSICAL PLANNING TEMPLATE
IBM Physical Planning Template: 3800 Printing Subsystem for System/370
Equipment template on 8 1/2 x 11 inch acetate sheet, for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 3800 Printing Subsystem with and without Burster-Trimmed-Stacker for System/370.
8 1/2 x 11 inch Acetate template, 7/76
//15//3800/
- GX22-7057
3350 DIRECT ACCESS STORAGE MODELS A2, A2F, E2, B2F, C2, AND C2F PHYSICAL PLANNING TEMPLATE
Equipment template on 8-1/2 x 11 inch acetate sheet, for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes 3350 Direct Access Storage Models A2, A2F, B2, B2F, C2, and C2F for System/370.
Acetate template, 1 page, 7/76
//15//3350/
- GX22-7058
IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MCDL 138
Template for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes IBM 3138 Processing Unit, IBM 3046 Power Unit Model 1, and IBM 3203 Printer Model 4.
8-1/2 x 11 inch Acetate Template, 10/76
3138//15//
- GX22-7059
IBM PHYSICAL PLANNING TEMPLATE: SYSTEM/370 MCDL 148
Template for planning machine room layouts. Scale: 1/4 inch equals 1 foot. Includes IBM 3148 Processing Unit, IBM 3047 Power Unit Model 1, and IBM 3203 Printer Model 4.
8-1/2 x 11 inch Acetate Template, 10/76
3148//15//
- GX22-7061
3031 ATTACHED PROCESSOR COMPLEX WITH 3041 ATTACHED PROCESSING UNIT - PHYSICAL PLANNING TEMPLATE: INCLUDES 3017 PRINTER MODEL 1 AND 3036 CONSOLE MODEL 1 - PHYSICAL PLANNING TEMPLATE
IBM Physical Planning Template: 3031 Attached Processor Complex with 3041 Attached Processing Unit, 3017 Printer Model 1 and 3036 Console Model 1.
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot.
Acetate Template, 8 1/2 x 11 inches, 9/78
3041//15//
- GX22-7062
3033 MULTIPROCESSOR COMPLEX TEMPLATE: INCL 3036, 3037, 3038
IBM Physical Planning Template: 3033 Multiprocessor Complex including 3036 Console Model 1, 3037 Power and coolant Distribution Unit Model 1 and 3038 Multiprocessor Communication Unit Model 1.
Equipment template for planning machine room layouts. Scale 1/4 inch equals 1 foot.
3 Acetate Templates, 8 1/2 x 11 inches, 5/78
//15//3033/
- GX22-7063
IBM 3895 DOCUMENT READER/INSCRIBER
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot.
Acetate Template, 8 1/2 x 11 inches, 1 pg, 8/78
//15//3895/
- GX22-7064
IBM 3896 TAPE-DOCUMENT CONVERTER
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot.
Acetate Template, 8 1/2 x 11 inches, 1 pg, 8/78
//15//3896/
- GX22-7065
IBM 3287 PRINTER MODELS 1 AND 2 PHYSICAL PLANNING TEMPLATE
IBM Physical Planning Template: 3287 Printer Models 1 and 2.
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot.
Acetate Template, 8 1/2 x 11 inches, 9/78
//15//3287/
- GX22-7066
IBM 3287 PRINTER MODELS 1 AND 2 PHYSICAL PLANNING TEMPLATE
IBM Physical Planning Template: 3287 Printer Models 1 and 2.
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 20 millimeters equals 1 meter.
Acetate Template, 8 1/2 x 11 inches, 9/78
//15//3287/
- GX22-7067
IBM 3250 GRAPHICS DISPLAY SYSTEM PHYSICAL PLANNING TEMPLATE (SCALE 1:48)
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts.
Scale: 1/4 inch equals one foot (1:48). Includes a full configuration of:
3258 control Unit
3255 Display Controls
3251 Display Stations
Plastic template, 8 1/2 x 11 inches, 1 pg, 7/78

//15//3250,3258/

GX22-7068

IBM 3250 GRAPHICS DISPLAY SYSTEM PHYSICAL PLANNING TEMPLATE (SCALE 1:50)
Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts.

Scale: 20 mm equals one meter (1:50). Includes a full configuration of:

3258 Control Unit
3255 Display Controls
3251 Display Stations

Plastic Template, 8 1/2 x 11 inches, 1 pg, 7/78
//15//3250,3258/

GX22-7069

IBM 3203 PRINTER MODEL 5

Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot.

Acetate Template, 8 1/2 x 11 inches, 1 pg, 8/78
4331,4341//15//3203/

GX22-7070

IBM 3203 PRINTER MODEL 5

Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 20 mm = 1m.

Acetate Template, 8 1/2 x 11 inches, 1 pg, 8/78
4331,4341//15//3203/

GX22-7073

PHYSICAL PLANNING TEMPLATE FOR 8809 MODELS1A, 2 AND 3 (1/4 INCHES = 1 FOOT SCALE)

Physical planning template for 8809 magnetic tape unit models 1A, 2 and 3 for 8100 System, and 4300 Processors (U.S. and Canada scale).

Template
//15//8809/

GX22-7074

PHYSICAL PLANNING TEMPLATE FOR 8809 MODELS 1A, 2 AND 3 (10 mm = 0.5 m)

Physical planning template for 8809 magnetic tape unit models 1A, 2 and 3 for 8100 System and 4331 processor (metric scale).

Acetate template, 8 1/2 x 11 inches, 1/79
//15//8809/

GX22-7075

3033 ATTACHED PROCESSOR COMPLEX PHYSICAL PLANNING TEMPLATE

This is an equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Scale: 1/4 inch equals 1 foot. It covers physical planning for the 3033 Attached Processor Complex, including 3042 Attached Processor Model 1, 3036 Console Model 1, and 3037 Power and Coolant Distribution Unit Model 1.

Template, 8 1/2 x 11 inches, 2/79
3033//15///

GX22-7076

PHYSICAL PLANNING TEMPLATE FOR 3880 STORAGE CONTROL (10 mm = 0.5 m)

4300 Processors: physical planning template for 3880 Storage Control (metric scale).

Acetate template, 8 1/2 x 11 inches
//15//3880/

GX22-7077

PHYSICAL PLANNING TEMPLATE FOR 3880 STORAGE CONTROL(1/4 INCH = 1 FOOT)

4300 Processors: Physical planning template for 3880 Storage Control (1/3 in. = 1 ft scale).

Acetate template, 8 1/2 x 11 inches, 1/79
//15//3880/

GX22-7078

PHYSICAL PLANNING TEMPLATE FOR 3370 MODELS A1 AND B1 (10 mm = 0.5 m)

Physical planning template for 3370 Direct Access Storage, Models A1 and B1 (metric scale). For use with IBM 4300 Processors, 4341 and 4331.

Acetate template, 8 1/2 x 11 inches, 1/79
4331,4341//15//3370/

GX22-7079

PHYSICAL PLANNING TEMPLATE FOR 3370 MODELS A1 AND B1 (1/4 INCH = 1 FOOT)

Physical planning template for 3370 Direct Access Storage Models A1 and B1 (U.S. and Canada scale) for use with IBM 4300 Processors: 4341 and 4331.

Acetate template, 8 1/2 x 11 inches
4331,4341//15//3370/

GX22-7080

PHYSICAL PLANNING TEMPLATE FOR 3310 MODELS A1/A2 AND B1/B2

Physical Planning template for 3310 Direct Access Storage Models A1/A2 and B1/B2 for use with 4331 Processor (metric scale)

Acetate template 8 1/2 x 11 inches, 1 page, 1/79
//15//3310/

GX22-7081

PHYSICAL PLANNING TEMPLATE FOR 8860 MODELS A1, A2,B1, B2 (1/4 INCH = 1 FOOT)

Physical Planning template for 3310 Direct Access Storage Models A1/A2 and B1/B2 for use with 4331 Processor (U.S. and Canada scale).

Acetate template, 8 1/2 x 11 inches, 1/79
//15//3310/

GX22-7082

3262 PRINTER MODEL 1 PHYSICAL PLANNING TEMPLATE: FOR SYSTEM/370 AND 4300 PROCESSORS

IBM Physical Planning Template: 3262 Printer Model 1.

Equipment template on 8 1/2 x 11 inch acetate sheet for planning machine room layouts. Metric scale: 10 mm = 0.5 m.

Acetate template, 8 1/2 x 11 inches, 3/79

OS/VS1 TRACE TABLE OVERLAY
 This is a clear plastic overlay to be used over VS1 Trace Table printouts when reading dumps. It is a debugging aid. It can be used only with dumps printed under OS/VS1 Releases 1 through 3.1. When placed over the printout, it delimits each of the entries in the trace table and eliminates the need for the user to physically mark, on the dump, the start (or end) of each trace table entry.
 Plastic overlay, 1 page

DE/DC DATA DICTIONARY FIELD DEFINITION FORM,PROG PRODS 5740-XXF, 5746-XXC

This coding form, for use with the batch input facility of the DE/DC Data Dictionary program product, provides the means for bulk entry of data relevant to the definition of fields (and segments). This form is used to collect data to add new field definitions to the data dictionary or to add data to an existing definition. Several types of records can be coded.

Instructions for using this form are in DE/DC Data Dictionary User's Guide (SH20-9083).

Pad of 25 forms, 11 x 17 inches, 25 pgs, 8/77

GX26-3717

DE/DC DATA DICTIONARY SEGMENT DEFINITION FORM,PROG PROD 5740-XXF, 5746-XXC

For use with the batch forms input facility of the DE/DC Data Dictionary program product, this coding form provides the means for bulk entry of data relevant to the definition of a segment. The form is used to collect data to add a new segment definition to the dictionary or to add data to an existing definition. Several types of records can be coded.

Instructions for using this form are in DE/DC Data Dictionary User's Guide (SH20-9083).

Pad of 25 forms, 11 x 17 inches, 25 pgs, 8/77

GX26-3718

DE/DC DATA DICTIONARY TEXT DATA FORM,PROG PROD 5740-XXF, 5746-XXC

For use with the batch forms input facility of the DE/DC Data Dictionary program product, this coding form provides the means for bulk entry of text data (description, user data, and PL/I data). This form is used to collect data that is to be added to a specific subject definition. Three types of records can be coded: header records, input text records, and end records.

Instructions for using this form are in DE/DC Data Dictionary User's Guide (SH20-9083).

Padded form, 11 x 17 inches, 25 pgs, 8/77

IBM ACF/VTAM SNA PROBLEM DETERMINATION HANDBOOK
This handbook describes a general approach to help isolating SNA network problems to a component (ACF/VTAM, NCP, IMS, CICS, JES2, TSO/VTAM, VSPC, and SSS). Twelve network problems and the tools needed to detect these problems are presented. Each problem type discussion describes what should happen, asks questions to determine what did happen, and compares the traces and dumps used to determine where the problem occurred.
Manual, 8 1/2 x 3 3/4 inches, 100 pages, 4/78

GX28-0647

OS/VS2 TSO COMMAND LANGUAGE REFERENCE SUMMARY
This booklet is intended for reference use at a terminal. It outlines the syntax of TSO commands and is based on OS/VS2 TSO Command Language Reference, GC28-0646. The booklet applies to OS/VS2 Release 3.7 and subsequent releases until otherwise indicated, and contains information that applies to the following selectable units:

TSO/VTAM Level 1 (VS2.03.813)
System Security Support (5752-832)
TSO/VTAM Level 2 (5752-858)

Since the command descriptions are brief and only the syntax is presented, the user should have an understanding of the TSO commands and of using a terminal.
Booklet, 3 1/2 x 8 1/2 inches, 100 pages, 5/78
//39//5752

GX28-0684

OS AND OS/VS SMP REFERENCE SUMMARY

This reference card provides information about the System Modification Program (SMP). This information is intended for use by IEM personnel and system programmers responsible for changing and redesigning the installation's operating system.
This card contains formats and descriptions of the SMP control statements, the update control language (UCL) statements, and the modification format control statements. It also has an SMP data set requirements chart plus sample JCL statements for the SMP data sets.

IBM FORTRAN IV REFERENCE CARD

This reference card contains FORTRAN IV information for IBM 1130 System and IBM 1800 System (1130/1800), IBM System/3, IBM System/360 Disk Operating System (DOS), IBM System/360 Operating System (G, H, G1, H Extended, and Code and Go), IBM System/360 Time Sharing System (TSS/360), IBM Call/360-CS (CALL/360), American National Standard FORTRAN, X3.9-1966, and American National Standard Basic FORTRAN, X3.10-1966. This card is intended to be used as a secondary reference. The basic program documentation is the authoritative source and will be the first to reflect any changes and improvements to the FORTRAN IV language.
Fanfold Card, 8 panels, 3-3/4 x 8-1/2 folded size

SX28-6385

VS BASIC (TSO) REFERENCE SUMMARY, PROG PRCD 5748-XX1

This is a digest of the VS BASIC language and the requirements for its use under the TSO system. It assumes the reader is familiar with the language and system details described in VS BASIC Language, Order No. GC28-8303, and Basic TSO Terminal User's Guide, Order No. SC28-8304, respectively.
Reference Summary, 16 panels
/////5748-XX1

SX28-6386

VS BASIC (CMS) REFERENCE SUMMARY, PROG PRCD 5748-XX1

This is a digest of the VS BASIC language and the requirements for its use under the CMS component of the VM/370. It assumes the reader is familiar with the language and system details described in VS BASIC language, Order No. GC28-8303, and BASIC CMS Terminal User's Guide, Order No. SC28-8306, respectively.
Reference Summary, 16 panels
/////5748-XX1

GX28-6400

IBM TIME SHARING SYSTEM -- QUICK GUIDE FOR USERS

This booklet is a small, hand-held type, quick reference manual on TSS. It provides information on terminals, commands, FORTRAN, and Assembler.
Booklet (3 1/2 X 8 1/2), 112 pages
//40/TSS//

GX28-6506

IBM SYSTEM/360 BASIC ASSEMBLER SHORT CODING FORM

This form is designed to assist programmers in coding programs in the IBM System/360 special support basic assembler language, as described in (GC28-6503)
Padded Form, 25 to a Pad, 8-1/2 x 11
NOT AVAILABLE UNDER SLSS

GX28-6507

IBM SYSTEM/360 BASIC ASSEMBLER LONG CODING FORM

This form is designed to assist programmers in coding programs in the IBM System/360 special support basic assembler language, as described in (GC28-6503)
Padded Forms, 25 to a Pad
NOT AVAILABLE UNDER SLSS

GX28-6509

IBM SYSTEM/360 ASSEMBLER CODING FORM

Coding form for entry of source data to be keypunched for Assembler programs. May be used for PL/I or other languages
Padded Form, 25 sheets, 8 1/2 x 14, one side
NOT AVAILABLE UNDER SLSS

SX28-6813

IBM SYSTEM/360 OS/DOS ITF: FLI REFERENCE CARDPROGRAM NUMBERS 5734-RC1, 5736-RC1

A 12-page folder containing the keys to symbols in formats, system information and ITF:PL/I Language.
Program Product Reference Card

LYBO-8043

VS PERSONAL COMPUTING OS/VS1, LISTINGS, PROG PROD 5740-XR5
 Contains SCP program listings for OS/VS1 and/or OS/VS2 as specified in the title.
 Microfiche (updated by 140 cards TNL 6/78) 4/76
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8044

VSPC FORTRAN PROGRAM LISTINGS, PROG PROD 5748-FO2
 Microfiche listings for Program Product in title. Available to each licensee under the licensing agreement from IBM Program Control Center. Available to IBM personnel from IEM Distribution Center.
 Microfiche
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8045

VS PERSONAL COMPUTING OS/VS2 PROG 5740-XR6
 Microfiche listings for subject Program Product
 Microfiche, with TNL LNB6-9962, 359 cards, 6/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8046

DOS/VS VS PERSONAL COMPUTING (VSPC) PROG PROD 5746-XR3, ICR LISTINGS
 Contains SCP program listings for DOS/VS as specified in the title.
 Microfiche, with TNL LNB6-9961, 405 cards, 6/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8048

DOS/VS VSPC CROSS REFERENCE AND DATA AREAS PROG PROD 5746-XR3
 Microfiche contains three cross-reference reports:
 Symbol where used
 Macro where used
 Macro what used
 and data area descriptions.
 Microfiche, 10/76
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8061

OS/VS2 MVS SEQUENTIAL ACCESS METHOD-EXTENDED (SAM-E): DATA AREAS MICROFICHE LISTINGS
 This microfiche lists and describes control blocks in Sequential Access Method-Extended (SAM-E). The information provided about each control block, in addition to its name, includes the following about each of its fields:

- field name
- its offset
- its length
- field description

Control blocks are presented in alphameric order of their common name acronyms.
 Microfiche, 1 card, 1/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYBO-8062

OS/VS2 MVS SEQUENTIAL ACCESS METHOD-EXTENDED (SAM-E): SYMBOLIC NAME CROSS REFERENCE TABLE
 This microfiche contains a table which lists each symbolic name that is accessed by more than one module. For each symbolic name, the modules that access it, and the kind of access, are listed. Symbolic names are listed in alphameric order.
 In addition, the publication contains another table which lists each macro that is used by more than one module. For each macro, the names of the modules using it are listed. Macros are listed in alphameric order.
 Microfiche, 3 cards, 1/78
 SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SYBO-8090

OS/VS2 RELEASE 3 INDEPENDENT COMPONENT: JES3 ASSEMBLY LISTINGS AND CROSS REFERENCE TABLE 5752-SC1-BA
 JES3 assembly listings and cross-reference table are provided primarily to aid the IBM Field Engineering program support representative in diagnosing and correcting program errors.
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY

GYBO-8501

MICROFICHE FOR IBM SYSTEM/370 DISTRIBUTED SYSTEM - PROGRAM NUMBER 360A-TX-032
 Program assembly listings for all source modules excluding macros.
 Microfiche

OS/VS2 MVS PROGRAMMED CRYPTOGRAPHIC FACILITY DIRECTORY, LIC PROG 5740-XY5
This publication contains directory reference information about the contents and organization of the program product 5740-XY5. A directory shows the relationship between load module names, CSECT names or reference names, entry point names and alias names. This publication is intended primarily for IBM Programming Support Representatives for use in installing and debugging this program product. The user of this product should have a working knowledge of OS/VS2 functions and logic.
Microfiche reduced 45x, 1 card
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYC0-9004

VM/370 BSEPP LISTINGS, LIC PROG 5748-XX8
Microfiche listings for System/370 VM/370 Basic System Extensions Program Product (BSEPP).
Microfiche (with TNL LNB5-0371), 5/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYC0-9005

BSEPP REL 2.0 VM/370 BASIC SYSTEM EXTENSICNS, LIC PROG 5748-XX8, MICROFICHE LISTINGS
Microfiche for all purchasers of this product.
Microfiche reduced 45x, 97 cards
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYC0-9008

DMS/CMS, LIC PROG 5748-XXE, MICROFICHE LISTINGS

1401/1440/1460 EMULATOR 5745-SC-EML (G09) MICROFICHE LISTINGS
The IBM Systems 1401/1440/1460 Emulator Program - hereafter referred to as the 1400 Emulator - allows the execution of 1400 programs on IBM 4331 machines equipped with the 1400 Compatibility Feature and on IBM 4341 with the 1400 Simulator generated as part of the 1400 Emulator. The simulation of disk I/O on FBM (Fixed Block Mode) devices is provided. The 1400 Emulator runs as a problem program under control of the DOS Releases 26 and 27 or all DCS/VS Releases up to Release 34 and DOS/VSE with VSE/Advanced Functions. As a problem program it is possible to integrate the 1400 Emulator into a DOS, DOS/VS or DOS/VSE system and to take advantage of the capabilities of such a system.
Several 1400 Emulators, up to the number of partitions available, can run concurrently.
Microfiche, 6 cards

VSE/ADVANCED FUNCTIONS REL 1.0 MICROFICHE LISTINGS
This document contains assembler listings for all VSE/Advanced Function Modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
Microfiche, 31 cards
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SYC7-0452

DOS/VS OLTEP (CARDLESS)
INDEPENDENT COMPONENT RELEASE 33.0
This document contains assembler listings for DOS/VS OLTEP (Cardless) Independent Component Release 33.0. "Cardless" refers to a computer system which has no card reader or card punch equipment configured; but does have a 3540 Diskette I/O unit in lieu of card equipment. Two manuals support DOS/VS OLTEP "Cardless" R 33.0: GC33-5383-2, DOS/VS OLTEP; SY33-8568-1, DOS/VS OLTEP Logic. DOS/VS OLTEP (Cardless) R33.0 is intended for use by IBM Customer Engineers; however, the customer can use it to help isolate system failures or to periodically check I/O devices.
Microfiche

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYC7-0465

VSE/ACCESS CONTROL - LOGGING & REPORTING LIC PROG 5746-XE7, MICROFICHE LISTINGS
This document contains Assembler listings for all VSE/Access Control Modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
Microfiche 3 cards
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LYC7-0454

ADVANCED FUNCTIONS - DOS/VS DISPLAY OPERATOR CONSOLE 5746-E2-DOC
Microfiche Assembly Listings for all Advanced Functions - DOS/VS DOC Modules

LYC7-0901

DOS 01-0 SORT/MERGE LISTINGS - PROGRAM PRODUCT 5743-SM1
The microfiche cards contain program listings of all the modules of DOS Sort/Merge, 5734-SM1. The program itself includes all functions, facilities and options of the 5736-SM1 Program Product and The Type 1 360N-SM-483 Sort/Merge program such as ASCII support and support of the COBOL Sort Verb besides the following: (a) support of the 3330 DASD and the 3400-series tape devices for input, output and work data sets, (b) reduction in main storage requirements from 22K to 10K when sorting on 2314/2319 DASD. Allow sorting in 10K for all DASD and DASD supported (c). Increased security through an option to erase work data sets (except 2400-series tape devices (d) a facility to specify and programmer logical unit number for input, output, and work data sets.
Microfiche

DISK OPERATING SYSTEM/VIRTUAL STORAGE MAGNETIC TAPE IOCS LISTINGS - COMPONENT NUMBER 5745-SC-TAP

Microfiche assembly listings of DOS/VS Magnetic Tape IOCS.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1961

DISK OPERATING SYSTEM/VIRTUAL STORAGE TAPE ERP LISTINGS COMPONENT NUMBER 5745-SC-TPE

Microfiche assembly listings of DOS/VS Tape ERP.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1962

DISK OPERATING SYSTEM/VIRTUAL STORAGE SYSTEM UTILITY PROGRAMS LISTINGS - COMPONENT NUMBER 5745-SC-UTIL

Microfiche assembly listings of DOS/VS System Utility Programs.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1963

DISK OPERATING SYSTEM/VIRTUAL STORAGE VSAM LISTINGS COMPONENT NUMBER 5745-SC-VSM

Microfiche assembly listings of DOS/VS VSAM.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1964

DOS/VS: DCS DISTRIBUTION PROGRAM LISTINGS (5745-SC-DIS)

Microfiche assembly listings of DOS/VS DCS Distribution Program.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1966

DISK OPERATING SYSTEM/VIRTUAL STORAGE DISKETTE IOCS 5745-SC-DIC

Microfiche assembly listings of DOS/VS Diskette IOCS.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

SYC7-1968

DISK OPERATING SYSTEM/VIRTUAL STORAGE VTAM 5745-SC-VIM

Microfiche Assembly Listings of DOS/VS VTAM Routines,

5745-SC-VTM.

Microfiche

SLSS - ORDER NO. SUBSCRIPTION ONLY

- SYC7-1969
DOS/VSE TOLTEP LISTINGS - COMPONENT NO. 5745-SC-TLT
 Microfiche assembly listings of DOS/VSE TOLTEP Routines, 5745-SC-TLT.
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1970
DOS/VSE SUBSYSTEM SUPPORT SERVICES - 5745-SC-SSS, LISTINGS
 Microfiche assembly listings of DOS/VSE Subsystem Support Services.
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1971
DISK OPERATING SYSTEM/VIRTUAL STORAGE 3600 FINANCE COMMUNICATION SYSTEM - 5745-SC-124, LISTINGS
 Microfiche assembly listings of DOS/VSE 3600 Finance Communication System, 5745-SC-124.
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1972
VTAM & 3600 SYSTEM INDEX
 Microfiche Assembly - Listings Index to be used to locate individual modules and macros in the following components: 5745-SC-VTAM, 5745-SC-TLT, 5745-SC-SSS, 5745-SC-124, (i.e. Form Nos. SYC7-1968, SYC7-1969, SYC7-1970-1, SYC7-1971 respectively).
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1976
DOS/VSE POWER/VSE RJE, SNA ICR - SCP COMPONENT 5745-SC-PWR
 Microfiche assembly listings of DOS/VSE POWER/VSE RJE, SNA ICR
 Microfiche
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1980
DOS/VSE ATTENTION ROUTINES 5745-SC-AIT (350) MICROFICHE LISTINGS
 This document contains assembler Listings for all DOS/VSE Attention Routine modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 3 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1981
DOS/VSE ANALYSIS PROGRAM COMPONENT 5745-SC-APC (350) MICROFICHE LISTINGS
 This document contains assembler Listings for all DOS/VSE Analysis Program Component modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 2 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1982
DOS/VSE ASSEMBLER 5745-SC-ASM (350) MICROFICHE LISTINGS
 This document contains assembler listings for all DOS/VSE Assembler modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 11 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1983
DOS/VSE CHECKPOINT/RESTART 5745-SC-CKR (350) MICROFICHE LISTINGS
 This document contains assembler listings for all DOS/VSE Checkpoint/Restart modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 2 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1984
DOS/VSE DIRECT ACCESS METHOD 5745-SC-DAM (350) MICROFICHE LISTINGS
 This document contains assembler listings for all DOS/VSE Direct Access Method modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 1 card
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- SYC7-1985
DOS/VSE DISKETTE IOCS 5745-SC-DIO (350) MICROFICHE LISTINGS
 This document contains assembler listings for all DOS/VSE Diskette IOCS modules and the PL/S source used to generate these listings. This document is intended for use by IBM personnel for the correction of program design errors.
 Microfiche, 2 cards
 SLSS - ORDER NO. SUBSCRIPTION ONLY

VANDL-1 LOGIC MANUAL - PROG. NO. 5799-AEY
A Program Logic Manual describes the internal design or
logic of the subject program. These manuals are intended for
persons involved in program maintenance and system
programmers who are altering the program design. Program
logic information is not necessary for the operation of the
program; therefore, distribution of these publications
should be limited to persons with maintenance and alteration
requirements.
Manual, 221 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY12-5016

DATA LANGUAGE/1 DISK OPERATING SYSTEM/VIRTUAL
STORAGE (DL/I DOS/VS) LOGIC MANUAL - PROGRAM
PRODUCT 5746-XX1
This publication provides information on the internal
operation of the DL/I system as an application program under
DOS/VS. It is intended for use by persons involved in
program maintenance and by system programmers who are
altering the program design.
DL/I DOS/VS is a data management control system that

assists the user in creating, accessing, and maintaining
large common data bases. In conjunction with the Customer
Information Control System (CICS/DOS/VS), DL/I LCS/VS can be
used in an online teleprocessing environment.

Readers of this manual must be thoroughly familiar with
the use of DOS/VS, and of CICS/DOS/VS if DL/I DOS/VS is to
be used in the online environment.
Manual, 332 pages, 11/73
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY12-5026

IBM SYSTEM/370 IMS/VS DATA BASE ANALYZER LOGIC,
PROG PROD 5740-XXR (CS/VS)
IMS/VS Data Base Analyzer (DB analyzer) is an Information
Management System/Virtual Storage (IMS/VS) productivity aid
that analyzes the structure of an existing IMS/VS data base
with hierarchical direct (HDAM or HIDAM) organization. It
produces reports on distribution of pointers and free space,
to allow monitoring of the efficiency of data base space
allocation in storage. It also checks pointer integrity,
examining whether recovery procedures have been applied
successfully.

This manual presents an overview of DB analyzer and
describes the control flow within the programs by means of
text and flowcharts. It also presents the layout of output
records and internal tables. It is intended as an aid when
maintaining the DB analyzer programs.

This publication is intended primarily for data base
administrators and system analysts. The reader is assumed
to be familiar with IMS/VS data bases and their pointer
structures. Publications providing this background are
IMS/VS Utilities Reference Manual, SH20-9029 and IMS/VS
System/Application Design Guide, SH20-9025.
Manual, 8 1/2 x 11 inches, 52 pgs, 12/76

LY12-5027

SYSTEM/370 AND 4300 PROCESSORS, VSE/POWER, LIC PROG
5746-XE3, FEATURES 6066-6071, LOGIC (PART 1)
This publication provides information on the internal
operation of VSE/POWER. It is intended for use by persons
involved in program maintenance and by system programmers
who intend to alter the program design.

VSE/POWER, a successor to POWER/VS of earlier DOS/VS
releases, services input and output speeds. The reading of
data from or the writing of data to unit record devices is
carried out by VSE/POWER while other jobs are being
executed.

The method of operation of VSE/POWER is described in
Part 2 of this manual (LY12-5028), and that for the optional
Remote Job Entry Feature is described in Part 3 (LY12-5034).
Readers of this manual should be thoroughly familiar with
the use of DOS/VSE.

LY12-5028

SYSTEM/370 AND IBM 4300 PROCESSORS, VSE/PCWER, LIC PROG
5746-XE3 FEATURES 6066-6071, LOGIC (PART 2)

This publication provides information on the internal
operation of VSE/POWER. It is intended for use by persons
involved in program maintenance and by system programmers
who intend to alter the program design.

VSE/PCWER, a successor to POWER/VS of earlier DOS/VS
releases, services input and output requests addressed to
unit record devices at disk input/output speeds. The
reading of data from, or the writing of data to, unit-record
devices is carried out by VSE/POWER while other jobs are
being executed.

This part of the VSE/POWER Program Logic Manual
describes the method of operation. The method of operation
of the optional Remote Job Entry Feature is described in
Part 3 (LY12-5034). The remainder of the internal operation
description of VSE/POWER is contained in Part 1 (LY12-5027).
Manual, 8 1/2 x 11 inches, 740 pages, 2/79

LY12-5032

SYSTEM/370 AND 4300 PROCESSORS VSE/ACCESS CONTROL - LOGGING
AND REPORTING, LIC PROG 5746-XE7, LOGIC

VSE/Access Control - Logging and reporting is part of the
data security functions offered for batch users of DOS/VSE.
These security functions are designed for auditing purposes
of a DOS/VSE data processing installation. Data access,
library access, and program access can be checked and logged
for security reasons.

This manual is intended for persons who are maintaining,
debugging, or modifying the system. It is assumed that
these persons are thoroughly familiar with DOS/VSE,
VSE/Advanced Functions, and VSE/Interactive Computing and
Control Facility.

Manual, 8 1/2 x 11 inches, 272, 2/79

VS PERSONAL COMPUTING PL/I LOGIC, INTERNATIONAL FIELD PROGRAM 5785-EAB

This manual describes the internal logic of the VS Personal Computing PL/I (VSPC PL/I) processor, including the compiler, the library, and the interface between VSPC and PL/I. It is intended for use by system programmers responsible for the maintenance of the PL/I processor. It does not contain information on the PL/I language itself or its usage.

The manual begins with a general description of the contents and composition of the PL/I processor. Information follows on the interface between VSPC and PL/I, including the interface services, the directory of routines, the support macros, and the control blocks. Sections on the compiler cover compiler operations, the directory of routines, the compile-time tables and lists, and the support macros. Runtime information follows, including the directory of routines, the control blocks, and the support macros. The final section describes the sections of the object program.

Manual, 8 1/2 x 11 inches, 226 pgs 9/77

IBM CUSTOMER ENGINEERING KWIC INDEX

This catalog indexes the titles and lists the prices of Customer Engineering publications available to those involved in maintaining IBM data processing products.

All titles are KWIC (keyword in context) titles. KWIC is an abbreviating retrieval system in which titles are expressed in no more than 30 characters and each such title is indexed under each practical keyword.

Materials for the use of IBM products and services, in particular those for system libraries but including many other categories, are in the Marketing Publications KWIC Index, G320-1621.

INFORMATION MANAGEMENT SYSTEM/360, VERSION 2 PROGRAM NUMBER 5734-XX6

SYSTEM MANUAL - LOGIC VOLUME I, FEATURE CODE 8080
Information Management System/360 is a processing program designed to facilitate the implementation of medium to large common data bases in a multiapplication environment. This environment is created to accommodate both online message processing and conventional batch processing, either separately or concurrently. The system permits the evolutionary expansion of data processing applications from a batch-only to a teleprocessing environment.

This manual includes a description of each module of the IMS/360 program. It also contains information on macros used, interfaces and module sizes, error codes and handling, and ABENDS. Flowcharts are contained in Volume II. Volume III contains listings of the data base (batch) portion of the IMS/360 program, furnished as microfiche. Volume IV contains listings of the data communications portion of the program, also furnished as microfiche.

Program Product Manual, 728 pages

CUSTOMER INFORMATION CONTROL SYSTEM FEATURE NUMBER 8030 (DOS-ENTRY) LOGIC MANUAL - PROGRAM NUMBER 5736-XX6
The IBM Customer Information Control System (CICS) is a transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications; message switching, inquiry, data collection, order entry, and conversational data entry.
CICS is available in three systems--two for DOS users and one for OS users. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small data base/data communication configuration and move up through DOS into OS. The information contained in this manual is of interest to persons maintaining and modifying the operation of the CICS/DOS-ENTRY system.
Manual, 272 pages

3270 FORMATTING FEATURE FOR BTS, IUP 5796-PED, SYSTEM GUIDE (FEATURE 8073)

This publication describes in detail the ETS 3270 formatting feature. Its mode of operation and its modular interfaces are described, as well as the queues, tables, directories, and control blocks used specifically by the 3270 formatter.

It is assumed that the reader of this publication is familiar with the functions and names of ETS modules, IMS/360 application program calls, and the IMS/360 Message

Formatting Service. The reader should also be familiar with the publication BTS Batch Terminal Simulator Systems Guide, Order No. LY20-0774.

The 3270 Formatting Feature is an expansion of the Batch Terminal Simulator IUP (5796-PBD); which is described in Availability Notice G320-1523. BTS allows IMS batch, batch message and message processing programs to be tested without having teleprocessing hardware installed. The addition of the 3270 Formatting Feature provides the ability to test applications using the IMS Message Formatting Service (MFS) without the use of 3270 hardware. This means that development of new online applications, or conversion of batch programs for online use, can proceed while still in the batch only test/development mode.

3270 SCREEN IMAGE PROCESSOR FOR IMS AND IMS/VS - IUP 5796-AFC, SYSTEM GUIDE

The Screen Image Preprocessor is a productivity aid which simplifies the design and implementation of IMS/3270 applications. Each 3270 screen format added to an IMS system necessitates the preparation of many detailed control statements as input to the Message Format Language Utility. Using a single control statement and only one card image for each line to be represented on the screen, the Preprocessor generates the required IMS input statements. Each line of the screen image is coded exactly as it is to appear on the 3270 screen. Field control information (attribute bytes), which do not appear on the actual screen but occupy one screen character position at the beginning of each field, must also be coded to specify the desired field types. The Preprocessor output includes a printed representation of the screen layout in addition to generated control statements which may be printed or passed to the Utility.

Manual

LY20-0947

DB PROTOTYPE/VS - IUP 5796-PCX, SYSTEM GUIDE

DBPROTOTYPE/VS is a design evaluation tool which enables the IMS/VS user to create model data bases and skeletal application programs to run against these data bases. By analyzing the performance data obtained from successive runs utilizing different design parameters, the user can select the system design best suited to his needs.

The value of this prototype approach to design is that it enables the user to study the effects of various design alternatives prior to expending resources in implementation. Programming for new or changing applications and data bases can follow with a higher level of confidence for success without costly rework caused by poor design.

DBPROTOTYPE/VS operates with IMS/VS. It extends the capabilities of DBPROTOTYPE (IUP 5796-PBB) to support IMS/VS features and incorporates improvements in the existing functions of DBPROTOTYPE. DBPROTOTYPE is a prerequisite for DBPROTOTYPE/VS.

VM/370 RESOURCE MANAGEMENT PROGRAMMING RPQ PO-9006 PROGRAMMER AND SYSTEM LOGIC GUIDE, PROG 5799-ARQ

This publication contains detailed system information about the areas in VM/370 changed by the Resource Management RPQ for VM/370. It provides system information for system programmers and IBM system hardware and software support personnel. This publication contains information abstracted from VM/370 publications and updated to reflect changes that have been made.

Prerequisite publications:
IBM Virtual Machine Facility/370:
System Programmer's Guide (GC20-1807)
System Logic and Problem Determination Guide

(SY20-0885)
Data Areas and Control Block Logic (SY20-0884 Manual, 80 pages

LY20-2043

DISPLAY MANAGEMENT SYSTEM II -- DOS/VS (DMS II) LOGIC MANUAL, PROG. PROD. 5736-XC4

DMS II is a set of programs to simplify the implementation of online operations using the 3270 Information Display System. Application specification is simplified by means of DMS II forms. Preprogrammed facilities are provided to perform paging and panel selection, file operations, and data routing. This manual is intended primarily for those responsible for maintaining the programs product. It is designed to be used in conjunction with program listings and flowcharts to understand program logic.

Manual, 230 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2045

FASTER LANGUAGE FACILITY FOR THE CUSTOMER INFORMATION CONTROL SYSTEM (CICS/VS), LOGIC PROG. NCS. 5746-XX3 (CICS/DOS/VS), 5740-XX1 (CICS/OS/VS): FEATURES 6019, 6020, 6021, 6022, 6023, 6024

The FASTER Language Facility (F.L.F.) feature of CICS/DOS/VS and CICS/OS/VS makes it possible to run most FASTER Transaction Processing Descriptions (TPDs) under CICS/VS.

The F.L.F. consists of a set of language macros and processing routines designed as a conversion aid for users of the five FASTER systems. All language macros present in the FASTER programs are also present in the language facility and are designed in the Program Reference Manual.

The logic manual primarily describes the functions and the interworking of F.L.F. processing routines. A knowledge of those internal details is not ordinarily needed for day-to-day use of the language facility.

Manual, 70 pages

LY20-2050

IMSMAP/VS - IUP 5796-PCY, SYSTEM GUIDE

The Installed User Program IMSMAP/VS is a documentation aid which produces pictorial representations of data base structures. These maps, which are produced on a line printer, graphically represent the many characteristics of an IMS/VS data base. In addition to producing maps, IMSMAP/VS can print a detailed report describing the characteristics of each data base description (DED).

IMSMAP/VS is an extension of the currently available IUP, IMSMAP (5796-PBC). IMSMAP is a prerequisite for IMSMAP/VS. IMSMAP/VS provides both support for IMS/VS data bases and additional features not available in the original IMSMAP IUP.

Manual
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2051

BTS/VS - IUP 5796-PCZ, SYSTEM GUIDE

BTS/VS is a terminal simulator which allows IMS/VS application programs to be tested without the use of teleprocessing hardware or the IMS IC feature. Extensive de-bugging facilities enable the BTS/VS user to test batch applications, as well as those intended to run in a teleprocessing environment. BTS/VS provides information about each transaction and message as it progresses through the IMS/VS system.

The BTS IUP (5796-PBD) is a prerequisite for the use of BTS/VS. The 3270 Formatting Feature, offered as a feature of BTS, extends 3270 simulation capability to both BTS and to BTS/VS.

Manual
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2052

TEST IMS/VS UTILITIES, DESCRIPTION/OPERATIONS, IUP 5796-PDA

This publication describes the IMS/VS support product for the Test IMS Utilities. The prerequisite for the use of this product is the Test IMS Utilities (Program Number 5796-PBE) and the associated Systems Guide (LY20-0775).

The Test IMS utilities include programs to create a test data base, compare an old and a new version of the same data base, list and/or unload all or part of a data base, restructure a data base segment for printing. This publication describes the internal logic of these programs as well as the program used to create and print the segment description module, which contains a physical description of every segment and field in a data base.

Manual, 28 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2053

DOSMAP - DL/I DATA BASE MAPPING PROGRAMS SYSTEMS GUIDE PROG. NO. 5796-PCW

The DL/I data base mapping programs, DBDMAP and PSBMAP, build and print maps of DL/I data bases from information contained in the data base descriptions (DEDS) and program specification blocks (PSBs). This manual describes the internal logic of the DBDMAP and PSBMAP programs.

LY20-2059

VM/SGP STATISTICS GENERATING PACKAGE - IUP 5796-PDD,
SYSTEM GUIDE

VM/SGP, an Installed User Program is a Statistics Generating Package for VM/370. It is designed to further reduce the data collected by the VM/370 Measurement Facility and is intended to provide information for installation management, system programmers, and users. VM/SGP provides a variety of summarization techniques useful for reporting on many aspects of system load and utilization. It may also simply be used to format and print trace data and thereby facilitate the inspection and analysis of system bottlenecks and overloads.

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

Manual

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

VM/370 SYSTEM FOR ONLINE TAPE AND DISK LIBRARIES - IUP
5796-AGN, SYSTEM GUIDE

The VM/370 System for Tape and Disk Libraries is an IUP for the control of user tape and disk libraries. It works online under CMS with commands to control the assignment and accounting for user volumes. The system operator can add, delete, and modify a record associated with a particular mountable volume. It can make a large pool of tapes and disks accessible to a large number of time sharing users by providing the storage location and accounting information available online. The benefits are improved data security, quicker location of volumes, quicker response to mount commands, automatic bookkeeping and improved system control.

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

Manual

LY20-2126

TELECOMMUNICATIONS ACCESS METHOD IMS/VIS INTERFACE LOGIC,
PROG PROD 5740-KXC

The TCAM-IMS/VIS Interface is provided as a bridge between TCAM and IMS/VIS.

This manual is intended for program systems representatives and systems programmers who maintain the TCAM-IMS/VIS Interface.

Manual

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2175

EXTENDED TELECOMMUNICATIONS MODULES (EXTM) FEATURE OF
CICS/DOS/VIS - PROG. PROD. 5746-XYE, LOGIC

The Extended Telecommunications Modules (EXTM) Feature of CICS/DOS/VIS provides linkage between CICS/VIS 1.0.1 and a telecommunications network. It provides access to the IBM 3600 Finance Communication System and functions within the framework of System Network Architecture (SNA). Data flow for certain pre-SNA terminals is also provided.

The basic function of the program is to establish and maintain a data flow between a CICS/VIS application and a corresponding user application for the IBM 3600 Finance Communication System.

This manual covers the internal logic of the Extended Telecommunications Modules Feature of CICS/DOS/VIS.

Manual

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

DB/DC DRIVER SYSTEM LOGIC VOLUME I, PROG PROD 5740-XYT

This publication describes the internal logic of the executive and utility programs for the DB/DC Driver System. This system can be used to drive and test DE/DC application programs.

The executive program controls the work in the region assigned to the DB/DC Driver System. It contains facilities for interrupt handling, terminal and direct access data management, command processing, submitting jobs for batch processing in VS background through the latch interface, script processing, logging control, and debugging.

The utility programs provide facilities for system build, job initialization, data base management, log data set processing, and batch interface offline operations. These programs are used by programmers responsible for building, initializing, and maintaining the system and its data base.

This volume contains introductory information, programming conventions, the executive overview, and descriptions of the modules which comprise the executive program.

Manual, 8 1/2 x 11 inches, 192 pages, 10/76

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2189

DB/DC DRIVER SYSTEM LOGIC VOLUME II, PROG PROD 5740-XYT

This publication describes the internal logic of the executive and utility programs for the DE/DC Driver System.

This system can be used to drive and test DB/DC application programs.

The executive program controls the work in the region assigned to the DB/DC Driver System. It contains facilities for interrupt handling, terminal and direct access data management, command processing, submitting jobs for batch processing in VS background through the batch interface, script processing, logging control, and debugging.

The utility programs provide facilities for system build, job initialization, data base management, log data set processing, and batch interface offline operations. These programs are used by programmers responsible for building, initializing, and maintaining the system and its data base.

This volume contains a description of the DB/DC Driver System utilities.

Manual, 8 1/2 x 11 inches, 80 pages, 10/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2190

DB/DC DRIVER SYSTEM LOGIC VOLUME III, PROG PROD 5740-XXT

This publication describes the internal logic of the executive and utility programs for the DB/DC Driver System. This system can be used to drive and test DB/DC application programs.

The executive program controls the work in the region assigned to the DB/DC Driver System. It contains facilities for interrupt handling, terminal and direct access data management, command processing, submitting jobs for batch processing in VS background through the batch interface, script processing, logging control, and debugging.

The utility programs provide facilities for system build, job initialization, data base management, log data set processing, and batch interface offline operations. These programs are used by programmers responsible for building, initializing, and maintaining the system and its data base.

This volume contains appendices which provide a module cross reference index, control block formats, record descriptions, terminal codes, macro descriptions, and script error codes.

Manual, 8 1/2 x 11 inches, 168 pages, 10/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2193

EXTENDED TELECOMMUNICATIONS MODULES FEATURE OF CICS/DOS/VS PROBLEM DETERMINATION GUIDE PROGRAM NUMBER: 5746 XXB

The Extended Telecommunications Modules Feature of CICS/DOS/VS provides linkage between CICS/VS 1.0.1 and a telecommunications network. It provides access to the IBM 3600 Finance Communication System and functions within the framework of System Network Architecture (SNA). Data flow for certain pre-SNA terminals is also provided. The basic function of the program is to establish and maintain a data flow between a CICS/VS application and corresponding user application for the IBM 3600 Finance Communication System.

This manual provides control block layouts, storage maps, sample dumps, sample traces, and describes an approach to debugging. It presents guidelines, tools, and information needed to assist program systems representatives and system programmers, who maintain the system and the Extended Telecommunications Modules Feature of CICS/DOS/VS.

DOS/VS PERFORMANCE TOOL (DOSVS/PT), IUP 5796-PGK, SYSTEMS GUIDE

DOSVS/PT is a software tool that monitors the performance of an existing IBM System/370 running DOS/VS. It uses both dynamic event tracing and periodic statistical sampling to record system status on an output tape or DASD data set. Subsequently, a series of reports can be produced to evaluate hardware performance during either the entire monitoring period or any portion thereof.

This manual provides information on the design and logic of the DOSVS/PT programs. This information can be used by systems programmers for making program modifications, diagnosing program errors, and performing program maintenance.

Manual, 8 1/2 x 11 inches, 48 pgs, 10/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2243

VS1 PERFORMANCE TOOL (VS1PT), IUP 5796-PGL, SYSTEMS GUIDE

VS1PT is a software monitor that measures the performance of an existing IBM System/370 running OS/VS1. It uses statistical sampling, event tracing and event counting to record selected system status information. At requested intervals, the accumulated information is placed on an output data set. Subsequently, reports can be generated to evaluate overall performance during the entire monitoring period or to analyze in detail any specific areas of concern.

This manual provides information on the design and logic of the VS1PT programs. This information can be used by systems programmers for making program modifications, diagnosing program errors, and performing program maintenance.

Manual, 8 1/2 x 11 inches, 36 pgs, 11/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2244

SVS PERFORMANCE TOOL (SVSPT), IUP 5796-PGN, SYSTEMS GUIDE
SVSPT is a software monitor that measures the performance of an existing IBM System/370 running OS/VS2 SVS. It uses both statistical sampling and event counting to record selected system status information. At requested intervals, hardware and software performance reports are generated and placed on an output data set. Subsequently, reports can be selected to evaluate overall performance during the entire monitoring period or to analyze in detail any specific areas of concern.

This System Guide describes the complete capabilities of SVSPT while the PDOM describes only a subset of SVSPT's most commonly used features.

This manual provides information on the design and logic of the SVSPT programs. This information can be used by systems programmers for making program modifications, diagnosing program errors, and performing program maintenance.

Manual, 8 1/2 x 11 inches, 56 pgs, 11/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2247

APL FUNCTION EDITOR FOR APLSV IUP 5796-PGX, FEATURE 8676, SYSTEM GUIDE

This manual provides information for system analysts, programmers, and others who wish to make alterations to the program. It also will be helpful to those desiring a fuller understanding of the program components.

Manual, 8 1/2 x 11 inches, 20 pages, 4/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2248

APL FUNCTION EDITOR FOR VSAPL IUP 5796-PGY, SYSTEM GUIDE, FEATURE 8677

This manual provides information for system analysts, programmers, and others who wish to make alterations to the program. It will also be helpful to those desiring a fuller understanding of the program components.

Manual, 8 1/2 x 11 inches, 20 pages, 4/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2249

BATCH MONITOR FOR VM/370 CMS, IUP 5796-PGZ, SYSTEMS GUIDE

LY20-2268

SMF JOB DATA COMPRESSION AID (JDCA) - IUP 5796-PHN, SYSTEMS GUIDE

This systems guide is for those systems and applications programmers who handle program modifications, error diagnoses, and program maintenance for the SMF Job Data Compression Aid (JDCA), an IBM installed user program.

This guide is divided into four sections: record formats, program descriptions, program modifications, and error diagnosis.

- Record formats are formed of PL/1 declare statements, with associated comments.
- Program descriptions are in narrative form keyed to the labels and comments in the PL/1 programs.
- The program modifications section describes procedure for correcting or modifying the source programs.
- The error diagnosis section describes the techniques for locating 1) an error within the programs, 2) selected data items from the output of the linkage editor map.

Manual, 8 1/2 x 11 inches, 72 pgs, 4/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2269

STORAGE DEVICE MIGRATION AID (SDMA) - IUP 5796-PHP, SYSTEMS GUIDE

The Systems Guide is for those systems and applications programmers who handle program modifications, error diagnosis, and program maintenance for the Storage Device

Migration Aid (SDMA), an IBM installed user program.

This guide is divided into four sections: record formats, program descriptions, program modifications, and error diagnosis.

- Record formats are formed of PL/1 declare statements, with associated comments.
 - Program descriptions are in narrative form, keyed to the labels and comments in the programs.
 - The program modifications section describes procedure for correcting or modifying the source programs.
 - The error diagnosis section describes the techniques for locating 1) an error within the programs, 2) selected data items from the output of the linkage editor map.

LY20-2280

FORTRAN INTERACTIVE SUBROUTINE LIBRARY - IUP 5796-PHT, SYSTEM GUIDE

The FORTRAN Interactive Subroutine Library (FISLIB) Installed User Program consists of a set of FORTRAN callable subroutines which can be used by a FORTRAN programmer to give more flexibility to interactive FORTRAN programs. FISLIB is used where the interaction of human decision making ability with the computer program is essential to permit users to choose between alternatives at key points during program execution. The interactive program produced can be run under: VM/CMS; any of the TSC options - OS/MVT, OS/SVS or OS/MVS; VS/PC FORTRAN; or DOS FORTRAN F utilizing the operating console.

The subroutines written in FORTRAN are designed to be system independent. They provide a simplified method of allowing the terminal program user to: specify program functions to be executed; specify parameters to be varied, reset or incremented; use a comprehensive desk calculator mode for intermediate computations; create procedures, a series of commands, executable by procedure name.

LY20-2282

APL DECISION TABLE PROCESSOR - IUP 5796-PJE, SYSTEMS GUIDE

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

The APL Decision Table Processor and Code Generator (DTABL) is a set of interactive APL programs designed to help the user construct and maintain a library of limited entry decision tables and to compile the decision tables into procedural code in a high level language (COBOL, PL/I, APL, ALGOL). The usual concerns of program debugging may thereby be eliminated, allowing the end-user to concentrate on the decision-making logic of the application. Decision tables can be edited and validated for completeness and consistency. ALGOL, APL, COBOL, and PL/I code generators are provided. APL programs can be generated for immediate execution and testing. Programs in the other languages can be filed on a data set and be used as input to other language processors. A full coverage test case sequence for validating the object code is optionally produced.

A questionnaire processor is available as part of this

system to guide an application user through a series of "yes/no" to produce a decision table map. The questionnaire is also useful for interactive checkout of table logic.

DISPLAY EDITING SYSTEM FOR CMS, IUP 5796-PJP, SYSTEM GUIDE

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

The Display Editing System Installed User Program is a full-screen editing system for the Virtual Machine Facility/370 Conversational Monitor System (VM/370 CMS) designed to utilize the features of both local and remote terminals. In addition to a comprehensive array of cursor and command oriented data manipulation functions, the IUP has direct usability in a wide range of user applications. Display terminals supported are the 3277 model 2 and the IBM 3278 model 2, including both the TEXT PROCESSING and APL keyboards.

The Display Editing System accommodates CMS files of all types, including program source material, documentation, and data. It permits users to change portions of the display without program intervention. By placing the cursor on the position(s) requiring change, the user may re-enter the correct character(s). The Display Editing System checks for modifications made to the display image and makes permanent copies of the changes to the file.

VS PERSONAL COMPUTING PL/I, PROG PROD 5785-EAB, LOGIC

This manual describes the internal logic of the VS Personal Computing PL/I (VSPC PL/I) processor, including the compiler, the library, and the interface between VSPC and PL/I. It is intended for use by system programmers responsible for the maintenance of the PL/I processor. It does not contain information on the PL/I language itself or its usage.

System Guide, 8 1/2 x 11 inches, 223 pgs, 10/77

LY20-2318

MSS TRACE/SMF CORRELATION AID, IUP 5796-PJX, SYSTEMS GUIDE

This manual is for those systems and applications programmers who perform program modifications, error diagnoses, and program maintenance for the Correlation Aid, an IBM installed user program. For further information about this aid and its reports, see the Program Description/Operations Manual (SH20-2045).

This guide is divided into four sections: record formats, program descriptions, program modifications, and error diagnosis.

- Record formats are in the form of PL/I declare statements, with associated comments.
- Program descriptions are in narrative form keyed to the labels and comments in the PL/I programs.
- The program modifications section describes the procedure for correcting or modifying the source programs.
- The error diagnosis section describes the techniques for locating: 1) an error within the programs, and 2) selected data items from the output of the linkage editor map.

Manual, 8 1/2 x 11 inches, 44 pages, 1/78

LY20-2339

TSO-3270 DISPLAY SUPPORT AND STRUCTURED PROGRAMMING FACILITY VERSION 2, LOGIC, PROG PROD 5740-XT8

SPF is a programming aid that operates in the Time Sharing Option (TSO) environment and is designed to increase productivity in developing and modifying programs. SPF supports VS2-TSO users who have a 24-line IEM 3270 display terminal equipped with a full keyboard, including 12 program function keys. SPF increases programmer productivity through:

- display presentations which prompt the user and simplify command and data entry.
- time-saving use of program function keys for commonly performed operations.
- features which facilitate structured programming in a time sharing environment.

This manual describes the logic of SPF. It is designed for those who maintain and use SPF.

Manual, 8 1/2 x 11 inches, 376 pages, 4/77

LY20-2340

HASP NETWORKING (PRPQ P09009) LOGIC, PROG 5799-ATC

This manual describes the purpose and functions of the HASP Networking PRPQ and its relationship to OS/VS2, Release 1.7 and HASP II Version 4.0. It does not replace the program listings; it supplements them and makes the information in them more accessible.

Persons interested in determining sources of errors within or making changes to the internal logic of the HASP Networking PRPQ (HASP/NJI) should read this publication. Readers must be familiar with programming techniques and the operating principles of OS/VS2, Release 1.7 and HASP II Version 4.0. This manual assumes the reader is familiar with the contents of the HASP Logic Manual (GY27-7255).

Portions of the HASP Logic Manual were used as a base for this manual. A vertical rule in the left margin indicates NJI additions.

Manual, 8 1/2 x 11 inches, 200 pages, 4/77

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2341

ASP NETWORKING (PRPQ P09008) LOGIC, PROG 5799-ATE

The ASP NJI System is a set of programs that can be installed in an existing ASP system to provide an interface to a job network interconnecting processors that may be operating under ASP, HASP, VM/370, and JES2 so that users at any node can have access to programs, data files, and facilities available at any other node.

JES2 installations using the Network Job Entry program product must predefine all connections between ASP installations operating under this Networking PRPQ.

This manual describes the function and logic of each ASP NJI module and the changes made to ASP, and acts as a guide to the program listings.

Manual, 8 1/2 x 11 inches, 80 pages, 4/77

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2342

VM/370 NETWORKING (PRPQ P09007) LOGIC, PROG 5799-ATA

This manual describes the internal functioning of the VM/370 Networking PRPQ (VNET). It is intended for use by IBM Program support representatives, and by system programmers and analysts who are responsible for installation, maintenance, and modification of the PRPQ.

This manual assists in isolating VNET module code. It gives:

- An overview of system operations
- Description of VNET's user functions with reference to the tasks and modules that perform them
- A description of each module's main routines and linkages
- Control flow diagrams of inter-routine inter-task relationships
- Data areas: locations and contents
- An approach to problem determination
- Six appendices with extensive reference material

These sections document the program logic sufficiently to point to the module listing that the PLM user needs. Once in a module listing, the user should readily find the logic he is concerned with, using module and subroutine headers (prologues) and the comments in the assembler language statements.

HOST REMOTE NODE ENTRY SYSTEM, IUP 5796-PJY, SYSTEM GUIDE

This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

The Host Remote Node Entry System, Installed User Program (5796-PJY), provides the capability of making a VS1 system a remote job entry station to any OS/VS2 MVS/JES2 or SVS/HASP system or another OS/VS1 system. (In an OS/VS1 to OS/VS1 configuration, HRNES could be installed on both CPUs, but is not required. This program, running in a VS1

partition, will do the following; automatically sign on to MVS/JES2 or SVS/HASP, SCAN the specified VS1 input queues and send all jobs found there to MVS/JES2 or SVS/HASP for execution, receive all output from MVS/JES2 or SVS/HASP and will disperse it to the originator at either a local printer/punch or to an RJE printer/punch, provide all MVS/JES2 or SVS/HASP RJE commands to the VS1 operator, provide commands to the VS1 operator, allow sign-off from the VS1 console.

LY20-2355

GENERAL CROSS ASSEMBLER GENERATOR SYSTEM GUIDE, IUP 5796-PKD
This systems guide provides the Systems Analyst with the necessary information on the design, logic and coding of the system to enable him to make modifications, diagnose program errors and perform program maintenance.

The Cross Assembler Generator is a system of programs designed to dramatically reduce the time and cost to create basic program assemblers for a wide variety of computer architecture. The entire system is implemented in APL.

A cross-assembler is an assembler which runs on one computer to assemble code for another computer. The first computer is called the "host computer", and the second is called the "target computer." The Cross Assembler Generator takes advantage of the fact that only 25-30% of an assembler is dependent on the design of the target computer. If the host computer is held constant, then only target computer dependencies need be changed to vary from one assembler to another. Furthermore, the portion of the assembler that is changed has a high degree of regularity and usually can be generated from only one or two pages of descriptive material.

Systems integrators will find this particularly attractive since they can debug machine language programs for hardware before they actually take delivery. This will reduce dependence on the supplier's delivery schedule.

Colleges and universities can use the Cross Assembler Generator in both practical laboratory work and in classrooms as a teaching tool.

Manufacturers can use the Cross Assembler Generator for preliminary programming and thus reduce cost and time in programming support. In addition, these manufacturers can also more cheaply support experimental process or design.

Time sharing vendors and in-house time sharing systems will find this of use to existing users as well as a means of attracting smaller hardware integration to their time sharing services.

Highlights

- Provides end users capability to rapidly define computer assembler
- Can run in any VSAPL, APLSV environment
- Users need not know APL
- Prompting module to lead user through assembler definition
- Core patching capability

IBM S/370 FORTRAN H EXTENDED OPTIMIZATION ENHANCEMENT, IUP 5796-PKR, SYSTEMS GUIDE
This publication describes the internal design of the IBM System/370 FORTRAN H Extended Compiler Optimization Enhancement. It provides a higher level of optimization to the generation of executable object code from FORTRAN source programs, without requiring any changes to the FORTRAN source or control procedures.

The optimization enhancements to the Library usually provide for faster execution of the commonly used mathematical FORTRAN subroutines and input/output formatted conversions without changing the arithmetic results produced.

The optimization enhancements are applied to the program products FORTRAN H Extended (5734-FO3) and FORTRAN Library M2 (5734-LM3). An understanding of these products is assumed.

The Enhanced Compiler runs under either VM/CMS or MVS using the same conventions as the regular FORTRAN H Extended

compiler and FORTRAN Library M2.

This Systems Guide is intended for use by persons involved in the maintenance of systems and program products. The information contained herein is not necessary for the use and operation of the FORTRAN compiler itself.

S/370 MC GILL UNIVERSITY SYSTEM FOR INTERACTIVE COMPUTING (MUSIC IV), IUP 5796-ATL, SYSTEMS GUIDE
MUSIC IV, developed by McGill University in Montreal, Canada, is an interactive operating system complete with a collection of utilities, compiler interfaces and application packages. Their collective goal is to provide a high performance, cost-effective and manageable computing environment. Concurrently users may be performing such diverse activities as problem solving, program development, file editing, word processing, computer assisted instruction and batch processing. Flexible hardware requirements enable its use over an impressive spectrum of IBM computers - from the System/370 Model 115 to the powerful 303X Processing Complexes. It operates in both the VM/370 and dedicated machine environments.

This manual provides information needed by those persons involved in MUSIC system maintenance and modification.

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), LIC PROG 5740-XY3, LOGIC

This manual describes the internal program logic and operation of the Telecommunications Control System-Advanced Communications Function (TCS-ACF).

The basic TCS-ACF concepts section contains the functional and logical concepts of TCS-ACF and places the program in perspective relative to the Operating System (OS/VS) and the Telecommunications Access Method (TCAM). The method of operation section describes functional flows of programs in the TCS-ACF environment and also points out those features that are major additions to the TCAM facilities or are deviations from TCAM.

The program organization section describes the TCS-ACF modules in the form of a table with the information necessary for an understanding of the function of each module and its place relative to other related modules. This section also discusses each TCS-ADV macro, with a figure of any created parameter list.

Note: This manual describes the Basic TCS-ACF program and does not apply to the multicompiler Networking Feature.

PL/I LANGUAGE CONSTRUCTION PRE-PROCESSOR, IUP 5796-PLL, SYSTEMS GUIDE

The PL/I Language Construction Preprocessor is a general purpose preprocessor for PL/I, similar in many ways to the built-in preprocessor, but far more efficient when a large number of new language statements must be defined. Using it, one may create a "language within a language" - i.e., a set of commands for simulation, data base access, graphics, etc., which will be translated to PL/I code. The program will take as input a file consisting of new language commands and, optionally, interspersed PL/I statements, and produce a file of PL/I statements acceptable as input to the PL/I compiler. Command names can be identified by context, so that it is unnecessary to prohibit their use as PL/I variable or array names. The user must supply an external PL/I procedure for each new language statement, to generate the appropriate expansion. He is allowed full use of the PL/I language (as opposed to the limited use permitted by the built-in preprocessor). Efficiency is achieved by pre-compiling the language expansion routines, and by avoiding any extra processing for an unreferenced command. It is designed to operate with OS/VS1, OS/VS2 MVS and VM/370 CMS.

LY20-2417

HIGH-SPEED SEQUENTIAL RETRIEVAL OF IMS/VS DATA BASES, IUP 5787-LAA, LOGIC

Many IMS/VS installations run batch DL/I jobs which sequentially process large physical DL/I data bases. If the installation is an online system, these batch runs may have to be made at night while the data bases are not being updated. In both cases there may be a need to increase the system throughput. High-speed Sequential Retrieval (HSSR) was designed as a high performance option to improve throughput for sequential processing of IMS/VS physical data bases. The reduction in CPU-time depends on the Data Base environment, but could reach up to 80% of the CPU-time needed by DL/I.

- With HSSR, an installation may:
- Reduce the time required for batch processing
 - Find that new batch applications are now feasible
 - Run online for a longer period of time

This Installed User Program was developed by, and is running at, the Swiss Bank Corporation, Basel, Switzerland.

VSE PERFORMANCE TOOL, IUP 5796-PLQ SYSTEMS GUIDE

The performance of an IBM System 4300 operating under DOS/VSE with VSE/Advanced Functions or an IBM System 370 operating under DOS/VSE or DOS/VS depends on many complex and interrelated factors. Manual or theoretical methods cannot adequately evaluate machine/system performance. The VSE/PT Installed User Program is a software tool that provides the ability to measure and report many performance-related factors of such a system.

It uses dynamic event tracing and/or periodic statistical sampling to record system status on an output data file. Subsequently, a series of reports can be produced to aid in the evaluation of software and hardware performance during the entire monitoring period or any portion thereof.

Used on a regular basis, VSE/PT can help answer some key performance questions. It can measure the changing environment to aid in an understanding of the system's internal operations. The measurement detail can be used to identify where changes to the system may produce an improvement in overall performance. Subsequent analysis can verify that the changes produced the desired result. Finally, an analysis of the VSE/PT reports can assist in determining which resources are available for the future

growth of the system.

OS/MVT ANALYSIS PROGRAM-1 (AP-1) LOGIC, PRG 5799-ARG, PRPQ EG4653 FOR 3350 & 3330 MODEL 11 ON SYSTEM/370
This manual is intended for maintenance personnel who require an in-depth knowledge of AP-1's design, organization, data area and diagnostic information.

This manual describes the internal logic of AP-1 and contains a Microfiche directory and diagnostic information. The microfiche directory should be used with the program listings which show which module references the fields of data. The labels used in each module is also presented. OS/MVT Analysis Program-1 (AP-1) User's Guide, SH20-9106, is a prerequisite.
Manual, 69 pages, 9/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-8049

OS/MVT AND OS/VS DASDR LOGIC - PROG PROD 5740-UT1
This manual is intended for programming support representatives and system programmers who support DASDR program product and require an in-depth knowledge of the organization, data areas, and diagnostic information of the program.

The manual describes the internal logic of the program and contains diagnostic information, data area descriptions, and figures that show the relationship between various parts of the program.
OS/MVT and OS/VS DASD User's Guide, SH20-9111, is a prerequisite manual.
Manual, 100 pages, 3/77

LY20-8050

IMS/VS VERSION 1 FAILURE ANALYSIS STRUCTURE TABLES (FAST) FOR DUMP ANALYSIS, PROG PROD 5740-XX2
This publication presents Failure Analysis Structure Tables (FAST) that associate abnormal termination conditions encountered in operation of IMS/VS with their causes. It is intended for both IMS/VS users and IBM Field Engineering programming support representatives who define and diagnose problems encountered in the operation of IMS/VS. Readers of this book should be able to use this book to precisely define a particular IMS/VS failure.
Manual, 900 pages, 12/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-8058

OFFLINE IBM 3800 UTILITY LOGIC, PROG PROD 5748-UT2
This manual explains the logic of the utility program which controls the Offline 3800 Printer. The purpose of the manual is to help the IBM Programming Service Representative (PSR) to isolate a programming failure as quickly as possible. Although this manual is primarily written for the PSR, system programmers and others may also be interested in some of the information presented.
Manual, 8 1/2 x 11 inches, 2 pgs, 11/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-8063

IMS/VS VERSION 1 DIAGNOSTIC AIDS, PROG PROD 5740-XX2
This book is designed to help IBM PSRs and customer system programmers do three things:

- Define programming failures systematically
- Find fixes in RETAIN/EWS for IMS/VS programming failures
- Find user-caused programming failures

The book is based on a concept of defining programming failures through the use of "keywords". Keywords are simple words that identify aspects of a programming failure, such as the subfunction that failed or the type of failure. The book tells how to construct a set of keywords to define a programming failure. Once keywords are constructed, they are used to search RETAIN/EWS for similarly defined

programming failures.
Manual, 8 1/2 x 11 inches, 90 pgs, 11/77

LY20-8069

IMS/V5 V1, LIC PROG 5740-XX2, LOGIC
This publication is intended for program systems representatives (PSRs) and system programmers who are involved in the service and/or modification of IMS/V5. Sufficient information is provided to enable a user to rapidly locate a pertinent point in the program code. The structure of the manual is based on an information organization linked to the IMS/V5 function/subfunction breakdown as described in the IMS/V5 Diagnostic Aids manual. Prerequisite publications are: IMS/V5 Diagnostic Aids, LY20-8063; IMS/V5 System/Application Design Guide, SH20-9025; IMS/V5 System Programming Reference Manual, SH20-9027; and IMS/V5 Utilities Reference Manual, SH20-9029. Manual, 8 1/2 x 11 inches, 400 pages, 9/78

IBM 1288 BASIC UNFORMATTED READ SYSTEM (MFT/MVT/VS1/VS2): LOGIC MANUAL, PROG. NO. 5734-UT3
This PIM is written primarily for persons responsible for the maintenance of the program. It is intended as a recall mechanism and a debugging aid. As a debugging aid, this manual serves best as a guide to sequences of instructions found in the coding of the program.
This publication describes the internal logic of the IBM 1288 Basic Unformatted Read System and includes the following items:
-Method of Operation
-Program Organization
-Data Area Formats
The information necessary to implement the program is not included in this publication.
Program Logic Manual, 88 pages

LY20-8072

OS/VS1 AND OS/VS2 MVS VS PERSONAL COMPUTING (VSPC) LOGIC
This publication describes the internal logic of VS Personal Computing (VSPC), an IBM program product that runs under OS/VS1 and OS/VS2 MVS. It is directed toward persons supporting VSPC who require information about the functions performed and the methods used to determine the nature and cause of problems encountered when executing the functions. Since program logic is not needed to use VSPC, this publication is limited to licensees involved in program service.
Manual, 128 pages, 12/78

SY21-9203

APPLICATION CONTROL LANGUAGE SUPPORT LOGIC MANUAL (FOR IBM 3741 MODELS 3 & 4 PROGRAMMING WORK STATION)
This publication is intended for IBM programming support representatives when servicing an IBM 3741 MCDL 3 or 4 Programmable Work Station for microcode defects. This publication discusses the application control language (ACL) used on the work station and contains theory on how the work station's microcode works, source to object code conversion, information on the operation of each ACI instruction, a storage map and description of the system controlled storage, information for using the diagnostic aids, and information on some debugging aids that were not in the customer publications.
The reader should be familiar with the contents of the IBM 3741 Models 3 and 4 Programmable Work Station Programming Reference Manual, GA21-9194.
Manual, 240 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

GY21-0012

OS BSAM LOGIC FOR IBM 1419/1275
This publication describes the logic of the basic sequential access method (BSAM) routines required to use the IBM 1419 Magnetic Char. Reader and the IBM 1275 Optical Char. Reader with the MFT, MVT, and VS options of the operating system (OS). It is intended for IBM customer engineers and for programmers who must understand or modify 1419/1275 BSAM routines.

A general understanding of OS and data management and an understanding of how to write 1419/1275 programs is required to use this publication. See OS Data Management Services & Macro Instructions for IBM 1419/1275, GC21-5006 for information on how to write programs for the 1419 and 1275.

IBM EMULATOR FOR HONEYWELL SERIES 200 ON SYSTEM/370 USING DOS & DOS/VS: LOGIC, PROG. NO. 5799-ADT
This publication describes the internal logic of the Honeywell Series 200 Emulator Program, an integrated emulator program, for the IBM System/370 Models 135 and 145. The emulator is a problem program that is executed under control of the IBM Disk Operating System (DCS). The emulator program, together with the appropriate compatibility feature (RPQ S00120 for the Model 135, RPQ S00121 for RPQ S00122 for the Model 145), executes most Honeywell Series 200 object programs without modification on a System/370.

For additional information, refer to IEM Emulator for Honeywell Series 200 on System/370 Using DCS, GA24-3604.
Manual, 375 pages

LY21-0014

IBM DOS RPG II LANGUAGE PROGRAM LOGIC MANUAL PROGRAM NUMBER 5736-RGI

This publication describes the internal logic of the RPG II compiler, object program, and formatted dump program. It is intended as a recall mechanism and a debugging aid. As a debugging aid, this manual serves best as a guide to sequences of instructions found in the coding of the program.

This manual is divided into three parts describing the internal logic of the RPG II program. The first part describes the RPG II compiler, the second part describes the object program, and the third part the RPG II formatted dump program. Each part includes the following areas:

- o Introduction.
- o Method of Operation.
- o Program Organization.
- o Directory.
- o Data Areas.

The information necessary to implement the program is not included in this publication.
Manual, 240 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

GY24-5154

DOS OLTEP LOGIC
This reference publication describes the internal logic of the System/360 Disk Operating System Online Test Executive Program (OLTEP). It is for persons involved in program maintenance and programmers who are altering the program design.

For titles and abstracts of associated publications, see the IBM SYSTEM/360 AND SYSTEM/370 BIELICGRAPHY (GA22-6822).

LY21-0021

IBM SYSTEM/360 IBM 1288 BASIC UNFORMATTED READ SYSTEM PROGRAM LOGIC MANUAL PROGRAM NUMBER 5736-UT1

This publication describes the internal logic of the data capture program. This includes the following areas:
Method of operation
Program organization
Data area formats

This manual is intended as a recall mechanism and a debugging aid. It does not include information necessary to implement the program.
Program Logic Manual, 88 pages

SY24-5155

OS/VS1 SUPERVISOR LOGIC

This manual describes the purpose and function of the VS1 supervisor and its relationship to the control program. The major areas of the supervisor are identified as interrupt management, task management, contents management, virtual storage management, page management, timer management, and overlay management. Each of the routines related to these functions, the data areas used by the supervisor, and the diagnostic aids for maintaining the system are described in detail. Three appendixes provide information on Program Fetch, time slicing, shared DASD, extended precision

floating point decimal simulator, generalized trace facility, and ECPS (extended control program support) for VS1.

This manual does not discuss I/O supervision, checkpoint/restart, or recovery management services.

Persons interested in determining sources of errors within or making changes to the internal logic of the VS1 supervisor should read this manual. This manual is also written as a reference tool for educational purposes. Readers must be familiar with programming techniques and the operating principles of VS1.

Prerequisite reading: IBM System/370 System Summary. Manual, 432 pages, (release 6)

SY24-5156

OS/VS1 I/O SUPERVISOR LOGIC MANUAL

This manual describes the internal logic of the OS/VS I/O supervisor. It is intended to be used by program support customer engineers and system programmers who alter program design.

The I/O supervisor starts, monitors, and, when necessary, restarts I/O operations.

This manual is comprised of 7 sections:

1. Introduction: Informs you of the I/O supervisor's services and overall operation.
2. Method of Operation: Provides high level HIPO (Hierarchy plus Input-Process-Output) diagrams that describe the operation of the I/O supervisor and guide you into the program listing.
3. Program Organization: Contains functional organization charts of the I/O supervisor, and flowcharts of new or particularly complex routines.
4. Directories: Provides cross-reference lists.
5. Data Areas: Contains descriptions of the data areas that are used primarily by the I/O supervisor.
6. Diagnostic Aids: Contains information to help you interpret the program listing.
7. Appendixes: Supplements both this manual and the program listing. Included are descriptions of SVC routines and optional features, error recording information, error recovery routines, list of abbreviations, and a glossary.

Manual, 184 pages

OS/VS IBM 3886 OPTICAL CHARACTER READER MODEL 1 LOGIC

This publication, when used with program listings, meets the documentation requirements of support personnel who maintain the Operating System/Virtual Storage (OS/VS) support for the IBM 3886 Model 1 under the Basic Sequential Access Method (BSAM). The publication describes the modules that form the IBM System/370 OS/VS support for the IBM 3886.

Manual, 56 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5163

OS/VS IBM 3890 DOCUMENT PROCESSOR LOGIC

This publication when used with the program listings, provides the documentation requirements of support personnel who service the Operating System/Virtual Storage (OS/VS) support for the IBM 3890 Document Processor under the Queued Sequential Access Method (QSAM).

This publication describes the following modules that form the IBM System/370 OS/VS support for the IBM 3890:

- o OPEN Executor for the IBM 3890
- o SETDEV module
- o GET Module

- o SYNCH Module
- o CNTRL Module
- o ERP (error recovery procedure) module

SY24-5168

OS/VS1 JOB MANAGEMENT LOGIC, VOLUME 1

This publication is Volume 1 of a two volume set. The two volume set replaces OS/VS1 Job Management Logic, SY24-5161. This volume contains Section 1: Job Management Concepts, Section 2: Method of Operation, and Section 3: Program Organization. Volume 2 (SY24-5169) contains Program Logic Manual Sections 4, 5, and 6.

This manual supplements the program listings and makes the information in the listings easier to access. It is for persons involved with program changes, and provides them with a hierarchical overview of the job management functions to show how they operate functional system flow to illustrate the functions performed by the various job management modules.

The user of this publication should be familiar with OS/VS1 concepts and terminology, and have a knowledge of the OS/VS1 job management functions. Prerequisite publications are:

- OS/VS1 Planning and Use Guide, GC24-5090
- OS/VS1 JCL Reference, GC24-5099
- OS/VS1 JCL Services, GC24-5100
- OS/VS1 Supervisor Services and Macro Instructions, GC24-5103

Manual, 540 pages, 2/76

SY24-5170

OS/VS1 RECOVERY MANAGEMENT SUPPORT LOGIC

This publication describes three recovery management programs that are part of OS/VS1:

- o The Machine-Check Handler (MCH), a program that processes machine-check interruptions and writes diagnostic messages and error records.
 - o The Channel-Check Handler (CCH), a program that receives control after the detection of a channel data check, channel control check, or interface control check.
 - o Dynamic Device Reconfiguration (DDR), a program that permits a demountable volume to be moved from one device to another and repositioned. This method is used to bypass I/O errors and avoid abnormally terminating the affected job or reloading the system.
- This publication also includes appendixes for:
- o The Missing Interruption Checker (MIC), a program that checks to see that expected I/O interruptions occur

within a specified time period.

- o The Power Warning Feature (PWF), a program that prevents the loss of information in real storage at the occurrence of a utility power disturbance. This publication is intended to be used as a guide to the program listings. The intended audience includes customer engineers, programming support representatives, and system programmers.
Manual, approx. 160 pgs, 8/76

SY24-5174

OS/VS1 VECTOR PROCESSING SUBSYSTEM LOGIC - SUID 5741-606
This publication describes the internal logic of OS/VS1 Vector Processing Subsystem (VPSS). It is intended for use by IBM personnel who provide maintenance for that program. Information includes a VPSS overview, a functional description, program organization module directory, data areas, and program maintenance aids.
Manual, 8 1/2 x 11 inches, 250 pgs, 9/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5175

SU5 SUPPLEMENT TO OS/VS1 I/O SUPERVISOR LOGIC (SY24-5156-5)
This publication supplements the I/O Supervisor Logic manual, SY24-5156-5, for MSS Enhancements, Selectable Unit 5741-605. It describes the specifications for the Start I/O routine for virtual DASD devices.
Manual, 8 1/2 x 11 inches, 20 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5176

SU5 SUPPLEMENT TO OS/VS1 RECOVERY MANAGEMENT SUPPORT LOGIC (SY24-5170-0)
This publication supplements the OS/VS1 Recovery Management Support Logic manual, SY24-5170-0, for MSS Enhancements, selectable unit 5741-605. It describes the specification of longer time intervals needed by the Missing Interrupt Checker (MIC) to properly check for missing interrupts from Mass Storage System (MSS) devices.
Manual, 8 1/2 x 11 inches, 16 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5177

SU 5741-605 SUPPLEMENT TO VS1 SYSTEM DATA AREAS, SY28-0605-5
This publication supplements the OS/VS1 System Data Areas manual, SY28-0605-5, for OS/VS1 MSS Enhancements, S.U. 5741-605. It documents the additional MSS flags in the Request Queue Element (RQE).
Manual, 8 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5178

SU5 SUPPLEMENT TO OS/VS1 JOB MANAGEMENT LOGIC, VOLUME 1
This manual, on OS/VS1 selectable unit 5741-605, provides MSS (Mass Storage System) Enhancements information for OS/VS1 Job Management Logic, Volume 1 (SY24-5168). Intended users are customers and IBM personnel.
Manual, 8 1/2 x 11 inches, 16 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5179

SU5 SUPPLEMENT TO OS/VS1 JOB MANAGEMENT LOGIC, VOLUME 2 (SY24-5169-0) SELECTABLE UNIT 5741-605
SU5 provides MSS enhancements for VS1. This Supplement adds information to the OS/VS1 Job Management Logic, Volume 2 (SY24-5169). The intended audience is customers and IBM personnel.
Manual, 20 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5181

DOS/VSE FIXED BLOCK ARCHITECTURE LOGICAL IOCS
This reference publication is the fourth of four logic manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operation System/Virtual Storage Extended. The four related logic manuals are:

- Volume 1: General Information and Imperative Macros, SY33-8559
- Volume 2: SAM, SY33-8560
- Volume 3: DAM and ISAM, SY33-8561
- FBA Logical IOCS, SY24-5181

 This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.
Manual, 8 1/2 x 11 inches, 532 pages, 2/79
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5182

SUPPLEMENT TO OS/VS1 SUPERVISOR LOGIC, SUID 5741-606
This manual is a supplement to, and provides replacement pages for OS/VS1 Supervisor Logic, SY24-5155-5. It documents the OS/VS1 Subsystem Attachment Support selectable unit impact to the OS/VS1 supervisor.
Manual, 8 1/2 x 11 inches, 40 pgs, 8/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5183

SU 5741-606 SUPPLEMENT TO VS1 SYSTEM DATA AREAS, SY28-0605-5
This publication supplements the OS/VS1 System Data Areas manual, SY28-0605-5, for OS/VS1 Subsystem Support. It documents new data areas and changes to existing data areas for subsystem support.
Manual, 36 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5184

SU6 SUPPLEMENT TO OS/VS1 JOB MANAGEMENT LOGIC, VOLUME 1 (SU ID 5741-606)
VS1 SU6 (Selectable Unit 5741-606) provides a generalized linkage to subsystems. This supplement adds SU6 information to OS/VS1 Job Management Logic, Volume 1 (SY24-5168). Intended users are customers and IBM personnel.
Manual, 60 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5185

SU6 SUPPLEMENT TO OS/VS1 JOB MANAGEMENT LOGIC, VOLUME 2 (SY24-5169-0) SU ID 5741-606
VS1 SU6 (Selectable Unit 5741-606) provides a generalized linkage to subsystems. This supplement adds SU6 information to OS/VS1 Job Management Logic, Volume 2 (SY24-5169). Intended users are customers and IBM personnel.
Manual, 64 pgs, 3/77

LY24-5187

IBM 3895 DOCUMENT IDENTIFICATION AND DESCRIPTION MACROS (DIDM) LOGIC, LIC PROG 5748-F12
This manual describes the internal logic of IIM and contains macro descriptions and diagnostic information. It is designed to be used with the program listings. The material contained in this manual includes an overview of DIDM macros, logic flow of the program (flow charts), and a description of the tables used.
Manual, 8 1/2 x 11 inches, 110 pgs, 4/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5191

VSE/VSAM VSAM LOGIC, VOLUME 1: CATALOG MANAGEMENT, OPEN/CLOSE, DAESM, ISAM INTERFACE PROGRAM CONTROL BLOCK MANIPULATION 5745-SC-VSM, 5745-SC-VCM
This book describes the internal logic of VSAM and provides diagnostic information for maintenance personnel and development programmers who require an in-depth knowledge of the program's design, organization, and data areas. It is not required for effective use of VSAM.
Manual, 474 pages, 2/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5192

VSE/VSAM VSAM LOGIC, VOLUME 2: RECORD MANAGEMENT 5745-SC-VSM, LIC PROG 5746-AM2
This book describes the internal logic of VSAM and provides diagnostic information for maintenance personnel and development programmers who require an in-depth knowledge of the program's design, organization, and data areas. It is not required for effective use of VSAM.
Manual, 452 pages, 2/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY24-5193

SU 5741-604 SUPPLEMENT TO VS1 SYSTEM DATA AREAS, SY28-0605-5
This publication supplements the OS/VS1 System Data Areas, SY28-0605-5, for the IBM 3895 Document Reader/Inscriber, S.U. 5741-604. It documents changes to the IOE and UCB.
Manual, 16 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY24-5194

SU-4 SUPPLEMENT TO OS/VS1 I/O SUPERVISOR LOGIC (SY24-5156-5) SU ID 5741-604
This publication supplements the I/O Supervisor Logic manual, SY24-5156-5, for the IBM 3895 document reader/inscriber, Selectable Unit 5741-604. It describes the 3895 error routine.
Manual, 8 1/2 x 11 inches, 20 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY24-5195

VSE/VSAM ACCESS METHOD SERVICES LOGIC, COMPONENT ID 5745-SC-AMS, LIC PROG 5746-AM2
This book describes the internal logic of Access Method Services and provides diagnostic information for maintenance personnel and development programmers who require an in-depth knowledge of the program's design, organization, and data areas. It is not required for effective use of Access Method Services.
Manual, 500 pages, 2/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5203

VIRTUAL MACHINE FACILITY/370: REMOTE SPOOLING COMMUNICATIONS SUBSYSTEM NETWORKING, LIC PROG 5748-XPL, LOGIC

This logic manual describes the internal functioning of the Remote Spooling Communications Subsystem Networking program product. It is for IBM Program Support Representatives, system programmers, and system analysts responsible for installation, maintenance, and modification of RSCS Networking. It contains:

- An overview of RSCS Networking operations.
 - Descriptions of RSCS Networking's user functions with reference to the tasks and modules that perform them.
 - A description of each module's main routines and linkages.
 - Control flow diagrams.
 - Location and contents of data areas.
 - An approach to problem determination.
 - A description of the RSCS Networking Preloader utility
- Manual, 8 1/2 x 11 inches, 180 pages, 3/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5205

VIRTUAL MACHINE FACILITY/370 VM/INTERACTIVE FILE SHARING, LIC PROG 5748-XXC, LOGIC

This manual describes the internal logic of VM/Interactive File Sharing for CMS. It contains detailed component descriptions, module interconnecting diagrams, and module descriptions. The information in this manual is designed to be used with program listings.
Manual, 8 1/2 x 11 inches, 110 pages, 4/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5206

VIRTUAL MACHINE FACILITY/370 DISPLAY MANAGEMENT SYSTEM FOR CMS: LOGIC

This manual contains brief descriptions of the functions, architecture, logic flow, and structure of the Display Management System for CMS. It also contains an extensive description of each module, a number of cross-reference tables to aid in tracking flow, and depictions of the data areas used.
Manual, 8 1/2 x 11 inches, 100 pages, 3/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY24-6000

OS/VS2 MVS JES2 R4 LOGIC

This publication provides the Programming Service Representative and the using System Programmer with detailed information on the internal organization and logic of JES2 Release 4. The publication contains:

- Sec. 1 Introduction: describes the general characteristics and functions of JES2.
 - Sec. 2 Method of Operation: contains HIPO diagrams that summarize the operation of JES2.
 - Sec. 3 Program Organization: provides descriptions of the operation of each JES2 Module.
 - Sec. 4 Directory: provides cross-reference lists and describes entry points.
 - Sec. 5 Data areas: depicts and describes JES2 control blocks and data areas.
 - Sec. 6 Diagnostic Aids: lists register usage by major routines and describes error analysis techniques.
- Appendix A. JES2 Programmer Macros: describes JES2 macros and their use. Appendix B. Multi-Leaving: describes the basic principles of Multi-Leaving. Appendix C. Remote Terminal Bootstrap: describes the RTPBOOT bootstrap program. Appendix D. External Writer: describes the external writer program used for producing SYSOUT data sets on magnetic tape or direct-access devices.

SY25-0001

MVS INTERACTIVE PROBLEM CONTROL SYSTEM ICGIC, SUID 5752-857

This manual provides information about the program logic of the OS/VS2 MVS IPCS Selectable Unit. It describes the structure of IPCS modules by grouping the modules into functional areas. It describes the operations used to execute IPCS subcommands. The manual includes a brief description of every OPCS module, and shows the control flow used in executing the modules. It also includes descriptions of the data sets and control blocks used by IPCS.

The manual is primarily a reference manual. The manual enables a user to identify a failing IPCS component down to the module level. Then microfiche can be used to examine the module's code.

The manual is intended for use by IBM PSRs and customer system programmers who have a need to analyze the IPCS code. A basic knowledge of OS/VS2 MVS and TSO is assumed.
Manual, 8 1/2 x 11 inches, 400 pages, 4/78

LY26-3737

IBM SYSTEM/360 OPERATING SYSTEM TIME SHARING OPTIONASSEMBLER PROMPTER PROGRAM LOGIC MANUALPROGRAM NUMBER 5734-CP2

This manual describes the assembler prompter, a program product that operates only under the Time Sharing Option (TSO) of the IBM System/360 Operating System.

The assembler prompter consists of two modules that interact with the TSO terminal monitor program (TMP), the parse service routine (IKJPARS), the dynamic allocation interface routine (IKJDAIR), the PULLLINE service routine, and the stack service routine. This manual discusses how the assembler prompter interacts with these routines to analyze the ASM command and to allocate data sets required by the assembler. It also discusses how the prompter passes control to the assembler.

The manual assumes that the reader knows the ASM command, its operands, and how to use the command as described in the IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION ASSEMBLER PROMPTER USER'S GUIDE (SC26-3740). The book also assumes that the reader is familiar with the assembler language and the concepts of TSO as described in: IBM SYSTEM/360 OPERATING SYSTEM: ASSEMBLER LANGUAGE (GC28-6514)

IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION GUIDE (GC28-6698)

IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION COMMAND LANGUAGE REFERENCE (GC28-6732)

IBM SYSTEM/360 OPERATING SYSTEM: TIME SHARING OPTION GUIDE TO WRITING A TERMINAL MONITOR PROGRAM OR A COMMAND PROCESSOR (GC28-6764)

This manual is intended for people involved in program maintenance, and its distribution is limited to licensees doing maintenance work. Program logic information is not necessary to use the program.
Manual, 56 pages

SY26-3814

OS/VS LOADER LOGIC

This publication describes the internal logic and organization of the OS/VS Loader program. It is intended for persons involved in maintaining or modifying the loader. It is not required for normal use and operation of the program described.

Before using this publication, the reader must be familiar with OS/VS Linkage Editor and Loader, GC26-3813, and OS/VS and DOS/VS Assembler Language, GC33-4010.

Corequisite publications include OS/VS1 Storage Estimates, GC24-5094, or OS/VS2 Storage Estimates, GC28-0604, and OS/VS1 System Data Areas, SY28-0605, or OS/VS2 System Data Areas, SY28-0606.
Manual, 167 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3815

OS/VS LINKAGE EDITOR LOGIC

This publication describes the internal organization and logic of the OS/VS linkage editor. The linkage editor, a processing program, combines and edits modules to produce a load module that can be loaded into virtual storage by the control program.

This publication is intended for persons involved in the maintenance and modification of the linkage editor; it is not required for the normal use and operation of the programs described.

The following publications are required for an understanding of the linkage editor:

- o OS/VS Linkage Editor and Loader, GC26-3813
- o OS/VS Data Management Services Guide, GC26-3783
- o OS/VS Data Management Macro Instructions, GC26-3793
- o OS/VS JCL Reference, GC28-0618

OS/VS1 System Data Areas, SY28-0605, or OS/VS2 System Data Areas, SY28-0606, describes data areas used by the linkage editor.

Manual, 232 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3820

OS/VS2 CHECKPOINT/RESTART LOGIC

This book describes the logic of the OS/VS2 routines that take a checkpoint and restart a job at a checkpoint. The major parts of this book and the information in them are as follows:

- o Introduction - describes the checkpoint/restart routines in general terms and briefly tells what they do.
- o Method of Operation - describes the operations performed by checkpoint/restart routines and the input to and output from those operations.
- o Program Organization - shows the flow of control between the modules of checkpoint/restart and describes the major operations performed by each module.
- o Data Areas - shows the data areas used by checkpoint/restart routines.
- o Diagnostic Aids - Lists the messages, message codes, and return codes generated by checkpoint/restart modules.
- o Modules Directory - lists each checkpoint/restart module and refers to a figure in "Program Organization" or "Method of Operation" that describes each module.

This book is intended for use by programming systems representatives and system programmers maintaining checkpoint/restart routines.

A general understanding of how the user requests that a checkpoint be taken and restarts his job is prerequisite knowledge for understanding the information in this book. See OS/VS Checkpoint/Restart, GC26-3784, for this type of information.

SY26-3823

OS/VS2 I/O SUPERVISOR LOGIC REL 3, 3.6 WITH SN28-2618 AND SN28-2736, REL 3.7

Intended as an aid in troubleshooting the OS/VS2 I/O supervisor, the component responsible for communicating with the system's I/O devices. Contains two paths to the microfiche listings: a tutorial path, to make the listings

meaningful to the reader lacking a basic understanding of the I/O supervisor's function and design; and a diagnostic path, to get the knowledgeable reader from a dump, a message, or an error code as near the source of error as possible.

The chapters that make up the tutorial path name and classify the collars of the I/O supervisor, tell how the callers ask for services, and describe how the I/O supervisor performs the services. The chapters that make up the diagnostic path show the diagnostic output of I/O supervisor procedures and give the flow-of-control between the procedures.

Contains two appendixes: the first describes the logic of the OS/VS2 EXCP processor, a component that communicates the requests of some IBM access methods to the I/O supervisor; the second gives an overview of the error recovery processing that is done following an I/O error.

Related Publication: OS/VS2 Scheduler and Supervisor Logic, SY28-0621

listings, this publication allows the reader to maintain or make changes to the I/O supervisor when necessary.

Related publications include OS/VS2 Supervisor Manual, 140 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3825

OS/VS2 VSAM LOGIC

This manual is intended for maintenance personnel and development programmers who require an in-depth knowledge of OS/VS2 VSAM/2 design, organization, and data areas. The Virtual Storage Access Method (VSAM) is an access method for use with OS/VS for data stored on direct-access storage devices.

The manual describes the internal logic of VSAM and contains module directories and diagnostic information. It should be used with the program listings and with the VSAM microfiche cross-reference tables that show which program modules reference the fields of data areas, which modules issue the macros used by VSAM, and how control flows between program procedures.

OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838, is a prerequisite.
Manual, 300 pages

SY26-3826

OS/VS2 CATALOG MANAGEMENT LOGIC

This manual is intended for maintenance personnel and development programmers who require an in-depth knowledge of OS/VS2 Catalog Management's design, organization, data areas, and diagnostic information.

The manual describes the internal logic of OS/VS Catalog management and contains diagnostic information, data area descriptions, and figures and tables that show the relationship between various parts of the program.

OS/VS Virtual Storage Access Method (VSAM) Programmer's Guide, GC26-3838, and OS/VS Access Method Services, GC26-3836, are prerequisites.

Manual, 320 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3827

OS/VS2 OPEN/CLOSE/EOV LOGIC: REL 3, 3.6; WITH SN26-0823, REL 3.7

This publication is intended for system programmers and people who want to understand the Open/Close/End-of-Volume (EOV) (functions).

Open opens a data set by linking system control blocks so that the access methods can perform the input/output operations. EOV applies these linkages when the end of a volume of a multivolume data set is reached and performs end-of-data processing. Close closes a data set by restoring the system control blocks to the contents they had before the data set was opened.

The book is divided into the following sections: Introduction, Method of Operation, Program Organization, Directory, Data Areas, and diagnostic Aids. The latter section discusses how to use a set of routines called Problem Determination to find the causes of errors that occur during Open/Close/EOV processing.

The reader is expected to be familiar with OS Data Management, as described in OS/VS Data Management Services Guide, GC26-3783.

SY26-3834

OS/VS2 VIO LOGIC

This book describes what the VIO processor does and how it operates. It is intended for IBM programming support representatives and system programmers who are learning about, supporting, or modifying the VIO logic. They should be thoroughly familiar with the OS/VS2 environment and with channel programming.

VIO enables system-named temporary data sets to reside in external page storage and to be processed using paging I/O. VIO interprets regular I/O requests and simulates their execution by moving data between a user's buffer and the VIO buffer. VIO uses paging I/O to cause the pages in the VIO buffer to be intermittently paged in or out of main storage as required.

To thoroughly understand the logic involved in VIO processing, this book should be used with either listings, or microfiche of compiled VIO source code.

The following are prerequisite publications:

- o For information about ASM processing in support of VIO, see OS/VS2 Auxiliary Storage Management (ASM) Logic, SY35-0009
- o For an orientation to the OS/VS2 system, see OS/VS2 Planning Guide for Release 2, GC28-0667
- o For information about job management, task management, real storage management (RSM), virtual storage management (VSM), and recovery/termination management (RTM) and their support of VIO processing, see OS/VS2 Scheduler and Supervisor Logic, SY28-0621
- o For information about I/O appendages, see OS/VS2 System Programming Library: Data Management, GC26-3830.

SY26-3837

OS/VS1 DADSM LOGIC

This manual provides detailed information about the direct access device space management (DADSM) routines. The DADSM routines allocate and release space on a direct access volume by altering the volume table of contents. This publication describes how these routines operate and how they relate to each other and the system control program OS/VS1; it also describes data set control blocks which make up the volume table of contents.

The intended audience is persons who support the DADSM routines and system programmers who wish to alter the design of these routines. Cross-references to module names and to labels within each module of the DADSM routines are provided, as are descriptions of data areas, and methods of diagnosing DADSM problems.

Prerequisite publications:

- o For how to and reference information on allocating extending and releasing space on direct-access volumes: OS/VS1 JCL Services, GC24-5100, and OS/VS1 JCL Reference, GC24-5099.
- o For reference information on space allocation: OS/VS Data Management Services Guide, GC26-3783.
- o For reference and how-to information on deleting data sets (SCRATCH macro), renaming data sets (RENAME macro), obtaining access to DSCBs (OBTAIN macro) and providing password protection for data sets (PROTECT macro):
- o For general information about the operating system: OS/VS1 Planning and Use Guide, GC24-5090
- o For details about the System Management Facilities (SMF) records: OS/VS System Management Facilities (SMF), GC35-0004
- o For reference and how-to information on using IEHLIST, OS/VS Utilities, GC35-0005

OS/VS1 Data Management for System Programmers, GC26-3837. Drop shipped to major users; minimal supply available at IBM Distribution Center to meet other requirements.

OS/VS1 ISAM LOGIC

This publication describes the program logic of the two indexed sequential access methods: the queued indexed sequential access method (QISAM) and the basic indexed sequential access method (BISAM). It also discusses the relationship of indexed sequential access method routines to other parts of the control program.

This publication is intended for personnel supporting or modifying ISAM. These publications are prerequisite to this publication.

- o OS/VS Data Management Services Guide, GC26-3783
- o OS/VS Data Management Macro Instructions, GC26-3793

Manual, 288 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3839

OS/VS1 OPEN/CLOSE/EOV LOGIC

This publication describes the functions (units of processing) and modules (unit of code) of the Open/Close/End-of Volume portion of the operating system. It also describes the relationship of Open/Close/EOV to the portions of the operating system that give control to and receive control from it. Open/Close/EOV modifies system control blocks, and mounts and verifies volumes so that I/O operations can be performed. This publication is divided into seven sections: Introduction, Method of Operation, Program Organization, Module Directory, Data Areas, Diagnostic Aids, and Appendix.

This book uses DCB and ACB as interchangeable blocks. Where it is necessary to refer to both control blocks, they are referred to as DCB/ACB or DCB or ACB. DCB is used as the prefix for all fields within these control blocks (for example, DCBMACRF). The ACB is used by the job entry subsystem (JES) and by the virtual storage access method (VSAM) to logically connect the system program or a user's program to a data set, in the same way that a DCB is used.

Manual, 240 pages

SY26-3866

SUPPLEMENT FOR SU6: OS/VS1 OPEN/CLOSE/ECV, 5741-606

This supplement contains replacement pages for OPEN/CLOSE/EOV Logic (SY26-3839-3) to support Subsystem Attachment Support Selectable Unit.

Manual, 8 1/2 x 11 inches, 36 pages, 10/77

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3867

SUPPLEMENT TO SU6: OS/VS1 SUBSYSTEM ATTACH SUPPORT, 5741-606

This supplement contains replacement pages for OS/VS1 SAM

Logic (SY26-3840-2) in support of Selectable Unit 6 (SU6).
Manual, 8 1/2 x 11 inches, 12 pages, 10/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3868

SUPPLEMENT FOR SU32 TO MVS CHECKPOINT/RESTART LOGIC:
SYSTEM SECURITY, 5752-832
This System Library Supplement provides replacement pages for OS/VS2 Checkpoint/Restart Logic, SY26-3820, to support the Resource Access Control Facility (RACF) for RACF-protected tape volumes.
Manual, 8 1/2 x 11 inches, 24 pgs, 5/77
/////5752-832

SY26-3869

SUPPLEMENT FOR SU32 TO MVS DADSM LOGIC:
SYSTEM SECURITY, 5752-832
This System Library Supplement provides replacement pages for OS/VS2 DADSM Logic (either SY26-3828-1 for Release 3.7, or SY26-3858-0 for Release 3.7 with 5752-808) to support the System Security Support Selectable Unit (SU32).
Manual, 8 1/2 x 11 inches, 8 pgs, 5/77
/////5752-832

SY26-3872

OS/VS2 SVS ALTERNATE PATH RECOVERY LOGIC INFORMATION
SUPPORT SUPPLEMENT FOR APAR OY14666
This publication provides information about the PTF alternate path recovery that is intended for use with the program logic manuals for OS/VS2 Release 1.7. The information in this publication is intended for IBM program support representatives, installation programmers, and others involved in maintaining this PTF.
The logic information provided in this manual is presented in a format resembling replacement-page technical newsletters (TNLS). You can either keep the pages bound together in this book, or you can take them apart and insert the pages into the various program logic manuals that they supplement. If you do the latter, ensure that you do not replace any pages that have been changed by any other independent component or update TNL. In such cases, both pages must be kept.
The program logic manuals for which information is supplied are listed below with the form numbers you can use to obtain copies.

- OS/VS2 I/O Supervisor Logic, SY26-3823 (obtained by using order number SQ66-3823)
- OS/VS Recovery Management Support Logic, SY27-7239 (obtained by using order number SQ67-7239)
- OS/VS SYS1.LOGREC Error Recording Logic, SY28-0639 (obtained by using order number SQ68-0639)

Manual, 8 1/2 x 11 inches, 66 pgs, 3/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY26-3873

DOS/VS IEBIMAGE AND SETPRT LOGIC
This manual explains the logic of the two programs (IEBIMAGE, SETPRT) which together provide the data needed to control the IBM 3800 Printer. The purpose of this manual is to help the IBM programming service representative (PSR) to isolate a programming failure as quickly as possible. Although this manual is written primarily for the PSR, system programmers and others may also be interested in some of the information presented here.
Manual, 8 1/2 x 11 inches, 72 pgs, 11/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

GY27-7198

IBM SYSTEM/360 OPERATING SYSTEM: MACHINE-CHECK HANDLER
FOR SYSTEM/370 MODELS 155 THRU 168 (LOGIC), P/N 360S-DN-539
This manual describes the internal operations of the Machine-Check Handler (MCH) for the IBM System/370 Models 155 and 165. MCH is a standard component of the MFT and MVT versions of System/360 Operating System when used with the Models 155 and 165.

This manual is written for persons who maintain the program or who are altering the program's design. Its primary purpose is to serve as a guide to the program listings.

Program Logic Manual, 192 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

GY27-7228

7074 OS EMULATOR ON MODELS 165/168, PROG 360C-EU-739
(OS/MFT AND OS/MVT), PROG 5744-AK1 (OS/VS1 AND OS/VS2)
This publication provides IBM customer engineers and persons responsible for program maintenance with information about the organization and logic of the IBM 7074 Emulator Program for IBM System/370 Models 165 and 168. The emulator program runs as a problem program under the MFT, MVT, VS1, or VS2 configurations of the operating system. The System/370 Models 165 and 165 II must have IBM Compatibility Feature #7117; the Model 168 must have Feature #7127. The emulator program, together with a compatibility feature, executes object programs written for the IBM 7074 Data Processing System.
Manual, 8 1/2 x 11 inches, 244 pages, 4/73
SLSS - ORDER NO. SUBSCRIPTION ONLY

GY27-7229

7080 OS EMULATOR ON MODELS 165/168: LOGIC, PROG. NOS.
360C-EU-737 (MFT/MVT), 5744-AL1 (VS1/VS2)
This manual describes the internal logic of the IBM 7080 Emulator Program for the IBM System/370 Model 165. The emulator program is a problem program that executes under the MFT and MVT configuration of the IBM System/360 Operating System. The IBM Compatibility Feature #7118 must be installed on the Model 165.

The emulator program executes object programs written for the IBM 7080 Data Processing System. Major topics are the logic of the emulator program; the relationships among the emulator program, the compatibility feature, and the operating system; and the logic of tape formatting programs used in conjunction with the emulator.

This publication is a reference manual for persons responsible for emulator program maintenance. Readers should be experienced with the IBM 7080 Data Processing System and have a working knowledge of the MFT or MVT configuration of the IBM System/360 Operating System. Systems Library, 204 pages

LY27-7230

VIDEO/370 LOGIC MANUAL - PROGRAM NUMBERS 5734-RC5, 5736-RC3
This manual presents the logic of VIDEO/370, which allows direct data entry through the use of IBM 3270 display stations. It describes the functions of VIDEO/370, the routines that perform the functions, and the data areas used by the routines. Information for diagnosing problems with the VIDEO/370 sample program is also included.

This book is intended for use by IBM program service representatives, Field Engineering education, SDC product programmers, DPD system engineers, or customers performing similar functions.
Manual, 224 pages

GY27-7237

IBM SYSTEM/360 OPERATING SYSTEM: MACHINE-CHECK HANDLER FOR
SYSTEM/370 MODELS 135 AND 145 (LOGIC), P/N 360S-DN-539
This manual describes the internal operations of the Machine-Check Handler (MCH) for the IBM System/370 Models 135 and 145. MCH is a standard component of the MFT version of the System/360 Operating System when used with the Model 135 or the Model 145.

This manual is written for persons who maintain the program or who are altering the program's design. Its primary purpose is to serve as a guide to the program listings.

Program logic manual, 128 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

GY27-7238

7074 OS EMULATOR ON MODELS 155/158 LOGIC
PROG. NOS. 360C-EU-741 (OS); 5744-AJ1 (VS1, VS2)
This manual describes the internal logic of the IBM 7074 Emulator Program for the IBM System/370 Model 155. The emulator program is a problem program that executes under the MFT or MVT configuration of the IBM System/360 Operating System. The IBM Compatibility Feature #7117 must be installed on the Model 155.

This manual describes how the emulator program executes object programs written for the IBM 7074 Data Processing System. Major topics are the logic of the emulator program; the relationship among the emulator programs, the compatibility feature, and the operating system; the logic of the tape formatting programs used in conjunction with the emulator and the logic of the compatibility feature.

This publication is a reference manual for persons responsible for maintenance of the emulator program, tape formatting programs, and compatibility feature. Readers should be experienced with the IBM 7074 Data Processing System and have a working knowledge of the MFT or MVT configuration of the IBM System/360 Operating System.

SY27-7239

OS/VS RECOVERY MANAGEMENT SUPPORT LOGIC: SVS REL 1.6;
VS1 REL 4, 5

This publication describes three recovery management programs that are part of OS/VS:

- o The Machine-Check Handler, a program that processes machine-check interruptions. Depending on the severity of the malfunction, the Machine-Check Handler (1) restores the system to normal operation, (2) terminates tasks associated with the malfunction so the system can resume processing, or (3) places the system in a wait state. In all cases, the Machine-Check Handler writes diagnostic messages and error records.
- o The Channel-Check Handler, a program that receives control after the detection of a channel data check, channel control check, or interface control check. The Channel-Check Handler analyzes the channel error and provides the results of this analysis to the appropriate error recovery procedure and to the operator and system maintenance personnel.
- o Dynamic Device Reconfiguration, a program that permits a demountable volume to be moved from one device to another and repositioned. This method is

used to bypass I/O errors and avoid abnormally terminating the affected job or reloading the system.

Manual, 164 pages

SY27-7240

OS/VS GRAPHICS ACCESS METHOD LOGIC MANUAL

Describes the internal logic of the Graphics Access Method (GAM) for the IBM 2250 Display Unit, Models 1 and 3, and the IBM 2260 Display Station (Local Attachment). Areas of the program that perform specific functions are identified and related to the program listings.

GAM consists of input/output and control routines that are part of the graphic programming services for the 2250 display unit and the 2260 display station. The GAM routines perform three major functions:

- o Graphic data management (including buffer management)
- o Input/output control
- o Attention handling (both basic and express)

This program logic manual is directed to the IBM customer engineer, who maintains the program, and to the system programmer, who may wish to alter the program design. It should be used in conjunction with, and as a guide to, appropriate program listings. Program logic information is not necessary for program operation and use.

Manual, 104 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY27-7241

OS/VS GRAPHICS PROBLEM-ORIENTED ROUTINES LOGIC

This manual describes the internal logic of the problem oriented routines (PORs) for the IBM 2250 Display Unit, Models 1 and 3. Areas of the program that perform specific functions are identified and related to the program listings.

PORs, which are part of the graphic programming services for the 2250 display unit, are generalized routines that generate graphic orders for displaying various images and alphanumeric information on the 2250 Display Unit. Each POR is described in detail to show its internal structure and logic.

This program logic manual is directed to the IBM customer engineer, who maintains the program, and to the system programmer, who may wish to alter the program design. It should be used in conjunction with, and as a guide to, the appropriate program listings. Program logic information is not necessary for program operation and use.

Manual, 52 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY27-7242

OS/VS GRAPHIC SUBROUTINE PACKAGE (GSP) FOR FORTRAN IV, COBOL AND PL/I LOGIC

This manual describes the internal logic of the graphic subroutine package (GSP), a program that enables a FORTRAN, COBOL, or PL/I programmer to write graphic programs for the IBM 2250 Display Unit under the control of OS/VS. GSP may also be used in an assembler language program.

This program logic manual is directed to the IBM customer engineer, who maintains the program, and to the system programmer, who may wish to alter the program design. It should be used in conjunction with, and as a guide to, the appropriate program listings. Program logic information is not necessary for program operation and use.

Manual, 136 pages

SY27-7243

OS/VS2 IPL AND NIP LOGIC: REL 1.6 ONLY

This publication describes the logic of the IPL (initial program loader) and NIP (nucleus initialization program) support for OS/VS2. The information is intended for use by personnel involved in program maintenance. IPL loads the nucleus designated by the user and prepares the system for initialization. NIP initializes the nucleus and the remainder of real storage in preparation for system execution.

Readers of this publication should be familiar with the following publications:

- o OS/VS Supervisor Services and Macro Instructions, GC27-6979.
- o OS/VS2 Supervisor Logic, SY27-7244.

The following publications may be helpful in understanding IPL and NIP:

- o OS/VS Message Library: VS/2 System Messages GC38-1002.
- o OS/VS Message Library: VS2 System Codes, GC38-1008.
- o Operator's Library: OS/VS2 Reference, GC38-0210.
- o OS/VS2 System Data Areas, SY28-0606.

Manual, 208 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY27-7244

OS/VS2 SUPERVISOR LOGIC (THROUGH RELEASE 1.6 ONLY)

This publication describes the logic of the OS/VS2 supervisor, its relationship to the other portions of the control program, and the interaction between supervisor modules.

The information in this manual is intended for personnel who are responsible for determining sources of error within or making modifications to the VS2 supervisor.

The supervisor support for the communications task and checkpoint/restart are not documented in this publication. The communications task which is documented in OS/VS2 Job Management Logic, SY28-0620; checkpoint/restart logic is documented in OS/VS2 Checkpoint/Restart Logic, SY26-3820.

To understand the information in this publication, you must be familiar with the basic concepts of and services provided by the VS2 supervisor as described in OS/VS Supervisor Services and Macro Instruction, GC27-6979.

Manual, 1,012 pages (2 volumes)

GY27-7245

DOS VERSION 4 BTAM LOGIC, PROG. NO. 370N-CQ-469

This publication describes the internal logic of the Basic Telecommunications Access Method (BTAM) in Version 4 (Release 27) of the Disk Operating System (DOS). It is intended for persons involved in program maintenance and for systems programmers who are altering the program design. It can be used to help locate BTAM application program errors. This publication contains:

- o An overview of BTAM logic
- o A guide to specific BTAM routines by alphabetical name of the routine and by function
- o Routine descriptions and flowcharts

This information is designed to be used with the program listings.

The user should be familiar with how BTAM is used; this is described in the SRL publication, DOS Version 4 Basic Telecommunications Access Method, GC27-6978.

Manual, 436 pages

GY27-7255

OS/VS2 HASP II VERSION 4 LOGIC MANUAL - PROGRAM NUMBER 370H-TX-001

This manual describes the purpose and function of HASP and its relationship to OS/VS2 Release 1. It does not replace the program listings; it supplements them and makes the information in them more accessible.

This publication contains seven sections:

Section 1 Introduction - describes the general characteristics and functions of HASP II Version 4.

Section 2 Method of Operation - contains HIPO (Hierarchy plus Input-Process-Output) diagrams that describe the operation of HASP II Version 4. The diagrams are high level and are designed to guide the reader to a particular area of the program listing.

Section 3 Program Organization - describes the HASP general program organization and each of the HASP processors.

Section 4 Directory - provides cross-reference lists.

Section 5 Data Areas - contains descriptions of the interrelationship and content of HASP data areas and control blocks.

Section 6 Diagnostic Aids - contains information necessary for interpreting the program listing and diagnosing program failures.

Section 7 Appendix A HASP Programmer Macros - describes HASP macro instructions and their use.

Glossary - defines HASP terms.

Related OS/VS publications are listed in the IBM System/360 and System/370 Bibliography, GA22-6822. Manual, 484 pages

SY27-7256

INTRODUCTION TO VTAM (LEVEL 2) LOGIC: MVS; SVS REL 1.7; VS1 REL 5; WITH SN27-1552, VS1 REL 6; DOS/VS PLANNING ONLY
This publication describes the general way that the Virtual Telecommunications Access Method (VTAM) works, the interfaces that exist between major groups of VTAM routines, and the control blocks that VTAM uses. The VTAM routines are grouped into six major categories: initialization and termination services configuration services; system services; and reliability, availability, and serviceability. This publication is one of a set of publications that describe the logic of VTAM. It describes the high-level logic, which is similar in the DOS/VS, OS/VS1, and OS/VS2 versions of VTAM. The VTAM logic manuals for each system describe the lower-level, system-dependent VTAM logic. This manual is available immediately in Mechanicsburg for planning purposes until VTAM Level 2 is available. Users of this manual for VTAM Level 1.1 should now order by the temporary order number, ST67-7256-1. Manual, 116 pages

SY27-7257

OS/VS1 VTAM LOGIC
This manual is the second part of a two-part description of the logic of the Virtual Telecommunications Access Method (VTAM) for OS/VS1. The first part is the Introduction to VTAM Logic, SY27-7256, which describes the high-level logic. The two manuals are intended primarily for IBM Programming Support Representatives, to enable them to quickly locate failures in the access method. Using OS/VS1 VTAM Logic, the PSR can determine the module that performs a particular function; pertinent information about each module is provided and control flow diagrams show how control passes between modules. The data areas for OS/VS1 VTAM Logic are contained in a separate publication, VTAM Data Areas, SY27-7265. Prerequisite publications: none

7094 OS EMULATOR ON MODELS 165/168: LOGIC, PROG. NOS. 360C-EU-740 (MFT/MVT) & 5744-AM1 (VS1/VS2)
This manual describes the internal logic of the IBM 709/7090/7094 II Emulator Program for the IBM System/370 Model 165. The emulator program is a problem program that executes under the MFT and MVT configurations of the IBM System/360 Operating System. The IBM Compatibility Feature #7119 must be installed on the Model 165. The emulator program executes object programs written for the IBM 709, 7090, 7094, or 7094 II Data Processing System. Major topics are the logic of the emulator program; the relationship among the emulator program, the compatibility feature, and the operating system; and the logic of tape formatting programs used in conjunction with the emulator. This publication is a reference manual for persons responsible for emulator program maintenance. Readers should be experienced with the IBM 709, 7090, 7094, or 7094 II Data Processing System, and have a working knowledge of the MFT or MVT configuration of the IBM System/360 Operating System. ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) DEBUGGING GUIDE, PROG PROD 5735-RC2 (OS/VS)

This publication describes an approach to debugging ACF/VTAM in OS/VS. It presents guidelines, tools, and other information that the reader can use as ACF/VTAM debugging aids to help determine the cause of an error or failure. It also summarizes serviceability aids described in other publications and directs the reader to detailed descriptions of these aids.

This manual is intended for IBM program support representatives and system programmers who maintain systems and application programs that use ACF/VTAM. Prerequisite publications for this manual are ACF/VTAM Concepts and Planning, GC38-0282, and ACF/VTAM System Programmer's Guide for OS/VS, SC38-0258.
Manual, 8 1/2 x 11 inches, 220 pgs, 12/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY27-8007

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) DEBUGGING GUIDE, PROG PROD 5746-RC3 (DOS/VS)

This publication describes an approach to debugging ACF/VTAM in DOS/VS. It presents guidelines, tools, and other information that the reader can use as ACF/VTAM debugging aids to help determine what the cause of an error or failure is. It also summarizes serviceability aids described in other publications and directs the reader to detailed descriptions of these aids.

This manual is intended for IBM program support representatives and system programmers who maintain systems and application programs that use ACF/VTAM. Prerequisite publications for this manual are ACF/VTAM Concepts and Planning, GC38-0282, and ACF/VTAM System Programmer's Guide for DOS/VS, SC38-0268.
Manual, 8 1/2 x 11 inches, 200 pgs, 7/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8009

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), EXECUTION SEQUENCES, PROGRAM NUMBER 5735-RC2 (OS/VS1)

This publication describes sample execution sequences of OS/VS1 ACF/VTAM modules involved in processing selected ACF/VTAM macros and network operator commands. It is intended to supplement ACF/VTAM Logic, LY27-8016 and ACF/VTAM Debugging Guide, SY27-8006.

Manual, 8 1/2 x 11 inches, 100 pages, 6/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8010

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM EXECUTION SEQUENCES (OS/VS2 MVS)

This publication describes sample execution sequences of ACF/VTAM modules involved in processing selected ACF/VTAM macros and network operator commands in an OS/VS2 MVS operating system. It is intended to supplement the publications ACF/VTAM Logic, LY27-8016 and ACF/VTAM Debugging Guide, SY27-8006.

Manual, 8 1/2 x 11 inches, 190 pages, 2/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8012

ACF/VTAM EXECUTION SEQUENCES, SCP 5735-RC2 (OS/VS2 SVS)

This publication describes sample execution sequences of ACF/VTAM Modules involved in processing selected ACF/VTAM Macros and Network operator commands in a S/370 OS/VS2 SVS operating system.

Manual, 7/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8013

ADVANCED COMMUNICATIONS FUNCTIONS FOR VTAM (ACF/VTAM) TOLTEP LOGIC, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

Manual describes the internal logic of the Teleprocessing Online Test Executive Program (TOLTEP). TOLTEP operates as a subtask of ACF/VTAM and is the interface between ACF/VTAM and the online test programs (OLTS) that test the hardware characteristics of various terminals supported by ACF/VTAM. This manual is intended for IBM personnel who are responsible for program maintenance.

Manual, 8 1/2 x 11 inches, 60 pgs, 7/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8014

INTRODUCTION TO ACF/VTAM LOGICPROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This publication is one of a set that describes the logic of ACF/VTAM. This publication describes the high-level logic, which is similar in the DOS/VS and the OS/VS versions of ACF/VTAM. This publication should be read before reading the other logic manuals in the set to get a general understanding of ACF/VTAM logic. The ACF/VTAM logic manuals for DOS/VS and for OS/VS describes the lower-level, system-dependent logic. The intended audience is the IBM program support representative who maintain the access method.

This publication contains:

- o An overview of ACF/VTAM operations
- o A chapter describing the most important ACF/VTAM control blocks
- o A chapter for each ACF/VTAM component that

describes the functions performed by the component

- o A list of abbreviations used in the publication

ACF/VTAM Concepts and Planning, GC38-0282, is a prerequisite publication.
Manual, 8 1/2 x 11 inches, 200 pgs, 7/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

overview of ETAM-ES, a list of BTAM-ES routines by name, a list of ETAM-ES routines by function performed, and detailed flowcharts of the logic as well as descriptions of the contents of various control blocks.
Manual, 8 1/2 x 11 inches, 460 pages, 2/79
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8016

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) LOGIC, PROG PROD 5735-RC2 (OS/VS)
This manual is the second part of a two-part description of the logic of the Advanced Communications Function of the Virtual Telecommunication Access Method (ACF/VTAM) for OS/VS Systems. The first part is the Introduction to ACF/VTAM Logic, which describes the high level logic of ACF/VTAM. This manual describes the lower-level logic, which includes system-dependent logic. This manual is intended primarily to help IBM program systems representatives to quickly locate failures in the access method. The Introduction to ACF/VTAM Logic should be read first to get an understanding of the high-level logic, followed by this manual for more detailed information.

Included in this publication are HIPO diagrams that describe the Logic of ACF/VTAM components, control flow diagrams which show the flow of control between modules, and module synopsis information about each ACF/VTAM module. This information should enable the PSR to determine the module that performs a particular function and how control passes to and from that module.
Manual, 8 1/2 x 11 inches, 800 pgs, 12/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8018

ACF/VTAM LOGIC, PROG PROD 5746-RC3 (DOS/VS)
This manual is the second part of a two-part description of the logic of the Advanced Communications Function of the Virtual Telecommunication Access Method (ACF/VTAM) for DOS/VS. The first part is the Introduction to ACF/VTAM Logic, which describes the high level logic of ACF/VTAM. This manual describes the lower-level logic, which includes system-dependent logic. This manual is intended primarily to help IBM program systems representatives to quickly locate failures in the access method. The introduction to ACF/VTAM Logic should be read first to get an understanding of the high-level logic, followed by this manual for more detailed information.

Included in this publication are HIPO diagrams that describe the logic of ACF/VTAM components, control flow diagrams which show the flow of control between modules, and module synopsis information about each ACF/VTAM module. This information should enable the PSR to determine the module that performs a particular function and how control passes to and from that module.

SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8022

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), MULTISYSTEM NETWORKING FACILITY LOGIC, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)
This manual describes the logic of the Multisystem Networking Facility, a feature for ACF/VTAM. This manual supplements ACF/VTAM Logic, LY27-8018 (for DOS/VS) and LY27-8016 (for OS/VS). This manual describes the logic that is unique for the Multisystem Networking Facility, not the logic of ACF/VTAM. This manual is intended primarily to help IBM program systems representatives to locate failures in the Multisystem Networking Facility code. The Introduction to ACF/VTAM Logic, LY27-8014, should be read first to get an understanding of the high-level logic.

This manual contains detailed information which relates the components of the Multisystem Networking Facility to the components of ACF/VTAM, describes the function of each of the Multisystem Networking Facility components, and gives module details which should enable the reader to identify a particular module that performs a certain function.
Manual, 8 1/2 x 11 inches, 148 pgs, 7/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8024

ACF/VTAM ENCRYPT/DECRYPT LOGIC, 5735-RC2
No abstract available.
Manual, 8 1/2 x 11 inches, 84 pages, 1/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8028

ACF/VTAM LOGIC: VTIOC AND TCAS PROGRAM PRODUCT
This manual describes the internal organization and logic of the ACF/VTAM terminal I/O coordinator (VTIOC) and the terminal control address space (TCAS). It is intended for people who are debugging or modifying VTIOC or TCAS.
Manual, 8 1/2 x 11 inches, 200 pages, 1/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY27-8030

BASIC TELECOMMUNICATIONS ACCESS METHOD EXTENDED SUPPORT (BTAM-ES) LOGIC
This manual describes the internal logic of the Basic Telecommunications Access Method Extended Support (BTAM-ES) program product, which works with Disk Operating System/Virtual Storage Extended (DOS/VSE).

GY28-0603

OS/VS MASTER INDEX OF LOGIC
This publication consolidates the indexes of program logic manuals for OS/VS; it applies to both VS1 and VS2.
The master index lists topics alphabetically, and refers to manuals where these topics are discussed. The indexes of these manuals list the same topics and refer to specific pages.
Index, 320 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0605

OS/VS1 SYSTEM DATA AREAS
This publication describes the contents and format of the major control blocks used by more than one component of the OS/VS1 control program. This publication is to be used by IBM software support personnel and by system programmers who require information about the individual fields contained in the system's major control blocks.
Manual, 600 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0612

OS/VS2 JES3 LOGIC
Describes the function and logic of the JES3 component of OS/VS2 MVS Release 3.7 and subsequent releases.
Contains the following six sections to be used by support representatives and system programmers who must service the JES3 system:

- Section 1 - Introduction
- Section 2 - Method of Operation
- Section 3 - Program Organization
- Section 4 - Directory
- Section 5 - Data areas
- Section 6 - Diagnostic Aids

Manual, 8 1/2 x 11 inches, 776 pages, 9/78
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0620

OS/VS2 JOB MANAGEMENT LOGIC (SVS)
This publication provides the information necessary to trace function and program organization through the job management part of the control program. The intended audience is primarily involved with system maintenance but may possibly be altering system design.

The major functions described are master scheduler initialization, system input/output processing, initiating and terminating tasks, allocating and freeing devices, processing commands, managing work queues, communicating with the system operator and console, recovering from errors, and recording system information.

The program organization necessary to accomplish the functions provided is described, and local data areas, a module directory, an introductory overview of job management, and a section tying message IDs to the issuing and detecting modules, are provided.
Manual, 640 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0621

OS/VS2 MVS VTAM (LEVEL 2) LOGIC
This manual is the second part of a two-part description of the logic of the Virtual Telecommunications Access Method (VTAM) for OS/VS2. The first part is the introduction to VTAM Logic, SY27-7256, which describes the high level logic. The two manuals are intended primarily for IBM Programming Support Representatives, to enable them to quickly locate failures in the access method using OS/VS2 VTAM Logic, the PSR can determine the module that performs a particular function; pertinent information about each module is provided and control flow diagrams show how control passes between modules. The data areas for OS/VS2 VTAM Logic are contained in a separate publication, OS/VS2 DATA AREAS SY27-7267.

Diagnostic aids are contained in OS/VS2 Debugging Guide, GC27-0023; and OS/VS2 VTAM Control Block Overview, GX27-0031.

Manual, 700 pages, 1/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0622

OS/VS2 JES2 LOGIC: VS2 REL 1.6 THROUGH 3.6
This manual describes the purpose and functions of JES2 and its relationship to OS/VS2 Release 2. It does not replace the program listings; it supplements them and makes the information in them more accessible. This publication contains the following sections:

- Section 1 Introduction - describes the general characteristics and functions of JES2.
- Section 2 Method of Operation - contains HIFC (Hierarchy plus Input-Process-Output) diagrams that describe the operation of JES2.

The diagrams are high level and are designed to guide the reader to a particular area of the program listings.

Section 3 Program Organization - describes the JES2 general program organization and each of the JES2 processors.
 Section 4 Directory - provides cross-reference lists.
 Section 5 Data Areas - contains descriptions of the interrelationship and content of data areas and control blocks.
 Section 6 Diagnostic Aids - contains information necessary for interpreting the program listing and diagnosing program failures.
 Section 7 Appendixes:
 A - JES2 Programmer Macros - describes JES 2 macro and their use.
 B - MULTI-LEAVING* - describes the basic principles of MULTI-LEAVING.
 C - Remote Terminal Bootstrap - describes the RTPBOOT bootstrap program.
 D - External Writer - describes the External Writer program which is used for producing SYSOUT data sets on magnetic tape or direct-access devices.

Manual, 828 pages

SY28-0623

OS/VS2 SYSTEM INITIALIZATION LOGIC REL 2, 3, 3.6; WITH SN28-2617, REL 3.7
 This publication describes the functions and internal logic of the system initialization process for the OS/VS2 Release 2 System. This publication is intended for the IBM programming systems representative who is involved in modifying system initialization programs.
 Systems publication, 260 pages
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0626

OS/VS2 SCHEDULER AND SUPERVISOR LOGIC VOLUME 3 OF 3
 This publication documents the internal logic of the following scheduler and supervisor functions:

- o Communications Task
- o Command Processing (including Reconfiguration Commands)
- o LOGON Scheduling
- o System Resources Manager
- o System Activity Measurement Facility (MF/1)
- o Region Control Task
- o Started Task Control (including START/LOGON/MOUNT)
- o Job Scheduler:
 - Subsystem Interface
 - Master Subsystem
 - Initiator/Terminator
 - SWA Create Interface
 - Converter/Interpreter
 - SWA Manager
 - Allocation Unallocation
 - System Management Facilities (SMF)
 - System Log
 - Checkpoint/Restart
- o Timer Supervision
- o Supervisor Control
- o Task Management
- o Program Management
- o Real Storage Management
- o Virtual Storage Management
- o Recovery/Termination Management (R/TM)

To order Scheduler and Supervisor Logic Volumes 1,2, and 3
 Manual, 692 pages

SY28-0635

OS/VS1 SERVICE AIDS LOGIC
 This publication describes the functions and internal logic of eight service aid programs provided for use in servicing OS/VS1. These service aid programs are: Generalized Trace Facility, HMAPTFLE, HMASPZAP, HMBLIST, HMDPRDMP, HMDSADMP, IMCJOBQD, IMCOSJQD.
 This publication is intended for the IBM programming systems representative who is involved in maintaining service aid programs. This publication should be used in conjunction with OS/VS1 Service Aids, GC28-0665.
 Systems Publication
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0643

OS/VS2 SERVICE AIDS LOGIC
 This publication describes the functions and internal logic of the service aid programs provided for use in servicing OS/VS2. The service aid programs are: Generalized Trace Facility, AMBLIST, AMDPRDMP, AMAPTFLE, AMDSADMP, and AMASPZAP.
 This publication is intended for the IBM programming systems representative who is involved in maintaining service aid programs. This publication should be used in conjunction with OS/VS2 Service Aids, GC28-0674, which tells how to use the service aid programs.
 Manual, 408 pages
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0650

OS/VS2 TSO TERMINAL MONITOR PROGRAM & SERVICE ROUTINES LOGIC
 This publication describes the internal logic of the TSO terminal monitor program (TMP) and the following service routines: STACK, GETLINE, PUTLINE, PUTGET, Command Scan, Parse, Dynamic Allocation Interface Routine (DAIR), Default, Catalog Information, and the DAIR/SVC99 Error Code Analyzer. This manual applies to OS/VS2 Release 3.7 and subsequent releases until otherwise indicated, and contains information that applies to the following selectable units:
 Supervisor Performance #2 (VS2.03.807)
 TSO/VTAM Level 1 (VS2.03.813)
 TSO/VTAM Level 2 (5752-858)
 The TMP accepts commands from the terminal and gives control to the TSO Command Processors named by the commands. The TSO service routines perform common functions needed by both the TMP and the command processors.
 This publication is written for persons who maintain or modify TSO; it is not necessary for persons who use TSO to process programs or who write programs that are processed by TSO.
 Manual, 8 1/2 x 11 inches, 116 pages, 6/78
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0651

OS/VS2 TSO COMMAND PROCESSOR LOGIC VOLUME I: ACCOUNT
 This publication describes the internal logic of the programs that handle the ACCOUNT command and its ADD, CHANGE, DELETE, LIST, and SYNC subcommands. It also describes the internal logic of the ACCUMI subroutines and the ACCOUNT BROADCAST interface.
 The command processors are described with method of operation diagrams and supporting text. Directories for routines are provided.
 This manual is intended for persons involved in program debugging; it is not intended for normal use or operation of the programs described.
 Manual, 542 pages
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0652

OS/VS2 TSO COMMAND PROCESSOR LOGIC VOLUME IV REL 3; WITH SN28-2630, REL 3.7)
 This publication describes the internal logic of the programs that handle the following TSO commands:

ALLOCATE	LISTDS
ATTRIB	OPERATOR
CALL	OUTPUT
CANCEL/STATUS	PROFILE
DELETE	PROTECT
EXEC	RENAME
FREE	RUN
HELP	SEND
LINK/LCADGO	SUBMIT
LISTALC	TERMINAL
LISTBC	TIME

The manual is intended for persons involved in program debugging, or systems programmers who are altering the design; it is not necessary for normal use or operation of the programs described.
 Manual, 380 pages
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0653

OS/VS2 TSO ENHANCEMENTS NO. 2 LOGIC
 This publication describes the logic that supports TSO Enhancements No. 2. Only logic changes resulting from enhancements are documented in this publication. The logic documentation of the following TSO command processors and facilities are changes: ACCOUNT
 EDIT
 EXEC
 PROFILE
 I/O Service Routines
 Systems Publication, 88 pages
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0655

OS/VS2 TSO SUPPORT FOR VS BASIC LOGIC: REL 1.6, 1.7
 This publication describes the logic that supports VSBASIC or an equivalent in the TSO command processors. Only changes resulting from VSBASIC are documented in this publication.
 This publication is intended for persons involved in program debugging, or system programmers who are altering the program design; it is not intended for normal use of the commands described.
 Manual
 SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0659

OS/VS2 TSO ENHANCEMENTS LOGIC
 This publication describes the internal logic that supports Program Number 5742-010, Feature Number 5005. The logic of the following commands and routines is affected:

ALLOCATE
Dynamic Allocation
EDIT
OPERATOR
Parse routine
PROFILE
RUN

SEND
The information in this publication supplements the information in the following prerequisite publications:

OS/VS2 TSO:

Command Processor Logic, Vol. I, Order No. SY28-0651
Command Processor Logic, Vol. II, Order No. SY33-8548
Command Processor Logic, Vol. IV, Order No. SY33-0652
Terminal Monitor Program and Service Routines Logic, Order No. SY28-0650

This publication is intended for persons involved in program maintenance, or system programmers who are altering the program design; it is not intended for normal use of operation of the programs described.

Only changes resulting from the enhancements are documented. For complete logic documentation of the subject commands and routines, consult the appropriate prerequisite publications.

Manual, 62 pages

SY28-0660

OS/VS1 RES ACCOUNT FACILITY LOGIC

The OS/VS1 Remote Entry Services (RES) Account Facility provides background users the ability to update the user attribute data set (SYS1.UADS) and the broadcast data set (SYS1.BROADCAST) from a remote work station other than a conversational terminal.

This publication describes the internal logic of the Account Facility whose routines establish and administer the background environment for batch, or non-interactive, users of the OS/VS1 RES ACCOUNT command processor.

This publication is for people who maintain or modify the routines in the Account Facility; it is not necessary for people who wish to use the facility to update the UADS or Broadcast Data Set. For that type of explanatory information, refer to the OS/VS1 RES System Programmers' Guide.

Systems Publication, 384 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0662

OS/VS1 OLTEP LOGIC

This publication describes the functions and internal logic of the Online Test Executive Program (OLTEP) which performs online testing of input/output devices under control of OS/VS1.

This publication is intended for the IBM programming systems representative who is responsible for program maintenance. It can be used to supply an overview of OLTEP logic or to locate specific areas of the program and to relate them to the corresponding program listings.

Prerequisite information is contained in OS/VS1 OLTEP, GC28-0666, which tells how to use OLTEP to test input/output devices. For information on OLTEP messages refer to: OS/VS Message Library: Service Aids and OLTEP Messages, GC38-1006.

DOS/VS AND OS/VS TOLTEP LOGIC

This seven section program logic manual describes the internal logic of the Teleprocessing Online Test Executive Program (TOLTEP). TOLTEP operates as a subtask of VTAM and is the interface between VTAM and the online test programs (OLTS) that test the hardware characteristics of various terminals supported by VTAM that use the basic mode of data transfer. Information in this manual is intended for IBM representatives who are responsible for program maintenance.

Manual, 100 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0669

OS/VS1, SYS1.LOGREC ERROR RECORDING LOGIC

This publication describes the internal logic and organization of SYS1.LOGREC Error Recording under the OS/VS1 system control program. This publication is intended for the IBM programming systems representative and installation programmer involved in maintaining or using the SYS1.LOGREC data set.

This publication should be used in conjunction with OS/VS1 SYS1.LOGREC Error Recording, GC28-0668, which tells how to use the IFCDIP00 and IFCEREP0 service aid programs.

Publication, 148 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY28-0676

OS/VS2 OLTEP LOGIC

This publication describes the functions and internal logic of the Online Test Executive Program (OLTEP) which performs online testing of input/output devices under control of OS/VS.

This publication is intended for the IBM programming systems representative who is responsible for program maintenance. It can be used to supply an overview of OLTEP logic or to locate specific areas of the program and to relate them to the corresponding program listings.

Prerequisite information is contained in OS/VS2 System Programming Library: OLTEP, GC28-0675-0, which tells how to use OLTEP to test input/output devices. For information on OLTEP messages refer to: OS/VS Message Library: Service Aids

and OLTEP Messages, GC38-1006.

SY28-0679

OS/VS2 DYNAMIC SUPPORT SYSTEM LOGIC

Provides an introduction to the Dynamic Support System (DSS) Logic to guide the IBM programming system representative and system programmers who need to debug DSS.

DSS is a debugging tool used to diagnose and temporarily repair OS/VS in the field. DSS operates as a standalone system that can stop OS/VS operation for problem diagnosis or repair, or allow OS/VS to run in a monitored condition, so that DSS gains control when program events occur or when execution reaches a specified breakpoint.

The only prerequisite publication for using this publication is the OS/VS Dynamic Support System, GC28-0640. The reader should also have a working knowledge of the internal logic of OS/VS.

Manual, 176 pages

OS/VS2 MVS RACF LOGIC MANUAL, PROG PROD 5740-XXH

This publication describes the internal logic of the subject
program product. This information is intended for the IBM
program systems representative who is responsible for
program maintenance or the installation systems programmer
who is responsible for installation, and modification of
RACF.

This publication, when used with the program listing,
enables the user to understand the internal operation of
RACF and to make corrections if necessary. The publication
does not replace the program listings; it supplements them
and makes the information in them more accessible.
Manual, 360 pages

LY28-0739

OS/VS2 MVS RESOURCE MEASUREMENT FACILITY (RMF) LOGIC -
PROG PROD 5740-XXM

This publication is intended for system programmers and
software maintenance personnel involved with the
installation, enhancement, and maintenance of software
programs in a computer system.

Its purpose is to provide information about RMFs:

- o internal logic
- o operational characteristics
- o input requirements
- o output results

This publication also provides information useful in
debugging and diagnosing errors in RMF operation.

Manual

LY28-0749

OS/VS2 MVS TSO COMMAND PACKAGE, LIC PROG 5740-XT6,
5740-XE1, LOGIC

This publication describes the program logic of the TSO
Command Package Program Product. This publication is
intended for persons who are debugging or modifying the TSO
Command Package. The TSO Command Package provides function
to TSO under OS/VS2 MVS through support for: enhanced
ability to execute commands in the background; a new EDIT
data set recovery mechanism; and, new EDIT subcommands and
operands.

With the MVS/System Extensions Release 2 (Program Number
5740-XE1) installed with this program product several of the
previously documented modules have been moved into the base
system. (All deleted information has been placed in the
base system publications.) Additional function has been
provided in the DISPLAY and LOGON subcommand/command.

SY28-0773

OS/VS ENVIRONMENTAL RECORDING EDITING AND PRINTING (EREP)
PROGRAM LOGIC, SUID 5741-601, 5752-827, ICR 5742

The OS/VS Environmental Recording Editing and Printing
(EREP) Program Logic Supports Releases 4 and 6 of OS/VS1,
Release 1.7 of OS/VS2 (SVS) and Releases 3.0, 3.6 and 3.7 of
OS/VS2 (MVS).

This publication is intended for the IEM programming
service representative, installation programmer, and others
involved in maintaining or using the SYS1.LOGREC and/or
Accumulation data sets.

The internal logic and organization of the IFCEREP1
service aid, which prints records from the SYS1.LOGREC
and/or Accumulation data sets for diagnostic purposes, is
described.

LY28-0913

OS/VS2 MVS TSO 3270 EXTENDED DISPLAY SUPPORT
SESSION MANAGER LOGIC, LIC PROG 5740-XE2

This is the logic manual for the TSO Session Manager Program
Product. It should enable IBM customers' system programmers
or Field Engineering to obtain a conceptual level of
understanding of the internal process of this program
product. It will also identify the main processing
functions to enable system programmers to identify
associated modules. The system programmer will then be able
to review the modules providing the function.

Manual, 8 1/2 x 11 inches, 120 pages, 7/77

GY28-2009

IBM TIME SHARING SYSTEM -- SYSTEM LOGIC SUMMARY

This publication describes the logic of the IBM Time Sharing System (TSS). The emphasis is on describing the interrelationship of system components in performing system functions. Where an individual component is described, only the highest level of logic is discussed. This program logic

manual is directed to the person who is responsible for program maintenance. It can be used to determine the interrelationship among the various areas of the system, and it enables the reader to relate these areas to the corresponding program listings.
Systems Reference Library Manual, 311 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY28-6403

FORTRAN IV (H EXTENDED) COMPILER FOR OS AND VM/370 (CMS),
LOGIC - PROG PROD 5734-FO3

Describes the internal design of the FORTRAN IV (H Extended) compiler program. It is intended for use by personnel involved in program maintenance. Program logic information is not necessary for the use and operation of the FORTRAN IV (H Extended) compiler.

Manual, 8 1/2 x 11 inches, 660 pgs
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6406

OS (TSO) CCECL PROMPTER LOGIC, PROG PROD 5734-CP1

Describes the internal logic of the COBOL Prompter program product. It is intended for programmers who are responsible for program maintenance or by system programmers who must alter the program design. It is not needed for normal use or operation of the subject program product.

Manual, 86 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6407

IBM SYSTEM/360 OPERATING SYSTEMFULL AMERICAN NATIONAL STANDARD COBOL COMPILER AND LIBRARY,
VERSION 3 PROGRAM LOGIC MANUAL, PROGRAM NUMBER 5734-CE1

This publication describes the internal design of the IBM System/360 Operating System Full American National Standard COBOL, X3.23-1968 Compiler and Library, Version 3. Program logic manuals are intended for persons involved in program maintenance, or for system programmers who are altering the program design for installations that require a special purpose COBOL compiler. It is not needed for normal use or operation of the compiler described.

Manual, 8-1/2 x 11, 400 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6408

FORTRAN IV LIBRARY (MOD I) FOR OS & VM/370 (CMS):
PROGRAM LOGIC MANUAL, PROGRAM NUMBER 5734-LM1

This document describes the internal design of the IBM System/360 Operating System FORTRAN IV Library (Model 1), a program product.

The modules of the Model 1 library are designed to be combined as needed with the object code produced by the Code and Go FORTRAN or FORTRAN IV (GI) compilers to form executable load modules.

This document is intended for use by persons involved in program maintenance. Program logic information is not necessary for the use and operation of the Model 1 library.

Distribution of this document is limited to licensees of the IBM program product it describes.

Program Logic Manual, 154 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6409

FORTRAN IV LIBRARY (MOD II) FOR OS AND VM/370 (CMS) LOGIC,
PROG PROD 5734-LM3

Describes the internal design of the FORTRAN IV Library (Mod II), a program product. This manual is intended for OS and VM/370 personnel involved in program maintenance and for systems programmers who are altering program design. It is not necessary for the use and operation of the FORTRAN Mod II Library.

Manual, 174 pgs
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6412

DOS FULL ANS COMPILER VERSION 3, LOGIC, PROG PROD 5736-CE2

Describes the internal design of the DOS Full American National Standard COBOL Compiler, Version 3. It is intended for use by persons involved in program maintenance and by system programmers involved in altering the program design for installations requiring such alteration. This publication supplements the compiler listing and its comments, but is not a substitute for them.

Effective use of this manual requires an understanding of IBM System/360 or System/370 operation and of the IBM DCS service programs and macro instructions. Knowledge of both IBM Full American National Standard COBOL and the IBM Assembler Language is a prerequisite. Reference publications for this information are listed in the preface of this manual.

Manual, 532 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6413

DOS FULL ANS COBOL SUBROUTINE LIBRARY VER 3, LOGIC,
PROG PROD 5736-LM2

Describes the object-time subroutine library used by the DOS Full American National Standard COBOL Compiler, Version 3. It is intended for use by persons involved in library maintenance and by system programmers involved in altering

the library for installations requiring such alteration. This publication supplements the subroutine listings and their comments, but it is not a substitute for them.

Effective use of this manual requires an understanding of IBM System/360 and System/370 operation and of the DOS service programs and macro instructions as well as the DOS Full American National Standard COBOL Compiler, Version 3. Knowledge of both American National Standard COBOL and the IBM Assembler Language is a prerequisite. Reference publications for this information are listed in the Preface of this manual.

Manual, 168 pgs
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6414

DOS SUBSET ANS COBOL COMPILER AND LIBRARY LOGIC
PROG PROD 5736-CB1

Describes the internal logic of the DOS Subset American National Standard COBOL compiler and object time library subroutines. It is intended for use by persons responsible for program maintenance, and for systems programmers who must alter program design.

Manual, 876 pgs
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6415

SYSTEM/360 OS FORTRAN IV (H EXTENDED PLUS) COMPILER AND
LIBRARY, PRPG LOGIC SUPPLEMENT, PROG 5799-AAW

Supplements the IBM FORTRAN IV (H Extended) Compiler for OS and VM/370 (CMS) Program Logic manual, Order No. LY28-6403. Together these publications provide OS and VM/370 personnel and other technical personnel with information describing the internal organization and operation of the FORTRAN IV (H Extended Plus) compiler. Program logic information is not necessary for the operation and use of the compiler.

Manual, 108 pgs
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6419

OS FULL ANS COBOL SUBROUTINE LIBRARY VERSION 4
LOGIC, PROG PROD 5734-LM2

Describes the internal design or logic of the subject program. This manual is intended for persons involved in program maintenance and for system programmers who are altering the program design. Program logic information is not necessary for the operation of the program.

LY28-6422

SYSTEM/370 VS BASIC: PROGRAM LOGIC, PROG. PROD. 5748-XX1
This publication is intended for use by programming support representatives and system programmers with responsibility for maintaining the VS BASIC program product. Each module is described as are the control blocks. Functions are summarized visually in method of operation diagrams.

Prerequisite to understanding the VS BASIC logic is a knowledge of the language and of the operating system. See VS BASIC Language, GC28-8303, and the appropriate terminal user's guide: VS BASIC TSO Terminal User's Guide, SC28-8304, VS BASIC CMS Terminal User's Guide, SC28-8306, VS BASIC for VSPC: Terminal User's Guide, and VS BASIC OS/VS and DOS/VS Programmer's Guide, SC28-8308.

If VS BASIC is running interactively under TSO, CMS, or VSPC, the logic of the subsystem/program product should also be understood first.

Manual, 187 pages, 3/76
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6423

IBM DOS/VS COBOL COMPILER PROGRAM LOGIC - PROGRAM NUMBER
5746-CB1

This publication describes the internal design of the IBM DOS/VS COBOL Compiler. It is intended for use by persons involved in program support and by system programmers involved in altering the program design for installations requiring such alteration. This publication supplements the compiler listing and its comments, but is not a substitute for them.

Effective use of this manual requires an understanding of the IBM Operating System and of the IBM DOS/VS service programs and macro instructions. Knowledge of both IBM DOS/VS COBOL and the IBM Assembler Language is a prerequisite. Reference publications for this information are listed in the preface of this manual.

Manual, 542 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY28-6424

IBM DOS/VS COBOL SUBROUTINE LIBRARY PROGRAM LOGIC - PROGRAM
NUMBER 5746-LM4

This publication describes the object-time subroutine library used by the IBM DCS/VS COBOL Compiler. It is intended for use by persons involved in library maintenance and by system programmers involved in altering the library for installations requiring such alteration. This publication supplements the subroutine listings and their comments, but it is not a substitute for them.

Effective use of this manual requires an understanding of the IBM operating system and the DOS/VS Operating System service programs and macro instructions, as well as the IBM DOS/VS COBOL Compiler. Knowledge of both DOS/VS COBOL and IBM Assembler Language is a prerequisite. Reference publications for this information are listed in the preface of this manual.

OS/VS1 RES RTAM AND WORKSTATION SUPPORT LOGIC

This logic manual is written for customer engineers and others who require information regarding the internal operation of RTAM (Remote Terminal Access Method), which is the access method used by RES (Remote Entry Services); RTAM is the major component of RES. Other components of RES are described when such information is needed for understanding RES.

The functions are presented in diagram form (HIPO diagrams) at a relatively high level. The diagrams include reference to labels in the program listing, which is to be used in conjunction with this logic manual. The manual includes description of data areas used by more than one module. Also included are module descriptions and such diagnostic aids as cross references of messages and modules, contents of control bytes for record compression and/or interleaving, and the storage layout of RES components.

SY30-2039

OS/VS TCAM LOGIC - PROGRAM NUMBER 5741-SC1-21
This publication describes the internal logic of the OS/VS Telecommunications Access Method (TCAM). The book is intended for IBM programming systems representatives and system engineers who provide program maintenance and who need information on the internal organization and logic of TCAM.
In order to understand the logic of TCAM, the reader must have a general knowledge of OS/VS. In addition, the following prerequisite publications are applicable:
o OS TCAM Concepts and Facilities, GC30-2022, to gain familiarity with the overall concepts and structure of TCAM.
o OS/VS TCAM Programmer's Guide, GC30-2034, to learn how to construct and modify a TCAM MCP and a TCAM-compatible application program.
The OS/VS1 System Data Areas publication, SY28-0605, and the OS/VS2 System Data Areas publication, SY28-0606, provide corequisite information on system data areas that are used by TCAM.
Manual, 470 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY30-2040

OS/VS2 TCAM (LEVEL 8) LOGIC
Provides the information required for persons involved in keeping the program operational.
This publication is a reference manual for OS/VS2 TCAM level 8, the level of TCAM designed to operate with the Virtual Telecommunications Access Method (VTAM) and the new Systems Network Architecture (SNA).
It contains an introduction, a section on basic TCAM concepts, a method of operation section, a program organization section, a diagnostic aids section, and various appendices including one on Time Sharing Support (TSO).

PREREQUISITE PUBLICATIONS

OS/VS TCAM Concepts and Facilities, GC30-2042, for general information. OS/VS TCAM Programmer's Guide, GC30-2041, to learn how to construct and modify a TCAM MCP and a TCAM-compatible application program.
Manual, 768 pages

GY30-3000

IBM 3735 PROGRAMMABLE BUFFERED TERMINAL FORM DESCRIPTION MACRO INSTRUCTIONS AND FORM DESCRIPTION UTILITY PROGRAM LOGIC MANUAL (CS, DOS, AND VS SYSTEMS)
This publication describes the internal logic of the OS and DOS programming support for the IBM 3735 Programmable Buffered Terminal. The 3735 programming support includes both Form Description (FD) macro instructions and Form Description utility programs to provide the operating environment for applications using preprinted (fixed-format) forms and batch processing.
This publication is intended for IBM programming systems representatives who maintain the 3735 programming support and for customer system programmers who modify that support.
To understand the logic of the 3735 programming support, the reader must have a general understanding of CS or DCS and of the macro language facility of the assembler.

GENERATION AND LOGIC MANUAL FOR PROGRAMMING RPQ P85004, SIX BIT TRANSCODE FOR IBM 3705 EMULATION PROGRAM PROGRAM NO. 5799-AGA
This document contains information reflecting changes to the current version of the Emulation Program, V1M2, required for support of Six Bit Transcode, PRPQ P85004. The document is intended for analysts and programmers responsible for the generation and maintenance of the Emulation Program, and for IBM system engineers and field engineers.
These changes affect only the method employed in converting transmitted or received data, rather than the actual functions performed by the Emulation Program. Consequently, only a few changes to the EP PLM, SY30-3001, and EP Generation Manual, GC30-3002, are necessitated by this PRPQ. Only the areas affected by the changes are included in this document.
Documentation is divided into three sections:
Section 1. General description of the Six Bit Transcode PRPQ (P85004)
Section 2. Information relating to areas of the Emulation Program Generation Manual, GC30-3002, that are affected by Six Bit Transcode support.
Section 3. Information relating to areas of the Emulation Program PLM, SY30-3001, that are affected by Six Bit Transcode support.

SY30-3006

IBM 3705 EMULATION PROGRAM GENERATION AND LOGIC MANUAL FOR PROGRAM SUPPORT FOR HARDWARE RPO M26099 SABRE LINE CONTROL
Contains information reflecting changes to the current version of the Emulation Program, VIM2, required for support of airlines (SABRE) line control PSHRPQ P85000. It is intended for analysts and programmers responsible for the generation and maintenance of the Emulation Program, and for IBM systems engineers and field engineers. It is assumed that the reader has a conceptual knowledge of the current Emulation Program and of the Airlines Line Control supported by RPOs for the 2703 Transmission Control Unit.

Documentation is divided into three sections:

Section 1 - General description of the Airlines Line Control (ALC) PSHRPQ P85000.

Section 2 - Information relating to areas of the Emulation Program Generation and Utilities Guide and Reference Manual, GC30-3002, that are affected by Airlines Line Control support.

Section 3 - Information relating to areas of the Emulation Program PLM, SY30-3001, that are affected by Airlines Program PLM, SY30-3001, that are affected by Airlines Line Control support.

LY30-3009

IBM 3705 EMULATION PROGRAM GENERATION AND LOGIC MANUAL FOR PROGRAMMING RPO P85005, SPECIAL SYNCHRONOUS LINE CONTROL PROGRAM NO. 5799-AFZ

This document describes the changes made to the IBM 3705 Emulation Program for programming RPO P85005, Special Synchronous Line Control. This PRPQ emulates the Inter-Processor Communications Adapter (IPCA) feature of the IBM 2701 (RPO M24802) and the cyclic checking feature for the 2701 with IPCA (RPO M25697).

The document gives general information about the PRPQ and specific information about specifying the PRPQ during EP generation and about the internal logic of the PRPQ. It also summarizes the functions of a hardware RPO required if certain features of the PRPQ are selected and describes in detail the commands and control characters used with the PRPQ.

This document supplements the information in the IBM 3704 and 3705 Communications Controllers Emulation Program Generation and Utilities, Controller Emulation Program, Program Logic Manual (SY30-3001). It is intended for analysts and programmers responsible for the generation and maintenance of the Emulation Program, and for IBM systems engineers and customer engineers.

LY30-3023

IBM 3704 AND 3705 EMULATION PROGRAM GENERATION AND LOGIC MANUAL FOR PROGRAMMING RPO P85010, TELEGRAPH FULL - DUPLEX LINE CONTROL - PROG. NO. 5799-AGN

This document describes the Telegraph Full-Duplex Line Control Programming RPO for the IBM 3704 and 3705 Communications Controllers Emulation Program. The PRPQ provides support of duplex line control for four telegraph terminals: The manual is intended for analysts and programmers responsible for generation and maintenance of the Emulation Program and for IBM system engineers and IEM customer engineers.

This document contains three types of information:

- o Information needed to generate the PRPQ into an Emulation Program.
- o Information about the internal logic of the PRPQ.
- o Information about the line control used for each of four terminal types supported by the PRPQ.

Prerequisites for this manual are:

IBM 3704 and 3705 Communications Controllers Emulation Program Generation and Utilities, Guide and Reference Manual

(GC30-3002).

IBM 3704 and 3705 Communications Controllers Emulation Program, Program Logic Manual (SY30-3001).

IBM 3705 ADVANCED COMMUNICATIONS FUNCTION FOR NETWORK CONTROL PROGRAM/VS, NCP VER 6, LIC PROG 5735-XX1, XX3, LOGIC
This publication covers the internal logic of the IBM 3705 Communications Controller, Advanced Communications Function for Network Control Program/VS (ACF/NCP/VS), Version 6. Version 6 of the NCP operates under OS ACF/VTAM, DOS ACF/VTAM, and DOS ACF/TCAM. This PLM is designed to supplement the program listings for the NCP and to make access to the information in the listings easier.

The ACF/NCP/VS PLM is directed to the IBM support representatives and system engineers who provide program maintenance and who need information on the internal organization and logic of ACF/NCP.
Manual, 8 1/2 x 11 inches, 812 pgs, 7/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY30-3031

IBM 3705 COMMUNICATIONS CONTROLLER EMULATION LOGIC
This publication describes the internal logic of the NEW BASE Emulation Program (EP), Version 3. Version 3 of the Emulation Program introduces support for the 3705 II with the type 4 channel adapter and the type 3 communication scanner. Additionally, software support of multiple type 4 channel adapters and multi-subchannel line access (MSLA) is provided. The EP modules that provide this support are called NEW BASE.

Previous releases of the Emulation Program support the 3705 I in a configuration which allows a single type 1 channel adapter and either a single type 1 communication scanner or up to four type 2 communications scanners. That configuration is supported by the old base Emulation Program modules (the type 1 channel adapter and the type 1 communication scanner are not supported by the NEW BASE). The EP System Generation selects either OLD BASE or NEW BASE modules depending upon the channel adapter and communication scanner defined. OLD BASE support is described in the IBM 3704 AND 3705 COMMUNICATIONS CONTROLLER EMULATION PROGRAM LOGIC MANUAL.

The EMULATION PROGRAM PLM is directed to the IBM program support representatives and system engineers who provide program maintenance and who need information on the internal organization and logic of the EP.

OS PL/I CHECKOUT COMPILER: PROGRAM LOGIC VOLUME 1 OF 2, PROGRAM NUMBER 5734-PL2

This two-volume manual describes the internal logic of the OS PL/I Checkout compiler.

The checkout compiler consists of a translator program and an interpreter program. The translator converts PL/I source programs into instructions in an intermediate code. The interpreter achieves the effect of object-time execution of the coded instructions.

This volume contains a functional description of translation and the logic of the interpretation process. It does not describe the dynamic aspects of interpretation (which are discussed in OS PL/I Checkout Compiler: Execution Logic, Order No. SC33-0032), or the internal logic of the library subroutines (which are discussed in Volume 2 of this manual, Order No. LY33-6014).

It is primarily intended for use by programmers who are responsible for maintenance of the compiler, or who wish to understand program design.

LY33-6028

CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (CICS/VS) LOGIC (DOS/VS), PROG PROD 5746-XX3

The IBM Customer Information Control System/Virtual Storage (CICS/VS) is a data-base/data communication system that provides an interface between a system/370 operating system and user-written application programs. Applicable in most online environments, CICS/VS provides many of the facilities for standard applications: message switching, inquiry, data collection, order entry, and conversational and batched data entry.

CICS/VS is available as two program products: CICS/DOS/VS, which is executed under control of the Disk Operating System/Virtual Storage (DOS/VS), and CICS OS/VS, which is executed under Operating System/Virtual Storage (OS/VS1 or OS/VS2). Both program products consist of modular components from which a user installation can select and tailor a CICS/VS system to meet particular application processing needs. Because the CICS DOS/VS system is compatible with the CICS OS/VS system, it is possible to

start with a small DOS/VS data base/data communication configuration and move up through DOS/VS into OS/VS. The information contained in this manual is of interest to persons servicing CICS DCS/VS.
Manual, 1150 pgs, 2/77

CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (CICS/VS) PROGRAM LOGIC (OS/VS) - PROGRAM NUMBER 5740-XX1
The IBM Customer Information Control System/Virtual Storage (CICS/VS) is a data base/data communication system that provides an interface between a system/370 operating system and user-written application programs. Applicable in most online environments, CICS/VS provides many of the facilities for standard applications: message switching, inquiry, data collection, order entry, and conversational and batched data entry.

CICS/VS is available as two program products: CICS/DOS/VS, which executes under control of the Disk Operating System/Virtual Storage (OS/VS1 or OS/VS2). Both program products consist of modular components from which a user installation can select and tailor a CICS/VS system to meet particular application processing needs. This publication deals with CICS/OS/VS, and all references to CICS/VS in this publication refer to CICS/OS/VS.

The information contained in this manual is of interest to persons servicing CICS/OS/VS.
Manual, 8 1/2 x 11 inches, 1198 pgs, 4/77

SY33-6030

CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (CICS-VS) VERSION 1, RELEASE 3 PROBLEM DETERMINATION GUIDE PROG PROD 5740-XX1 (CICS/OS/VS), 5746-XX3 (CICS/DOS/VS)

The purpose of this manual is to help IBM Field Engineers and customer's system programmers in the debugging of problems which might be related to CICS/VS, to the way in which CICS/VS is used, or to the coding of application programs that run under CICS/VS. Part 1 (Approach to Problem Determination) is intended for the newcomer to CICS/VS problem debugging. Part 2 deals with aids to problem determination (such as trace & dump). Part 3 summarizes CICS/VS operation. Part 4 describes CICS/VS interfaces with other access methods. Appendices cover APAR documentation and common user errors.
Manual, 8 1/2 x 11 inches, 280 pgs., 6/77

1401/1440/1460 DOS EMULATOR ON SYSTEM/370: LOGIC, PROG. NOS. 370N-EU-490 (DOS), 5745-SC-EML (DOS/VS)

This publication describes the organization and logic of the program that emulates the 1401, 1440, and 1460 on the System/370 Models 135, 145, 155.
Manual, 342 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-7009

1410/7010 DOS EMULATOR ON SYSTEM/370 LOGIC, PROG. NOS. 370N-EU-490 (DOS), 5745-SC-EML (DOS/VS)

This publication describes the internal logic of the 1410/7010 Emulator Program for the System/370 Models 145 and 155, using the System/360 Disk Operating System. The emulator program is a problem program executed under control of the System/360 Disk Operating System. The emulator program and the appropriate compatibility feature (#4458 for Model 145, #3950 for Model 155) execute 1410/7010 programs on these System/370 models.

Major topics in this publication are the logic of the emulator program, the functions of the compatibility features, and the logic of the tape formatting programs used with the emulator.

The publication is written to meet the needs of the IBM customer engineer who must maintain the program.
Manual, 292 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-7010

MODEL 20 EMULATOR ON SYSTEM/370 USING DOS AND DOS/VS LOGIC - PRG. NOS. 370N-IC-002 AND 5745-SC-E20

Volume 1 of this manual describes the internal logic of the IBM System/360 Model 20 Emulator Program on the IBM System/370 Models 115, 125, and 135. The emulator is a problem program that operates under the control of DCS or DOS/VS. IBM Compatibility Feature #7520 must be installed on the System/370.

Volume 2 of this manual describes the internal logic of the data interchange program. The data interchange program converts files in Model 20 emulator format to files accessible by DOS/VS programs, and vice versa. It does not use the compatibility feature, and can therefore run on any System/370 model.

This publication is intended to be a reference manual for those responsible for emulator program maintenance. Assumed is familiarity with the System/360 Model 20 and DCS or DOS/VS.

SY33-7011

1401/1440/1460 OS EMULATOR ON SYSTEM/370 LOGIC - PROGRAM NUMBERS 5744-AH1 AND 360C-EU-735

This manual describes the internal logic of the IBM 1401/1440/1460 Emulator Program for the IBM System/370 Models 135/145/155-II/158. The emulator programs runs as a problem program under the OS/MFT, OS/MVT, OS/VS1, and OS/VS2 control programs, and executes object programs written for the IBM 1401, 1440, and 1460 Data Processing Compatibility Feature #4457; the Model 145 with IBM compatibility Feature #4457 or #4458; the Model 155 with IBM Compatibility Feature #3950). Note that OS/MVT and OS/VS2 do not run on the Model 135. In addition, this manual describes the 1401/1440/1460 simulator, which enables programs to be executed on System/370 Models 135 through 168 under the control of OS/VS1 and OS/VS2, without the need for the compatibility feature (the functions of the compatibility feature are performed by simulator routines).

Described in this manual are the logic of the emulator program (including the simulator routines); the inter-relationships of the emulator program, the compatibility feature, and the operating system; and the logic of the tape and disk formatting programs used in conjunction with the emulator.

This manual is intended to be a reference manual for those responsible for emulator program maintenance. Assumed is familiarity with the IBM 1401/1440/1460 Data Processing Systems and with the appropriate OS control program.

Manual, 260 pages

SY33-7015

DOS TO OS/VS EMULATOR: LOGIC, PROG. NO. 5744-AS1

This publication describes the internal logic of the DOS Emulator Program under OS/VS1 and OS/VS2. The emulator is a combination of a software program and the DOS Compatibility Feature. The relationship of the program logic to that of the Compatibility Feature is described.

This publication has been written to serve as a guide to and for use with the program listing. It is intended for programmers involved in program maintenance and system programmers who are altering the program design. Note: (DOS to OS Emulator-Logic, GY26-3741 is now obsolete) use GY33-7018 for DOS Emulator under OS.

SY33-7016

1401/1440/1460 OS/VS EMULATOR ON SYSTEM/370, LOGIC - PROG. NO. 5744-AH1

This manual describes the internal logic of the IBM 1401/1440/1460 Emulator Program for the IBM System/370 Models 135/145/155-II/158. The emulator program runs as a problem program under the OS/VS1 and OS/VS2 control programs, and executes object programs written for the IBM 1401, 1440 and 1460 Data Processing Systems (the Model 135 must be equipped with IBM Compatibility Feature #4457; the Model 145 with IBM Compatibility Feature #4457 or #4458; the Model 155 with IBM Compatibility Feature #3950).

Described in this manual are the logic of the emulator program, the inter-relationships of the emulator program, the compatibility feature, and the operating system, and the logic of the tape and disk formatting programs used in conjunction with the emulator.

This manual is intended to be a reference manual for those responsible for emulator program maintenance. Assumed is familiarity with the IBM 1401/1440/1460 Data Processing Systems and with the appropriate OS control program.

Manual, 320 pages

DOS/VS SORT/MERGE LOGIC - PROGRAM NUMBER 5746-SM1

This manual aids Programming Systems representatives and system programmers involved in maintenance circumvent and/or fix faults in the DOS/VS Sort/Merge (5746-SM1). It describes the structure, logic and operation of the sort/merge by means of method-of-operation diagrams, module descriptions, data area descriptions, and various cross-reference tables.

Manual, 135 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY33-8039

DOS SORT/MERGE PROGRAM LOGIC MANUAL PROGRAM NUMBER 5743-SM1

This manual is a guide to the internal organization and logic of program no. 5743-SM1, intended for customer engineers. Describes program capabilities and system environment, techniques used by the program, and specific program components (using flowcharts). Also includes such aids as:

- o Microfiche directory
- o Table Layouts
- o Register contents at entry to modules
- o Error-message module cross-reference tables
- o Control statement formats
- o Summary of program exits

The user should be familiar with the Disk Operating System service programs, assembler language, macro instructions, and sort/merge program specifications.

Manual, 316 pages
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY33-8041

OS/VS, VM/370 ASSEMBLER LOGIC

This program logic manual is written for customer engineers and programmers maintaining the OS/VS - VM/370 assembler. The manual describes the structure, logic, and operation of the assembler. Method of operation diagrams highlight the inputs, processing, and outputs of the assembler functions. The diagrams are accompanied by text describing the functions in more detail and cross-references to the program elements that perform the functions. Detailed charts show how the assembler phases use main storage and the flow of control and data between the assembler phases. The manual also contains layouts of data areas, information designed to be helpful in debugging and information about error message origin, macro and copy code usage, meta text

flags, internal operation codes, entry points and EXTRN symbols, record formats, and the internal character set.

Prerequisite Publications:

DOS VERSION 4 IOCS INTRODUCTION VOLUME 1 - PROGRAM LOGIC MANUAL - PROGRAM NUMBERS 370N-CL-453, 370N-IO-454, 370N-IC-455, -456, -457, -458, -477, -478
This reference publication is one of four Program Logic Manuals that describe the internal logic of the Logical IOCS (Input-Output Control System) programs for the IBM Disk Operating System. The four related Program Logic Manuals are:
Volume 1: Introduction, GY33-8543.
Volume 2: SAM for Unit Record, Magnetic Tape, and Device Independent Files, GY33-8544.
Volume 3: SAM and DAM for CASD, GY33-8545.
Volume 4: ISAM, GY33-8546.

This manual is intended for persons involved in program maintenance and for system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of IBM System/370 operation and the Disk Operating System Assembler language and its associated macro definition language. Reference publications for this information are listed in the Preface.

For a list of associated publications and their abstracts, see IBM System/360 and System/370 Bibliography, GA22-6822.
Manual, 360 pages

GY33-8544

DOS VER. 4 LIOCS VOL. 2, LOGIC - PROG. NO. 370N-CL-453
370N-IO-477, 370N-IO-456, 370N-IO-478, 370N-IO-458

This reference publication is one of four Program Logic Manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operating System. The four related Program Logic Manuals are:

- Volume 1: Introduction, GY33-8543.
- Volume 2: SAM for Unit Record, Magnetic Tape, Device Independent Files, GY33-8544.
- Volume 3: SAM and DAM for DASD, GY33-8545.
- Volume 4: ISAM, GY33-8546.

This manual is intended for persons involved in program maintenance and for system programmers who are altering the program design. Program logic information is not necessary for the operation of the Programs described. Therefore, distribution is limited to those with maintenance and alteration responsibilities.

Effective use of this publication requires an understanding of IBM System/370 operation and the Disk Operating System Assembler language and its associate macro definition language. Reference publication for this information are listed in the preface.

For the titles and abstracts of other related publications, refer to the IBM System/360 and System/370 Bibliography, GA22-6822.
Manual, 380 pages

GY33-8545

DOS VERSION 4 LIOCS VOLUME 3-SAM AND DAM FOR DASD-
PROGRAM LOGIC MANUAL - PROGRAM NUMBERS 370N-IO-455,
370N-IO-454

This reference publication is one of four Program Logic Manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operating System. The four related Program Logic Manuals are:

- Volume 1: Introduction, GY33-8543.
- Volume 2: SAM for Unit Record, Magnetic Tape, and Device Independent Files, GY33-8544.
- Volume 3: SAM and DAM for DASD, GY33-8545.
- Volume 4: ISAM, GY33-8546.

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of IBM System/370 operation and the Disk Operating System Assembler language and its associated macro definition language.

Reference publications for this information are listed in the Preface.

For the titles and abstracts of other related publications, refer to the IBM System/360 and System/370 Bibliography, GA22-6822.
Program Logic Manual, 420 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

GY33-8546

DOS VERSION 4 LIOCS VOLUME 4 - ISAM - PROGRAM LOGIC
MANUAL - PROGRAM NUMBER 370N-IO-457

This reference publication is one of four Program Logic Manuals that describe the internal logic of the Logical IOCS programs for the IBM Disk Operating System. The four related Program Logic Manuals are:

- Volume 1: Introduction, GY33-8543.
- Volume 2: SAM for Unit Record, Magnetic Tape, Device Independent Files, GY33-8544.
- Volume 3: SAM and DAM for DASD, GY33-8545.
- Volume 4: ISAM, GY33-8546.

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design.

Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of system operation, assembler language, and its associated macros.

Reference publications for this information are listed in the Preface.

For the titles and abstracts of other related publications, refer to the IBM System/360 and System/370 Bibliography, GA22-6822.

SY33-8548

OS/VS2 TSC CMMAND PROCESSOR LOGIC VOLUME II: EDIT

This publication describes the internal logic of the TSC EDIT Command Processor program. Included in this manual are discussions of the organization and method of operation of the program, tables of data layouts.

The EDIT program processes the EDIT command and subcommands, which are a part of the TSO command language. The EDIT command and its subcommands create and modify data sets.

The subcommands are:

ALLOCATE	END	INSERT	RENUM	SUBMIT
BOTTOM	FIND	Insert/Replace/Delete	RUN	TABSET
CHANGE	FORMAT	LIST	SAVE	TCP
DELFTE	HELP	MERGE	SCAN	UP
DOWN	INPUT	PROFILE	SEND	VERIFY

This manual is intended for use by persons debugging the EDIT Command Processor program, or by systems programmers who are altering the program design. It is not intended, nor is it needed for normal operation of the program.

SY33-8553

DOS/VSE LOGICAL TRANSIENTS AND DUMP PHASES LOGIC

This reference publication provides general logic information and detail flowcharts of the Logical Transient phases and the Dump routines of the IBM Disk Operating System Virtual Storage Extended (DOS/VSE). The transient phases discussed are: The Attention routines, the Terminator routines, the CRT Transients, the Checkpoint/Restart routines, and some special service programs.

This publication, which is a supplement to the program listing, is intended for persons involved in program service and for system programmers who are altering the program logic. Program logic information is not needed for normal operation of DOS/VSE.

Manual, 300 pages

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8554

DOS/VSE SERVICEABILITY AIDS LOGIC

This manual describes the DOS/VSE Serviceability Aids (SDAID) programs. It is intended to help support personnel do problem determination in case of program errors. It contains the logic descriptions of the programs PDZAP, Parser, LSERV and Standalone Dump.

Manual, 8 1/2 x 11 inches, 284 pages, 2/79

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8555

DOS/VSE INITIAL PROGRAM LOAD AND JOB CONTROL LOGIC

This reference publication describes the internal logic of the IBM Disk Operating System/Virtual Storage Extended, DOS/VSE, Initial program Load (IPL) and Job Control Programs. It is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not needed for normal operation of the IPL and Job Control Programs. It is designed to be used as a supplement to the program listing. Effective use of this manual requires an understanding of IBM System/370 and IBM System/4300 operations and of DOS/VSE control and service programs, macro instructions, and operating procedures.

Manual, 8 1/2 x 11 inches, 392 pages, 2/79

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8556

DOS/VSE LINKAGE EDITOR LOGIC

This publication describes the internal logic of the IBM Disk Operating System/Virtual Storage Extended (DOS/VSE) linkage editor program. It is intended for use by persons

involved in program maintenance and by system programmers who are altering the program design. Program logic information is not needed for normal operation of the linkage editor program. It is a supplement to the program listing. Effective use of this manual requires an understanding of IBM System/370 operation and of IBM DOS/VSE control and service programs, macro instructions, and operating procedures.

Manual, 8 1/2 x 11 inches, 128 pages, 2/79
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8557

DOS/VSE LIBRARIAN LOGIC

This reference publication describes the internal logic of the IBM Disk Operating System/Virtual Storage Extended (DOS/VSE) Librarian Organization, Maintenance, and Service Programs. Persons involved in program maintenance and system programmers should use this manual when altering the program design. Program logic information is not needed for normal operation of the librarian programs, but is to be used as a supplement to the program listing. Effective use of this manual requires an understanding of IBM System/370 operation and of IBM DOS/VSE control and service programs, macro instructions, and operating procedures.

Manual, 8 1/2 x 11 inches, 256 pages, 2/79
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8558

DOS/VSE SYSTEM UTILITIES LOGIC

This publication describes the internal logic of the IBM DOS/VSE System Utility Programs. It is needed for use by persons involved in the program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs.

Manual, 8 1/2 x 11 inches, 656 pages, 2/79
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8559

DOS/VSE LIOCS VOLUME 1, GENERAL INFORMATION AND IMPERATIVE MACROS LOGIC

This reference publication is the first of four Logic Manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operating System/Virtual Storage. The four related Logic Manuals are:

- Volume 1: General Information and Imperative Macros, SY33-8559
- Volume 2: SAM, SY33-8560
- Volume 3: DAM and ISAM, SY33-8561
- Volume 4: VSAM, SY33-8562

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of IBM System/370 operation and the DOS/VSE Assembler language and its associated macro definition language. Reference publications for this information are listed in the front of the manual.

For titles and abstracts of other related publications, refer to the IBM System/360 and System/370 Bibliography, GA22-6822, and the IBM System/370 Advanced Function Bibliography, GC20-1763.

Manual, 256 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8561

DOS/VSE LIOCS VOLUME 3 DAM AND ISAM LOGIC

This reference publication is the third of four Logic Manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operating System/Virtual Storage. The four related Logic Manuals are:

- Volume 1: General Information and Imperative Macros, SY33-8559
- Volume 2: SAM, SY33-8560
- Volume 3: DAM and ISAM, SY33-8561
- Volume 4: VSAM, SY33-8562

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of IBM System/370 operation and the DOS/VSE Assembler language and its associated macro definition language. Reference publications for this information are listed in the front of the manual.

Manual, 354 pages
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8562

DOS/VSE LIOCS VOLUME 4: VSAM LOGIC

This publication and the listing documentation (module prologues and comments) describe the internal logic of the DOS/VSE Virtual Storage Access Method (VSAM).

The intended audience is a person involved in program maintenance or a system programmer who is altering the program design. Logic information is not necessary for the operation of the programs described.

This manual and the listing documentation should be

viewed as a maintenance set. The listings describe the internal logic of the modules, and the manual shows what the functions of DOS/VSE VSAM are and how the modules work together to carry out those functions. Prerequisite publications:

- o DCS/VSE Data Management Guide, GC33-5372, which describes DOS/VSE VSAM data management.
- o DCS/VSE Supervisor and I/O Macro Instructions, GC33-5373, which tells how to code DOS/VSE VSAM macro instructions
- o DCS/VSE LIOCS Volume 1: General Information and Imperative Macros Logic, SY33-8559 contains brief descriptions of how DOS/VSE open, close, and end-of-volume routines interact with DCS/VSE VSAM.

MANUAL, 720 PAGES

SY33-8564

DOS/VSE ACCESS METHOD SERVICES LOGIC

This book describes the internal logic of the routines of Access Method Services and provides diagnostic information. This information is directed to maintenance personnel and development programmers who require an in-depth knowledge of the program's design, organization, and data areas. It is not required for effective use of Access Method Services.

Manual, 8 1/2 x 11 inches, 600 pages, 5/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8566

DOS/VSE POWER RJE PROGRAM LOGIC

The Program Logic Manual describes the internal design or logic of the subject program. This manual is intended for persons involved in program maintenance and for system programmers who are altering the program design. Program logic information is not necessary for the operation of the program; therefore, distribution of this publication is limited to persons with maintenance and alteration requirements.

Manual, 230 pages

SY33-8567

DOS/VSE ASSEMBLER LOGIC

This manual aids Programming Systems Representatives and system programmers involved in maintenance circumvent and/or fix faults in the DOS/VSE Assembler and the DOS/VSE 3705 Assembler. It describes the structure, logic, and operation of the assembler. It provides information on how the assembler works functionally (this is illustrated through method-of-operation diagrams); how the program is divided into units; control and data flow between phases; allocation of main storage; detailed layouts of data areas; I/O activity and workfile layouts; register usage; debugging hints; and appendixes with related reference material.

The modifications made to certain phases of the DOS/VSE Assembler in order to produce the DOS/VSE 3705 Assembler are described in Appendix K.

Manual, 390 pages

SY33-8571

DOS/VSE HANDBOOK

This manual provides a summary for DOS/VSE SCP information for persons involved in program service activities. It contains among others: The System/370 instruction set, a summary of JCL and librarian control statements, DTF tables, tape/DASD label formats, control blocks and areas of the supervisor, service aids.

Manual, 400 pages, 6/79

///5745-020

SY33-8572

DOS/VSE HANDBOOK VOLUME 2

This manual is a supplement to the DOS/VSE Handbook, SY33-8571. It contains information about POWER/VSE and VTAM.

Manual, 192 pages

///5745-010

SY33-8573

1401/1440/1460 DOS/VSE EMULATOR ON SYSTEM/370 LOGIC PROG PROD 5747-CC3

This publication describes the internal logic of the IBM 1401/1440/1460 Emulator program. The emulator runs as a problem program under control of the IBM Disk Operating System/Virtual Storage (DCS/VSE) on the system/370 Model 115, 125, 135, 135-3, 138, 145, 145-3, 148, 155-II, or 158, equipped with the appropriate compatibility feature. This publication is intended for those responsible for emulator program maintenance.

Manual, 8 1/2 x 11 inches, 348 pages, 4/77

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8574

1410/7010 DOS/VS EMULATOR ON SYSTEM/370 LOGIC
PROG PROD 5747-CC3

This publication describes the internal logic of the IBM 1410/7010 Emulator Program. The emulator runs as a problem program under control of the IBM Disk Operating system/Virtual storage (DOS/VS) on the system/370 Model 145, 145-3, 148, 155-II, or 158, equipped with the appropriate compatibility feature.

This publication is intended for those responsible for emulator program maintenance.

Manual, 8 1/2 x 11 inches, 4/77

SLSS - ORDER NO. SUBSCRIPTION ONLY

SY33-8575

MODEL 20 DOS/VS EMULATOR ON SYSTEM/370 LOGIC

Volume 1 of this manual describes the internal logic of the IBM System/360 Model 20 Emulator program. The emulator runs as a problem program under control of the IBM Disk Operating system/Virtual Storage (DOS/VS) on the system/370 Model 115, 125, 135, 135-3, or 138, equipped with the Compatibility Feature #7520.

Volume 2 of this manual describes the internal logic of the data interchange program. The data interchange program converts files in Model 20 emulator format to files accessible by DOS/VS programs, and vice versa.

This publication is intended for those responsible for emulator program maintenance.

Manual, 8 1/2 x 11 inches, 355 pages, 4/77

LY38-3022

ACF/VTAM LOGIC: BASE SYSTEM VOLUME 1 METHOD OF OPERATIONS
ACF/VTAM RELEASE 2, LIC PROG 5746-RC3

This manual is the second part of a three part description of the logic of ACF/VTAM for DOS/VSE. Part one is the manual ACF/VTAM Logic: Overview, and part three is the manual ACF/VTAM Logic: Base System Volume 2 - Program Organization and Module Directory. The three manuals are intended primarily to help IBM program systems representatives quickly locate failures in the access method. This manual contains method-of-operation diagrams that describe the ACF/VTAM components in sufficient detail for the reader to be able to identify the module that performs a particular operation.
Manual, 8 1/2 x 11 inches, 4/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3023

ADVANCED COMMUNICATIONS FUNCTION FOR BTAM (ACF/VTAM)
LOGIC: MULTISYSTEM NETWORKING FACILITY, LIC PROG
5746-RC3, 5735-RC2, RELEASE 2 FEATURE 6059
(DOS/VSE), 6009 (OS/VSE)

This manual describes the logic of the Multisystem Networking Facility, an optional feature of ACF/VTAM. It contains introductory information, method-of-operations diagrams, program organization control flows, module synopses, and a module directory. These sections correspond to sections in the base ACF/VTAM logic, and cross reference information is provided throughout.
Manual, 8 1/2 x 11 inches,
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3024

ACF/VTAM LOGIC: BASE SYSTEM VOLUME 2 PROGRAM ORGANIZATION
AND MODULE DIRECTORY ACF/VTAM RELEASE 2,
LIC PROG 5746-RC3 (DOS/VSE)

This manual is the third part of a three part description of the logic of ACF/VTAM for DOS/VSE. The first part is the manual ACF/VTAM Logic: Overview and the second part is the manual ACF/VTAM Logic: Base System Volume 1, Method of Operation. The three manuals are intended primarily to help IBM program systems representatives quickly locate failures in the access method. This manual contains program organization information consisting of control flow diagrams and module synopses and module directory, that is a cross reference table that lists every ACF/VTAM module, its phase name, entry point, and the numbers of the MO diagrams in which it appears.
Manual, 8 1/2 x 11 inches, 4/79

IBM MARKETING PUBLICATIONS KWIC INDEX/EFFECTIVE
DECEMBER 1977

This catalog lists publications available for distribution or sale to users of IBM data processing products and services. Included are technical publications, briefs, photographs, educational materials, advertising brochures, and periodicals. Materials related to the maintenance of IBM products are in the IEM Customer Engineering KWIC Index, GY19-0010-9.
Manual, 8 1/2 x 11 inches, 282 pages, 12/77

S/360 - S/370 MCGILL UNIVERSITY SYSTEM FOR INTERACTIVE
COMPUTING GENERAL INFORMATION MANUAL - PROGRAM NUMBER
5796-AAT

MUSIC is a time-sharing system that offers a wide variety of facilities in a cost effective environment. It offers many languages and features normally found in larger systems. By combining the full functions of multiple languages and interactive capabilities with demonstrable dependability MUSIC has proved to be a multipurpose high-performance system suitable for many types of operations, particularly in the Educational Area. For instance, it is currently being used by large city-wide school and university installations in addition to commercial and governmental organizations.

This manual provides the necessary information to market the time-sharing system. It includes configuration support and descriptions of the functions provided.

Manual, 20 pages

CUSTOMER EDUCATION COURSE CATALOG

This three-section catalog has been prepared to provide users of IEM data processing equipment with information on the various courses, curriculums, and education materials available to them through IEM Customer Education.

- GENERAL INFORMATION: This covers basic enrollment information, terms and conditions of education programs and agreements, location of various education centers and availability of special purpose programs such as
 - o Time payments
 - o On-site courses
 - o Tailored courses [(RPQ) Request Price Quotation]
 - o Computerized education configurators
 - o Education Consulting Services
- EDUCATION PLANNING GUIDES: Since it is advantageous to develop an overall education plan that is in line with application implementation or personnel requirements, these flow chart aids have been developed to help the user match the curriculum with his requirements. In this fashion, the user should be able to project his education schedule with the related tuition for budgetary purposes.
- DETAILED COURSE DESCRIPTIONS: This section contains the courses offered to users of IBM data processing equip-

ment. The descriptions cover the intended audience, as well as other relevant information. The descriptions have been written to give the reader as much detail as possible to help him select the proper course(s) from the broad spectrum offered.

As can be seen in the Table of Contents, the courses are cross-indexed in three sequences, alphabetic, course code and curriculum.

This catalog obsoletes the following publications in the "IBM Education ... a course of action" series, also known as Course Selection Guide modules.

G520-2327 Systems Science Education
 G520-2329 The Operating System
 G520-2330 DOS/TOS
 G520-2334 1130-1800-System/7
 G520-2335 S/360 Model 20 and Unit Record

G320-1408

S/370 MCGILL UNIVERSITY SYSTEM FOR INTERACTIVE COMPUTING (MUSIC) RELEASE 2: IUP 5796-AAT NOTICE

A new release of the MUSIC Timesharing System is now available. It contains significant new system support for S/370 Models 125, 158, 165 and 168, including 3330/3333 Model II, 3704/3705, enhancements to BASIC and APL workspace support. In addition, its interface to VM/370 has been improved to provide more efficient operation when running in a virtual machine under VM/370 control. Programming services have been extended until December 31, 1974. MUSIC offers a high performance and high function timesharing facility previously unavailable to the low entry System/370 user.

DBPROTOTYPE (5796-PBB), IMSMAP (5796-PBC), PLIMS (5796-PBF), BTS (5796-PBD), TEST IMS UTILITIES (5796-PBE) ARE NOW READY FOR SHIPMENT AVAILABILITY NOTICE

Five IMS Version 2.3 Productivity Aids - DBPROTOTYPE for Data Base Design, IMSMAP for Data Base Structure Mapping and Documentation, PLIMS for IMS application programming, BTS and TEST IMS UTILITIES for IMS application testing, now available for shipment from PID are described. These five IUP's have been developed and used by IBM internal installations to support the design, development, testing, and documentation of IMS data bases and application programs.

Notice

G320-1529

3270 FORMATTING FEATURE FOR BATCH TERMINAL SIMULATOR IUP 5796-PBD - NOTICE

This notice is intended to inform the potential user about the program and that it has been released. The 3270 Formatting Feature is an expansion of the Batch Terminal Simulator IUP (5796-PBD); which is described in Availability Notice G320-1523. BTS allows IMS batch, batch message and message processing programs to be tested without having teleprocessing hardware installed. The addition of the 3270 Formatting Feature provides the ability to test applications using the IMS Message Formatting Service (MFS) without the use of 3270 hardware. This means that development of new online applications, or conversion of batch programs for online use, can proceed while still in the batch only test/development mode.

G320-1530

TEST DATA GENERATOR FOR SYSTEM/370 - IUP 5796-PBF - NOTICE

This notice is designed to inform potential users about the program and that it has been released. Test Data Generator constructs data used in testing an application program. The user describes the characteristics of the data and supplies the "seed" for a random number generator; the program constructs test files containing randomly generated data and optionally gives the user a data for testing the logic of application programs should provide savings by not having to prepare test data manually, thus reducing programming time and eliminating the heavy volume of keypunching normally required to establish test files. It should also provide less biased data for the actual test. Frequently, it can eliminate or postpone the writing and testing of data file load programs.

Release Notice, 16 pages

G320-1532

DATA COMMUNICATION ANALYZER FOR IMS DB/DC (DCANALYZER): IUP 5796-PCA NOTICE

The Data Communication Analyzer (DCANALYZER) program is designed to assist the user in evaluating design alternatives for IMS data base/data communication systems. It produces relative data on service times and throughput of

transactions processed on iterative runs of DCANALYZER under varying design combinations. The user can analyze and compare this data to select the design best suited to his needs.

This notice is intended to inform potential users about the program and that it has been released.

Release Notice
 SLSS - ORDER NO. SUBSCRIPTION ONLY

G320-1535

DB PROTOTYPE/VS - IUP 5796-PCY, RELEASE NOTICE

DBPROTOTYPE/VS is a design evaluation tool which enables the IMS/VS user to create model data bases and skeletal application programs to run against these data bases. By analyzing the performance data obtained from successive runs utilizing different design parameters, the user can select the system design best suited to his needs.

The value of this prototype approach to design is that it enables the user to study the effects of various design alternatives prior to expending resources in implementation. Programming for new or changing applications and data bases can follow with a higher level of confidence for success without costly rework caused by poor design.

DBPROTOTYPE/VS operates with IMS/VS. It extends the capabilities of DBPROTOTYPE (IUP 5796-PBB) to support IMS/VS features and incorporates improvements in the existing functions of DBPROTOTYPE. DBPROTOTYPE is prerequisite for DBPROTOTYPE/VS.

G320-1538

IMSMAP/VS - IUP 5796-PCY, RELEASE NOTICE

The Installed User Program IMSMAP/VS is a documentation aid which produces pictorial representations of data base structures. These maps, which are produced on a line printer, graphically represent the many characteristics of an IMS/VS data base. In addition to producing maps, IMSMAP/VS can print a detailed report describing the characteristics of each data description (DED).

IMSMAP/VS is an extension of the currently available IUP, IMSMAP (5796-PBC). IMSMAP is a prerequisite for IMSMAP/VS. IMSMAP/VS provides both support for IMS/VS data bases and additional features not available in the original IMSMAP IUP.

G320-1540

TEST IMS/VS UTILITIES - IUP 5796-PDA, RELEASE NOTICE

The Test IMS/VS Utilities were developed to aid in testing and checking out application program code by automating the functions of organizing, displaying and comparing test data. If performed manually, these functions can consume a large portion of customer programming manpower. This set of programs can assist the programmer in effectively managing his test data and more rapidly evaluating test results.

Test IMS/VS Utilities, offered as an enhancement of Test IMS Utilities, provides support for IMS/VS data bases and adds new functions to Test IMS Utilities. Test IMS Utilities (5796-PBE) is a prerequisite for the Test IMS/VS Utilities.

G320-1544

INTERACTIVE QUERY AND REPCRT PROCESSOR (IQR) - IUP 5796-PDG, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The Interactive Query and Report Processor (IQR) enables the end user to interact, from a terminal, directly with files of interest to him using a free form set of commands which can be easy to learn. IBM experience with predecessor systems indicates that providing this type of query and reporting facility to the end user potentially constitutes a significant productivity enhancement and can permit a wide variety of applications to be implemented without traditional programming.

The key to IQR's value in permitting the end user to generate interactively his own applications is a simple, flexible, non-procedural, powerful set of commands. Use of IQR predecessor systems within IBM has demonstrated that clerks, managers, administrative personnel, technical staff and production workers can quickly learn to use the IQR query terms.

G320-1621

IBM MARKETING PUBLICATIONS KWIC INDEX

This catalog indexes the titles and lists the prices of customer publications, including all those for system libraries and many other marketing publications, such as application briefs, educational and promotional literature, cassettes, videotapes, periodicals and photographs.

All titles are KWIC (keyword in context) titles. KWIC is an abbreviating retrieval system in which titles are expressed in no more than 30 characters and each such title is indexed under each practical keyword.

Among such keywords is #SUP, which creates a numerically-sorted listing of all System Library Supplements (applying to Selectable Units and certain licensed programs) released before the edition date.

Conversely, Supplements applying to a given base number and edition may be found under that base number, where it appears in the title index as a keyword.

Similarly, those requiring the pseudonumbers for specific back editions (supporting prior releases of programs) will find them listed in the title index under the actual base order number.

Materials for the maintenance of IBM products are in the Customer Engineering KWIC Index, GY20-0073. Index, 344 pages, 8/79

VM/370 GRAPHIC MONITOR, IUP 5796-PDT, NOTICE

This document tells potential customers about use of the VM/370 Graphic Monitor.

The primary objective of the system is to display realtime information on the activity taking place in the VM/370 system. For example, the system would allow the user to observe and, if necessary, react to adverse loop situations that could degrade the overall system. Features of the program are extensive and include screen formats that show:

- o System utilization which provides a histogram of CPU utilization of the VM/370 system over an 80 minute span of time. This screen will also display numeric data for the last interval and hour.
- o User utilization of system resources. This screen shows the individual user's utilization of CPU, I/O and paging. This screen allows systems personnel to immediately determine users having detrimental utilization rates.
- o Dual control - The system can be controlled either by the virtual machine console or a selected control 3270 local. This feature allows the systems personnel to select the screen formats desired and to suppress those not desired.
- o Print file - a virtual spool file is created which contains VM/370 data as specified by the user. This information may also be retained as a disk file under the Conversational Monitor System.
- o The 168 console is supported as a display device as well as 3270 locals. This support is provided as dedicated devices attached directly to the VM/370 Graphic Monitor.

Systems personnel can instantly visualize the manner of distribution of the VM/370 system resources and take any corrective action deemed necessary.

G320-5537

AUTOMATED UNIT TEST, IUP 5796-PEB, 5796-PEC, NOTICE

This document contains information about use of Automated Unit Test (AUT), a productivity aid which can be used by a programmer to drive test cases through a unit of code for internal interface testing, monitor execution of the test cases, verify whether the tests were successful, and provide diagnostic information about discrepancies. Because it also provides the capability to simulate uncoded or uncompleted units of code or entire modules while driving the test cases, AUT promotes the use of top-down design or development - a technique used by many to help improve the quality and reliability of code.

Release notice, 8 pages, 9/75

SLSS - ORDER NO. SUBSCRIPTION ONLY

G320-5539

VS/REPACK, IUP 5796-PDZ, NOTICE

This document contains information about use of the VS/REPACK Installed User Program (5796-PDZ), a tool to help in improving the performance of individual user programs running in a virtual storage environment. In particular, VS/REPACK provides facilities for recording, displaying, and analyzing virtual storage reference data which can enable the user to reduce program working set size in order to decrease overall system paging. The VS/REPACK developers have used these facilities to reduce the paging rate of specific applications in their installation in the range of one-half to two-thirds. The improvements that can be obtained using VS/REPACK may vary widely depending upon the nature of the application and the system environment.

HIGHLIGHTS

The VS/REPACK system can assist the programmer in:

- o Reordering the CSECTS for improved program performance
- o Reducing the wasted space
- o Interactive testing of assumptions without recording, relinking or rerunning
- o Graphically displaying program activity
- o Debugging program logic errors related to abnormal sequencing of storage references
- o Confining a program's address space references to fewer pages for extended periods of time

SYSTEM DESCRIPTION

The VS/REPACK Installed User Program (5796-PDZ) is a program developed and structuring aid used for analysis of a program's execution in a virtual storage environment. The use of VS/REPACK involves two separate procedures that are used in conjunction with each other to analyze how to improve performance: The Trace session and The Analysis session.

G320-5540

WIDEBAND COMMUNICATIONS SYSTEM, IUP 5796-PDJ, NOTICE

This document contains information about use of the Wideband Communications Program, currently in use in over 75 IBM locations throughout the world. It was developed to take advantage of high-speed data transfer rates available over leased lines. Using sophisticated data compaction techniques, checkpointing, and audit and security facilities, the system allows multiple installations to effect fast, reliable transmission of bulk data under control of CPUs using OS/VS1 or OS/VS2. Wideband Communications can help reduce the cost associated with bulk data transfer by increasing productive line utilization and decreasing the displaceable cost associated with offline transmission systems such as tape handling or transportation of storage media.

HIGHLIGHTS

- o Transmission of the data sets to multiple locations via store and forward
- o Three level prioritization
- o Operation at line speeds from 1200 baud to 230.4KPE
- o Between local and remote locations, tape-to-tape, tape-to-spool, spool-to-tape, or spool-to-spool transmission
- o Support of standard label, nonlabel, nonstandard label, and 7/9-track tape files (nonstandard label files are transmitted bit for bit with no label processing performed)
- o Multifile tape volume support
- o Spooling or despooling using sequential devices other than tape or disk
- o Concurrent send, receive, and spooling task capabilities within a single CPU
- o Retention of sent traffic in compacted format
- o Reduction of line overhead and spool space through data compaction
- o Integrated checkpoint/restart and line error recovery
- o System performance/audit analysis capability through the use of standalone utilities
- o High level of main storage optimization through the use of reentrant modules

ASSEMBLER H/CMS INTERFACE, IUP 5796-PEJ, NOTICE

This document contains information about use of the Assembler H/CMS Interface Installed User Program, which enables VM/370 users to install and execute OS Assembler H under CMS. After installation is completed, a simple command, HASM, is used to invoke Assembler H to assemble user specified files. A set of options available with the HASM command provides the CMS user with the same options as Assembler H under OS.

HIGHLIGHTS

- o Provides an interface to OS Assembler H under VM/370.
- o Enables VM/370 CMS users to benefit from Assembler H performance improvement and language extensions.
- o Uses a simple CMS command to invoke Assembler H.
- o Provides for assembly time options with the CMS command.
- o Enables source program input from CMS files, OS data sets, or OS partitioned data sets.
- o Permits programs written for Assembler F and the OS/VS Assembler to be assembled with Assembler H.

G320-5542

RCA TDOS ASSEMBLER TO O/S ASSEMBLER CONVERSION AID, IUP 5796-PEX, NOTICE

This document informs potential customers about the use of the RCA TDOS Assembler to OS/VS Assembler Conversion Aid.

This aid converts RCA TDOS Assembler programs to OS/VS executable modules with a minimum of source statement changes. The conversion aid uses RCA assembler language source code as input and, with nominal additions directly produces an executable OS/VS assembler program eliminating many errors resulting from manual changes. It minimizes the amount of application knowledge required of the conversion programmer. An auxiliary module, included with the aid, is required until future conversion to native OS/VS mode.

The conversion aid consists of two assembler language programs and a macro library. One of these programs is for correcting minor syntactical differences between the two assembler languages. The other program is an auxiliary module with multiple entry points that works in conjunction with the expansion of the macros included in the conversion aid. The macro library consists of macros that were written to accept the RCA/DOS syntactical format and expand either to their direct OS MACRO equivalent or to a branch and link to the auxiliary routine necessary to provide the RCA/TDOS function.

DISK VOLUME MAP PROGRAM, IUP 5796-PFL, NOTICE

This document contains information on use of the Disk Volume Map Program, developed by IBM Program Development in order to use disk storage more efficiently and thus have more disk packs and disk drives available for adding new applications. The Disk Volume Map Program makes it possible to monitor disk storage as often as desired and to have knowledge at all times as to whether and where space is available, whether any data sets should be compressed, and what is stored where - knowledge that is crucial to avoid wasting resources in the disk storage area.

Potential Advantages

- o More efficient use of available disk space
- o Fewer reruns due to lack of available disk space
- o Faster execution of disk I/O bound programs if many long seek operations are eliminated by more efficient data set organization
- o Potential transfer of data management chores from the systems programmer to the operations department
- o Easier, faster, and better conversion of data files from tape to disk

G320-5551

ISAM TO DL/I COBOL TRANSLATOR, IUP 5796-PFB, -PFC, NOTICE

This document contains information on use of the ISAM-to-DL/I COBOL Program Translator Installed User Program, which assists the user in his conversion from ISAM files to integrated data-base management under DL/I. The Translator converts COBOL source programs that use ISAM into exactly equivalent COBOL programs that use DL/I to access the same data. At the same time the Translator detects and diagnoses unusual programming techniques (if any) that may require revision to operate in an integrated data base environment. The Translator provides a complete audit listing of this conversion, or, if the user chooses, an exceptions-only listing at either of two levels of detail.

The ISAM-to-DL/I COBOL Program Translator thus helps the user by:

- o Detecting all occurrences of ISAM-related usage in a COBOL source program.
- o Converting all common ISAM-related COBOL statements. These DL/I statements are organized in a standard and easily modified form for all translated programs.
- o Diagnosing and identifying errors in COBOL syntax or unusual usage of ISAM that may require manual changes to conform to the user's intended operating environment under DL/I.
- o Providing the user with a simple level of control over the translation process through use of control cards.

G320-5652

IMS SPACE MANAGEMENT UTILITIES, IUP 5796-PPW, NOTICE

This document contains information in us of the IMS Space Management Utilities, which can improve system performance and programmer productivity. They are designed to assist in managing OS, OS/VS, IMS/360 and IMS/VS data space, to detect and report IMS hierarchical direct (H.D.) pointer discrepancies and to assist with segment restructuring during data base reorganization. The IMS Space Management Utilities are installed and operational at the IBM System Products Division plant in East Fishkill, New York.

HIGHLIGHTS

The IMS Space Management Utilities can provide the following benefits to the user:

- o Reduction or elimination of reruns caused by program abends due to the lack of available disk space
- o Improved CS or IMS program performance resulting from properly reorganized data bases and data sets
- o Improved system programmer productivity due to reduced diagnostic/repair time spent correcting IMS H.D. physical pointer discrepancies
- o Less programming time required to create test data bases from a subset of existing data bases
- o Ease of accommodating changes in data base design via a simplified method of restructuring data base segments

Release Notice, 4 pages, 1/76

SLSS - ORDER NO. SUBSCRIPTION ONLY

G320-5653

TSO/CODES UPDATE SYSTEM, IUP 5796-PFR, NOTICE

This document contains information on use of the TSO/Codes Update System Installed User Program, a productivity aid which can be used by a TSO System Administrator to automatically create unique passwords for TSO users. It can eliminate manual updating of the passwords and help increase the security and manageability of the TSO password facilities. Because the TSO/Codes Update System uses both the Julian date and the time of day as input to its randomizing routines, the same series of passwords should not be reproduced within a 100-year cycle, and likely will never be reproduced.

The TSO/Codes Update System is designed to be used with "snap-out" form-type mailers, which are readily available from various forms vendors. The program prints the new password, name and address, and any user message on the cover sheet of the special form. This cover sheet is removed and held as the master listing and is used for the auditing process. The new password and message are printed only on the cover sheet and on the inside part of the form. This is accomplished by the arrangement of carbons within the mailer envelope. The new password is visible only when it is separated from the envelope portion of the multipart form. The use of these forms can reduce the amount of handling, helping to increase security, and, potentially, decreasing maintenance costs.

G320-5660

DL/I HDAM DATA BASE TUNING AID, IUP 5796-AKF, NOTICE

This document contains information on use of the HDAM Reorganization Utility for DL/I DOS/VS.

The DL/I DOS/VS user generally has the choice of two access methods, HIDAM and HDAM, for implementing online and performance-oriented systems. The potential performance advantages of HDAM make it an attractive alternative to HIDAM. If the application requirements can be met by HDAM, the user should consider it over HIDAM when selecting an access method. The HDAM Reorganization Utility was developed at General Reinsurance Corporation in order to use HDAM more effectively. Its purpose is to predict and tune HDAM performance during systems design, and to maintain that performance with an optimum reorganization procedure after implementation. Highlights:

- o Analyzes HDAM performance during system design
- o Calculates average number of I/Os to access root segments randomly
- o Requires only one control card to specify randomizer name and DBDGEN performance parameters
- o Provides a reorganization procedure that enhances performance by loading synonyms last
- o Eases conversion to HDAM from HISAM and HIDAM

PL/I F TO PL/I OPTIMIZER CONVERSION AID IUP 5796-AKG, NOTICE

This document contains information on use of the PL/I F to PL/I Optimizer Conversion Aid which accepts syntactically correct PL/I F source text and modifies it so that it will

compile under the Optimizer or Checkout Compiler Program Product (5734-PL1 and 5734-PL2). It permits lower skilled personnel to perform conversion of PL/I program libraries. It can reduce the time required and adds an orderly method to perform the tasks. It can assist the user in achieving significant cost reduction in making the conversion. Release Notice, 4 pages, 1/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

batch production work where performance is essential.

The objective of the GTFSSVC program is to identify those jobs and program modules that are the heaviest users of supervisor services (for example, EXCP, GETMAIN, Overlay Supervision). The execution of many of these system-provided services is both time-consuming and serial creating bottlenecks with resultant performance degradation.

The Generalized Trace Facility (GTF) component of the user's system control program provides detailed data on a variety of events occurring in a system, including supervisor calls. The GTFSSVC program accomplishes its objective by extracting and summarizing GTF trace records into a useful and manageable format.

IMS TRANSACTION PROFILES, IUP 5796-PGG, NOTICE

The IMS Transaction Profiles Installed User Program was developed by the IBM Palo Alto/ Raleigh Systems Center to process IMS log information collected from IMS installations in surveys conducted by the GUIDE and SHARE User Organizations. Reports on the results of these surveys are available to customers through their IBM Systems Engineers. The IUP produces reports which can reveal a broad spectrum of characteristics of the transaction workload on an IMS DB/DC system. The information can provide early recognition of problem situations and identify the individual transaction processing programs involved. The increased understanding of the transaction workload can also provide the user with confidence in the ability of the system to absorb added applications or help to identify when the capacity of the system should be increased.

DOS/VS PERFORMANCE TOOL, IUP 5796-PGK, NOTICE

DOS/VSPT is a software monitor that measures the performance of an existing IBM system operating under DCS/VS. It uses both statistical sampling and event tracing to record system status on an output data file. This data is used later to produce a series of reports on both hardware and software performance during selected time intervals.

HIGHLIGHTS

- o Reporting includes:
 - CPU utilization
 - Real main storage occupancy and paging
 - Channel utilization and overlap with the CPU
 - Device utilization and queueing
 - DASD seek analysis
- o Analysis by partition includes:
 - Deactivation
 - Real main storage occupancy
 - DASD seek analysis

CICS VIDEO EXTENSIONS: VIDEO SUPPORT AIDS, IUP 5796-AKK, NOTICE

This document describes for potential customers use of Video Support Aids.

With the rapidly increasing demands upon today's data processing personnel, productivity has become the watchword of the industry. The challenge to DP management is to find improved methods whereby more new applications can be implemented faster, greater system availability can be achieved, and the total effort required to maintain the system components can be eased. It was with these objectives in mind that Washington Manufacturing Company undertook the development of VIDEO support aids. As a user of VIDEO/370 under CICS/VS, the company had already experienced significant productivity gains. VIDEO Support Aids provides still greater potential for improved productivity. It makes available to the VIDEO/370 CICS/DOS/VS user significant new and enhanced functions.

MVS SEEK ANALYSIS PROGRAM, IUP 5796-PJC, NOTICE

This document describes for potential customers use of the MVS Seek Analysis Program. This internally developed program produces reports from GTF output that can aid the MVS systems programmer in eliminating system bottlenecks. This program can be used in the installation of MVS to analyze the effects of making changes to the MVS system configuration. Following the installation of MVS, the program can be used to help identify system bottlenecks such as poor data set placement. Release notice, 4 pages, 3/76

VS1 PERFORMANCE TOOL, IUP 5796-PGL, NOTICE

This notice announces release of VS1PT, a software monitor that measures the performance of an existing IBM System/370 running OS/VS1. It uses both statistical sampling and event counting to record selected system status information. At requested intervals, the accumulated information is placed on an output data set. Subsequently, reports can be generated to evaluate overall performance during the entire monitoring period or to analyze in detail any specific areas of concern.

Highlights

- o Monitoring selectively includes:
 - o CPU utilization and queueing
 - o Real main storage occupancy and paging
 - o Program module usage
 - o Supervisor calls
 - o Channel utilization
 - o Device utilization and queueing
 - o DASD seek analysis
 - o System data set utilizations (SVCLIE, LINKLIB, SYSPCCL and PAGE)
- o Analysis by partition includes:
 - o Virtual storage assignment and deactivation
 - o CPU utilization and queueing
 - o Real main storage occupancy
- o Time plots of activity for selected major resources are provided to show system performance variations over extended time periods.
- o Selected internal reports are available for in-depth analysis of specific system resources.

Flyer, 8 pages

SVS PERFORMANCE TOOL, IUP 5796-PGN, NOTICE

This notice announces release of SVSPT, a software monitor that measures the performance of an existing IBM System/370 OS/VS2 SVS. It uses both statistical sampling and event counting to record selected system status information. At requested intervals, hardware and software performance reports are generated and placed on an output data set. Subsequently, reports can be selected to evaluate overall performance during the entire monitoring period or to analyze in detail any specific areas of concern.

Highlights

- o Monitoring selectively includes:
 - o CPU utilization and queueing
 - o Real main storage occupancy and paging
 - o Program module usage
 - o System resource ENQUEUE and supervisor calls
 - o Channel utilization and overlap with the CPU
 - o Device utilization and queueing
 - o DASD seek analysis
 - o System data set utilizations (LINKLIB, JOBQUE, PAGE)
- o Analysis by job and job step includes:

G320-5675

GTF SUPERVISOR SERVICES ANALYZER, IUP 5796-PGE, NOTICE

This document describes for potential customers use of the GTF Supervisor Services Analyzer Program, (GTFSSVC). This internally developed program is designed to aid the systems programmer in analyzing and improving the performance of the computer system. The GTFSSVC Program can prove valuable as a tool for identifying performance bottlenecks in the key jobs of an installation. These jobs are frequently the online DB/DC system or critical-path

- o Elapsed execution time
 - o CPU utilization and queueing
 - o Real main storage occupancy
 - o Time plots and a time scaled summary report of activity for selected major resources are provided to show system performance variations over extended time periods.
 - o Selected interval reports are available for in-depth analysis of specific system resources.
- Flyer, 12 pages

DISKETTE SORT PROGRAM, IUP 5796-PGJ, NOTICE
This document contains information on use of the Diskette Sort Installed User Program which enables users of the IBM DOS/VS Sort/Merge Program, 5746-SM1, to sort diskette files without first having to copy them onto tape or disk.

Highlights:

- o It provides a generalized Sort/Merge E15 exit routine to DOS/VS diskette users.
- o It provides improved performance to those sort users that need to sort diskette files, since the copying pass from diskette to tape or disk is no longer required.
- o It will dynamically determine the record length of the diskette records to be sorted.
- o The programming symbolic unit number used in conjunction with this program is determined at installation time and can be chosen such that no conflicts occur with the particular installation's standards.

BATCH TERMINAL SIMULATOR II, IUP 5796-PGT, NOTICE
This document contains information on use of Batch Terminal Simulator II (BTS II), a Productivity Aid for Application Program Testing under IMS/VS Version 1.1.1 and subsequent releases. BTS II is a terminal simulator that allows online IMS/VS application programs to be tested in an IMS/VS batch environment without the use of teleprocessing hardware. Extensive debugging facilities enable the BTS II user to test batch applications as well as those intended to run in a teleprocessing environment. BTS II supplies information about each transaction or message as it progresses through the IMS/VS system. It provides IMS/VS users with a comprehensive means of checking and debugging:

- o application program logic
- o IMS/VS interfaces
- o teleprocessing activity
- o 3270 format control blocks
- o data base activity

BTS II is a new product based upon BTS/VS with the 3270 Formatting Feature and released with an extended support period and significant enhancements. It is fully upward-compatible with BTS/VS and the 3270 Formatting Feature.

BATCH MONITOR FOR VM/370 CMS IUP 5796-PGZ, NOTICE
This program allows a VM/370 CMS terminal user to direct jobs which do not require conversational supervision to one of four virtual "batch" machines. The major highlights of the program include: terminal user inquiry into "batch" machine workload, class and priority scheduling of batch jobs, system workload balancing, and extensive control and restart facilities. The major potential benefit to a user of this program is increased CMS terminal user productivity.

DL/I BATCH MONITOR FOR DOS/VS, IUP 5796-AKY, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
This IUP is a productivity aid which helps the DL/I DOS/VS Application Programmer test and debug DL/I batch programs. In addition, it provides the Data Base Administrator/Systems Programmer with a means to audit data base calls issued by these programs, and to evaluate program performance. The objectives of this IUP are to reduce the time required to implement DL/I batch application programs, and to help in tuning the DL/I DOS/VS batch system.
This IUP supports only DL/I DOS/VS data bases which use VSAM (DL/I Entry is not supported). The IUP supports DL/I application programs written in Assembler, COBOL and PL/I.

VS APL FOR TSO, IUP 5796-ALB, NOTICE
VSAPL for TSO, Installed User Program 5796-ALB, is a TSC command processor written in Assembler Language which interfaces the VSAPL Program Product (5748-APL) to TSO and has been tested under MVS 3.6, and MVT 21.7. All of the VSAPL interpreter functions are available to the user without modification. All TSO functions defined for use by a Command Processor are unchanged by the addition of this IUP and become available to the APL terminal. VSAPL terminals which are supported include the IEM 1050, 2741, 3270 with Data Analysis feature, 3767, 5100 as well as bit-pairing and typewriter-pairing ASCII APL terminals. The VSAPL program product is a prerequisite and must be ordered separately.

TESTING AND DEBUGGING ONLINE WITH CICS/VS, IUP 5796-AHJ, NOTICE
CICS/VS Online Test/Debug provides a programmer with the facilities to test and debug CICS/VS application programs under CICS/VS by entering command statements via a 3270 Information Display System. The features include the ability to display any location in main memory of the machine, alter any location within the CICS/VS job step boundaries, stop the execution of a specific CICS/VS task at a specific address within an application program, immediately update or display file records (ISAM, BDAM, VSAM and DL/I), and open or close files online. In effect, this program allows a programmer with access to a 3270 the ability to "console debug" programs without interrupting normal installation operations.

G320-5714

SMF JOB DATA COMPRESSION AID IUP 5796-PHN, STORAGE DEVICE MIGRATION AID IUP 5796-PHP, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
The Job Data Compression Aid (JDCA) IUP (5796-PPN) and its companion, the Storage Device Migration Aid (SDMA) IUP, (5796-PHP) are tools designed to help OS or OS/VS installations manage their tape, DASD, and Mass Storage System (MSS) configurations.
JDCA produces a base file of edited and reduced System Management Facilities (SMF) data. This base file can be used by SDMA. Consequently, JDCA is a prerequisite for SDMA. But, the JDCA base file data can also be rearranged by sorting and including in detailed or summary reports by IBM personnel using IBM Marketing Aid 1 (MA/1) or by user written applications. In this latter case, JDCA can simplify the task of processing SMF's variable length records.

JDCA provides a number of useful options for controlling the data included in the base file. It also provides Summary reports for estimating the validity of the SMF data processed. JDCA can process SMF data from up to 9 OS or OS/VS systems.

The Storage Device Migration Aid (SDMA) IUP generates a series of reports from the base file created by the Job Data Compression Aid (JDCA) IUP (5796-PPN). These reports include information about data sets and jobs. The information in the reports can be custom tailored by use of one or more filters. The filters enable the installation to study the specific data sets and jobs of interest.

JDCA and SDMA are designed to simplify migration to a new I/O configuration but they can also be used for other purposes. They can help you and your customer:

- o Detect the need for I/O configuration upgrades
- o Determine the changes to be made
- o Plan migration to the new configuration
- o Monitor the progress of migration
- o Estimate the date of the next I/O configuration upgrade
- o Monitor compliance with installation standards
- o Improve system performance by optimizing data set placement and characteristics

JDCA and SDMA, if used together, provide the customer with many of the functions supported by IEM Marketing Aid 1 (MA/1). In addition, new reports are included that simplify detailed migration planning.
Users of these IUPs will be able to keep all of the

reports produced and use them freely for their own purposes. These IUPs will enable your customer to get involved with I/O configuration studies at an early date and assume the primary responsibility for processing the data and analyzing results.

GIS AND GIS/VS LIBRARY MAINTENANCE PROGRAM - IUP 5796-ANG, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The GIS and GIS/VS Library Maintenance Program Installed User Program 5796-ANG, aids an installation in the management of its GIS library data sets.

Many GIS and GIS/VS users have found that maintenance of their GIS.LIB data set presents difficulties. The directory of this partitioned data set often gets filled or an excessive number of members use the space allocated to the data set thus causing systems termination. Many of the members and directory entries are unnecessary, because GIS.LIB modules from multi-step jobs remain on the library when an earlier step fails to complete. Others were once intentionally saved but were not deleted when their counterpart GIS.LIB members were deleted.

The job of cleaning up this PDS is further compounded by the problem of identifying from whom or for what reason the members have been kept. The purpose of this self-scheduling IUP is to automate the determination and deletion of GIS library and directory entries which are no longer valid. The program prepares a listing indicating which members of GIS.LIB are to be retained and which members are marked for deletion. This provides an audit trail prior to the execution of IEBCOPY to reorganize and to compress GIS.LIB.

CMS EXEC LANGUAGE EXTENSIONS, IUP 5796-PJA, NOTICE

This document announces release of CMS EXEC Enhancements, Installed User Program 5796-PJA, designed to provide additional functions to expand the usefulness of the VM/370 CMS EXEC language. It is a standard CMS command module which runs in the transient area and allows the EXEC writer to:

1. Perform multiplication, division, and residue operations as addition and subtraction.
2. Obtain current date and time in EXEC variables.
3. Obtain read or virtual device type information.
4. Search a file in a specific column for a particular

character string.

5. Search a list of values for a particular value.
6. Determine if a member is defined in a library and obtain the starting record number of the member in the library and the size of the member.
7. Obtain the values of specific parameters or options from the EXEC argument list and supply default values if no value was provided.
8. Obtain the value of an option which follows a specific keyword and supply a default if the keyword is not in the option list.
9. Return the values of local EXEC variables to the next higher level.
10. Punch, stack, or type data which contains a specific number of embedded blanks and strings greater than 8 characters.
11. Read any record in a CMS file into EXEC variables.
12. Place a CMS file on the console stack.
13. Obtain data from the File System Table when only part of the file ID is known.
14. Obtain virtual machine user ID or system level number.
15. Set global EXEC variables which may be accessed from command to command.

G320-5729

FORTRAN INTERACTIVE SUBROUTINE LIBRARY, IUP 5796-PHI, NOTICE

The FORTRAN Interactive Subroutine Library (FISLIB) consists of a set of FORTRAN callable subroutines which can be used by a FORTRAN programmer to give more flexibility to interactive FORTRAN programs. FISLIB is used where the interaction of human decision making ability with the computer program is essential to permit users to choose between alternatives at key points during program execution. The interactive program produced can be run under: VM/CMS; any of the TSO options - OS/MVT, OS/SVS or OS/MVS; VS/PC FORTRAN; or DOS FORTRAN F utilizing the operating console.

The subroutines written in FORTRAN are designed to be system independent. They provide a simplified method of allowing the terminal program user to: specify program functions to be executed; specify parameters to be varied, reset or incremented; use a comprehensive desk calculator mode for intermediate computations; create procedures, a series of commands, executable by procedure name.

APL DECISION TABLE PROCESSOR - IUP 5796-PJE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The APL Decision Table Processor and Code Generator Installed User Program 5796-PJB is a set of interactive APL programs designed to help the user construct and maintain a library of limited entry decision tables and to compile the decision tables into procedural code in a high level language (COBOL, PL/I, APL, ALGOL). The usual concerns of program debugging may thereby be eliminated, allowing the end-user to concentrate on the decision-making logic of the application. Decision tables can be edited and validated for completeness and consistency. ALGOL, APL, COBOL, and PL/I code generators are provided. APL programs can be generated for immediate execution and testing. Programs in the other languages can be filed on a data set and be used as input to other language processors. A full coverage test case sequence for validating the object code is optionally produced.

A questionnaire processor is available as part of this system to guide an application user through a series of "yes/no" to produce a decision table map. The questionnaire is also useful for interactive checkout of table logic.

DISK WORK FILE MANAGER FOR DOS/VS - IUP 5796-ANK, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This IUP helps provide partition independence to DOS/VS users by dynamically allocating disk work files from pools of disk space which are internally maintained for each partition. A user may specify one or more pools for each partition, a pool of space assigned to one partition cannot be shared with other partitions. Typically requiring 2K bytes in the shared virtual area, this IUP handles program requests for disk work files by intercepting and modifying incoming job control statements. In this manner, the same job (and same JCL) running in two different partitions will automatically be assigned different temporary disk space areas.

G320-5742

MASS STORAGE CONTROL TABLE MAINTENANCE PROGRAM, NOTICE, IUP 5796-PHY

Proper operation of the IBM 3850 MSS is possible only if data in the MSC's Table Data Sets is valid. The purpose of the Mass Storage Control Table Maintenance Installed User Program is to help the system programmers maintain this important data set. The program provides an interactive conversational approach for maintenance of the MSC Table Data Sets. It can substantially reduce the time required to perform system programmer and operator functions including queries regarding operational status, problem diagnosis and performance of corrective actions.

The Mass Storage Control Table Maintenance Program executes under TSO or with a TCAM interface. It can be used from the operators console to query status of the system via MSC table analysis. It can also be used in a Display Only mode or for Display and Update. All actions taken and associated output are logged to provide an audit trail. Flyer, 8 1/2 x 11 inches, 4 pgs, 3/77

G320-5746

TSO/MSS ARCHIVER RELEASE NOTICE, IUP 5796-AJK

TSO users tend to need more and more space for storing their permanent data as time progresses. On the other hand, at any particular point in time, they are working with a relatively small subset of this data. In other words, the data falls into one of two categories: active or inactive. These categories may be thought of as hierarchies of storage: Level 1 (active) and Level 2 (inactive).

When specifying the media for storing these two hierarchies, a TSO user has traditionally used real DASD for both levels. Some have used tape for Level 2 but waiting for tapes to be retrieved and mounted is non-productive and costly. Furthermore, no systematic way of transferring data between the levels was supported by IBM.

IBM's new 3850 Mass Storage System has created an opportunity to significantly reduce the time needed to retrieve and mount tape data sets. And, the TSO/MSS Archiver IUP bridges the gap between TSO and the MSS by providing the TSO user with a systematic way of keeping his inactive Level 2 data on MSS cartridges and retrieving that data from Level 2 with minimal delays. The TSO user and his installation, therefore, benefit from the lower storage costs inherent in the 3850 MSS. The installation savings can help justify 3850 MSS.

/////5796-AQJ

G320-5810

MSS TRACE/SMF CORRELATION AID, IUP 5796-PJX, RELEASE NOTICE

This document announces release of an IUP which consists of a set of programs developed to assist an installation with an IBM Mass Storage Subsystem (3850) in evaluating system and subsystem performance. Workload balancing and problem determination for the 3850 requires knowledge of both host CPU and MSS activity.

Correlation of event activity between CFU hosts and MSS requires the use of common data elements recorded in each of the respective activity journals, System Management Facility (SMF) and MSS Trace. The IUP analyzes data collected by SMF and MSS trace and generates reports and time-based plots of activity within the MSS and host CPU, thus allowing correlation of these two sources over time. The correlation will show processing peaks and can aid in work rescheduling to reduce or eliminate system or subsystem saturation periods. Situations such as cylinder faulting can be detected and investigated by correlation of SMF job, step and data set information - with the stage/destage activity as recorded by MSS trace.

G320-5754

DBPROTOTYPEII RELEASE II, IUP 5796-PJK, NOTICE

The DBPROTOTYPEII Release 2 IUP provides a powerful and flexible tool for IMS/VS data base design and evaluation. The analytic tools of DBPROTOTYPE II estimate the disk space, CPU time, and I/O time required by an IMS/VS application program. The simulation tools enable the data base designer to create model data bases of skeletal application programs to run against these data bases. Major enhancements for release 2 include an analytical tool, DBCAP, for estimating the CPU time and I/O time required by DL/I calls of an IMS/VS application program.

This IUP was written using PL/I and uses the standard features of the operating system OS/VS1 or OS/VS2 and of the

In order to realize the full recording capabilities of this IUP, the user must install the Job Data Compression Aid IUP (5796-PHB); collect full SMF data and process this data with the JDCA IUP. However, the MGS Trace/SMF Correlation Aid IUP may be used without JDCA to process only on MSS trace data.

Programming System: OS/VS1, OS/VS2 (SVS), OS/VS2 (MVS).

IMS/VS ONLINE DATA MANAGEMENT UTILITY, IUP 5796-AQZ, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This document announces release of the IMS/VS Online Data Management Utility, developed by Blue Cross Hospital Service of Missouri, Inc., an IMS/VS transaction which provides the facility for catalog and DASD management. The terminal user may display catalog, Volume Table of Contents (VTOC) and directory information for a data set; catalog, uncatalog, and scratch datasets; display, rename, or scratch a Partitioned Data Set (PDS) member; rename a DASD data set; send messages to the OS/VS console; and maintain OS/VS catalog indexes. This aid provides a productivity tool for application development programmers and system programmers with interactive facilities not previously available under IMS/VS. It has proven to be useful to operations personnel when restarting systems which have failed.

Release Notice, 8 1/2 x 11 inches, 4 pages, 1/78

G320-5821

3800 HIGH VOLUME PRINTING PROGRAM, IUP 5796-ARA, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The 3800 High Volume Printing Program, Installed User Program 5796-ARA, developed by Dannelley Marketing of Nevada, Iowa can print high volume output online to the IBM 3800 Printing Subsystem in an OS/VS environment. The product was designed to maximize throughput rates of the IBM 3800 while minimizing utilization of system resources.

The use of QSAM for processing of the input print image records allows the program to be device independent of the storage media used to hold the print image records.

A wide variety of input record formats are supported; blocked or unblocked; fixed or variable; and ASA, machine control characters or no control characters. In addition, reformatting of 3-line mailing labels (4-up or 5-up) is done by the program allowing these labels to be printed on either a 3800 or an impact printer.

Keyword parameters specified by the operator facilitate control over each execution of the program. 3800 features of FLASH, COPYMOD character sets (CHAR), table recognition characters (TRC), and BURST can be used along with the IUP.

Input device independence and the variety of input and output formats of this IUP along with the IEM 3800 Printing Subsystem increases the printing flexibility of a data processing installation.

Release Notice, 11 x 17 inches, 4 pages, 1/78

G320-5822

IMS/VS RESPONSE TIME MONITOR RELEASE NOTICE, IUP 5796-ARB

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The IMS/VS Response Time Monitor developed by Philadelphia National Bank is a real-time, table driven system of IMS/VS programs which interact to measure the transaction scheduling capability of an IMS/VS DC System. The user sets criterion for acceptable response time for each message and the Response Time Monitor measures these response times at regular intervals while the IMS/DC control region is active. Message classes, whose response times exceed the user-selected criteria, are logged and time stamped and the IMS Master Terminal Operator is notified as delays occur. Action can then be taken to alleviate the response time problem or investigate it further. The IMS/VS Response Time Monitor assists IMS operations personnel in avoiding serious response problems.

Release Notice, 11 x 17 inches, 4 pages, 1/78
/////5796-ARB

G320-5823

IBM 3741 REPORT GENERATOR, IUP 5796-ARC, NOTICE

The 3741 Report Generator, Installed User Program 5796-ARC, developed by American Can Company of Greenwich, Connecticut, provides a high level language capable of generating reports on the 3741 model 2 and 4. Present data stored on diskettes can be summarized, totaled, or abstracted. The 3741 user now is able to quickly and easily create meaningful reports in response to management requests. The 3741 Report Generator, was developed by American Can Company to provide 3741 locations the ability to utilize existing data and resources in a more productive manner.

The 3741 Report Generator improves the utilization of the 3741 by providing a language which does not require detailed data processing knowledge. The fill-in-the-form approach to programming simplifies report creation. Once a report is created the 3741 Report Generator saves it in a library of programs. Programs thus stored may be executed at any time without recompiling.

Release Notice, 8 1/2 x 11 inches, 4 pages, 1/78
/////5796-ARC

G320-5824

GENERAL CROSS ASSEMBLER GENERATOR, IUP 5796-PKE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This document announces release of the Cross Assembler Generator, a system of programs designed to dramatically reduce the time and cost to create basic program assemblers for a wide variety of computer architecture. The entire system is implemented in APL.

A cross-assembler which runs on one computer to assemble code for another computer. The first computer is called the "host computer", and the second is called the "target computer." The Cross Assembler Generator takes advantage of the fact that only 25-30% of an assembler is dependent on the design of the target computer. If the host computer is held constant, then only target computer dependencies need be changed to vary from one assembler to another. Furthermore, the portion of the assembler that is changed has a high degree of regularity and usually can be generated from only one or two pages of descriptive material.

Systems integrators will find this particularly attractive since they can debug machine language programs for hardware before they actually take delivery. This will reduce dependence on the supplier's delivery schedule. Colleges and universities can use the Cross Assembler Generator in both practical laboratory work and in classrooms as a teaching tool.

The manufacturers can use the Cross Assembler Generator for preliminary programming and thus reduce cost and time in programming support. In addition, these manufacturers can also more cheaply support experimental process or design.

Time sharing vendors and in-house time sharing systems will find this of use to existing users as well as a means of attracting smaller hardware integration to their time sharing services.

Highlights

- Provides end users capability to rapidly define computer assembler
- Can run in any VSAPL, APLSV environment
- Users need not know APL
- Prompting module to lead user through assembler definition
- Core patching capability

Release Notice, 8 1/2 x 11 inches, 6 pages, 1/78
/////5796-PRD

G320-5825

IBM 3800 90 DEGREE PRINT PROGRAM, IUP 5796-ARE, NOTICE
 The IBM 3800 90 Degree Print Program, Installed User Program 5796-ARE, developed by the New York State Legislature in Albany, provides printing at 90 degrees to normal printer output. Full pages are rotated 90 degrees one at a time and printed using the 90 degree characters provided. Applications requiring printing at greater density than 60 or 80 lines per page can be run on the IBM 3800 printing subsystem utilizing the paper width rather than the paper depth for printing. Many 3800 installations can benefit from the flexibility of being able to use either 8 1/2 by 11 inch or 11 by 8 1/2 inch form sizes without changing the paper in the machine. Also, for 14 7/8 by 11 inch paper, using the width of the paper as the depth allows 36 percent more lines to be printed at 12 lines per inch and has the effect of reducing the resultant 3800 Monthly Use Charge by the same percentage. The IUP executes in an OS/VS environment.
 Release Notice, 4 pages, 5/78

G320-5826

VSAMZAP FOR OS/VS, DOS/VS, IUP 5796-PKG, -PJQ, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
 Virtual Storage Access Method ZAP Utility
 • VSAMZAP - DOS/VS 5796-PKG
 • VSAMZAP - OS/VS 5796-PJQ
 When errors are introduced into a file, either because of programming problems, I/O errors, power failures or other causes, correcting them can be difficult and time consuming. This is especially true with VSAM because often the actual location of the data is not known precisely. An effective solution of this problem is to access the VSAM Control Blocks and extract the information necessary to find and examine and, if necessary, modify the data. VSAMZAP does just this. It allows an authorized person to access, verify and replace any data in any type of VSAM Data Set. The program can be run using either card input and printer output or the systems console. It can also be run interactively under Time Sharing Option - TSO (OS) or Entry Time Sharing System - ETSS (DOS). The integrity of files is protected using the Password facility of VSAM if it is implemented on the system. Care should be exercised, however, in changes; especially the key field in a KSDS Data Set.
 Release Notice, 8 1/2 x 11 inches, 4 pages, 1/78

G320-5828

DOS/VS CHAINED CCW PRINT SUBROUTINE, IUP 5796-ARR, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
 This document announces release of the Chained CCW Print Subroutine for Assembler and COBOL which provides a significant performance improvement for print programs during execution. Benchmark results have shown improvements in both CPU utilization and job throughput when running under POWER/VS. The subroutine is entered via a COBOL or Assembler call statement. The subroutine will execute with or without POWER/VS. Three classes of calls are honored:
 1. Open call - defines the overflow options of having the subroutine count lines or the main program doing it.
 2. Execute call - passes the data to be printed, the type of control desired (before or after spacing or skipping) and receives a return code
 3. Close call - terminates the print and forces the final print lines when necessary
 Release Notice, 8 1/2 x 11 inches, 4 pages, 1/78

PALO ALTO SYSTEMS CENTER TECHNICAL BULLETIN
SNA 3274/3276 INSTALLATION GUIDE
 This installation guide is intended to supplement existing product documentation by providing examples of the various parameters and options that must be specified to accomplish the installation process. The parameters and options in this guide are not optimum for any specific environment and should only be used as guidelines. Each installation must be evaluated individually. These examples are, generally, extracted from an operational system, but have not been submitted to any formal test.

The guide is organized in three parts:

- Part 1 contains general installation planning information.
- Part 2 shows examples of an installation consisting of ACF level access methods, IMS/VS Version 1 Release 1.5 and CICS/VS Release 1.4.
- Part 3 shows examples of an installation consisting of a VTAM-II environment with IMS/VS Version 1 Release 1.4 and CICS/VS Release 1.3.

This manual is a major revision of G320-6023-0. The previous release was based primarily on lab experience. This release has been updated based on current field experiences. The format of this release of the guide is similar to the previous release, but a large number of seemingly minor changes have been made. Initial readers need not be concerned, but readers that have been using the previous release of this guide are cautioned to be alert for these changes. While minor in appearance, the effect of these changes may be far reaching. A simple change of a mode table name or entry name, for example, may require corresponding changes to the network definition and DE/DC product generations. Or a USSTAB change may alter the operating procedures.

In addition, two new chapters have been added; Problem Determination Aids and CICS/VS Considerations.
 Manual - serial, 105 pages, 3/79

DOS/VS VSAM TUNING AND ISAM TO VSAM CONVERSION GUIDE
 This document is intended to aid new or current DOS/VS VSAM users in the conversion of ISAM applications to VSAM using VSAM-IIP or going directly to Native VSAM. Basic VSAM education and knowledge of the information contained in the SRL's is a prerequisite.

While the information contained herein is especially oriented to users with ISAM backgrounds and applications, much of the information VSAM program design, performance and tuning, and recovery is relevant to all DCS/VS VSAM users.

The recommendations contained in this document have not been subject to any formal test or review and should therefore be individually evaluated for their applicability to a particular installation. Use of the information presented in this document in a customer installation must adhere to the Guidelines for Systems Engineering Services.

G320-6033

PALO ALTO SYSTEMS CENTER TECHNICAL BULLETIN, CICS/VS HIGH LEVEL PROGRAMMING INTERFACE
 In CICS/VS Version 1 Release 3.0 a new high level programming interface (HLPI) was introduced to simplify writing CICS/VS application programs using either PL/I or COBOL. This new interface, the command-level interface, offered considerable ease-of-use advantages over the earlier macro-level interface. The basic idea behind the command level interface was to make it possible to write CICS/VS application programs without

- 1) the need to have a detailed knowledge of CICS/VS architecture
- 2) the need to be concerned with the addressability of CICS/VS control blocks, their formats and contents
- 3) the need to be concerned with storage management.

In CICS/VS Version 1 Release 4.0 the command-level interface has been extended for use with assembler language application programs.

Prior to Release 3.0 the application program interface to CICS/VS consisted of a set of macros and control block definitions. In order to reduce the dependencies upon CICS/VS architecture and control blocks a possible first step could be to replace the macro and control block interface by one consisting of calls with arguments. However the use of a native language 'CALL' interface introduces a different set of usability problems. For this and other reasons explained below it was decided that a new type of statement, the EXECUTE command, should be used rather than a native-language call statement. The EXECUTE command is translated to a native language coded call statement by means of a single-step preprocessor for subsequent compilation by the appropriate language compiler.

At execution-time the EXEC interface program (EIP) interfaces between the application program call statements and the CICS/VS management modules. The function of EIP is to analyse the arguments passed to it and determine the function required. Using the coded values within the first argument generated by the translator EIP invokes directly the code for the requested function. Then using the

arguments passed by the translated command IUP assigns values into appropriate CICS/VS control blocks and invokes the appropriate CICS/VS management module.

OS/VS1 PRIORITY QUEUE AGING PROCESSOR, IUP 5796-ARG, RELEASE NOTICE

The Priority Queue Aging Processor for S/370 OS/VS1 is designed to ensure a consistent level of service for all jobs processed in a system. Under the VS1 Priority Queue Aging Processor all jobs are periodically aged or advanced in priority within the input queue. Thus, low priority jobs will eventually reach the highest dispatching priority and be executed in a timely fashion.

Highlights:

- Variable, time initiated processing of the job queue
- Ages both centrally submitted (local) and RJE (remote) jobs
- Operator query and modification of the scan time period
- Executes in a normal batch partition
- Employs standard interfaces to the OS/VS1 operating system

DL/I CICS/VS TEST PROGRAM - STATE INDUSTRIES, INC., IUP 5796-ARN, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This IUP, written in COBOL, is a CICS/VS transaction which allows a programmer to enter DL/I calls on a formatted screen and display the results (segment retrieved, DL/I return code) at the terminal. To use the program, the programmer enters the PSB name, which PCB within the PSB is to be used (default is first), type of call ('GU ', 'GNP ', 'GN ', 'ISRT', 'REPL', 'DLET', gets with hold), and SSA (actual format). The SSA can contain a command code. The data returned to the terminal includes a character and HEX display of the first 160 bytes of the segments retrieved, the DL/I return code, the concatenated key, segment name, etc. (basically all the information returned in the PCB). A paging facility allows viewing of portions of the data base record in excess of 160 bytes.

QUERY BY EXAMPLE, IUP 5796-PKT, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The Query-by-Example Installed User Program is a high-level interactive language facility which provides easy access to data by end users not necessarily skilled in data processing techniques. The usability features of Query-by-Example significantly enhance and extend the value of computer resident business information. These features include:

- User perception of data as two-dimensional tables, with rows and columns
- Interactive, display-oriented end user support
- Powerful data definition, selection, and manipulation features
- Simple yet flexible language syntax
- Data extraction capabilities from IMS data bases

During an interactive session with Query-by-Example, operations may be performed on an entire table, an entire row, an entire column, or on one or more table data elements. Such operations include retrieval, insertion, deletion, and update as well as new table creation. These

G320-6070

IMS/VS EMERGENCY LOG TERMINATOR IUP 5796-ATN

The IMS/VS Emergency Log Terminator program is to be used when an IMS/VS System Log Tape cannot be otherwise closed through normal programs and procedures. This typically occurs following a catastrophic failure such as a power failure.

Expedient closing of the IMS/VS System Log Tape is required in order to attempt IMS/VS Emergency Restart as soon as possible after a system failure. This is frequently successfully done by the existing IMS/VS System Log Termination Utility Program (DFSIFLTO). When DFSIFLTO is not successful, such as when the system dump is not available, due to a power failure, the log must be closed in some other way before an Emergency Restart can be attempted. In both on-line and batch IMS/VS environments, the properly closed log is also needed to effect data base recovery. To insure the integrity this requires, use of the IMS Write Ahead Log feature is a prerequisite for this IUP.

Flyer, 4 pages, 9/78
/////5796-ATN

G320-6071

IMS/VS MESSAGE REQUEUER, IUP 5796-ATP, NOTICE

IMS/VS Message Requeuer permits an installation to reinsert input and output messages back into an IMS/VS system from IMS/VS log tapes after IMS/VS has normally or abnormally terminated. The messages are reinserted with their original timestamp and are inserted in original time sequence. An audit trail is produced recording messages that could not be reinserted because of changes in the IMS/VS environment, such as the elimination of transaction codes or logical terminal names. IMS/VS Message Requeuer is designed to be used for the following purposes:

- To carry unprocessed messages across an IMS/VS System.
- To recover messages if IMS/VS Emergency Restart or Normal Restart fails.
- To extract specific transactions (up to 100 codes) from log tapes to be processed correctly by an application program previously in error.
- To stress test or regression test an IMS/VS System.

This IUP is offered with extended support. The significance of offering an IUP with extended support is explained in the sales manual.

G320-6093

AUTOMATIC PASSWORD GENERATION FOR RACF IUP 5796-PLK, NOTICE

The RACF/Codes Update System Installed User Program is a fully automated password generation and auditing system. It provides the installation with the ability to update RACF user type passwords and/or audit their users within any desirable time frame. With the use of the system, a RACF installation can centralize the control of the password assignment and change functions which are normally a RACF user responsibility.

The RACF/Codes Update System is designed to be used with "snap-out" form-type mailers, which are readily available from various forms vendors. The program prints the new password, name and address, and any user message on the cover sheet of the special form. This cover sheet is removed and held as the master listing and is used for the auditing process. The new password and message are printed only on the cover sheet and on the inside part of the form. This is accomplished by the arrangement of carbons within the mailer envelope. The new password is visible only when it is separated from the envelope portion of the multipart form.

Flyer, 4 pages, 1/79

HIGH SPEED SEQUENTIAL RETRIEVAL FOR IMS/VS, IUP 5785-LAA, NOTICE

With HSSR, an installation may:

- Reduce the time required for batch processing
- Find that new batch applications are now feasible
- Run online for a longer period of time.

This International Field Program was developed by, and is running at the Swiss Bank Corporation, Basel, Switzerland.

High-Speed Sequential Retrieval (HSSR) was designed to reduce the CPU time required for sequential retrieval of large physical IMS data bases.

The HSSR functions can be substituted for basic DL/I retrieval calls in IMS batch programs. An application program using HSSR issues the DL/I calls to HSSR instead of DL/I. The structure of the application program from HSSR are the same as if the call had been handled by DL/I. HSSR has an option to have all data base calls handled by both HSSR and DL/I. Segment and feedback information returned are compared by the HSSR compare option.

When the application program gets control, Program Control Block (PCB) parameters are passed to it. Some PCBs are normal DL/I PCBs and may be used to issue normal DL/I calls. Others are HSSR PCBs. They have the same layout as DL/I PCBs and may be used to issue, through the HSSR language interface, those GU and GN calls that are supported by HSSR.

APL HANDBOOK OF TECHNIQUES WORKSPACE IUP 5796-PLP, NOTICE

This IUP consists of the machine-readable equivalent of the APL code which appears in the publication, The APL Handbook of Techniques, form number S320-5996. It may be used as the nucleus of a personal workspace. With it application development may be simplified considerably by using English-like expressions within your APL functions.

This IUP is written entirely in the APL language and is designed to operate with program product VS APL, program number 5748-AP1.

Flyer, 4 pages, 1/79

VSE PERFORMANCE TOOL, IUP 5796-PLQ, NOTICE
The performance of an IBM System 4300 operating under DOS/VSE with VSE/Advanced Functions or an IBM System 370 operating under DOS/VSE or DOS/VS depends on many complex and interrelated factors. Manual or theoretical methods cannot adequately evaluate machine/system performance. The VSE/PT Installed User Program is a software tool that provides the ability to measure and report many performance-related factors of such a system.

It uses dynamic event tracing and/or periodic statistical sampling to record system status on an output data file. Subsequently, a series of reports can be produced to aid in the evaluation of software and hardware performance during the entire monitoring period or any portion thereof.

Used on a regular basis, VSE/PT can help answer some key performance questions. It can measure the changing environment to aid in an understanding of the system's internal operations. The measurement detail can be used to identify where changes to the system may produce an improvement in overall performance. Subsequent analysis can verify that the changes produced the desired result. Finally, an analysis of the VSE/PT reports can assist in determining which resources are available for the future growth of the system.

G320-6159

JES3 MONITORING FACILITY II, IUP 5796-PLW, NOTICE
The JES3 Monitoring Facility II (JMFII) IUP provides the MVS/JES3 user with information on the activities and resource utilization of JES3. This information can be used to evaluate the performance of an existing MVS/JES3 system and to understand the impact of particular JES3 functions on the entire system. Used on a regular basis, JMFII can assist in identifying changes in the JES3 environment that affect overall JES3 performance. Such information may be useful in planning for future growth of the system.

JMFII supports JES3 Release 3 (SU26) and replaces the JES3 Monitoring Facility (JMF) 5796-PHR IUP.

CICS ON-LINE TEST/DEBUG FOR CICS/OSS, CICS/DOSS & CICS/DOSE: CON EDISON, IUP 5796-AEF NOTICE
CICS On-Line Test/Debug provides the programmer with the facilities to test and debug application programs or user files while CICS is operating by entering command statements via a 3270 Information Display System. The features include the ability to display and location in main memory of the machine, alter any location within the CICS job step boundaries, stop the execution of a specific CICS task at a specific address within an application program, display and alter storage records on any data set available to the CICS job step, immediately update changes made to storage records on file, and open or close files on-line. In effect, this program provides a programmer with access to a 3270 the ability to "console debug" programs without interrupting the normal operation of your installation.

CICS/COBOL CALL INTERFACE FOR CICS/OSS CICS/DOSS & CICS/DOSE: NATIONAL BANK OF DETROIT, IUP 5796-AEG NOTICE
Current users of the Customer Information Control System (CICS) who are writing application programs in ANS COBOL usually write Assembler Language macros in their application programs. This procedure requires the use of the CICS Preprocessor Program and two compilations of the program, one for the Assembler Language macros and one for the COBOL.

This program provides a COBOL/CICS interface technique which eliminates the use of the CICS Preprocessor Program and makes the writing and debugging of ANS COBOL/CICS application programs considerably easier. The system consists of 12 modules, one for each of the CICS management functions, and a Resident Interface Module. When the COBOL application programmer requires a CICS service, rather than write an Assembler Language macro, he simply codes a predefined COBOL CALL statement passing a list of parameters depending upon the service requested. The tested CICS macro is then issued in the subsequently called CICS Service Handler and control is returned to the requesting COBOL program upon completion of the CICS service.

3270 SCREEN IMAGE PROCESSOR FOR IMS AND IMS/VS - IUP 5796-AFC, RELEASE NOTICE
The Screen Image Preprocessor is a productivity aid which simplifies the design and implementation of IMS/3270 applications. Each 3270 screen format added to an IMS system necessitates the preparation of many detailed control statements as input to the Message Format Language Utility. Using a single control statement and only one card image for each line to be represented on the screen, the Preprocessor generates the required IMS input statements. Each line of the screen image is coded exactly as it is to appear on the 3270 screen. Field control information (attribute bytes),

which do not appear on the actual screen but occupy one screen character position at the beginning of each field, must also be coded to specify the desired field types. The Preprocessor output includes a printed representation of the screen layout in addition to generated control statements which may be printed or passed to the Utility.

2927 DUAL PRINTER UTILITY PROGRAM - IUP 5796-AFK, RELEASE NOTICE

This IUP supports two IBM 1403 N1 printers connected to the IBM 2927 Tape to Printer RPQ. The RPQ with this IUP provides for high volume production printing for direct mail addressing, labeling, letter writing and premium notice printing at low cost. Each printer is operated independently of the other. Tapes are prepared in previous operations in the desired format. Two volumes of a multi-volume file or two separate jobs operate simultaneously. This program will not run on the IBM 2927 single printer model. FDP 5798-AKH as described in GB21-0610 provides comparable support for the single printer model.

3525 GENERAL PURPOSE UTILITIES, IUP 5796-AGE, NOTICE

This document describes for potential customers use of 3525 General Purpose Utilities for System/370.

This IUP consists of four programs:

1. A program for interpreting anywhere on a card. Control cards specify print location and source data location.
2. A program that prints up to 64 characters from a source to a data card. Data cards can be punched or blank.
3. A program by which data is posted from a detail card to a specified location on a master card. For example, employee hours worked could be posted weekly to an employee year-to-date card. The program assumes that the master card immediately follows the detail card. A master-detail card pair is defined by equal information in a specified control field in both cards. The program is able to ignore an incomplete pair or halt on an incomplete pair.
4. A multi-phase program to reproduce cards, interpret cards, gangpunch into cards, and/or insert sequence numbers. Multiple operations, for reproduce, gangpunch, and insert sequence numbers, can be done in a single run. For this, program control cards are submitted for each function requested, and repro requests will override gangpunch request for conflicting field definitions. An additional feature of this program is the ability to gangpunch a specified number of cards.

Release notice, 4 pages, 1/75

G320-8114

3270 SUPPORT UNDER TSO, IUP 5796-AGH, NOTICE

This document contains information on use of Full Screen 3270 Support for PL/I and Assembler Application Programs under TSO, a multifunction and multipurpose subroutine. It provides an interface between the IBM 3270 Information Display System and PL/I or Assembler programs running under TSO. The IUP provides convenient, meaningful access to all the features of the IBM 3270, and isolates the programmer from the many intricacies of the device while still allowing complete control over every aspect of the terminal. Coupled with TSO, Full Screen 3270 Support for PL/I and Assembler Application Programs under TSO allows true interaction between a running program and a user at an IBM 3270 display terminal.

Release Notice, 4 pages, 10/75

G320-8120

VM/370 SYSTEM FOR ONLINE TAPE AND DISK LIBRARIES - IUP 5796-AGN, NOTICE

The VM/370 System for Tape and Disk Libraries is an IUP for the control of user tape and disk libraries. It works online under CMS with commands to control the assignment and accounting for user volumes. The system operator can add, delete, and modify a record associated with a particular mountable volume. It can make a large pool of tapes and disks accessible to a large number of time sharing users by providing the storage location and accounting information available online. The benefits are improved data security, quicker location of volumes, quicker response to mount

commands, automatic bookkeeping and improved system control.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

Release Notice

G320-8124

DOS TO OS CONVERSION SYSTEM - IUP 5796-AFZ, NOTICE
 The DOS to OS Conversion System IUP automates the conversion process for JCL, COBOL, RPG, SORT and some utility programs. DOS JCL and DOS programs are displayed side by side with their OS equivalents. The OS equivalents are punched with JCL ready for compilation and cataloging for testing. COBOL D programs are processed by the Language Conversion Program to bring them to the ANS COBOL level before conversion. COBOL programs with End of page indicators are modified for handling of the carriage control tape. ALL CALL subroutines are identified for further resolution. DOS RPG FILENAMES are converted to OS RPG DDNAMES through the use of cards provided during the conversion process. All SORT Control Cards are handled automatically. A management report is provided as part of the process which shows the status of the conversion on a dynamic basis.

The Envirotech Corporation converted 1,200 routines to OS/VS from four geographically separated divisions while consolidating their operations at Salt Lake City, Utah. They did this with one system programmer and three part-time clerical personnel in six months through the use of the Conversion System. They estimate that two-thirds of all time and effort were saved over manual alternatives.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

Release Notice

G320-8127

SMF GRAPHICAL ANALYSIS PROGRAM, IUP 5796-AFP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The SMF-Graphical Analysis Program is designed to bridge the gap between the detailed accounting data provided by the OS or VS System Management Facilities (SMF) and the high-level, easy-to-read summarized reports required by data processing management.

SMF-GAP consists of three PL/I "structured programs" which process the raw SMF provided by MPT, MVT, VSL, and VS2 (with or without HASP-V4). Nine reports are produced, containing four tabular listings, one two-part chart, three detailed histograms, and seven summary histograms.

In addition, a reformatted SMF data set is produced which can be read by user-written programs to provide accounting or other specialized reports. The records in this data set are compatible with PL/I, Assembler, or COBOL. Availability Notice, 6 pages

G320-8138

EXTENDED COBOL SORT, IUP 5796-AGZ, NOTICE

This document contains information on use of the Extended COBOL Sort which provides the COBOL installation with sorting and merging power never before available. It increases sort capacity to either 16 or 32 times normal. Thus the programmer need no longer be concerned about the hardware availability or the volume of data to be expected during actual production.

Extended COBOL Sort's merge-simulation feature simplifies the merging of files in a COBOL program. The programmer uses a language compatible with the proposed ANS standard MERGE statement, and a true merge can be executed in a COBOL program.

G320-8142

TCAM/VIDEO 370 INTERFACE, IUP 5796-AHR, NOTICE

This document contains information on use of the TCAM/VIDEO-370 Interface, a TCAM application program which enables the user to have VIDEO-370 (5734-RC5) execute as an application using TCAM as the TP access method instead of ETAM. All VIDEO-370 functions are supported without change. The TCAM-370 functions are supported without change. The TCAM/VIDEO-370 Interface capability is in operation at The Connecticut Bank and Trust Company in Hartford, Connecticut.

Highlights:

- o Terminal Sharing - the ability to access multiple applications under TCAM
- o Enable TCAM users to run VIDEO-370 under one common TP access method, thus reducing system and maintenance requirements
- o Display VIDEO-370 users at the console
- o Master console message when a VIDEO user signs on or off
- o Cost savings on terminals associated with terminal sharing capability

G320-8155

DATA ENTRY CONTROL AND AUDIT SYSTEM, IUP 5796-ARC, NOTICE

This document describes for potential customers use of the Data Entry Control and Audit System, which provides:

- o Visibility into content of cards, tapes and diskettes
- o Labeling of all input records
- o Journal of input data reansactions
- o Media-independent input to application programs via "Include" feature of POWER/VS
- o Extraction of selected records from journal with a choice of media
- o Economical storage of historical data
- o Ability to back out faulty batches of data
- o Establishment and recomputation of transaction counts

The system was developed to meet four goals: (1) facilitate transition to and operation of the diskette data entry media, (2) provide an input control system to support multiple remote input operation, (3) provide an auditing and backup system, and (4) provide an archival system for economical storage of historical data.

Release notice, 4 pages, 4/76
 /////5796-ARC

G320-8156

DOS/VS DBDUMP UTILITY PROGRAM, IUP 5796-AJE, NOTICE
 This document contains information on use of the DOS/VS DBDUMP Utility Program, which provides the users of DL/I DOS/VS (Data Language/I DOS/VS), DL/I Entry (Data Language/I Entry), and VANDL/I (Vancouver Data Language/I) with the ability to access, display, and optionally change data bases. Implementation time in testing data base applications can be saved by:

- o Displaying data bases to verify change activity without additional programming
- o Scanning for the presence of segments and listing them for content verification
- o Changing data contained in segments to correct errors generated by an application program error

Major features:

- o Lists entire data base
- o Lists selected data base records
- o Lists selected segments only
- o Scans for data within a segment
- o Updates information in a segment

Release Notice, 4 pages, 11/75
 /////5796-AJE

G320-8157

IMS/VS HDAM RANDOMIZING ALGORITHM ANALYZER, IUP 5796-AJL, NOTICE
 This document contains information on use of the IMS/VS HDAM Randomizing Algorithm Analyzer, which takes the guesswork out of evaluating the randomizing of key numbers for IMS data bases. It allows the user to see how a particular randomizing algorithm is going to perform against a set of keys without actually creating a data base. He can try as many algorithms as he wants in one run with no changes to his data bases or DBDs. If he doesn't like the result, he can make changes and try again. By having the most effective randomizing algorithm possible, transaction processing time can be reduced. Also, the need for data base reorganization may be eliminated. This IUP provides an inexpensive, easy to use, and effective evaluation tool.
 Release Notice, 4 pages, 1/76
 /////5796-AJL

G320-8159

DOSMAP - DLI, IUP 5796-PCW, NOTICE
 This document contains information on use of DOSMAP-DL/I, a logical approach to better documentation and communication related to DL/I DOS/VS data bases. DOSMAP DL/I builds and prints a pictorial layout of the data base descriptions (DBDs) and program specification blocks (PSBs) of the DL/I DOS/VS data bases. DOSMAP-DL/I should be used each time a DL/I DOS/VS data base is created or changed. The printouts can serve as a handy reference to assist in visualizing logical and physical relationships within the data base. They can act as visual aids for training, and as a recording medium to retain the historical and current status of the DL/I DOS/VS data bases. The maps can also be used as a reference when the data base requirements of current and proposed applications are compared and evaluated.
 Release Notice, 6 pages, 12/75
 /////5796-PCW

G320-8160

DOS/VS PRE-SORT PROCESSOR, IUP 5796-AJT, NOTICE
 This document contains information on use of the DOS/VS Pre-Sort Processor. This IUP is a special purpose utility program, designed to aid in converting difficult offline card sorting operations and to prepare and change data via substitution with control cards prior to a DOS/VS disk sort. It would be particularly useful where diskette input is being considered and offline sorting operations become impossible.
 This program reads cards or card images from diskette, tape, or sequential disk and builds a sort key on the front of each record. The contents of the appended sort key are established by user-supplied control cards. The control cards indicate which fields will be used to build the sort key, what sequence to use in sorting, and what exceptions will apply. The exceptions can either be substitute values for sorting purposes, or transactions to be eliminated from the input.
 Release Notice, 4 pages, 1/76
 /////5796-AJT

G320-8161

VSAM DATASET SUBROUTINES, IUP 5796-AJW, NOTICE
 This document contains information on use of VSAM Access Subroutines, the purpose of which is easy access for full-function VSAM files through a variety of high-level languages. A standard CALL interface (from COBOL, FORTRAN, Assembler) to perform VSAM requests helps simplify the application programmer's job; a step-by-step installation procedure and sample program assists the first-time VSAM user by providing jobs for VSAM object definition and examples of access to key-sequenced and alternate index data sets. Comprehensive error codes and messages can isolate user or system errors. All language users can benefit from a common interface to VSAM files.
 Release Notice, 4 pages, 4/76
 /////5796-AJW, 5796-AJX

GENERAL PURPOSE TAPE & DISK SCANS, IUP 5796-AGY, NOTICE
 This document describes for potential customers use of General Purpose Tape and Disk Scans.
 Two programs are provided: one for disk scans and the other for tape scans. Input parameters to both programs are supplied on control cards. The File Description card defines the record format, disk extent or number of tape reels, and output options. The Field Select card defines the location and length of the fields to be scanned, and the user's search conditions. The programs will handle a maximum of 12 record fields with lengths of up to 15 packed decimal digits or 64 characters. Two fields within a key on disk, with lengths of up to 16 bytes each, can also be scanned. Multiple field arguments (two or more values for the same field) are permitted, and the scan arguments may be selected on an "and" or "or" relationship.
 A tape, disk, and/or print file of the selected records can be produced through parameter specification. Printed output can be in hexadecimal or character format.
 Release notice, 4 pages, 4/75

3274 CONTROL UNIT PLANNING, SETUP AND CUSTOMIZING GUIDE
WITH RPQS 7H0431 - DUTCH PUBLISHING CHARACTER SET 7H0417
- GERMAN PUBLISHING CHARACTER SET UE4526 - FRENCH
PUBLISHING CHARACTER SET 7H0419 - SPECIAL EDITING FEATURE
SUPPORT
 Provides planning, setup and customizing information supplementary to that contained in IBM 3270 Information Display System: 3274 Control Unit: Planning, Setup, and Customizing Guide, GA27-2827, with which this guide should be used. This supplementary information is required when the following Request for Price Quotations (RPQs) are present: 7H0431, 7H0417, and 7H0419.
 Manual, 8 1/2 x 11 inches, 14 pages, 11/79
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- GA19-5040
3278 DISPLAY STATION MODEL 2: CUSTOM FEATURE DESCRIPTION WI
RPQS: 7H0418 - SPECIAL EDITING FEATURE, 7H0430 - DUTCH
PUBLISHING CHARACTER SET, XC4480 - GERMAN PUBLISHING CHARACT
SET, UB4502 - FRENCH PUBLISHING CHARACTER SET.
 This publication provides information about the Special Editing Features present in the IBM 3278 Display Station, Model 2 when Request for Price Quotation (RPQs) 7H418, 7H430, XC4480, and UE4502 are installed.
 Manual, 8 1/2 x 11 inches, 48 pages, 02/80
 SLSS - ORDER NO. SUBSCRIPTION ONLY
- GA19-5041
3287 PRINTER MODELS 1 AND 2 PROBLEM DETERMINATION GUIDE FOR
RPQS: 7H0307, 7H0317, 7H0327
 This Problem Determination Guide, (PDG), has been prepared for use with the IBM 3287 Printer, Models 1 and 2, when the following RPQs are installed: RPQ 7H0307, RPQ 7H0317, RPQ 7H0327.
 This document provides the operator with sufficient information to assess the possible cause of a printer failure and includes suggested remedial actions.
 Manual, 8 1/2 x 11 inches, 38 pages, 8/79

3800 PRINTING SUBSYSTEM USERS GUIDE FOR FORM LENGTH 2 X 4
1/6 OR 8 1/3 INCHES, FORM LENGTH 3 X 4 1/6 OR 12 1/2
INCHES, RPQ XA9753 AND RPQ ZA9754
 This publication provides detailed information about the 8 1/3 and 12 1/2 inch Forms Lengths, RFQs (XA9753 and XA9754), two new custom features for the IBM 3800 Printing Subsystem.
 It is intended for data processing managers, programming personnel, operators, and form designers.
 Manual, 8 1/2 x 11 inches, 60 pages, 5/79

3287 PRINTER MODELS 1 AND 2 USER'S GUIDE FOR THE
AUTOMATIC DOCUMENT INSERTION DEVICE, RPQ 7S0251, 7S0283
 This manual describes the Automatic Document Insertion Device (ADID) and the ADID Chutes/Variable Width Forms Tractor Combined paper handling devices designed specifically for the 3287 Printer Models 1 and 2. It gives detailed information for customer executives, programming personnel, forms designers, and operators who are aware of the intended use of the 3287 printer.
 NOTE: Translated version should be ordered from respective country.

5922 DOCUMENT READER MODEL S11 COMPONENT DESCRIPTION
This publication contains information about the IBM 5922 Document Reader Model S11 and how it is used in the IBM 3600 Finance Communication System, IBM 3270 Information Display System, and IBM 8100 Information System.
Directed primarily to programmers, this manual provides detailed information necessary in the writing of application programs for the 5922 terminal.
Manual, 8 1/2 x 11 inches, 84 pages, 10/80
//14/5922//WT-ONLY

GA19-5181

3800 PRINTING SUBSYSTEM OPERATOR ATTENTION CONTACTS RPQ 7S0263 USER'S GUIDE
This publication provides detailed information about the Operator Attention Contacts RPQ available for the IBM 3800 Printing Subsystem. It is intended primarily for 3800 users who may have a need for a special operator alert device not provided by the base 3800 printer.
Manual, 8 1/2 x 11 inches, 10 pages, 9/79
//14/3800//WT-ONLY

GA19-5182

3800 PRINTING SUBSYSTEM USER'S GUIDE FOR PRINT 1/3 INCH FROM BOTTOM RPQ YB0029
This publication provides detailed information about the Print 1/3 Inch From Bottom RPQ, a new custom feature available for the IBM 3800 Printing Subsystem. It is intended primarily for current and prospective users of the 3800, particularly those concerned with the operation of the printer equipped with the RPQ.
Manual, 8 1/2 x 11 inches, 26 pages, 1/80
//14/3800//WT-ONLY

GA19-5183

3800 PRINTING SUBSYSTEM USER'S GUIDE FOR EXTENDED PAPER WEIGHT RPQ XB6128
This publication provides detailed information about the Extended Paper Weight RPQ, a new custom feature available for the IBM 3800 Printing Subsystem. It is intended primarily for current and prospective users of the 3800, particularly those concerned with the design of forms and the operation of the printer equipped with the RPQ.
Manual, 8 1/2 x 11 inches, 16 pages, 6/80
SLSS - ORDER NO. SUBSCRIPTION ONLY

GA19-5248

3270 INFORMATION DISPLAY SYSTEM: CUSTOM FEATURE DESCRIPTION FOR RPQ UV001, 2950 MODEL 3 ATTACHED TO 3276 CONTROL UNIT DISPLAY STATION OR 3278 DISPLAY STATION
Describes RPQ UB9001 and its function in attaching IBM 2950 Model 3 optical MWK Reader (OMR) to 3276/3278 Display Stations.
Manual, 8 1/2 x 11 inches, 20 pages, 10/80

GA19-5252

8775 DISPLAY TERMINAL: DATA ENTRY VALIDATION RPQS SU0183 AND SU0184 CUSTOM FEATURE DESCRIPTION
Describes the Data Entry Validation function provided for the 8775 by RPQs SU0183 and SU0184. Introductory is given for use by programmers, planners, and marketing representatives.
The Data Entry validation RPQs allow input data to be validated directly by the terminal, by using the Action Sequence Table display function.
The first section of the publication describes the Action Sequence Table display function, the Action Sequence Table extended field attribute, and the checking and editing action types that are available. The second section gives planning information about the setup of the terminal and the programming support that is required. The third section gives attachment configuration and ordering information.

5486 CARD SORTER OPERATOR'S GUIDE

This manual describes the use of the IBM 5486 Card Sorter. The 96-Column Card, card coding, and card handling and the operation of the sorter are explained. Examples of the various types of sorting are presented. These examples are designed to help you fully understand what to do and how to do it. Therefore, it is not necessary to have previous knowledge of sorting to use this manual. Keys, lights, switches, and special features are discussed in appropriate sections.

GA21-9221

IBM 3742 DUAL DATA STATION FUNCTION CONTROL FEATURE REFERENCE MANUAL SUPPORTING RPQ 843866

This manual describes the operation and use of the FCF (Function Control Feature) of the IBM Dual Data Station The FCF is made available by RPQ 843866.

This manual is written with the assumption that you can operate the IBM 3742 Dual Data Station and are familiar with the IBM 3742 Dual Data Station Operator's guide, GA21-9136, and the IBM 3742 Dual Data Station Reference Manual, GA21-9184. This manual does not contain any information covered in these publications. You should have an understanding of general programming concepts to make full use of this manual. You should also read the general description of the FCF and its operation with the 3742 programs before going on to the following sections.

Several examples illustrate functions for which the RPQ was intended. There is considerable flexibility in the FCF functions that can be performed. You can also implement functions not addressed in this manual. However, no programming support or assistance is provided beyond that contained in the manual.

Manual, 44 pages

GA22-6866

SYSTEM/360 COMPONENT DESCRIPTIONS: 2400-SERIES MAGNETIC TAPE UNITS, 2803/2804 TAPE CONTROLS, AND 2816 SWITCHING UNIT MODEL 1

This manual contains a comprehensive presentation of the characteristics, functions, and features of the IBM 2400 Series Magnetic Tape Units, 2803/2804 Tape Controls, and a general description of the IBM 2816 Model 1 Switching Unit. The 2400 series consists of the 2401, 2402, and 2420 Magnetic Tape Units, and 2403, 2404, and 2415 Magnetic Tape Units and Controls.

In most instances, operational descriptions are limited to the channel and command level. Operating functions and procedures common and fundamental to all I/O operations are described in IBM SYSTEM/360 PRINCIPLES OF OPERATION, Order Number GA22-6821.

Subjects covered include magnetic tape unit principles; keys and lights; tape load, unload, and cleaning procedures; status and sense information; magnetic tape handling; tape block and reel organization; and error recovery procedures. Manual, 70 pages

3033 PROCESSOR COMPLEX & 3033 MULTIPROCESSOR COMPLEX FUNCTIONAL CHARACTERISTICS

This manual describes the functional characteristics and features of the IBM 3033 Processor Complex, Attached Processor Complex, and Multiprocessor Complex. For management, programming, and operations personnel experienced in System/370 operation, this manual provides a fundamental understanding of the three 3033 complexes.

The reader should have an understanding of data processing systems, including a fundamental knowledge of the IBM System/370 as defined in the IBM System/370 Principles of Operation, GA22-7000.

The manual focuses on the IBM 3033 and 3033-2 Processors (w/ processor storage, functions, and channels) and the IBM 3036 Console.

processor storage, functions, and channels) and the IBM 3036

Console.

features of the IBM 3033 Processor Complex and the IBM 3033 Multiprocessor Complex. For management, programming, and operations personnel experienced in System/370 operation, this manual provides a fundamental understanding of both 3033 complexes.

The reader should have an understanding of data processing systems, including a fundamental knowledge of the IBM System/370 as defined in the IBM System/370 Principles of Operation, GA22-7000.

The manual focuses on the IBM 3033 Processor (with its processing storage, functions, and channels) and the IBM 3036 Console.

SYSTEM/370 ASSISTS FOR MVS

This publication describes 13 instructions used to assist the MVS control program. Twelve of these instructions are provided when the System/370 Extended Facility or the Extended-Control-Program-Support for MVS feature is installed. They include four lock-handling instructions, six trace instructions, and the instructions Fix Page and SVC Assist. The thirteenth instruction, Add FRR, is provided when the 3033 Extension feature is installed, along with modifications to the Fix Page and SVC Assist instructions.

This publication is intended for system programmers and IBM field engineering personnel. The reader should be familiar with the general machine functions of System/370, as described in the IBM System/370 Principles of Operation, GA22-7000, and with the MVS system. The following are considered prerequisite reading: MVS/System Extensions: Debugging Handbook (Volume 2) SD23-0002; OS/VS2 Data Areas, SYB8-0606 (This document is on microfiche); OS/VS2 MVS/System Extensions General Information Manual, GC28-0872; and OS/VS2 System Logic Library, SBOP-8210.

GA24-3733

3262 PRINTER MODELS 1 AND 11 COMPONENT DESCRIPTION

This manual provides reference information about the 3262 Printer Models 1 and 11 for supervisory personnel, system analysts, and application programmers who are using the 3262 as an output printer for their IBM 4331 Processor.

The manual describes the general functions of the printer, printing method, speed (throughput) calculations, attachment to the 4331 Processor, programming information, printer components, and printer controls.

This is a major revision of and obsoletes GA24-3733-1 dated April 1980. The "Programming Information" section has

GA24

GA27

been completely revised, the "Audible Alarm" feature has been added, and various other changes have been incorporated.

Manual, 8 1/2 x 11 inches, 55 pages, 4/81

GA26-1664

3380 DISK STORAGE DESCRIPTION AND USER'S GUIDE

This manual describes the characteristics of the 3380 disk storage and gives conversion information. It includes the information needed for assigning addresses and for calculating the use of space. Also, it includes guidelines on how to use this particular storage system, including the supporting programs.

Publication of this document obsoletes and replaces GA26-1662, which was an introductory level manual.

Manual, 8 1/2 x 11 inches, 70 pages, 12/80

//07/3380/

GA26-1665

DISK STORAGE TECHNOLOGY

This booklet provides an overview of several technology challenges and innovations that were met and solved in the development of the IBM 3370 Direct Access Storage, the 62PC Direct Access Storage, and the IBM 3880 Storage Control.

The subjects of this booklet are each components of sophisticated disk storage subsystems which use advanced technologies developed and refined over a period of 25 years.

While the articles are authored by only a few engineers, hundreds of skilled professionals contributed to these technologies and products. The advances discussed represent the balanced use of IBM's research, development, manufacturing, and product assurance personnel at the San Jose site and supported by various other IBM groups at other locations.

Manual, 8 1/2 x 11 inches, 102 pages, 2/80

GA26-1666

INTRODUCTION TO IBM 3375 DIRECT ACCESS STORAGE

Describes physical and data format characteristics of IBM 3375 Direct Access Storage. Contains information about the recording medium, operator controls and indicators, count-key-data format, and command set. Highlights the efficiency and economy of the 3375 storage.

Brochure, 8 1/2 x 11 inches, 14 pages, 6/80

IBM 2560 MULTI-FUNCTION CARD MACHINE: COMPONENT DESCRIPTION AND OPERATING PROCEDURES

This publication describes the operating principles and features of the IBM 2560 Multi-Function Card Machine (MFCM). Descriptions of the programmed operations, indicators, and operator's console are included. Since this device is natively attached, you should have a thorough understanding of the using system before using this manual. The book is intended for system engineers, programmers, and operators.

The 2560 is compared with conventional card equipment in file-updating operations. In addition to descriptions and flowcharts of these operations, tables are provided for a ready comparison of the operational steps, card volumes, and running times of the two systems.

Restart procedures for a particular type of program (RPG, IOCS, etc.) are covered in the operating procedures manual associated with the particular program and using system.

GA27-3043

IBM 3735 PROGRAMMABLE BUFFERED TERMINAL CONCEPT AND APPLICATION

The purpose of this manual is two-fold: first, it introduces the IBM 3735 Programmable Buffered Terminal; and, second it provides planning information for those who may be involved in installing a 3735. Because of this dual purpose, not all sections of the manual may be of interest to each reader. Those interested in an overview and in the highlights of the 3735 will find the Introduction of most value; those who need more detailed information on the terminal's operation and functional capabilities will find the sections on Operating Characteristics and Implementation Considerations of most interest; systems and application programmers will find information on Programming Considerations for the 3735 in Appendix B.

Generally, the prerequisites for this manual are an understanding of the concept and application of the IBM System/360 and the IBM System/370 in a teleprocessing environment. The section on Programming Considerations requires more extensive knowledge of the applicable operating system (OS or DOS).

Although not intended as a terminal operator's guide or as a programmer's guide, the manual presents general information concerning these subjects.

GA27-3058

3872 MODEM USER'S GUIDE

The IBM 3872 Modem can transfer data at rates of 2400 or 1200 bits per second. It operates on dedicated (leased or privately owned), voice-grade communications facilities. In the USA and Canada, the 3872 also operates on the public switched network.

In this publication, the 3872 is described as an item of equipment in the medium-speed modem field. The manual is in four main parts: Part 1 describes (in general terms) the IBM 3872 Modem, planning considerations, and equipment and facility considerations; Part 2 presents 3872 operating procedures and offline problem determination procedures; Part 3 describes (in detail) the IBM 3872 Modem: interface specifications, installation specifications, channel specifications, and special features. Considerations in using the 3872 in World Trade countries are included in appropriate places in the manual and are summarized in Part 4, which also contains the glossary.

This publication is intended for system planners, systems engineers, installation planners, operators, and supervisory personnel. A knowledge of teleprocessing systems is a prerequisite for Part 3 only. Operator information (Part 3) is separated from general and specific descriptive information, for easier accessibility.

GA27-3063

COMPONENT INFORMATION FOR THE IBM 3780 DATA COMMUNICATION TERMINAL

This manual introduces the IBM 3780 Communication Terminal, designed to transmit and receive data accurately, quickly, and economically in a teleprocessing environment. The terminal's applications, capabilities, and design highlights are discussed, as well as use of the binary synchronous communication, a description of the associated data-link control characters, code structures, and timeouts. The manual also discusses communication facilities, IBM modems, and special features available for this teleprocessing terminal.

In-depth information for those who implement customer applications is also included. Readers concerned with the 3780's capabilities and design highlights will find the Introduction, Card Reader, and Printer sections useful, while those needing more detailed information on the terminal's operation and its binary synchronous method of communication should read the Operating Characteristics and Programming Considerations sections.

Prerequisites for this manual include an understanding of the IBM System/360 and the IBM System/370 in a teleprocessing environment, together with knowledge of the binary synchronous method of data-link control as outlined in the IBM Systems Reference Library publication, General Information, Binary Synchronous Communications, GA27-3004.

GA27-3145

COMPONENT DESCRIPTION FOR THE IBM 3776 AND 3777 COMMUNICATION TERMINALS

This publication presents introductory and reference information about the 3776 and 3777 terminals used in the following applications: 1) medium and high speed remote job entry terminals (BSC or SNA single logical unit), 2) high speed BSC MULTI-LEAVING workstation, and 3) medium and high speed SNA multiple logical-unit workstations. It describes the capabilities and functions of these terminals for those concerned with planning for a data communication network or for integrating the terminals into an existing network. It is also a reference source for system and application programmers, and for personnel planning job setups for the 3776 and 3777 terminals. Application personnel planning job setups will also require a copy of the appropriate Operating Procedures Guide or Operator's Guide.

It is assumed that the reader of this manual understands the concept and application of the IBM System/370 in a data communication environment, and is familiar with data link control procedures - Synchronous Data Link Control (SDLC) or Binary Synchronous Communications, whichever is used.

INTRODUCTION TO THE 3705-80 COMMUNICATION CONTROLLER

The IBM 3705-80 is a programmed transmission control unit designed to assume many data processing control functions formerly assigned to an access method. The controller is intended for data processing installations with limited communications requirements that intend to enter a systems network architecture (SNA) environment. The 3705-80 is controlled by programs that reside in the controller.

This publication contains introductory information on the 3705-80 control programs and hardware components. Any user or potential user of the 3705-80, including management, programmers, operators, and maintenance personnel, should be familiar with the contents of this manual. The only prerequisite for this manual is an understanding of basic telecommunication concepts.

GA33-3016

3740 DATA ENTRY SYSTEM SPECIAL SELF-CHECK NUMBER DEVICE CUSTOM UNIT DESCRIPTION
This publication describes the Self-Check Number Device Special Arithmetic feature which is available on the IBM 3741 Data Station, Models 1 and 2, and the IBM 3742 Dual Data Station. The feature implements many special algorithms by utilizing the modulus 11 program field definition characters.

For U.S. and Canada: RPOs WE0408 (3742) and Z07465 (3741)

For other countries: X10260 (3741/3742)

GA33-1534

4331 PROCESSOR MULTIUSE COMMUNICATIONS LOOP FUNCTIONAL CHARACTERISTICS
This manual describes the IBM Multiuse Communications Loop attached to the IBM 4331 Processor by means of the integrated loop adapter.

The manual has been prepared for two audiences. The first audience consists of those people responsible for coordinating the communications and loop operations of their enterprise. For this audience, the manual describes what communications and loop features are available, and what can be done with these features. It must be noted that capacities given in this manual are hardware capacities. Operating system and application requirements must be considered in determining the extent to which the hardware capacities can be utilized.

The second audience consists of people who want to know functional details that will assist them in understanding the communications and loop features. Hardware-oriented users may want to know about the command sequences which the programs use to direct the hardware; and programming oriented users may want to know how the hardware responds to these commands.

Manual, 8 1/2 x 11 inches, 88 pages, 9/80

GA33-3040

AN INTRODUCTION TO THE IBM 8775 DISPLAY TERMINAL
This reference manual provides an introduction to the IBM 8775 Display Terminal for customer executives, organization and methods managers, administrative services managers, data processing managers and planners, and IBM marketing representatives.
Manual, 8 1/2 x 11 inches, 62 pages, 11/80
//09/8775/

GA33-3044

8775 DISPLAY TERMINAL COMPONENT DESCRIPTION
This publication describes the 8775 from the point of view of a host programmer, and is not intended to provide operating instructions for the terminal operator. The manual provides sufficient information for an 8775 to be used in a System Network Architecture (SNA) environment, and for application programs to be written using the IBM 8100 Information System.
Manual, 8 1/2 x 11 inches, 304 pages, 12/80
//09/8775/

GA33-1535

4331 PROCESSOR MODEL GROUP 2 CHANNEL CHARACTERISTIC
This manual describes how the effects of imposing loads on the channels of the IBM 4331 Processor Model Group 2 can be checked. The book is intended for physical planning engineers and systems analysts who wish to check that a proposed configuration of input/output (I/O) devices will work satisfactorily with the IBM 4331 Processor Model Group 2.
Manual, 8 1/2 x 11 inches, 178 pages, 10/80
4331//01//

GA33-3045

8775 DISPLAY TERMINAL: TERMINAL USER'S GUIDE
Describes all the features and functions of the IBM 8775 Display Terminal. The guide, intended to be used for reference by users of the 8775, includes (1) descriptions of keyboard keys, (2) explanations of indicators and messages displayed, (3) instructions for checking or changing options selected at 8775 setup, and (4) procedures for determining the cause of problems and the appropriate remedial actions to be taken.
Manual, 8 1/2 x 11 inches, 138 pages, 10/80
//09/8775/

GA33-1536

4331 PROCESSOR DISPLAY PRINTER ADAPTER COMPONENT DESCRIPTION
This publication provides management, programmers, and system analysts with detailed reference material relating to the IBM 3270 devices attached to the 4331 Processor. It includes the IBM 3278 Display Station, Model 2 and the IBM 3287 Printer, Models 1 and 2.
Manual, 8 1/2 x 11 inches, 82 pages, 6/79
4331//01//

GA33-3051

3279 COLOR DISPLAY STATION PROBLEM DETERMINATION GUIDE
This guide provides reference information and problem determination procedures for operators using a 3279 Color Display Station.
Manual, 10 x 1 3/4 inches, 92 pages, 2/81
//09/3279/

GA33-1538

4331 PROCESSOR MULTI USE COMMUNICATIONS LOOP OPERATING PROCEDURE
This manual is intended for use by system engineers, programmers, 4331 system operators, and terminal operators. It provides the information required to control the loop adapter.
This version of the manual reflects the following two attachable units only: IBM 3287 Printer and IBM 8775 Keyboard display.
Additional attachable units will be covered in subsequent Technical Newsletters or revisions.
Manual, 8 1/2 x 11 inches, 72 pages, 10/80
4331//09//

GA33-3055

3250 GRAPHICS DISPLAY SYSTEM CUSTOM FEATURE DESCRIPTION
RPO SU0090, SU0091, 7J0005, AND 7J0014.
This publication describes the data communications facility provided for the IBM 3250 Graphics Display System by the RPOs shown in the title. Information contained herein supplements the information in related publications for the 3250 Graphics Display System.
Manual, 8 1/2 x 11 inches, 14 pages, 9/79
//14/3250,3258/

GA33-1539

4331 PROCESSOR DASD ADAPTER FOR: 3370 DIRECT ACCESS STORAGE REFERENCE MANUAL
This publication describes the functions of the IBM 3370 Direct Access Storage when attached to the IBM 4332 Processor. It is for readers who already have a knowledge of direct access storage devices and require reference material on 4331 installations. The publication describes the channel commands, unit and channel status, and sense bytes which apply when the 3370 is under control of the DASD adapter.
Manual, 8 1/2 x 11 inches, 62 pages, 12/80
4331//07/3370/

GA33-3056

3270 INFORMATION DISPLAY SYSTEM, COLOR & PROGRAMMED SYMBOLS
IBM 3270 Information Display System: Color and Programmed Symbols. This publication provides customer executives, installation managers and planners, application programmers, and IBM Marketing representatives with:
• Introductory information describing the use of color to communicate with the user of a display station.
• The concepts of Programmed Symbols whereby graphic symbols and special characters may be created by the application programmer and used as an extension to the base character set.
• The use of Programmed Symbols to display and print graphic information such as pie charts, and histograms.
• Details of the IBM 3279 Color Display Station and the IBM 3287 Printer Models 1C and 2C.
Hardware and planning information is included in this publication, but installation planners should refer to IBM 3270 Information Display System Installation Manual - Physical Planning, GA27-2888, for the latest available information on all devices included in the 3270 Information Display System.
Manual, 8 1/2 x 11 inches, 88 pages, 9/79
//09/3279/

GA33-1540

4331 PROCESSOR LOOP ADAPTER PROBLEM DETERMINATION GUIDE
This manual is intended for use by IBM 4331 system operators and terminal operators. It describes the procedures the operator should use if an error occurs in the loop adapter feature or any of the attached loops. These procedures are designed to help the operator to identify and eliminate the problem and possibly to avoid the need to call for assistance.

INTERNATIONAL FIELD PROGRAMS, PROGRAM PRODUCTS, PROGRAM INFORMATION AND INDEX
 This brochure gives descriptions of current International

GB11

IB11

Field Programs released through the International Field Program Center in Uithoorn and Program Products released through the Program Product Development Centers in Europe through 1 April 1981.

The programs are divided into seven different groups according to the type of application. Unless otherwise indicated, the manuals for the various programs are in English.

The programs are listed in an alphabetical list and in the Appendix the programs are listed according to application type.

02212

GB11-5020

Consult your local IBM marketing organization regarding the prices of the programs listed in this brochure and their availability in your country.

DL/I PERFORMANCE ENHANCEMENT-DOS/VS & OS/VS,
LIC PROG 5785-DAX, NOTICE

DL/I Performance Enhancement organizes the physical position of root segments of data bases and their dependents, according to their frequency of usage. The objective is to reduce as far as possible the physical movement of the disk arm, thereby reducing the elapsed time required to process jobs.

Information about the frequency of root segment usage may be provided to the performance aid. For Bill of Material data bases, the performance aid can predict the frequency of the usage of root segments, using as a basis their frequency of occurrence in other Bill of Material structures.

With the DL/I Performance Enhancement, it may be possible to:

- Reduce the time required for processing
- Reduce the frequency of data base reorganization

IMS/VS APPLICATION CONTROL SYSTEM, IFP 5787-NAC, NOTICE

The IMS/VS Application Control System, referred to below as CECILIA, provides a means for creating terminal-based computer applications for handling the clerical work flow in a business department.

CECILIA is an aid for implementing IMS/VS applications which are truly conversational and closely adapted to the needs of the user.

IMS/VS applications running together with CECILIA offer a user environment aimed at improving user productivity. The user of a CECILIA-based application needs little knowledge about the computer system itself. The user works with personalized menus for work selection and with conversational applications tailored to the user's work needs.

IBM VS APL IMS/VS/DE VS APL-DL/I INTERFACE IFF 5785-FAL, NOTICE

The VS APL-DL/I Interface is a generalized interface program between VS APL running under VSPC and the data base access method DL/I. It provides a powerful and easy-to-use data base extraction method in APL, thereby combining the data analysis power of APL with the data extraction power of DL/I.

Instead of importing extracted data from an IMS data base in the VSPC system, the VS API user can read the data directly from live data bases. The interface is an Auxiliary Processor for VSFC and can run as a batch message program in an online IMS DB/DC system or as a DL/I batch program in a DB-only system.

The interface is designed to handle any number of simultaneously active APL users and can extract data from any number of data bases.

VS APL - DL/I INTERFACE, IFF 5785-FAL, DESCRIPTION/OPERATIONS

This manual provides information about the functions and the installations tasks for the VS APL-DL/I interface IFF. This program is a generalized interface between VS APL running under VS PC and DL/I. It is running as an auxiliary processor for VS PC and it can be used as a batch program in a DB system or controlled by an online EB-DC (IMS/VS) system. The VS APL user can directly read from online data bases. One request can result in a large number of DL I calls and only the interesting segment fields will be translated and passed to the APL user in a character vector format.

The interface can handle any number of simultaneously active APL users and can extract from any number of data bases (logical, physical, support of secondary indexes).

The data bases or segments can be protected by passwords. For editing purposes user exits can be called. Start-up parameters are available to adapt the interface to specific installation requirements.

S/370 303X PROCESSOR DATA MAPPING PROGRAM, IFF 5785-EAP, -EA NOTICE

The Data Mapping Programs are designed to provide a fast, flexible, low-cost way to implement small-to-medium size data base applications (in traditional record-oriented terms, up to about a hundred thousand field instances). The facilities in the Data Mapping Program make programming unnecessary for many applications. A data structure for the application is defined by commands entered at a terminal, and can be extended at any time without disrupting existing applications for reorganizing the data. Data entry, online query, and report specification are done at the terminal. The Data Mapping Program uses the data definition to monitor and guide the terminal operations.

There are two versions of the Data Mapping Program, 5785-EAP for use with TSO and 5785-EAQ for use with VM/CMS.

IMS/VS QUEUE LOADER, S/370 303X PROCESSORS, IFF 5785-GAJ, NOTICE

The IMS/VS Queue Loader (IQL) basic component is an IMS application program that runs in a batch message processing (BMP) region, which can feed IMS/VS Message Queue data sets on the basis of data communication records extracted from a log tape of a previous IMS run. The log tape contains the transaction mix and rate that the user wishes to employ as the basis of IQL runs.

IQL is designed to assist the system programmer responsible for the maintenance and tuning of the IMS/VS system in performing regression tests during migrations to new IMS/VS workload. In this way, the performance and resource utilization may be optimized. In order to allow the evaluation of future requirements, the user can also simulate an increase in the system workload for measuring response time and throughput trends.

SYSTEM/370 - NETWORK CONTROL PROGRAM BUILDER, IFF 5785-EAL
DESCRIPTION/OPERATIONS

A major effort in setting up and maintaining Systems Network Architecture (SNA) networks is the construction and modification of Network Control Programs (NCPs).

The Network control Program Builder program creates NCP source programs from simple tables built by the user. It also automatically generates all the required node names according to a tried and tested, universally applicable convention, thus saving the user the effort of devising his own convention.

Partitioned Emulation Programs (PEPs) and local or remote NCPs can be constructed using the program.

This manual provides the information needed to understand, install, and successfully use the NCP Builder program.

An understanding of Systems Network Architecture and particularly Network Control Programs is also required.

TAPE ERROR CONTROL SYSTEM, IFF 5785-EAX, DESCRIPTION/OPERATIONS

The Tape Error Control system consists of a suite of programs which report upon and enable control of errors relating to magnetic tapes and tape drives.

The detailed accuracy provided by this system (impracticable with manual methods) gives the user the information necessary to obtain optimum performance from magnetic tapes and their units.

This manual provides the user with sufficient information to understand, install, and run the system. In addition, the various reports produced by the system are illustrated.

CONVERSION AID FOR BATCH JOB STREAMS, IFF 5785-EEF

The process of converting batch application programs from DOS/VS or DOS/VSE to MVS requires identification of programs and files that need to be converted, the ability to convert accurately large amounts of job control language (JCL), and sufficient information to create a detailed project plan.

This Conversion Aid for Batch Job Streams is designed to monitor the DOS/VS applications (in this document DOS/VS includes DOS/VSE unless otherwise stated) and to provide a printed profile containing the programs and files actually used. It thus identifies the programs and files that need to be converted. This information can be used in project planning, particularly for setting up realistic checkpoints, and for planning manpower and machine time requirements. The Conversion Aid also constructs the MVS JCL required to run the original applications.

CONVERSION AID FOR BATCH JOB STREAMS, IFF 5785-EEF, DESCRIPTION/OPERATIONS

The Conversion aid for Batch Job Streams (Program Number 5785-EEF) is an International Field Program designed to assist in moving application programs from a DOS/VS or DOS/VSE environment to an MVS environment. In the

SB11

SB11

documentation for this program, the term DOS/VSE will include DOS/VSE unless otherwise stated.

This manual describes the programs which make up the Conversion Aid, their installation, use, and possible modification. All programs are designed to run under DOS/VSE, and some can be run under MVS or CMS as an alternative. Therefore, the user is assumed to have a working knowledge of DOS/VSE and an appreciation of MVS or CMS.

GB11-5452

CICS/VS DATA ENTRY FACILITY, IFF 5785-WAE, NOTICE

In most data processing installations the need often arises for direct entry of data at the place of origin (the end user department) to avoid double effort (writing coding sheets and keypunching) and reduce turnaround time. Besides, it is in most cases desirable to eliminate the impractical manipulation of card decks and use modern devices, such as display stations, instead.

Since the data is usually in a variety of formats, the data processing department must create a number of special-purpose programs to provide this service. This process may be difficult and expensive.

CICS/VS Data Entry Facility (hereinafter referred to as CICS/VS/DEF) is designed to solve these problems and reduce the necessary effort and expense. CICS/VS/DEF enables the user of CICS/VS to enter any kind of data on an IBM 3270 Information Display System and to store them on data sets residing on disk devices.

CICS/VS/DEF is easy to learn and handle. It is basically designed for the end user, but through its efficient buffering and blocking mechanism CICS/VS/DEF is also a tool for a central, performance oriented, data entry pool.

HIGH-SPEED SEQUENTIAL RETRIEVAL CHAINED ANTICIPATORY BUFFERING, IFF 5787-LAC, NOTICE

High Speed Sequential Retrieval (HSSR) enables the user to substantially reduce the processor time and the elapsed time required for sequential retrieval and unloading of large physical IMS data bases, and may be regarded as a high speed sequential retrieval option for IMS data bases.

HSSR provides a compatible subset of DL/I calls. The HSSR processor time depends on the data base environment; the HSSR processor time is often in the range of 20%-25% of the IMS processor time.

In a multiprogramming environment, the whole job mix will benefit from HSSR since more resources remain available to process the other jobs.

COBOL AND PL/I CONVERSION AID, IFF 5785-EBG, NOTICE

The conversion of ANS COBOL and PL/I Optimizer programs from DOS/VS to MVS requires a detailed knowledge of the differences between their DOS/VS and OS/VS implementations and in particular the MVS variations. In addition, the MVS user should take advantage of device independence, which involves the rearranging of certain parameters between the program and the Data Definition (DD) statements in the Job Control Language (JCL). The same process must be repeated for all such programs in the installation.

The COBOL and PL/I Conversion Aid is designed to assist with these problems by processing valid DOS/VS ANS COBOL or PL/I Optimizer source programs and producing an MVS version, with the DOS/VS statements converted to their MVS equivalents, as far as possible. Statements having no function in MVS are deleted, and those which prevent use of MVS spooling are flagged. Reserved words in OS/VS COBOL have their last character altered and a warning message is produced. The ENVIRONMENT clause in PL/I is deleted.

Flyer, 8 1/2 x 11 inches, 4 pages, 10/80

ONLINE PREPARATION OF VIDEO/370 FORMATS, FDP 5798-BAC, DESCRIPTION/OPERATIONS

This document describes the capabilities of the FDP and the programs of On-line Preparation of VIDEO/370 Formats FDP. Written in RPG II, this FDP consists of three formats for VIDEO/370 and a set of Assembler language macros that expand into VIDEO/370 format definition statements. The FDP eliminates the use of coding sheets for preparation of formats by allowing creation of formats from a picture of a proposed screen layout. The FDP provides a fill-in-the-blanks approach so that no keywords have to be coded.

Three basic screen formats are used during the definition of a new document. The first describes the document name and exit routines. The second is used for entering information about the fields. The third type is used to describe how the fields should be extracted. The input that is keyed on the 3270 is, in most cases, a single character as opposed to a keyword if a coding sheet is used.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

CMS SORT FOR VM/370 FDP 5798-BDW DESCRIPTION/OPERATIONS
 This document describes the capabilities of the FDP and the program of the CMS Sort for VM/370. It is written in Assembler.

This FDP provides several sort programs and subroutines which run under the CMS component of VM/370. They may be invoked from a COBOL, PL/I, FORTRAN, or BAL program, or as a CMS command. Compared with the SORT component of CMS, these programs offer a compatible replacement for the CMS sort command with improved function and performance.

This Program Description/Operations Manual provides the user with sufficient information to understand, install and successfully use the program.

CMS SORT FOR VM/370 FDP 5798-BDW SYSTEMS GUIDE
 This document describes the steps necessary to modify the CMS Sort for VM/370.

- o Changes to VM/370 publications. o Modules added, deleted, or modified for the current release and program level change.
- o Ordering and distribution procedures for the current release and program level change.

A List of VM/370 Restrictions.

CICS/VS PERFORMANCE ANALYZER II - FDP 5798-CFP, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This new Field Developed Program is an improved version of the CICS Performance Analyzer FDP (5798-AZN). It is being offered with extended support and continuing license payments.

The program gathers statistics about user transactions and runs under the control of CICS/VS to assist in system performance analysis and resource utilization. Information gathered includes CPU execution time, total transaction time, largest amount of storage used and the number of entries to file control access methods. Enhancements to the original version include terminal message-size monitoring, DL/I activity monitoring, summary information by terminal operator ID, increased number of user counters and accumulators, and usability enhancements to the problem determination analysis model. Enhanced data reduction and display capabilities include graphic display of CPU utilization, task rates, and EXCP rates.

GB21-1900

DOS/VS LOADER, FDP 5798-CKG, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

The DOS/VS Loader Field Developed Program, written in Assembler, provides link edit type capabilities in a compile (or assemble), load and go environment. Due to its performance characteristics, it can have a significant effect on total throughput where the compile-load-go type jobs are frequently executed.

The Loader program combines the basic editing and loading functions of the linkage editor and program fetch in one job step. Therefore, the function performed by the loader program is equivalent to the link edit and execute function.

The Loader program will load the basic input from either SYLNK or SYSIPT. INCLUDE statements will be resolved from the relocatable library. Unresolved external references will also be resolved from the relocatable library unless NOAUTO has been specified.

The Loader program does not produce load modules for program libraries such as the core image library.

The program runs on any model System/370 under DOS/VS.

AUTOMATIC TCAM NETWORK DEFINITION, FDP 5798-CYH, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in assembler, will allow a user of either a TCAM/NCP or TCAM/PEP network to define the network resources in one place, i.e., the NCP or PEP source. That information will then be automatically propagated to the TCAM source, eliminating the need for duplication of effort in coding the network definitions into both control programs (host and controller).

Any change required in TCAM as a result of alterations to the network will come about as a by-product of the NCP or PEP source modification. If the network is accessed through more than one communication controller (local or remote), the TCAM network definition will be generated from all NCP or PEP sources in unison. If the Multiple System Networking Facility is being used, a network resource defined in one NCP source can be included in the TCAM network definitions for any hosts that are specified.

This FDP may be used with the following IBM program offerings:

- TCAM Level 10
- ACF/TCAM Version 1 and Version 2, Release 1 (Base and Networking Feature)
- EP/VS - Version 3
- NCP/VS - OS/VS Version 5
- ACF/NCP/VS - OS/VS Release 1

CAPACITY PLANNING EXTENDED, FDP 5798-CYH, NOTICE
 This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

Capacity Planning Extended (CPX) is a capacity planning and analysis aid which executes under the system for Generalized Performance Analysis Reporting (GPARR), Release 2. CPX reports, measurements and computational facilities are designed for use by Data Processing management and their staffs to assist with both planning and analysis activities

GB21

SB21

in either OS/VS1 or OS/VS2 installations.

CPX is compatible with USAGE (Understanding Your System and Application Growth Environment), and automates many of the calculations associated with capacity planning technique. The use of CPX, however, extends capacity planning and analysis beyond USAGE, which concentrates on measurements of CPU utilization.

CPX extracts SMF (System Management Facilities) and RMF (Resource Measurement Facility) measurements, then summarizes and stores them on a history file. This extensive set of measurements falls into 6 generic categories:

- USAGE study measurements
- CPU measurements
- Input/output measurements
- Paging activity measurements
- Batch workload measurements
- TSO activity measurements

Users can request reports that quantify these measurements over selected historical time periods and project growth of resource utilizations to future planning milestones.

CPX is a member of the GPAR family of performance and capacity planning products that includes GTFPARS (5798-CQQ), VTAMPARS (5798-CTW), IMSPARS (5798-CPQ), IMSASAP II (5798-CHJ), and the recently announced NETPARS (5798-C2X).

VIRTUAL SEQUENTIAL ACCESS METHOD (VSAM) OPERATIONS UTILITY, FDP 5798-CYR, AVAILABILITY NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, helps manage the utilization, relocation, and reorganization of VSAM files, data spaces, and catalogs. The utility retrieves information contained in the VSAM catalogs and produces VSAM Access Method Services (IDCAMS) jobstreams to back-up or reorganize the requested object (Cluster, Space, User Catalog, Master Catalog). A powerful set of run time options allow the operations or systems programming staff a wide range of flexibility in manipulating VSAM objects. These options include the ability to have the program adjust the new file size based on actual space requirements and substitute new volume and extent information in the new definitions and REPRO jobstreams. Individual files or extents of files may also be moved from one data space to another.

NETWORK PERFORMANCE ANALYZER - HOST, FDP 5798-CZR, NETWORK PERFORMANCE ANALYZER - CONTROLLER, FDP 5798-CZT, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

Written in ALC, the Network Performance Analyzer (NPA) collects communications network operating data for analysis.

NPA data may be helpful in highlighting the causes of performance degradation, such as excessive traffic at certain periods, or insufficient line capacity. It may also aid in isolating performance problems induced by high line or cluster error rates caused by temporary errors, or wide fluctuations in message rates.

With NPA data, networks may be tuned for greater efficiency, and potentially improved response times. Elements such as polling rates, network parameters, and line loading, may be modified and performance improved. Tuning may also free up capacity.

NPA information may also be helpful in capacity planning. Information such as 3705 utilization, message flow rates, and line usage rates, may help determine how much unused capacity exists for network growth.

The data may be displayed online as collected, or reviewed later at a terminal. Data of particular interest may be monitored on or offline for exceptions to user defined limits. The capability of displaying realtime information may be especially valuable during periods of poor performance. The data gathered is also available for formatting into reports for study, and comparison with previous periods. This allows modification of systems parameters, and observance of subsequent results.

NPA consists of a host application program and one or more modified NCP programs. It runs under VS1 or MVS, with VTAM and/or TCAM. NPA can coexist with subsystems such as CICS, IMS, or TSO, but operates independently of them.

INSTALLATION MANAGEMENT DOCUMENTATION AID, FDP 5798-CZW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is an installation planning and operations management tool, particularly useful in a large complex DP environment. Its functions include creation and maintenance of the following:

- Computer room layouts (Note: If a 3800 is available, these are drawn to the same scale as IBM provided equipment templates)
- CPU to channel to control unit cable diagrams
- Subsystem cabling diagrams (DASD, TAPE, 2914)

The program uses a "model file" containing physical equipment characteristics and a "detail data file" containing user dependent equipment data (such as address, serial number, location coordinates, etc.) to create these diagrams and drawings. Changes can be made easily and updated drawings produced quickly to facilitate operational decision making, installation planning, and problem resolution.

This FDP is parameter driven and may be executed under ISO or in batch.

CUSTOMER INFORMATION CONTROL SYSTEM PERFORMANCE ANALYSIS REPORTING SYSTEM (CICSPARS), FDP 5798-DAE, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. It is a new performance reporting and capacity planning aid which gives users information about their CICS/VS systems. The functions which are available include storage analysis, data gathering and reporting capability and a CICS/VS Monitoring Facility (CMF) data reporting capability.

The storage analysis function provides the user with information gathered on-line and reported with on-line displays or batch reports. These reports range from general management level reports to detailed system information. These reports give information regarding real and virtual storage utilization and page fault activity. The CMF data post-processing capability takes performance data captured by CICS/VS V1 R5 and provides the user with a detail list, summary and final totals reports and up to 19 different graphs. Additionally, a detail list report is provided for CMF's exception and accounting data.

The batch reporting function of CICSPARS requires the System for Generalized Performance Analysis and Reporting (GPAR) FDP, 5798-CPR for OS/VS and 5798-LAA for EOS/VS, a productivity aid which provides facilities designed to reduce the cost and effort of complex report program development.

FORMAT/3800 II, FDP 5798-DAC, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is a productivity aid for producing "pre-printed" or "formatted" forms for use on an IBM 3800 Printing Subsystem. FORMAT/3800 II includes the same functions as FORMAT/3800, 5798-CPN, and provides the user with a quick and simple method of preparing "formatted" forms using the FORMAT character set.

In addition, it generates online or offline syntax and allows "free-text" input in either character or hexadecimal form. As options, it has the ability to optimize generated COPYMOD statements for any line where there is no user data and to optimize "free-text" input if the free text data contains blanks. Also optionally, it produces COPYMOD statements with syntax as required for the IBM 3800 OFFLINE utility and an OPTION CVERRUN card for any specified lines per inch or the option not to produce an OPTION card.

A sample may be printed on either an IBM 3800 Printing Subsystem or an impact printer.

SYSTEM LOG DISPLAY AND SEARCH FACILITY, FDP 5798-DAL, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is a systems management aid for controlling and analyzing the operation of an MVS/JES2 system. It can improve the productivity of operations, scheduling, control, and systems programming personnel by providing much needed operational information. In many cases, problem determination time may be significantly reduced through the use of this FDP.

Information is provided in four displays: the System Log (SYSLOG) display, which allows the user to dynamically display (SCROLL) all MVS SYSLOG Data Sets, the Display Active display, Input Queue display, and the Output Queue displays. Much of the information provided by these displays have previously been unavailable or hard to obtain. Information is displayed on IBM 3270 display stations with 24, 32, or 43 display lines. This FDP will run either as a menu option to the TSO 3270 Display Support and Structured Programming Facility (SPP/TSO) program product 5740-XT8 Version 2.1 or 2.2, or as a TSO command processor. The display formats and command syntax of this FDP are similar to that of SPP/TSO.

ACCOUNT NETWORK MANAGEMENT PROGRAMS, FDP 5798-DAQ (OS/VS/CICS), FDP 5798-DAT, (DOS/VS/CICS), NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, is specifically designed to automate the core elements of systems management with an integrated set of interactive application programs and batch report programs as follows:

The problem management application provides preformatted screens to ensure consistent problem reporting, assignment and resolution of system or network incidents. It has create, update, display, and browse functions, allowing multiple assignments on problems and permits extensive comments. All fields except the comments are editable and searchable. History files can be created for batch reporting.

The change management application provides preformatted screens to enable planned, coordinated change activities including: equipment installation or relocation; new application programs; EUT and engineering changes, and feature changes. It likewise, has create, update, display and browse functions and includes an approver/reviewer facility. All fields are editable and searchable. History files can be created for batch reports.

The network configuration application provides an online data base of network components and the ability to create, update and display records containing component details. Detail may include: component name, id characteristics, location, phone numbers, vendor information, etc. The configuration file supports display of the physical connectivity of components. The batch report facility provides a network map, component detail listings and change activity.

NETWORK ERROR MANAGEMENT FACILITY, FDP 5798-DAW, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, enables the user to perform problem determination of incidents on communications networks in the OS/VS and DOS/VS operating environments. The design of this FDP permits a structured approach to problem determination through a hierarchical display of error information for each of the operating modes beginning with all errors summarized by each attached resource. Successive iterations lead quickly to the failing component, whereupon the detail data of the error event and the probable cause are available.

Using DOS/VS, error data is recorded and displayed in any of three modes: NCP, EP, and local. In NCP mode, error data from devices utilizing start/stop, bi-sync or SDLC line discipline is supported. In EP mode, devices utilizing start/stop or bi-sync line control are supported. Local mode supports error records for channel attached devices.

Using OS/VS, error data is recorded and displayed in each of two modes: EP and local. In EP mode, error data from devices utilizing start/stop or bi-sync line disciplines is supported. Local mode supports error records from channel attached devices.

DATA RETRIEVAL/MANIPULATION UTILITY, FDP 5798-DBC, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in Assembler, is a general purpose, control card driven, multi-phase program designed to perform a wide range of file-to-file functions, including most of the functions formerly available through the DOS Type I Utility Programs. File types supported include card (device independent), sequential disk (2311, 2314, 3330, 3340, 3350 and PBA), Diskette (3540), tape ISAM, VSAM and printer. Fixed and variable length records are supported. Maximum record length supported is 4,096 bytes.

Functions supported include verbatim copy from any of the above input file types to any of the above output file types and/or combinations of record selection and/or data reformatting. Up to 100 control totals can be maintained for audit purposes and to verify file integrity.

3850 TRACE INTERPRETATION PACKAGE, FDP 5785-DBW, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC and PL/I, is a set of programs for processing Mass Storage system Trace data to produce reports on Mass Storage System activity for status and performance analysis.

The raw Mass Storage System Trace data is the source of information for the evaluation of subsystem performance. A reformatted data set, created from the raw Mass Storage System Trace data, can be used as input to high level language programs. The package contains programs written in Assembler language and PL/I to create various reports and statistical information about Mass Storage System activity. These reports assist the system programmer in determining the reasons for subsystem problems. The reformatted data set can serve the user as a base for writing additional Mass Storage System Trace report programs of his own.

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in ALC.
The CICS/VS Operations Support Package is a set of four CICS/VS online transaction programs designed to assist operations personnel monitor CICS/VS system status information and diagnose operational problems on a realtime basis. The system status transaction, displays on a single screen, information about task class usage, dispatching queues, DL/I thread usage, transaction and paging rates, and other CICS/VS statistics and indicators which give a complete picture of current system performance. The task list transaction will display on multiple pages, if necessary, information about every transaction on a CICS/VS dispatching queue. The terminal status display will identify every terminal that is out of service or not in session with CICS/VS. The response time transaction will measure the average turnaround time of messages from CICS/VS to a terminal operator and back.

ACCOUNT NETWORK MANAGEMENT PROGRAM - IMS-VS, FDP 5798-EBP, NOTICE

This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP, written in ALC, are specifically designed to automate the core elements of system management with an integrated set of interactive application programs and batch report programs as follows:

The problem management application provides preformatted screens to ensure consistent problem reporting, assignment and resolution of system or network incidents. It has create, update, display, and browse functions, allowing multiple assignments on problems and permits extensive comments. All fields except the comments are editable and searchable. History files can be created for batch reporting.

The change management application provides preformatted screens to enable planned, coordinated change activities including: equipment installation or relocation; new application programs; Program Update Tape (PUT) and engineering changes, and feature changes. It likewise, has create, update, display and browse functions and includes an approver/reviewer facility. All fields are editable and searchable. History files can be created for batch reports.

The network configuration application provides an on-line data base of network components and the ability to create, update and display records containing component details. Detail may include: Component name, id characteristics, location, phone numbers, vendor

GB21

information, etc. The configuration file supports display of the physical connectivity of components. The batch report facility provides a network map, component detail listings and change activity.

require information concerning it.
This FDP is written in Assembler. It is designed to reduce the amount of data actually written to DASD, by compressing the data before it is written and expanding it when it is retrieved.

By using this FDP, an installation may:

- Reduce the DASD requirements for database storage
- Simplify recovery procedures
- Reduce recovery processing time
- Obtain improved performance
- Eliminate the need for application-specific compressing logic - accelerating program development and easing program maintenance

VSE/CENTRAL CONTROL FACILITY, FDP 5798-ECZ, NOTICE

This document describes the purpose and capabilities, the advantages of design, and the problems solved by the program referenced in the title. It contains complete ordering information for the program and a list of supporting documentation. It is intended for management and data processing personnel who are prospective users of the program.

This FDP is written in System/370 Assembler Language. It is designed to assist in the installation and management of distributed data processing (DDP) systems. The objectives of this FDP are to help reduce skill levels required to install, operate and maintain IBM processors in DDP environments, and to provide centralized DDP management functions to assist in increasing productive use of remote systems.

The FDP is a service system containing a Central Repository where information of hardware, software and DDP network status may be stored and updated. Files and programs may be sent to or retrieved from the distributed nodes by the service system: jobs may be submitted for execution at a node or nodes. Service changes may be prepared and tested at one node and applied at other nodes under the control of the FDP.

VS APL VARIABLE CONVERSION PROCESSOR, FDP 5798-DEH, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
This FDP is written in Assembler. It is a VS APL Auxiliary Processor designed to alter the internal structure of APL variables (vectors, scalars, arrays) to permit more efficient use of APL file I/O. Specifically, it allows a user to redefine the data type of variables without physically altering their form. This will facilitate the grouping of related variables into one data element for purposes of reading and writing to/from external files.

DATA DICTIONARY LANGUAGE PREPROCESSOR, FDP 5798-DEQ, NOTICE
This Availability Notice contains complete ordering information for the Program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.
This FDP is written in COBOL, PL/I, ASM. It is a program which actively binds source programs written in COBOL, PL/I or Assembler directly to the IBM DB/DC Dictionary Program Product, 5740-XXF. It provides the means for extracting data definitions from the Dictionary via normal COPY/INCLUDE language verbs, thus eliminating the need for intermediate "COFYLIBS". Supgprt is also provided for imbedded "STRUCTURES OUT" Dictionary statements, as well as the ability to generate DBD and FSE definitions via the "DBE OUT" and "PSB OUT" commands.

VS APL-DL/I INTERFACE, FDP 5785-FAL, NOTICE

This Availability Notice contains complete ordering information for the program and all its related documentation, for management and data processing personnel who are prospective users of the program and others who require information concerning it.

This FDP is written in Assembler. It is a generalized interface program between VS APL running under VSPC and the data base access method, DL/I. This interface is an Auxiliary Processor for VSPC and can run as a batch message program in an online IMS DB/DC System or as a DL/I batch program in an IMS DB-only System. Using this FDP, the VSAPL user may read data directly from "live" IMS data bases thus combining the data analysis power of APL with the data extraction power of DL/I.

A DEPARTMENTAL REPORTING SYSTEM II TRAINING, FDP 5798-DFC, NOTICE

This document describes the purpose and capabilities, the advantages of design, and the problems solved by the program referenced in the title. It contains complete ordering information for the program and a list of supporting documentation. It is intended for management and data processing personnel who are prospective users of the program.

This FDP is written in IIS. It teaches users how to set up a data base and prepare and update reports using a Departmental Reporting System II. The course, which runs under the Interactive Instructional System and the Interactive Instructional Presentation System, is designed for a broad range of users, with or without data processing background. Upon completion of the course, the student should be able to prepare a simple report in a required format using a selected set of a Departmental Reporting System II command, obtain a printed copy of a report, prepare more than one report of the same format using different sets of data, and take care of "housekeeping" tasks, such as saving workspaces, storing data files, and listing out report format data.

ASSEMBLER MACRO CONVERSION AID, FDP 5785-EBE, NOTICE

This document describes the purpose and capabilities, the advantages of design, and the problems solved by the program referenced in the title. It contains complete ordering information for the program and a list of supporting documentation. It is intended for management and data processing personnel who are prospective users of the program.

This FDP written in ALC, assists in converting DOS/VS Assembler Language Source programs to MVS. DOS/VS Macros are converted as far as possible to their MVS equivalents. Macros having no function in MVS are deleted, and those which prevent use of MVS spooling are flagged. DTF Macros are converted to DCBs and DD statements are created with the correct linkage between them.

CONVERSION AID FOR BATCH JOBSTREAMS, FDP 5785-EBF, NOTICE

This document describes the purpose and capabilities, the advantages of design, and the problems solved by the program referenced in the title. It contains complete ordering information for the program and a list of supporting documentation. It is intended for management and data

GB21

processing personnel who are prospective users of the program.

This FDP written in ALC is a series of programs that converts an installation's DOS/VSE or VSE JCL to MVS JCL. It is different from previous JCL conversion programs in that it gathers input information at DOS program execution time. This is important since the DOS JCL for a simple job may be stored in many places and is only brought together at execution time.

GB21-2796

FORTRAN UTILITIES FOR VM/370, FDP 5798-DFH, AVAILABILITY NOTICE

This document describes the purpose and capabilities, the advantages of design, and the problems solved by the program referenced in the title. It contains complete ordering information for the program and a list of supporting documentation. It is intended for management and data processing personnel who are prospective users of the program.

This FDP is written in FORTRAN. It is a set of FORTRAN subroutines that provide a bridge between FORTRAN and the VM/370 system. This set of utilities includes routines to allow a FORTRAN program to execute CF/CMS system commands, open and close files, spool printer files, clear IEM 3270 type terminal screens, obtain system date and time, convert an EBCDIC file to/from ASCII and read or write data arrays on random access disk datasets with a fast data transfer and no pre-defined extents.

The library of subroutines is designed to execute with the IBM FORTRAN G1 (5734-F02), H-Extended (5734-F03) or VS FORTRAN (5748-F03) compilers and their associated libraries FORTRAN IV Library (Mod II) (5734-IM3), and VS FORTRAN Library (5748-IM3).

INTERACTIVE QUERY & REPORT PROCESSOR (IQRP), IUP 5796-PDG, GENERAL INFORMATION

This Document contains general information on IQRP which consists of nine on-line programs, of which three contain several modules, together with five additional modules which provide an efficient interface with CICS/VSE. The entire system is highly modularized to permit ease of maintenance and provide for efficient operation in Virtual Storage. In addition to the on-line programs, IQRP includes a set of utility programs to prepare the system for operation, provide a journal, gather statistics on system use, etc.

In the operation of IQRP, the user at a terminal interacts with the system by entering his identification and the report name and, optionally, the selection criteria and report format and contents. This interaction is thereupon interpreted by IQRP, and passed to one of several IQRP query processors.

System files are used to determine whether a user has the proper security clearance to access the information he has requested, as well as to translate any special terms the user has included in his interaction. Data names supplied by the user are likewise translated into field names recognized by the access methods and any further information regarding structure required to permit access to the data is also provided from the system files. The system files also supply information on predefined report formats and any modifications to the standard format which this user may have predefined.

Using the information regarding the physical nature of

GB21

SC19

the data, the IQRP processor proceeds to search the appropriate data file for the information required on the basis of the criteria provided by the terminal user. IQRP manipulates the data, performing any sorting, totalling, or arithmetic operations required. The information is then formatted into the appropriate two-dimensional report structure and output is sent to the terminal or system printer. Should the IQRP interpreter detect a user request that is incomplete or incorrect, IQRP will return a message to the terminal indicating the nature of the problem. The user should then reinsert the corrected request.

VIRTUAL MACHINE/SYSTEM PRODUCT, LIC PROG 5664-167, INTRODUCTION

This introductory publication provides high-level concepts of the virtual machine as implemented by the VM/SP program product (used in conjunction with function provided by VM/370 Release 6). This publication describes:

- The composition of the virtual machine
- Performance options available to the virtual machine
- Major functions of the control program (CP) used in controlling virtual machines
- Functions of the Conversational Monitor System (CMS), a time-sharing system used in direct problem solving, and program development

The reader of this publication should have a basic understanding of IBM data processing.

VM/370 DIRECTORY MAINTENANCE, LIC PROG 5748-XE4, GUIDE FOR GENERAL USERS
 The introduction in this book will provide an overview of the function and facilities of the Directory Maintenance Program Product. It will clearly delineate the function that is available to the general user from the function provided the system administrator. This publication will contain all information on the Directory Program Product pertinent to the general user; that is commands, command syntax, command description and usage information along with response and system messages. All system messages will be contained in an appendix in a format compatible to the VM/370 System Messages. In this way, the message section can be extracted from this publication and filed at the back of the VM/370 System Messages Publication for common reference. Directory Maintenance commands available to the general user represent only about 25% of the total in the product. It is expected that a large number of this guide will be made available in each installation.
 Manual

VSE SYSTEM IPO/E RELEASE 2.1 PLANNING GUIDE

This planning guide provides information on the VSE System IPO/E to assist in evaluating its applicability for a particular installation. The guide describes the contents of the VSE System IPO/E and how it can increase user productivity.

This manual contains preliminary operating environment information, a description of the system management and system use facilities provided via full-screen dialogues, a discussion of VSE System IPO/E system considerations, and a description of the VSE System IPO/E distribution material.

The appendices contain preliminary detailed descriptions of installation procedures, pack layouts, and system definition files for 3310, 3330, 3340, 3350, and 3370 SYSRES users planning to install VSE using the VSE System IPO/E.

The co-requisites for new VSE users for understanding this publication are the Introduction to the VSE System (GC33-6108) and VSE/Advanced Functions System Generation (SC33-6096).

Manual, 8 1/2 x 11 inches, 275 pages, 2/81

INTRODUCTION TO RPG II AND RPG III: BATCH PROCESSING WITH PROGRAM DESCRIBED FILES

This simple introduction to the RPG programming language is intended for people with no previous knowledge of computers or programming. It explains how to produce printed reports from batch processing with program described files. It does not discuss interactive processing or externally described files.

Chapter 1 describes, in general terms, how a system operates and what you must do to run a program. Chapter 2 describes the RPG cycle and the RPG specifications you must write to do particular tasks. Chapter 3 explains an RPG programmer's job more fully by indicating the things a programmer must do from start to finish of a sample program.

INPUT/OUTPUT EQUIPMENT REFERENCE INSTALLATION MANUAL - PHYSICAL PLANNING: SYSTEM/360, SYSTEM/370, 4300 PROCESSORS

This publication contains information necessary for planning the physical installation of IBM input/output equipment for the 1xxx series and 2xxx series I/O equipment with System/360, System/370, and 4300 processors. It includes floor planning information, as well as electrical, environmental, and structural requirements.

Physical planning information for the 3xxx series I/O equipment is in GC22-7064.

A GUIDE TO THE 4331 PROCESSOR

This guide presents hardware I/O device, programming systems, and other pertinent information about the IBM 4341 Processor that describes its significant new features and advantages. Knowledge of System/360 hardware and I/O devices is assumed. The contents of the guide are intended to acquaint the reader with the 4341 Processor and to be of benefit in planning for its installation.

VSE SYSTEM IPO/EXTENDED GENERAL INFORMATION MANUAL

This manual provides a general summary of the IBM VSE System IPO/E concepts and facilities. It describes the major facilities of the VSE System IPO/E, including the unique menu-driven dialogues that assist the user in performing a desired activity. It describes the composition of the VSE System IPO/E and how this system can improve the productivity of the user.

This manual lists the products that make up the base and optional licensed program features available. Sample menu, data entry, and explain panels are shown with an explanation of their function and use. Information about the operating environment is also included.

MVS/INFORMATION DISTRIBUTION WORK STATION SUPPORT, LIC PROG 5740-AMA ADMINISTRATION, CUSTOMIZATION, AND INSTALLATION

This manual presents information that enables the user to administer, customize, and install the MVS/Information Distribution Work Station Support (IDWS) program to support the IBM 6670 Information Distributor in an MVS system. To install and administer IDWS, the user should be familiar with MVS, the job entry subsystem, and the SNA communication subsystem used in the installation.

The manual is organized in four chapters to support the user tasks of administering, customizing, and installing IDWS.
Manual, 8 1/2 x 11 inches, 2/80

SC23-0033

MVS/INFORMATION DISTRIBUTION WORK STATION SUPPORT, LIC PROG 5740-AMA, OPERATION: WORK STATION CONTROLLER AND SYSTEM OWNER GUIDE

This manual is written for IDWS users who have work station controller and system owner command authority. It presents information that enables the user to start, stop, and run IDWS with the IBM 6670 Information Distributor and MVS. Users with system owner authority should be familiar with MVS, the job entry subsystem, and the SNA communications subsystem used in the installation. Users with work station controller authority should be familiar with the IBM 6670 Information Distributor and understand the concepts of networking and remote job processing. The manual is in four chapters, organized by IDWS command authority.

Manual, 8 1/2 x 11 inches, 2/80

MVS/INFORMATION DISTRIBUTION WORK STATION SUPPORT, LIC PROG 5740-AMA OPERATION: GENERAL USER GUIDE
This manual presents information that enables the general user to log on and log off the IBM 6670 Information Distributor as an MVS/Information Distribution Work Station Support (IDWS) work station, to run and control a job, and to control IBM 6670 work station operation. The manual is in five chapters, organized by general user tasks.

Users with general user authority do not require experience with data processing. The general user should learn to record IDWS commands on magnetic cards and to operate the IBM 6670 for communicating.

OS/VS2 JES3 OVERVIEW
This publication introduces the terminology, organization, functions, and features of Job Entry Subsystem 3 (JES3). Readers need not be familiar with JES3, but should have an introductory level understanding of the Multiple Virtual Storage (MVS) System. This publication is a companion to Introduction to JES3, GC28-0607. The two manuals will provide a foundation for using the remaining manuals in the JES3 library.
Manual, 8 1/2 x 11 inches, 76 pages, 10/79
////5752-826

GC23-0039

JES3 INTRODUCTION
This book will introduce you to Job Entry Subsystem 3 (JES3). JES3 is a component of MVS that reads jobs, prepares them for execution, and processes output data produced by the jobs. In multiple-processor complexes, JES3 manages processors in a way where one processor exercises centralized control over the others and distributes jobs to the others via a common job queue.
It doesn't matter whether you are an installation manager, system programmer, application programmer, operator or student, or if you are currently using JES3 or just considering or planning a JES3 installation. You should read this book to get a perspective on JES3, and to get the maximum benefit from the other books in the JES3 library. There are no prerequisites for this book. It would be helpful, but not essential, for you to have a general knowledge of operating systems.
This edition applies to the JES3 component of MVS/System Product-JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.
Manual, 8 1/2 x 11 inches,
//20//5740-XYN

SC23-0040

JES3 OVERVIEW
This book introduces the terminology, organization, function and features of Job Entry Subsystem 3 (JES3). It is not essential that you be familiar with JES3 to read this book, but to get the most out of it you should first read JES3 Introduction, GC23-0039. (The Introduction describes JES3 from an external point of view, emphasizing what JES3 is and how it can be used; this book describes JES3 from an internal point of view, emphasizing how JES3 is organized and how it works.) This book does require an introductory-level understanding of MVS.
This edition applies to the JES3 component of MVS/System Product-JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters. †H
Manual, 8 1/2 x 11 inches,

SC23-0041

JES3 SYSTEM PROGRAMMING LIBRARY: INSTALLATION PLANNING AND TUNING
This book is intended for JES3 system programmers or for anyone who plans to install, initialize, customize, or tune JES3. This book describes:

- The planning that must be done before installing JES3
- How to define resources for JES3
- How to use JES3 initialization statements to customize JES3
- How to initialize remote job processing, both BSC and

RJF

- How to tune JES3
- How to add your installation to a job network

Before reading this book, you should read JES3 Introduction, GC23-0039 and JES3 Overview, SC23-0040. This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.
Manual, 8 1/2 x 11 inches,
//34//5740-XYN

SC23-0042

JES3 SYSTEM PROGRAMMING LIBRARY: USER MODIFICATIONS AND MACROS
This book is intended for the system programmer who plans to modify JES3 control programs. It includes instructions on how to write JES3 user exit routines and dynamic support programs (DSPs) and how to use the JES3 macro instructions to aid in writing exit routines and DSPs.
This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.
Manual, 8 1/2 x 11 inches,
//36//5740-XYN

SC23-0043

JES3 SYSTEM PROGRAMMING LIBRARY: DIAGNOSIS
This book provides reference information for debugging Job Entry Subsystem 3 (JES3) and user-written extensions of JES3. Readers must have a working knowledge of JES3 functions and logic. Topics include Debugging and Service Aids, Dump and Trace Formats, How to Find Information in a Dump, Error Indicators, Data Areas, SNA RJP Problem Analysis, and JES3 Completion Codes.
This book is intended for use only in debugging. None of the information contained should be construed as defining a programming interface.
Manual, 8 1/2 x 11 inches,
//37//5740-XYN

GC23-0044

JES3 MESSAGES
This book contains documentation for the messages issued by the JES3 component of MVS/System Product - JES3 Release 2.
This edition applies to the JES3 component of MVS/System Product - JES3 Release 2 and to all subsequent releases and modifications until otherwise indicated in new editions or technical newsletters.
Manual, 8 1/2 x 11 inches,

a given application, and an applications programmer who needs general background information about the access method to be used in his programs. Prerequisite publication: Introduction to the VSE System, GC33-6108. Manual, 102 pages, 10/79 //30//5746-XE8

SC24-5210

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, MACRO USER'S GUIDE (CURRENT RELEASE)

This guide is for programmers intending to use the VSE/Advanced Functions Input/Output Control System (IOCS) and the system control program macros. Chapters on file organization and concepts of access methods precede and provide background for discussions on the use of LIOCS macros to process files stored on DASD, diskette, magnetic tape, and unit record media. Device-independent system files and file processing by means of Physical IOCS (PIOCS) are also discussed. The use of the appropriate macros to obtain system control program (supervisor) functions are discussed for, among others, virtual storage control, program communications, multitasking, and program checkpointing.

Prerequisite publication: VSE System Data Management concepts, GC24-5209. Manual, 8 1/2 x 11 inches, 260 pages, 10/79 //30//5746-XE8

SC24-5211

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, MACRO REFERENCE (CURRENT RELEASE)

This manual provides quick reference to data management and system control macro information for experienced programmers. For the most part, restrictions and programming details have been omitted in order to provide rapid access to the information in the book.

Included are sections containing descriptions of the IOCS declarative and imperative macros and the system control ("supervisor") macros. Within each section, the macros are arranged alphabetically for easy reference. Preceding these sections is a list of all the macros in the book, showing the operands valid for each one and serving as an index for the descriptions that follow.

Prerequisite publications: VSE/Advanced Functions Macro User's Guide SC24-5210. Manual, 8 1/2 x 11 inches, 160 pages //30//5746-XE8

SC24-5212

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, TAPE LABELS (CURRENT RELEASE)

The types of labels that may be written on magnetic tape by VSE/Advanced Functions are defined and described in this manual. The processing performed by the system, and the specifications that the user must supply, are described. The processing of standard, user-standard, and nonstandard labels, and unlabeled files, is explained, primarily in regard to the function performed for volume, header, and trailer labels when the user ties specifications directly to IOCS through the DTF entries. Illustrations of volume layouts show the various arrangements of labels and data records that can be handled. For a thorough understanding of this manual, the reader should have a basic understanding of the Input/Output control systems (IOCS) as described in VSE System Data Management concepts, GC24-5209, and VSE/Advanced Functions Macro User's Guide, SC24-5210. Manual, 8 1/2 x 11 inches, 60 pages, 10/79 //30//5746-XE8

OS/VS AND DOS/VSE ANALYSIS PROGRAM-1 (AP-1) USER'S GUIDE (CURRENT RELEASE)

This publication is intended for operators whose systems include the IBM 3344 or IBM 3350 Direct-Access Storage. The material introduces operators and programmers to Analysis Program-1 (AP-1), its operating procedures, and its output. The material is presented in general terms and assumes that the reader knows how to operate his computer system.

AP-1 is a utility program for use with the 3344 and 3350. AP-1 examines the drive and the user's data to determine if there are errors. When AP-1 detects an error, it prints a message to the operator and prints diagnostic information on the system's printer.

Manual, 3/76 //32//3344,3350,3310,3370/5741,5752,5745-020,5742,5745-010,5652,5745-030

OS/VS1 CHECKPOINT/RESTART

This publication describes Checkpoint/Restart, a technique for recording information about a job at programmer-designated checkpoints so that, if necessary, the job can be restarted at the beginning of a step or at a checkpoint within a step. It is intended for use by programmers and system analysts.

A general understanding of job control language and data management is prerequisite knowledge for understanding the information in this publication. Manual, 88 pages, 9/76

OS/VS ACCESS METHOD SERVICES CRYPTOGRAPHIC OPTION,
LIC PROG 5740-AM8
This book describes the Access Method Services Cryptographic Option, a program product which enables a user to protect his offline data. This option is invoked by users of the Access Method Services REPRO command, which has been extended so that data can be copied to yield a data set whose contents are unintelligible. Another function of REPRO converts the data back to an intelligible form. The REPRO command uses the Programmed Cryptographic Facility program product, 5740-XY5.

The book is intended for installation managers and system programmers who are responsible for the software data security of their installations. It is assumed the reader is familiar with Access Method Services, its command language format, notational conventions, JCL requirements, etc. This information is contained in OS/VS1 Access Method Services, GC26-3840, and OS/VS2 Access Method Services, GC26-3841.

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM ENTRY (ACF/VTAM), LIC PROG 5746-RC7, INSTALLATION (CURRENT RELEASE)

A reference manual for system programmers in performing these tasks:

1. Generating support for ACF/VTAME in DOS/VSE.
2. Defining start options, start procedures, and initial configuration lists.
3. Defining its domain to ACF/VTAME, as well as other domains in a multidomain network.
4. Defining session establishment and termination.
5. Defining ACF/VTAME services, such as exit routines, to it.

ACF/VTAME Pre-Installation Planning serves as an introduction to this manual.

ADVANCED COMMUNICATION FUNCTION FOR VTAME (ACF/VTAME), LIC PROG 5746-RC7, PREINSTALLATION PLANNING (CURRENT RELEASE)

This manual is for customer system programmers and installation managers. It is an aid in planning and estimating the time and resources required for the installation of an ACF/VTAME.

It addresses two types of situations:

1. The customer will use ACF/VTAME standalone or in a network with other ACF/VTAMES.
2. The customer will use ACF/VTAME in a network with ACF/VTAM or ACF/TCAM, as well as other ACF/VTAMES.

In function, this manual is between ACF/VTAME General Information: Concepts (an introduction to ACF/VTAME) and ACF/VTAME Installation (a system programmer's reference). Manual, 8 1/2 x 11 inches, 140 pages, 7/79

SC27-0449

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), LIC PROG 5746-RC3, PROGRAMMER'S REFERENCE (CURRENT RELEASE)

This manual describes how to write an ACF/VTAM application program. An ACF/VTAM application program contains ACF/VTAM macro instructions which establish and terminate sessions, and perform communication functions with logical units and subsystems that are supported by ACF/VTAM.

- A summary of the Contents of the manual is as follows:
- An overview of ACF/VTAM application programs and their relation to other elements in a teleprocessing network.
- Suggestions on how to organize an ACF/VTAM application program.
- A discussion of the concepts, facilities, and language for opening and closing a program, and for establishing a session with and communicating with logical units.
- Requirements and suggestions on using exit routines, handling errors and special conditions in the network and debugging an ACF/VTAM application program. The user is assumed to be familiar with Basic Assembler Language.
- Detailed explanations of how to code each macro instruction.
- Prerequisite Publications: None, however, ACF/VTAM General Information: Concepts, GC27-0463, may be helpful in understanding the concepts of an ACF/VTAM network.

VIRTUAL MACHINE/VTAM COMMUNICATIONS NETWORK APPLICATION
LIC PROG 5735-RC5, PROGRAM SUMMARY

The Virtual Machine/VTAM Communications Network Application (VM/VCNA) is a program product that provides the Virtual Machine/System Product (VM/SP) user the ability to use a System Network Architecture (SNA), binary synchronous communication (BSC), start-stop, or local terminal as an operator console for a virtual machine. VM/VCNA supports Control Program/Conversational Monitor System (Control Program/CMS) command processing, CMS editor processing, and VM full-screen processing. The selected start-stop devices are supported through the Network Terminal Option (NTO) as line-at-a-time devices. VM/VCNA provides an interface between VM's console support and the application program interface of the Advanced Communications Function for VTAM (ACF/VTAM) or the Advanced Communications Function for VTAM Entry (ACF/VTAME), in order to support SNA, BSC, start-stop, or local terminals as virtual machine consoles.

ADVANCED COMMUNICATIONS FOR TCAM, LIC PROG 5735-RC1, GENERAL INFORMATION

This publication introduces Advanced Communications Function for the Telecommunications Access Method (ACF/TCAM). This program product supports IBM's System Network Architecture (SNA) and operates with OS/VS1, Multiple Virtual Storage (MVS), or Single Virtual Storage (SVS). This manual is for persons requiring a general knowledge of ACF/TCAM: data processing managers, system programmers, and application programmers. It describes how ACF/TCAM operates with an IBM 3704 or 3705 Communications Controller in network control mode.

ACF/TCAM can operate with an IBM 2701 Data Adapter Unit, an IBM 2702 or 2703 Transmission Control Unit, an IBM 7770 Audio Response Unit, or with an IBM 3704 or 3705 in emulation mode. The reader who plans to use ACF/TCAM with any of these control units or with the emulation program should refer to the OS/VS TCAM Concepts and Facilities, GC30-2042, for information on:

- o Line control
 - o Invitation and selection of terminals
 - o Polling and addressing
 - o Error-recovery procedures.
- Advanced Communications Function for TCAM General Information includes information on:
- o Basic ACF/TCAM concepts, such as buffering and queuing
 - o How ACF/TCAM and NCP/VS operate in a teleprocessing network
 - o SNA sessions and SNA support
 - o How ACF/TCAM operates in a multiple-domain network
 - o The message control program and message handlers
 - o Use of the Time Sharing Option (TSO) in a TSO-only and

IBM 3650 SUBSYSTEM PROGRAM PREPARATION SUPPORT - APPLICATION PROGRAMMER'S GUIDE, SCP 5747-BJ2 & 5744-BQ2

This manual is for systems analysts and application programmers who use Subsystem Program Preparation Support (SPPS) to design and code user unique applications for the IBM 3650 Retail Store System. Subsystem Program Preparation Support consists of an assembler language subset and a group of macros for coding applications, and the Transformation Definition Language (a declarative language used for defining data transfer between the IBM 3651 Subsystem Controller and an IBM 3275 Information Display Station).

Detailed specifications for the macros, the Transformation Definition Language, and the translator for the Transformation Definition Language are provided for the application programmer.
Manual, 300 pages

GC30-3033

INTRODUCTION TO ADVANCED COMMUNICATIONS FUNCTION

Provides an introductory description of the types of data communication network configurations that are supported by the three principal programming components of Advanced Communications Function: ACF/VTAM (Advanced Communications Function for Virtual Telecommunications Access Method), ACF/TCAM (Advanced Communications Function for Telecommunications Access Method), and ACF/NCP/VS (Advanced Communications Function for Network Control Program/Virtual Storage). This publication (1) explains the concepts of single-domain networks, and networking; (2) summarizes the capabilities and functions of Release 2 of ACF/VTAM, Version 2 Release 2 of ACF/TCAM, and Release 2 of ACF/NCP/VS; (3) explains the further capabilities and functions provided by Release 3 of ACF/VTAM, Version 2 Release 3 of ACF/TCAM, and Release 3 of ACF/NCP/VS; (4) lists the communication systems and stations supported by the program products listed in (3); (5) contains some preinstallation planning considerations for users intending to install or upgrade a network based on the IBM Systems Network Architecture (SNA); and (6) contains a glossary of terms and abbreviations used in describing SNA-based networks.

GC30-3035

3650 RETAIL STORE SYSTEM PROGRAMMER'S GUIDE REL 3.0 AND 3.1

This publication is a guide for the programmer of the IBM 3650 Retail Store System. It supports both Release 3.0 and 3.1 of the IBM 3650 Retail Store System. It describes the retail environment and the communication network to the host IBM System/370 virtual storage computer.

It is written primarily for the system programmer responsible for the complete host and store system, as well as for the IBM system engineer and field engineering programming support representative who may assist in its installation and maintenance. Also, the store training staff may find it helpful in understanding more about the retail store system functions. The major areas of this manual includes a review of the sales, administrative, and ticketing functions of the retail store system, how the user may add his own programming at the store controller to create a set of functions uniquely fitted to his store environment, and how to recognize and diagnose errors in the system.

This manual tells how to use the programming support available to the retail store system. It emphasizes ways of installing, operating, and maintaining the whole system. It suggests means by which the programmer can coordinate the operation of the system through subsystem definition, user programming, operating procedures, and error diagnosis. As a guide, it is not complete in itself but organizes this information and leads the user to other reference sources available in the retail store system library and IBM System/370 publications.

Manual, 8 1/2 x 11 inches, 512 pages, 3/77

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM CONCEPTS AND PLANNING

This publication provides an overview of Advanced Communications Function for the Telecommunications Access Method (ACF/TCAM). The ACF/TCAM program product supports IBM's systems network architecture (SNA) and operates with OS/VS1, Multiple Virtual Storage (MVS), and Single Virtual Storage (SVS). All information in this manual pertaining to multiple-domain configurations and cross-domain operations applies to ACF/TCAM systems with the Multisystem Networking Facility. The manual is directed primarily to data processing managers and the system programmers who will

GC30-3057

ACF/TCAM, VERSION 2 GENERAL INFORMATION: INTRODUCTION RELEASE 3, LIC PROG 5735-RC3

This publication provides an overview of Advanced Communications Function for the Telecommunications Access Method (ACF/TCAM), Version 2, Releases 1, 2, and 3. The ACF/TCAM program product supports IBM's Systems Network Architecture (SNA) and operates with OS/VS1 and OS/VS2 MVS. The manual describes ACF/TCAM's operation using an IBM network control program (either NCF/VS, Version 5 - for single-domain networks or ACF/NCP/VS - for multiple-domain networks) in an IBM 3705 Communications Controller. The manual is intended for data processing managers, their technical staff, and others who desire evaluative information on the product. The reader should be familiar with the basic concepts of data communication.

GC30-3058

ACF/NCP/VS NETWORK CONTROL PROGRAM SYSTEM SUPPORT PROGRAMS GENERAL INFORMATION

Provides a general introduction to the role of ACF/NCP/VS (Advanced Communications Function for Network Control Program/VS) in a data communication network and explains the purposes and advantages of Release 2 of ACF/NCP/VS.

ACF/NCP/VS is a licensed program product that is executed in an IBM 3705 Communications Controller. The program performs many functions relating to transmission of data over communication lines, including routing of message traffic through the network; activating, deactivating, and monitoring resources in the network (such as lines and stations); performing error recovery actions; translating message data from processing code to transmission code, and vice versa; and establishing operating parameters such as timeouts.

Each user of ACF/NCP/VS defines the configuration and operational requirements of his network in program generation statements, then generates the ACF/NCP/VS from a library of IBM-supplied modules. The user then loads the generated program into the communications controller that is to execute the program.

Release 2 of ACF/NCP/VS provides capabilities beyond those available in Release 1 that can assist the user in optimizing the management, control, and flexibility of the network.

This publication is directed to data processing managers and data communication network designers intending to install or upgrade an ACF/NCP/VS-based network or to consolidate existing networks.

Prerequisite to use of this publication is a general knowledge of data communication.

3770 REMOTE JOB ENTRY (RJE) SYSTEM NETWORK ARCHITECTURE (SNA) INSTALLATION GUIDE

Provides a general description (1) the Network Control Program (NCP) macros, (2) the Remote Job Entry (RJE) parameters, and (3) the System Network Architecture (SNA) commands required to generate the programs used when the 3770 Data Communication System is installed. The IBM 3770 Data Communication System consists of multipurpose keyboard/printer terminals (fixed-function or programmable) and attachable I/O devices.

This publication emphasizes the NCP macros, RJE parameters, and SNA commands that affect the installation and performance of the 3776 and 3777 Communication Terminals. The publication is written for system programmers, IBM system engineers, and IBM customer engineers who have a thorough understanding of the SNA environment in which the 3770 Data Communication System operates.

The purpose of this publication is to assist the reader in installing the 3770 Data Communication System and one of the RJE subsystems in an SNA environment. The RJE parameters described are for the Remote Entry Services subsystem, the Job Entry subsystem, and the POWER subsystem. The information provided is intended to supplement, not replace, the existing documentation for each subsystem and program described. The publication also contains a sample MVS/JES2 system generation.

SC30-3115

ACF/TAP USER'S GUIDE (ADVANCED COMMUNICATION FUNCTION/TRACE ANALYSIS PROGRAM) SSP 6 - 5735-XX3

The Advanced Communications Function Trace Analysis Program User's Guide, SC30-3115, describes how to use the Advanced Communications Function Trace Analysis Program (called ACF/TAP), which is an IBM service aid that increases the usefulness of trace data by providing:

- A common trace analysis facility for ACF/VTAM, ACF/TCAM, and ACF/NCP trace data.
- Output reports that show SNA and SDLC network trace data in formats that are easy to read and understand.

This publication has two purposes, each independent of the other:

- It describes how to use ACF/TAP.
- It provides a general overview of ACF/TAP maintenance information.

This user's guide is for IBM Customer Engineers, Program Support Representatives, and Systems Engineers who use ACF/TAP to provide hardware and program maintenance for customer data communication networks. It is also for IBM personnel who provide program maintenance on ACF/TAP.

A general knowledge of traces, SNA (SDLC and networking), VTAM or TCAM access methods, and communications controllers is a prerequisite for using ACF/TAP. This publication has no prerequisite manuals.

Manual, 8 1/2 x 11 inches, 100 pgs, 10/76
////5735-XX3,5735-XX1,5735-XX2,5735-RC1,5735-RC2,5735-RC3

SC30-3116

ACF/NCP/VS, LIC PROG 5735-XX1, -XX3 GENERATION AND UTILITIES REFERENCE (CURRENT RELEASE)

Provides the information necessary to (1) define and generate an ACF/NCP/VS for an IBM 3705 Communications Controller (under OS/VS and DOS/VS); (2) load the program into the controller; and (3) dump the contents of controller storage.

The ACF/NCP/VS can perform two major categories of functions: network control functions and emulation functions. Network control functions control the transmission of data between the access method (TCAM, ACF/TCAM, VTAM, ACF/VTAM) in the host processor and the SDLC (synchronous data link control), start-stop, and binary synchronous stations of a data communications network. Emulation functions enable the controller to operate as an IBM 2701, 2702, or 2703 transmission control unit, or any combination of the three, for transmission of data between the host processor and start-stop and/or binary synchronous stations. The user may generate an ACF/NCP/VS to include network control functions only, or both network control and emulation functions.

(This publication may also be used to generate a stand-alone emulation program to be executed in an IBM 3704 or 3705 Communications Controller.)

This publication is directed to the systems analyst or systems programmer responsible for defining and generating an ACF/NCP/VS and loading it into a 3705 communications controller.

The chapters of this book:

- Introduce the ACF/NCP/VS and summarize the content of the book.
- Describe the characteristics of the data communications network (including SDLC, binary synchronous, and start-stop stations) and the program options that must be considered when defining a program.
- Give the macro instructions necessary to code a program tailored to a specific installation.
- Describe the program generation procedure.
- Explain how to use the loader and dump utility programs under both OS/VS and DOS/VS.

The appendixes list the data communications devices with which the communications controllers can communicate using ACF/NCP/VS (and the emulation program), explain diagnostic messages related to the generation, loading, and dump procedures, and provide other relevant information about the program options.

Prerequisite to use of this publication is a basic understanding of data communications and data communications access methods. A general knowledge of the purposes of the communications controllers may be obtained from the Introduction to the IBM 3704 and 3705 Communications Controllers (GA27-3051).

SC30-3117

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM, LIC PROG 5735-RC1, SYSTEM PROGRAMMER'S GUIDE

This book is for users of the telecommunications access method (TCAM). It is a coding guide for the system programmer who must construct or modify a TCAM message control program (MCP) supporting IBM's Advanced Communications Function (ACF). It explains how to write an ACF/TCAM MCP using assembler language coding conventions and

SC30

how to use a variety of auxiliary service facilities. This book contains information that might be of use in planning and setting up a data communication system incorporating ACF/TCAM and systems network architecture (SNA). The reader is expected to be familiar with ACF/TCAM Concepts and Planning (GC30-3049) and to have a basic understanding of SNA.

Manual, 8 1/2 x 11 inches, 688 pgs, 12/77

SC30-3118

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM MACRO REFERENCE GUIDE

This publication is a reference guide that contains detailed information on the macro instructions used with the Advanced Communications Function for TCAM (ACF/TCAM) with direct network control program/virtual storage (NCP/VS) support. It includes the ACF/TCAM and TSO macro instructions, the message error record, internal and transmission code charts, and macro return codes. This manual is for a system programmer who is thoroughly familiar with the ACF/TCAM System Programmer's Guide and is ready to code a message control program (MCP). It is essential that the user refer to the ACF/TCAM System Programmer's Guide for a functional explanation of ACF/TCAM; this book is not tutorial and contains only a lower-level explanation of the macros with specific operand-coding considerations. The reader should also be familiar with the contents of the ACF/TCAM Installation and Migration Guide, the ACF/TCAM Concepts and Planning manual, and the ACF/TCAM Application Programmer's Guide. The reader is also assumed to have basic understanding of systems network architecture (SNA).

Manual, 8 1/2 x 11 inches, 444 pgs, 12/77

Manual, 8 1/2 x 11 inches, 104 pgs, 12/77
////5735-RC1

SC30-3121

ADVANCED COMMUNICATION FUNCTION FOR TCAM, LIC PROG 5735-RC1, INSTALLATION AND MIGRATION GUIDE

This publication provides a general description of the concepts you should be familiar with to install or migrate to an ACF/TCAM system. Its purpose is to help reduce the time required to migrate to or install an ACF/TCAM controlled data communication network. More detailed information about the concepts and topics discussed in this Guide is provided in other publications in the ACF/TCAM library. The primary reference source, however, is the ACF/TCAM System Programmer's Guide.

This Guide is intended for systems programmers and IBM systems engineers who have a thorough knowledge of operating systems as well as experience in how to install a TCAM system. It is organized in four chapters and four appendixes as follows:

"Chapter 1. Introduction" summarizes the ACF/TCAM functions for single-domain and for multiple-domain networks. It also provides a general description of Systems Network Architecture and ACF/TCAM as well as the ACF/TCAM Multisystem Networking Facility. An understanding of the information contained in this chapter is required to construct a data communication network controlled by ACF/TCAM.

"Chapter 2. ACF/TCAM Installation Guidelines" describes the channel and device configurations of a sample multiple-domain network that utilizes the program examples described in Chapter 3.

"Chapter 3. Sample Program Descriptions" contains the descriptions of two message control programs, three network control programs and five application programs that are used in the sample multiple-domain network configuration described in Chapter 2. The source listings for these programs are in Appendix D.

"Chapter 4. Migration" contains a summary of ACF/TCAM migration considerations for single-domain and multiple-domain networks. This chapter also describes the changes required for current TCAM systems to migrate to an ACF/TCAM system.

"Appendix A. Macros Required to Define and ACF/TCAM Message Control Program" describes the new or modified macros used to define an ACF/TCAM message control program.

"Appendix B. Macro Changes for OS/VS TCAM and ACF/TCAM

SC30

SC30

Releases" describes, in chart form, the TCAM macros and operands for TCAM release 5F through ACF/TCAM. This information may be used as a migration aid. It identifies the differences in the macros and their operands between one release of TCAM and another.

*Appendix C. Storage Estimates" describes the storage requirements for an ACF/TCAM message control program.

*Appendix D. Program Listings" contains the source listings for the sample message control programs, network control programs and the application programs used in the sample network configuration described in Chapter 2. The source listings represent executable examples of the program definition directions described in the ACF/TCAM library of manuals. These programs may be used as patterns when you code your message control program, or they can be installed with the appropriate modifications to make them match your hardware configuration. The descriptions of the sample programs are in Chapter 3. The JCL associated with the MCPs and the application programs are also in this Appendix. Manual, 8 1/2 x 11 inches, 100 pgs, 12/77
 ///5735-RC1

SC30-3122

ADVANCED COMMUNICATION FUNCTION FOR TCAM, LIC PROG 5735-RC1, DEBUGGING GUIDE

This manual can be used three ways: as a source of hints for originally coding the ACF/TCAM message control program (MCP) in a manner that facilitates the detection, handling, and diagnosis of error conditions that occur while the ACF/TCAM network is running; as an aid in diagnosing certain problems that occur due to incorrect coding of MCP macros; and as a guide to the selection and running of ACF/TCAM diagnostic aids that facilitate troubleshooting and debugging in a running ACF/TCAM network that is experiencing trouble.

Manual, 8 1/2 x 11 inches, 224 pgs, 12/77
 ///5735-RC1

SC30-3123

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM, PROG PROD 5735-RC1, OPERATORS GUIDE

Program No. 5735-RC1 with base feature No. 9001 and networking feature No. 6008. This manual describes the ACF/TCAM operator control commands and how these commands are used to control and monitor ACF/TCAM networks. It is primarily a comprehensive reference for an experienced OS/VS system operator who has been designated as the ACF/TCAM operator. System programmers and application programmers may also occasionally use this manual.

This manual contains five chapters. Chapter 1 briefly reviews some telecommunications concepts pertaining to ACF/TCAM and then describes the physical and logical elements of both single- and multiple-domain ACF/TCAM networks. Chapter 2 describes how to format and enter operator commands and how to respond to ACF/TCAM reply messages to operator commands. Chapter 3 describes the operator commands, including an explanation of the function of the commands and their operands. Chapter 4 is a summary of the operator commands. Chapter 5 lists the message number and text for messages that the operator is likely to receive after entering one of the operator commands. Manual, 8 1/2 x 11 inches, 140 pgs, 12/77

ACF/TCAM, VERSION 2 GENERAL INFORMATION: FUNCTIONAL DESCRIPTION

This publication provides an overview of Advanced Communications Function for the Telecommunications Access Method, (ACF/TCAM), Version 2, Release 1. The ACF/TCAM program product supports IBM's Systems Network Architecture (SNA) and operates with OS/VS1 and OS/VS2 MVS. All information in this manual pertaining to multiple-domain configurations and cross-domain operations applies to ACF/TCAM networks with the Multisystem Networking Facility (an optional feature). The manual describes ACF/TCAM's operation, in accordance with SNA, using an IBM 3705 Communications Controller loaded with either of the following IBM network control programs:

- NCP/VS, Version 5, can be used for single-domain networks only
- ACF/NCP/VS, Releases 1 and 2, can be used for both single and multiple domain networks.

The manual is directed primarily to data processing managers and system programmers who will design, install, or maintain a network that uses ACF/TCAM; application programmers can also use the manual to understand the context in which ACF/TCAM application programs execute. ACF/TCAM VERSION 2, LIC PROG 5735-RC3 ASSET ASSIGNMENTS 9001 AND 6003, MVS 5752 TC221, VS1 5741 TC221, APPLICATION PROGRAMMING

This manual is intended for the application programmer whose programs communicate with channel-attached or link-attached stations, or application programs via ACF/TCAM. The ACF/TCAM Application Programming manual provides the information needed by an application programmer to ensure that his application program interfaces with ACF/TCAM. The ACF/TCAM MCP programming information in this manual is introductory and the information allows the application programmer to fully understand the interface between an ACF/TCAM MCP and an ACF/TCAM application program.

SC30-3136

ACF/TCAM VERSION 2 OPERATION ASSET ASSIGNMENT 9001 AND 6003 MVS 5752-TC221 VS1 5741-TC221

This publication describes the ACF/TCAM operator commands and details their use in controlling and monitoring an ACF/TCAM network. It is primarily a comprehensive reference for an experienced OS/VS system operator who has been designated as an ACF/TCAM operator. System programmers and application programmers may also need to refer to it occasionally. And, although this is essentially a reference publication, its organization, from general to specific, enables the reader to use it tutorially.

Prerequisite Publication: ACF/TCAM, Version 2 General Information: Functional Description, GC30-3131. Manual, 8 1/2 x 11 inches, 265 pages
 ///5735-RC3

SC30-3137

ACF/TCAM, VERSION 2: DIAGNOSIS, LIC PROG 5735-RC3

This manual can be used three ways: as a source of hints for originally coding the ACF/TCAM message control program (MCP) in a manner that facilitates the detection, handling,

SC30

and diagnosis of error conditions that occur while ACF/TCAM is running; as an aid in diagnosing certain problems that occur due to incorrect coding of MCP macros; and as a guide to the selection and running of ACF/TCAM diagnostic aids that facilitate troubleshooting and debugging in an ACF/TCAM that is experiencing trouble.

ACF/TCAM VERSION 2, SERVICE FACILITIES, SYSTEM SERVICE PROGRAMS AND UTILITIES ACF/TCAM 5735-RC3; VSI 5741-TC221; MVS 5752-TC221

This publication describes the ACF/TCAM service facilities, system service programs, and utilities, all of which are auxiliary routines designed to help the message control program (MCP) in directing message traffic through the network.

ACF/TCAM service facilities include checkpoint/restart, dynamic accounting, security and authorization, message logging, and startup/restart message generation. Among the ACF/TCAM system service programs are basic and extended operator control, online retrieval, save/restore message queues, internodal awareness, and internodal sequence number synchronization. ACF/TCAM utilities include the message queue data set preformatting utility (IEDQXA), COMEDIT print utility (IEDQXB), message queue data set dump utility (IEDQXC).

This publication includes explanations of these facilities and examples of procedures and techniques. It should be used as a reference for the system programmer responsible for the planning and coordination of a network with ACF/TCAM.

Manual, 8 1/2 x 11 inches, 150 pages, 4/79

SC30-3140

ACF/TCAM, VERSION 2 MESSAGES, LIC PROG 5735-RC3

This publication guides recipients of DKJ and IED system messages in establishing, maintaining, controlling and responding to an ACF/TCAM network. It is part of the OS/VS Message Library and contains:

- The DKJ and IED system messages applicable to ACF/TCAM
- Problem determination (Appendix A)
- Routing and descriptor codes (Appendix B)

This publication is intended for use by ACF/TCAM operators and programmers. The messages are listed in alphanumeric order, and each listing includes an explanation of the message as well as a statement of any resultant system action and any necessary programmer response and operator response. Users of ACF/TCAM may replace the corresponding section of their system messages book with these pages.

ACF/NCP/VS & SSP LIC PROG 5735-XX1, -XX3, INSTALLATION (CURRENT RELEASE)

This publication provides the information necessary to define and generate an Advanced Communications Function for Network Control Program/VS (ACF/NCP/VS) for the IBM 3705-I and 3705-II Communications controllers.

The publication is directed to system analysts and system programmers responsible for preparing an ACF/NCP/VS to be used in communicating with an IBM System/370 in which one or more of the following access methods are being executed: ACF/TCAM, ACF/VTAM, TCAM, and VTAM. Also in this publication is information on the partitioned emulation programming (PEP) extension to ACF/NCP/VS, which permits the 3705 to emulate the operation of an IBM 2701, 1702, or 2703 transmission control unit for specified communication lines. Stations on these lines communicate in emulation mode with application programs in the System/370 via BTAM, QTAM, TCAM, or equivalent access methods that can be used with the transmission control units mentioned. Prerequisite Publications: ACF/NCP/VS General Information manual (GC30-3058).

////5735-XX1,5735-XX3

SC30-3143

ACF/NCP/VS & SSP LIC PROG 5735-XX1, -XX3, UTILITIES (CURRENT RELEASE)

This publication provides the information necessary to use the Advanced Communications Function Trace Analysis Program (called ACF/TAP), the OS/VS loader and dump utilities, and the DOS/VS loader and dump utilities. The Advanced Communications Function Trace Analysis Program (ACF/TAP) is an IBM service and that increases the usefulness of trace data by providing:

- A common trace analysis facility for ACF/VTAM, ACF/TCAM, and ACF/NCP trace data.
- Output reports that show SNA and SDLC network trace data in formats that are easy to read and understand.

The independent loader utility program is for use when you wish to load a local network control program into a communications controller before assigning the controller to the access method. An OS/VS and a DOS/VS version of the independent loader program are available.

The independent dump utility programs (OS/VS and DOS/VS) are used to dump the storage contents of a 3705 communications controller. The dynamic dump utility

SC30

programs (OS/VS and DOS/VS) are used in emulation mode only to obtain dynamic dumps of storage or of the emulation trace table and to start the emulation mode line trace function.

This manual is for IBM customer engineers, program support representatives who use ACF/TAP and the loader and dump utilities to provide hardware and program maintenance for customer data communication networks.

A general knowledge of traces, SNA (SDLC and networking), VTAM or TCAM access methods, and communications controllers is a prerequisite for using ACF/TAP, the loader utilities, and the dump utilities. This publication has no prerequisite publications.

ACF/NCP/VS & SSP LIC PROG 5735-XX1, -XX3, MESSAGES (CURRENT RELEASE)

The ACF/NCP/VS Network Control Program and Support Programs Messages publication is a reference book for messages issued by the following system support programs associated with Version 1, Release 2 of ACF/NCP/VS:

- The Advance Communications Function/Trace Analysis Program (ACF/TAP)
- The Independent Loader Utility, provided as an NCP system service program, under OS/VS
- The Dynamic Dump Utility, provided as an NCP system service program, under OS/VS (emulation mode only)
- The 3705 Communications Controller Assembler program (messages issued during stage 1 of NCP generation)
- The Independent Loader Utility, provided as an NCP system service program, under DOS/VS
- The Dynamic Dump Utility, provided as an NCP system service program, under DOS/VS
- The Independent Dump Utility, provided as an NCP system service program, under OS/VS and DOS/VS

This publication is provided for persons who operate, maintain, or generate an Advanced Communication Function Network control program.

SC30-3152

ACF/TCAM, VERSION 2 SUPPORT FOR IBM SUBSYSTEMS 5735-RC3; ASSET ASSIGNMENT NUMBERS 9007 and 6003 MVS 5752 TC221

Provides an overall view of the subsystems interface, describes how to code an MCP to operate with the subsystems interface, and describes how to operate a subsystem with ACF/TCAM. This book tells system programmers for IBM subsystems exactly what they must do in order to implement the ACF/TCAM subsystem interface.

IBM subsystems such as CICS, IMS/VS, and JES may use the ACF/TCAM subsystems interface as the single access method for their networks. This book describes the job control language, the coding in the MCP, how to initiate and terminate a session with a subsystem, the flow of messages to a subsystem, the basic operator control commands that are used, and the messages and codes that are obtained when running with the subsystems interface.

ADVANCED COMMUNICATIONS FUNCTION FOR TCAM (ACF/TCAM) WITH A FEATURE FOR MULTISYSTEM NETWORKING, DESIGN OBJECTIVES, PROG PROD 5735-RC1

This Program Product Design Objectives (PPDO) describes the design objectives and provides the estimated availability date of the subject Program Product. Advanced Communication Function for Team (ACF/TCAM) is an IBM Telecommunications Access Method program product. ACF/TCAM will be available for use in OS/VS1, OS/VS2, SVS, and OS/VS2 MVS system environments. ACF/TCAM is queued, general purpose teleprocessing access method, a component of IBM System Network Architecture (SNA) that controls the resources of a TCAM single domain network. A TCAM single domain network consists of a System/370 host processor, the host access method (ACF/TCAM), and the resources under control of that access method. Use of ACF/TCAM requires the concurrent installation of prerequisite TCAM system control Programming (SCP). This prerequisite SCP should only be installed by ACF/TCAM users.

DOS PL/I OPTIMIZING COMPILER, LIC PROG 5736-PL1, -LM4, -LM5 CMS USER'S GUIDE (CURRENT RELEASE)

This manual provides the information required to use the DOS PL/I Optimizing Compiler under CMS. Using the DOS PL/I Optimizing Compiler under CMS allows PL/I source programs to be compiled, debugged, and executed from a terminal.

The book is intended for all programmers who use the DOS Optimizing Compiler under CMS. It contains a brief tutorial introduction followed by reference data covering:

1. The syntax and options of DOSPLI, the command that invokes the DOS PL/I Optimizing Compiler.
2. The compile-time options that can be used with the DOS PL/I Optimizing Compiler.
3. The restrictions that apply to PL/I when it is used under CMS/DOS.

CICS/VS V1 REL 3, IBM 3600 GUIDE (5746-XX3 AND 5740-XX1)

This publication describes aspects of CICS/VS that apply specially when CICS/VS is used in an SNA environment with the IBM 3600 Finance Communication System.

The information is intended for CICS/VS system and application programmers, and also for 3600 programmers who wish to write programs that communicate with CICS/VS. The publication describes the various types of logical unit that can be used for communication between CICS/VS and the 3600, and discusses the special programming considerations that may apply.

The publication presupposes familiarity with CICS/VS and with the 3600.

DOS/VSE SYSTEM GENERATION
The manual provides information for installing the IBM Disk Operating System/Virtual Storage Extended (DOS/VSE) and shows how to generate support for the various functions available with DOS/VSE.
Topics include step-by-step procedures for installing and tailoring the DOS/VSE system control programming (SCP), describe the supervisor generation macros, and, for planning purposes, give information on calculating the size of a supervisor, libraries, and disk storage requirements. The contents of the DOS/VSE SCP libraries is summarized as an aid for checking an installation-tailored system.
The audience addressed are persons responsible for the installation, generation, and availability of an installation's operating system.
Use of the manual assumes the reader to be familiar with the following publications:
DOS/VSE System Manager Guide, GC33-5371
DOS/VSE System Control Statements, GC33-5376
DOS/VSE Operating Procedures, GC33-5378

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, GENERAL INFORMATION (CURRENT RELEASE)
This manual describes the functions available when the licensed program VSE/Advanced Functions is installed. It is intended primarily for those who need to have an overview of VSE/Advanced Functions.
VSE/Advanced Functions is designed to operate with the DOS/VSE SCP, to which it provides a number of functional enhancement and performance improvements. Manual, 8 1/2 x 11 inches, 28 pages, 1/79 //20//5746-XE8

SC33-6107

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8 SYSTEM INFORMATION (CURRENT RELEASE)
This manual provides information for installing the licensed support package VSE/Advanced Functions in the DOS/VSE environment and shows how to generate support for the various functions available with the package.
Topics discuss the interdependencies between this support package and the DOS/VSE SCP, and the prerequisites for the installation of this package and its use. Procedures show how to install the package; the supervisor generation macros as relating to the package are presented in detail. For planning purposes, information is given on processor storage and library requirements.
The functions discussed include asynchronous operator communication, operation with up to seven partitions, the controlling of shared resources (such as files, libraries, and disk volumes), up to 15 extents for the page data set, and access control. Procedures shipped with the package allow the VSE/Advanced Functions supervisors to be initialized with a minimum of operator/system interaction.
The audience addressed are persons responsible for the installation, generation, and availability of an installation's operating system.
Use of the manual assumes the reader to be familiar with VSE/Advanced Functions General Information, GC33-6106; it should be used with the DOS/VSE publications: DOS/VSE System Generation, and DOS/VSE Maintain System History Program (MSHP) User's Guide. Manual, 32 pages, 2/79 //20//5746-XE8

3031 DOS/VS SYSTEM CONTROL PROGRAMMING SPECIFICATIONS
These specifications describe the support for the IBM 3031 Processor in DOS/VS Release 34. The support is provided as an independent component release (ICR). Flyer, 8 1/2 x 11 inches, 2 pages, 6/79

SC33-6112

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8 DIAGNOSIS GUIDE (CURRENT RELEASE)
The publication contains guidelines to assist in making an initial evaluation of program problems with the objective of isolating the cause of the problem either to IBM code or to user specifications. It describes how to build a problem symptom string for reporting a program problem to IBM and how to submit an authorized program analysis report (APAR) to IBM.

The publication, a companion manual of VSE/Advanced Functions Serviceability Aids and Debugging Procedures, SC33-6099, assumes that the reader is familiar with the operational concepts of a VSE system as discussed in VSE/Advanced Functions System Management Guide, SC33-6094. Manual, 8 1/2 x 11 inches, 50 pages, 1/80 //37//5746-XE8

GC33-6113

VSE/OPERATOR COMMUNICATION CONTROL FACILITY GENERAL INFORMATION
This publication provides a general, introductory description of the VSE/Operator Communication Control Facility (VSE/OCCF), a program designed to reduce operator interaction at VSE controlled computing systems. The publication is intended primarily for customer management and technical staff who need to evaluate the applicability of the program to their data processing installation.
The manual describes the purpose and gives an overview of the program's functions and services; it discusses the program's usefulness and advantages; it states the basic requirements for using the program in various system environments. A program summary is also included. Manual, 8 1/2 x 11 inches, 40 pages, 9/79 //5746-XC5

GC33-6114

VSE/OPERATOR COMMUNICATION CONTROL FACILITY, LIC PROG 5746-XC5, SPECIFICATIONS
This publication provides information on the warranted functions of the Virtual Storage Extended/Operator Communication Control Facility (VSE/OCCF) and describes the warranted operating environment.
VSE/OCCF can be used in the single-system and distributed-data-processing environments to: suppress the display of messages, reply to messages automatically, route messages to a remote console, and translate messages, message replies, and commands to another language or end-user terms.
The program includes pre-defined control tables that provide specific selections of the above functions.
VSE/OCCF always requires VSE/Advanced Functions Release 3 or subsequent releases unless otherwise stated and, depending on the desired functions, requires the Network Communications Control Facility together with the applicable access method (ACF/VTAME, ACF/VTAM, or ACF/TCAM). Flyer, 8 1/2 x 11 inches, 2 pages, 9/80 //5746-XC5

SC33-6115

VSE/OPERATOR COMMUNICATION CONTROL FACILITY, LIC PROG 5746-XC5 INSTALLATION GUIDE AND REFERENCE
The publication contains information on how to plan, install, support, and operate VSE/OCCF. It provides, for planning purposes, information on the VSE/OCCF functions, the requirements for operation, and the control tables; it lists restrictions that must be considered by the application programmer. Examples show how to define control tables by means of the VSE/OCCF macros; the macros are described in detail.
Operations at the system console and NCCF operator station are explained; the VSE/OCCF commands and VSE/OCCF messages are described.
The publication includes considerations for operation with the Network Communications Control Facility (NCCF). Manual, 8 1/2 x 11 inches, 80 pages, 7/80 //5746-XC5

GC33-6116

VSE/ADVANCED FUNCTIONS RELEASE 3 PROGRAM SUMMARY
This publication provides a summary of the functions and services that will become available with Release 3 of the program product; it states the program product's estimated availability date. Program summary, 4 pages, 4/80 //5746-XE8

SC33-6117

VSE/OPERATOR COMMUNICATION CONTROL FACILITY, LIC PROG 5746-XC5, DIAGNOSIS GUIDE
The publication contains guidelines to assist in making an initial evaluation of program problems with the objective of isolating the cause of the problem either to IBM code or to user specifications. It describes how to build a problem symptom string for reporting a VSE/OCCF problem to IBM and how to submit an authorized program analysis report (APAR)

VSE/INTERACTIVE COMPUTING AND CONTROL FACILITY LIC PROG 5746-TS1 DIAGNOSIS GUIDE
 The publication helps the user to identify whether a system problem has originated in the VSE/ICCF environment, and whether IBM supplied code is involved. It also describes the procedures that the user should follow in obtaining assistance from IBM if this is necessary. It explains how to submit the problem to an IBM support center to find out if the problem is already known, and whether a solution is available. If not, the publication describes how to submit the problem to IBM via an Authorized Program Analysis Report (APAR).

It is assumed that the reader is familiar with the operational concepts of a VSE system as discussed in VSE/Advanced Functions System Management Guide, SC33-6094. The publication must be used in conjunction with the VSE/Advanced Functions Diagnosis Guide, SC33-6112. Manual, 8 1/2 x 11 inches, 28 pages, 7/80

INFORMATION/MVS, LIC PROG 5735-OZS, USER'S GUIDE

This manual describes how to use the search and retrieval program of the Information System Program Product to obtain data from the Information/MVS data base feature.

The information in the Information/MVS data base is intended primarily for system programmers and system engineers, but can also be used by data processing managers and by clerks and program librarians.

The Information/MVS feature is an organized collection of technical information pertinent to the MVS environment. The information is kept online on the user's system. Users access the data by signing on to Information/System through either TSO or NCCP onto a display terminal, such as a 3270.

To retrieve the Information/MVS data, users enter subcommands that search the data base using specific keyword combinations in a search argument. Subcommands can also be used to browse the data base.

Functions are also provided to enable data to be printed to output devices, and also to allow users to add their own data to the searchable data base.

The Information/System Installation and Customization manual is a prerequisite document for Information/MVS users.

INFORMATION/SYSTEM, LIC PROG 5735-OZS, PROGRAM SUMMARY

Information/System (Info/System) is a program product that supports system management tasks through the following set of optional features:

- Information/MVS (Info/MVS) - an IBM-supplied data base that is updated regularly to provide direct user access to a broad base of current technical information pertinent to the MVS environment.
 - Information/Management (Info/Management) - an interactive application that facilitates the management of data processing problem, change, and system configuration information.
 - Information/Access (Info/Access) - an interactive application that extends the software problem resolution and change management capabilities of Info/Management by providing teleprocessing access to the most current source of information for servicing IBM software.
- Through online, interactive support of the data processing system or network, Info/System and its features enable the installation to collect, update, retrieve, display, and report on data processing information with the goal of improving the delivery of system services to the end user.

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) GENERAL INFORMATION, PROG PRODS 5735-RC2, 5746-RC3

This manual is intended for those who will decide whether or not to use ACF/VTAM (an IBM program product), and is a preliminary source of information for installation managers and system programmers who will install it.

It discusses:

- o Definition of ACF/VTAM to the operating system
- o Operation of an ACF/VTAM network
- o ACF/VTAM macro instructions
- o Reliability, availability, and serviceability features available to ACF/VTAM

The reader should be familiar with teleprocessing concepts. System programmers should be familiar with the operating system with which they will use ACF/VTAM.

Manual, 8 1/2 x 11 inches, 50 pgs, 10/76

SC38-0256

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) MACRO LANGUAGE GUIDE, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This publication describes how to write an ACF/VTAM application program. An ACF/VTAM application program is a program that contains ACF/VTAM macro instructions to request connection to and communicate with telecommunications devices and subsystems supported by ACF/VTAM. This manual should be used with reference publication, ACF/VTAM Macro Language Reference, SC38-0261.

The contents include:

- an overview of ACF/VTAM application programs and their relation to other elements in a teleprocessing network;
- suggestions on how to organize an ACF/VTAM application program;
- a discussion of the concepts, facilities, and language for opening and closing a program, and for connecting to and communicating with terminals and logical units;
- requirements and suggestions on using exit routines, handling errors and special conditions in the network and debugging an ACF/VTAM application program. The user is assumed to be familiar with Basic Assembler Language.

Prerequisite Publications: None, however; ACF/VTAM Concepts and Planning, GC38-0282, may be helpful in understanding the concepts of an ACF/VTAM network.

Manual, 8 1/2 x 11 inches, 276 pgs, 7/77

SC38-0257

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) PROGRAM OPERATOR GUIDE PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This book describes how to write the Program Operator portion of an ACF/VTAM application program. It supplements the information on writing ACF/VTAM application programs contained in ACF/VTAM Macro Language Guide, SC38-0256. The primary audience for this book is the ACF/VTAM application programmer who is writing a Program Operator application program. The secondary audience is the system programmer who requires background information for planning and maintaining an ACF/VTAM network.

Manual, 8 1/2 x 11 inches, 88 pgs, 7/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SC38-0258

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) SYSTEM PROGRAMMER'S GUIDE, PROG PROD 5735-RC2

Provides the necessary information for defining an ACF/VTAM

network in an OS/VS system. It describes the interfaces that must be created between the user's ACF/VTAM application program and the system. It also describes how the system can be modified to better serve the needs of the user.

Prerequisite publication: Advanced Communications Function for VTAM (ACF/VTAM) Concepts and Planning, GC38-0282

Corequisite publication: Advanced Communications Function for VTAM (ACF/VTAM) Installation Guide, SC38-2069

This book is intended for system programmers who are primarily concerned with system generation and ACF/VTAM network definition.

Manual, 8 1/2 x 11 inches, 300 pgs, 12/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SC38-0259

ACF/VTAM NETWORK OPERATING PROCEDURES FOR OS/VS - PROG PROD 5735-RC2

This publication is a reference manual for system operators who run an ACF/VTAM network in OS/VS. It is also a guide for system programmers who must supply operators with the detailed information that they need to run the ACF/VTAM network.

The publication provides an introduction to operating ACF/VTAM (Chapter 1), describes the fundamentals of ACF/VTAM commands and messages (Chapter 2), and explains the use of commands in performing particular operations (Chapters 3-7). The commands are presented on the basis of function and the network elements they act upon. Command formats can be found either where the command is first discussed or in Appendix D, which summarizes the commands and their functions.

Manual, 8 1/2 x 11 inches, 120 pgs, 12/77
SLSS - ORDER NO. SUBSCRIPTION ONLY

SC38-0261

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) MACRO LANGUAGE REFERENCE, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)

This publication is a reference manual that describes the ACF/VTAM macro instructions in detail.

ACF/VTAM is an access method that allows a program operating under a virtual storage operating system to communicate with terminals and logical units of a teleprocessing network, or optionally to communicate with terminals and logical units of several combined teleprocessing networks.

This manual is used by installation personnel (typically system programmers) who code the programs that provide the interface between the application program and the teleprocessing network and is designed to be used in conjunction with the ACF/VTAM Macro Language Guide, SC38-0256.

Prerequisite Publications: None. However, the reader should be familiar with the parts of the OS/VS and DOS/VS Assembler Language (GC33-4010) that explains the rules for coding assembler statements.

Manual, 8 1/2 x 11 inches, 350 pgs, 7/77

SC38-0269

ACF/VTAM INSTALLATION GUIDE FOR OS/VS, IIC PROG 5735-RC2

This publication provides an overview of the steps required to install ACF/VTAM, including the Multisystem Networking Facility. "Installing" is defined to include planning requirements coding customer programming, and testing the programming with ACF/VTAM and related products. The intended audience is the customer or IEM system engineers who must do the installing. This publication refers to and must be used with other publications in the ACF/VTAM library and with related product publications, such as ACF/NCP/VS publications.

This publication contains:

- o An introductory chapter
- o An installation chapter describing specific planning, coding, and testing steps to take and referring to publications that contain

GC38

GC38

- required information
- o A chapter describing possible stages in migrating from a pre-ACF VTAM system
 - o chapter describing the coding and operating requirements of a hypothetical customer using the Multisystem Networking Facility
- ACF/VTAM Concepts & Planning, GC38-0282, is a prerequisite publication. ACF/VTAM System Programmer's Guide for OS/VS, SC38-0258 is a corequisite publication. Manual, 8 1/2 x 11 inches, 210 pgs, 12/77

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) CONCEPTS AND PLANNING, PROG PROD 5735-RC2, 5746-RC3
This publication describes the major concepts and facilities of the program product Advanced Communication Function for the Virtual Telecommunications Access Method (ACF/VTAM). ACF/VTAM is a data communication access method that performs network control and data-transmission functions for a network attached to a single host computer, or with the Multisystem Networking Facility, performs the functions for a network that includes a multiple host computers or multiple data-communication access methods. ACF/VTAM supports terminals on SDLC, BCS, and start-stop lines as well as locally attached Systems Network Architecture (SNA) terminals and locally attached non-SNA terminals. The publication is written for data processing managers card system programmers who are considering use of ACF/VTAM or who are planning for installation and use of the product. The publication also aids application programmers and network operators in becoming familiar with the overall characteristics and capabilities of the access method. The publication provides a comprehensive description of the system with a moderate of detail. A more general description of ACF/VTAM is provided in ACF/VTAM General Information, GC38-0254. The description of the access method is divided into chapters dealing with:
 - The basic structure and components of an ACF/VTAM system
 - Defining an ACF/VTAM system
 - Starting, controlling, and stopping an ACF/VTAM system
 - Coding application programs
 - Using reliability, availability, and serviceability characteristics of the system
 - Defining, controlling, and communication with BCS terminals, start-stop terminals and local non-SNA terminals
Basic planning considerations and requirements are also provided, although detailed planning information must be obtained by using this publication with the ACF/VTAM Installation Guide and the ACF/VTAM System Programmer's Guide for the operating system under which ACF/VTAM will be used. Manual, 8 1/2 x 11 inches, 236 pgs, 8/77

SUPPLEMENT FOR VM/370 SEPP TO SYSTEM PROGRAMMER'S GUIDE, 5748-XE1

Provides the detailed information the system programmer needs to understand and use Release 2 of the VM/370 System Extensions Program Product. This publication, which supplements the IBM Virtual Machine Facility/370: System Programmer's Guide, discusses:

- How VM/370 preserves virtual storage when a virtual machine becomes inoperative
- Changes the method that VM/370 uses to manage the real processor
- Changes to the favored execution performance option
- Changes to the information that the INECATE command provides
- Support for writing accounting records to disk and spool files to tape
- Support that expands a virtual machine's capability to control a 3270 display screen
- Requirements for using CMS/DOS tape label processing
- Support for fixed-block storage devices
- Support of the small-CP option
- Changes to the CMS file system
- Support for the 3289 Model 4 printer
- Multiple shadow-tale support
- MVS/System Extensions support
- Dynamic SCP transition to or from native mode
- Single processor mode

SUPPLEMENT FOR VM/370 BSEPP TO VM/370 CMS COMMAND AND MACRO REFERENCE, 5748-XX8

This supplement in support of VM/370 Basic System Extensions contains new and updated information about:

- CMS Tape Label Processing Support
 - Full Screen support
 - Interactive Help Facility under CMS
 - CMS File System Enhancements
 - CMS/DOS Uplevel to DOS/VSE
 - Display Control for the 3270
 - Support for the IBM 3289 Model 4 Printer
 - Support for the IBM 8809 Tape Unit
 - Support for the IBM 3310 and 3370 Direct Access Devices.
 - Full screen support
- Manual, 8 1/2 x 11 inches,
 ///5748-XX8

SD23-9025

SUPPLEMENT FOR VM/370 BSEPP TO VM/370 CP COMMAND REFERENCE FOR GENERAL USERS, 5748-XX8

This document supports the VM/370 Basic System Extensions Program Product. It contains:

- Resource management facilities subset
 - Virtual storage preservation support
 - Accounting-records-on-disk support
 - Spool-files-to-tape support
 - Full screen support
 - Enhanced 3270 support
 - APL/Text support for the 3270
 - Device support for 4300 processors
- Manual, 8 1/2 x 11 inches
 ///5748-XX8

LD23-9033

SUPPLEMENT FOR VM/370 BSEPP SYSTEM LOGIC AND PROBLEM DETERMINATION GUIDE (VOLUME 2), 5748-XX8

The IBM Virtual Machine Facility/370 Basic System Extensions program product provides significant performance and functional enhancements to the VM/370 system control program. These enhancements are:

- Support for the 3310 and 3370 direct access devices
- CMS File System enhancements
- Interactive HELP facility under CMS
- CMS/DOS uplevel to DOS/VSE

IMPROVED PROGRAMMING TECHNOLOGIES REFERENCE CARD STRUCTURED PROGRAMMING
The System Productivity Facility (SPF) is a program product which assists in program development. SPF is designed to take advantage of the characteristics of IBM 3270 display terminals and increase productivity in an interactive environment for users of both structured and conventional programming techniques.
The System Productivity Facility replaces the Structured Programming Facility (5740-XT8, 5748-XT3) program products. The name has been changed to reflect the expansion of the product capabilities beyond structured programming. SPF includes significant new functions that simplify the development of interactive applications. New services are provided to display predefined screen images, build and maintain permanent tables of user information, and generate output files for job submission or other processing.

IBM DP SYSTEMS HANDBOOK
The IBM Systems Handbook has been produced in order to give "first level" information on a number of topics and IBM products. It is not intended to replace any IBM manuals or other publications. It should not be considered as a proposal or offer for sale for any IBM products whether mentioned therein or not. It should not be regarded as a configurator aid. Assistance in determining the most satisfactory configuration for any particular application or series of applications must be obtained from your IBM representative or appropriate IBM Marketing or Installation Center.

JES3 INSTALLATION GUIDE: INSTALLATION MANAGEMENT
This guide was developed by the Job Entry Subsystem (JES) team, at the IBM United Kingdom Installation Support Centre, from experiences acquired in assisting JES3 accounts throughout Europe. It is intended primarily for system engineers and programmers at JES3 installations, but also contains information that may be useful for other individuals, for example, software customer engineers or operators. It may also assist installation staff who are considering changing to JES3 from another subsystem, such as, JES2, VS1, or JES/RES.

PREFACE TO PL/I PROGRAMMING IN SCIENTIFIC COMPUTING
In a brief and simple manner, this manual:
-Lists some problems arising in industry, business, science, and engineering
-Survey the mathematical, statistical, and operations research (OR) by which these problems are solved
-Tells how a few of such techniques and models are programmed for computers using the PL/I language
The major portion of the manual concentrates on PL/I. The essentials are brought out mostly by the many short examples and the summary exhibits.

SYSTEMS MANAGEMENT BIBLIOGRAPHY

This bibliography lists and categorizes selected IBM publications on the management of data processing, data security, auditability, and generally useful application development techniques and includes texts, manuals, briefs, and articles as well as certain forms, templates, bibliographies, and indexes.

In most cases, the publications are applicable to various IBM data processing systems; publications applicable to a specific data processing system can be found in that system's bibliography.

3031, 3032, 3033 PROCESSOR COMPLEX CHANNEL CONFIGURATION GUIDELINES

The purpose of these Channel Configuration Guidelines is to provide an overview of the IBM 3031, 3032, and 3033 Processor Complex channels, review some key terms and definitions, and provide a set of guidelines for attaching the I/O devices to the channels. The guidelines are designed to optimize the performance of the I/O configuration. These guidelines do not address attaching devices with a two-byte I/O interface (i.e., IBM 2305-1 Fixed Head Storage and IBM 3838 Array Processor).

AN MVS TUNING PERSPECTIVE

There are several requirements to be effective in tuning MVS. Among them are knowledge of MVS operation, knowledge of the particular system to be tuned, and tuning experience. This paper addresses the latter skill; experience. It does so by sharing with the reader the tuning experiences of the DP Washington Systems Center staff.

Specifically this paper is intended to:

1. Provide an approach to tuning an MVS system
2. Suggest actions MVS installations can take to manage performance.

MVS SYSTEM EXTENSIONS RELEASE 2 PRODUCT PRESENTATION

This technical bulletin contains a presentation on Release 2.0 of the MVS/System Extensions program product. The text associated with each visual is not a presentation script, but is intended to provide the presenter with some guidance on the significant points to make during a presentation. It is also intended to provide some explanation of the points covered on the visuals, allowing the presenter freedom to choose the level of detail for a presentation.

This bulletin does not contain a comprehensive explanation of all the functions included in MVS/SE Release 2. For complete documentation, refer to the Publications Support section of the MVS/System Extensions Release 2 General Information Manual, GC28-0872-4, for a list of System Library supplements. For planning purposes, also refer to MVS/System Extensions Release 2.0 Planning Information, GG22-9028-00.

GG22-9044

SYSTEMS MODIFICATION PROGRAM RELEASE 4 (SMP-4) CONSIDERATIONS

The purpose of this document is to provide some informal guidance in the use of SMP Release 4 which goes beyond the SMP System Programmer's Guide. The topics chosen were derived from questions raised by SMP users in APARS, at SHARE and GUIDE meetings and reader's comment forms. Many of the suggestions presented have come from the real experiences of users in the MVS 3.8 and VS1 6.7 environments.

RECOVERY FROM MSS INVENTORY AND TABLE MISMATCHES

The IBM 3850 Mass Storage System (MSS) maintains information about virtual volumes in the inventory data set and in the Mass Storage Control (MSC) Tables. This information must be consistent within itself and must refer to validly assigned cartridges in, or legally ejected from, the library.

This report gives guidance and sample job streams for recovery from 54 specific mismatch situations using standard AMS and recovery from a further twelve situations using AMS and the MSC Table Maintenance IUP (5796-PHY).

DOS TO MVS MIGRATION GENERAL INFORMATION
This document is a part of the DOS to MVS Migration Structured Support Plan. DOS is used in this document as a generic term which can signify DOS/VS or VSE. MVS signifies MVS/SP. This publication contains an overview of a Structured Support Plan for DOS to MVS migrations. It is intended for the Data Processing Manager, and other installation managers and supervisors who are considering the implementation of such a migration. This should be the first DOS to MVS SSP document to be read. Other DOS to MVS SSP publications include the following:
DOS to MVS Migration Event Support Material Z210-9938
DOS to MVS Sample Migration Network GG24-1525
DOS to MVS Sample Migration Events and Activities GG24-1526
DOS to MVS Migration Project Manager's Guide GG24-1527

IMS PRIMER FOR CICS/VS USERS
 This manual is intended for first-time users of the Information Management System (IMS/VS) who wish to implement applications in batch and/or online using the Customer Information Control System (CICS/VS). It provides system analysts, data base specialists, system programmers, and application programmers with the information necessary for the design, installation and operation of their initial applications, using a subset of the data base facilities of IMS/VS.

It assumes that users who wish to implement IMS/VS in a DB/DC environment using CICS/VS are familiar with CICS/VS, and therefore does not address the usage of CICS/VS, other than that related specifically to the use of IMS/VS.

The complete set of primer manuals can be ordered as GBOF-1300. This includes the IMS/VS Primer for CICS/VS Users Sample Listing (GG24-1531) and operating guides (GG24-1532).

Manual, 8 1/2 x 11 inches, 450 pages, 2/81

SCREEN DEFINITION FACILITY/CUSTOMER INFORMATION CONTROL SYSTEM, LIC PROG 5740-XYF, 5746-XXT, REFERENCE

Screen Definition Facility/Customer Information Control System is an interactive application development tool for the CICS/VS application programmer who wants to define or change maps and map sets for the CICS/VS Basic Mapping Support (BMS). Screen Definition Facility/CICS provides the application programmer with a full screen editor and a library to maintain the maps and map sets.

ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM PROGRAMMING
RPQ X99906: LIC PROG 5799-AYZ, TERMINAL USER'S GUIDE
 ELIAS is an integrated, pregenerated DB/DC system designed to run on an IBM System/370 Model 115 or 125. ELIAS is derived by system generation from CICS/VS, DL/I, ETSS II, Sort/Merge/VS, COBOL, and DITTO.

The Terminal User's Guide is intended to be used by the ETSS/CICS terminal user. It contains descriptions of how to use ETSS and the ELIAS tools to develop or maintain a program, submit the program to POWER/VS for execution, check its status in the system, and receive the output back at the terminal.

 ELIAS is an integrated pregenerated DB/DC system designed to run on an IBM System 370 Model 115 or 125. ELIAS is derived by system generation from CICS/VS, DL/I, ETSS/II, Sort/Merge/VS, COBOL, and DITTO.

The System Handbook is a reference publication describing the usage of the various ELIAS functions. It is addressed to the System Administrators functions to help them: Maintain the system-oriented software; maintain DL/I and CICS user-dependent parts; establish and maintain procedures for system operation, system maintenance and problem determination.

ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM-ONE
(ELIAS-I) LIC PROG 5746-XXV, GENERAL INFORMATION
 ELIAS-I is a licensed Program with supporting documentation designed to improve the productivity of users of CICS/VS and DL/I when run on and IBM System/370 or an IBM 4300 Processor. It is primarily intended to be used with the DOS/VSE System IPO/E 5750-AAA, 5750-AAB, or 5750-AAC). ELIAS-I provides a series of interactive dialogues called "procedures," which prompt the user to specify the definitions of data bases and batch and online application programs. ELIAS-I also provides a set of pre-defined sequences of code called "bricks." Each brick performs a specific and frequently used program function, and can be incorporated into the user's application program to perform that function.

This manual is addressed to those responsible for the development of computer applications. It describes the process of implementing a data base/data communications system using the facilities and methods supplied by ELIAS-I.

APPLICATION DESIGN GUIDE (CURRENT RELEASE)

ELIAS-I is the collective name for two related Licensed Programs, Entry Level Interactive Application System-One (Program Number 5746-XXV), and Entry Level Interactive Application System-One/Virtual Machine (Program Number 5748-XXX). These two Licensed Programs and their supporting documentation are designed to improve the productivity of users of CICS/VS and DL/I when run on a selected IBM System/370 or IBM 4300 Processors. The two products differ in the control program environment to which they relate.

SH19

ELIAS-I is executed in the environment provided by the VSE/Interactive Computing and Control Facility, and is primarily intended to be used with DOS/VSE System IPO/E, (Program Number 5750-AAA, 5750-AAB, or 5750-AAC). ELIAS-I/VM is executed in the environment provided by the Conversational Monitoring System, and is primarily intended to be used with VM/DCS/VSE System IPO/E, (Program Number 5750-AAE or 5750-AAF). It can also be used with VM System IPO/E, (Program Number 5750-AAD) to provide the jobstream creation facility.

Both programs provide a series of interactive dialogs called "procedures", which prompt the user to specify the definitions of data bases and batch and online application programs. They also provide a set of predefined sequences of code called "bricks". Each brick performs a specific and frequently used program function, and can be incorporated into the user's application program to perform that function.

This manual presents the implementation at a conceptual level and is intended to be used for reference while designing applications.

INFORMATION MANAGEMENT SYSTEM/360, VERSION 2, GENERAL INFORMATION MANUAL: PROG. PROD. 5734-XX6
 The Information Management System/360 is an Operating System/360 processing program designed to facilitate the implementation of medium to large common data bases in a multiapplication environment. This environment is created to accommodate both online message processing and conventional batch processing, either separately or concurrently. The system permits the evolutionary expansion of data processing applications from a batch-only to a teleprocessing environment.

This manual includes a general description of the system and its various facilities and programs, listings of typical and minimum configurations, and sample applications.

CUSTOMER INFORMATION CONTROL SYSTEM (CICS), DOS-ENTRY (CICS-DOSE) DOS-STANDARD (CICS/DOS) OS-STANDARD V2 (CICS/OS), LIC PROG 5734-XX7, 5736-XX6, -XX7, GENERAL INFORMATION
 The IBM Customer Information Control System (CICS) is a transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications: message switching, inquiry, data collection, order entry, and conversational data entry.

CICS is available in three systems - two for DOS users and one for OS users. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small DOS data base/data communication configuration and move up through DOS to OS.

This manual is designed for persons interested in a general description of CICS and its data base/data communication capabilities.

S/370 CICS ON LINE TEST/DEBUG CON EDISON - IUP 5796-AEF DESCRIPTION/OPERATIONS

CICS On-Line Test/Debug provides the programmer with the facilities to test and debug application programs or user files while CICS is operating by entering command statements via a 3270 Information Display System. The features include the ability to display any location in main memory of the machine, alter any location within the CICS job step boundaries, stop the execution of a specific CICS task at a specific address within an application program, display and alter storage records on any data set available to the CICS job step, immediately update changes made to storage records on file, and open or close files on-line. In effect, this program provides a programmer with access to a 3270 the ability to "console debug" programs without interrupting the normal operation of your installation.

SH20-1359

S/370 CICS/COBOL CALL INTERFACE NATIONAL BANK OF DETROIT 5796-AEG DESCRIPTION/OPERATIONS

Current users of the Customer Information Control System (CICS) who are writing application programs in ANS COBOL usually with Assembler Language macros in the middle of their application programs. This procedure requires the use of the CICS Preprocessor Program and two compilations of the program, one for the Assembler Language macros and one for the COBOL.

This program provides a COBOL/CICS interface technique which eliminates the use of the CICS Preprocessor Program and makes the writing and debugging of ANS COBOL/CICS application programs considerably easier. The system consists of 12 modules, one for each of the CICS management functions, and a Resident Interface Module. When the COBOL application programmer requires a CICS service, rather than write an Assembler Language macro, he simply codes a predefined COBOL CALL statement passing a list of parameters depending upon the service requested. The test CICS macro is then issued in the subsequently called CICS Service Handler and control is returned to the requesting COBOL program upon completion of the CICS service.

BATCH TERMINAL SIMULATOR II, IUP 5796-PGI, DESCRIPTION/OPERATIONS

The Batch Terminal Simulator II allows IMS/VS batch and online application programs to be tested in an IMS/VS batch environment without the use of teleprocessing hardware. BTS II provides information about each transaction and message as it progresses through the IMS/VS system. The facilities inherent in the BTS II design philosophy provide the user with a comprehensive means of checking and debugging:

- o Application program logic
- o Interfaces between application programs and IMS/VS
- o Data base activities
- o Teleprocessing activity
- o 3270 format control blocks

In addition, BTS II provides a number of debugging aids and application program performance statistics.

This publication provides a general description of BTS II and describes in detail the programs' functional capabilities and how to use them. The publication also includes explanations of BTS II messages and codes.

GH20-2007

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), LIC PROG 5740-XY3, CONCEPTS AND FACILITIES

This manual describes the IBM Telecommunications Control System - Advanced Communications Function (TCS-ACF) program product, which provides control for single CPU network systems incorporating terminals and/or application programs. Based on and enhancing IBM's Telecommunications Access Method (TCAM), TCS-ACF controls traffic between terminals and application programs, message switching between terminals, and message transfer between applications. Lines and terminals may be shared among applications. Both user application programs and complex subsystem environments such as CICS/VS may be supported. Queuing and priority facilities for handling mixed message types may optimize line use and speed delivery of inquiry/responses messages.

A TCS-ACF message control program (MCP), customized by the user with TCS-ACF and TCAM macro instructions and assembler language, operates in the network computer, usually in a different storage-protected region or partition from application programs.

Support facilities include:

- operator control for complex networks
- online statistics gathering and security/authorization capabilities
- alternate path and indirect routing capabilities
- message integrity safeguards
- start/stop, binary synchronous communications, and SNA synchronous data link control device support equivalent to TCAM's
- aids for minimizing application program device-characteristic dependencies, including extended support for the IBM 3270 Information Display System

Note: This manual describes the Basic TCS-ACF program and does not apply to the multicomputer Networking Feature.

TELECOMMUNICATIONS CONTROL SYSTEM ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), NETWORKING, CONCEPTS AND FACILITIES MANUAL

This manual introduces the Networking feature of TCS-ACF, which may be ordered with TCS-ACF Base program. The Networking feature enriches the functions provided by ACF/TCAM with the Multisystem Networking Facility.

The Networking feature of TCS-ACF:

- Extends device support provided by ACF/TCAM MSNF
- Provides enhanced routing capability and traffic management facilities.
- Provides an integrated inter-host message switching capability.
- Simplifies network definition in a multi-host network.
- Provides a structure for incorporation of foreign (non-SNA) hosts, foreign links, or multiple SNA networks into a single network.
- Provides a Model Message Control Program that can be run without change, or tailored to the user's requirements.

SH20-2161

RACF/CODES UPDATE SYSTEM, IUP 5796-PLK DESCRIPTION/OPERATIONS

The RACF/Codes Update System Installed User Program is a fully automated password generation and auditing system. It provides the installation with the ability to update RACF user type passwords and/or audit their users within any desirable time frame. With the use of the system, a RACF installation can centralize the control of the password assignment and change functions which are normally a RACF user responsibility.

The RACF/Codes Update System is designed to be used with "snap-out" form-type mailers, which are readily available from various forms vendors. The program prints the new password, name and address, and any user message on the cover sheet of the special form. This cover sheet is removed and held as the master listing and is used for the auditing process. The new password and message are printed only on the cover sheet and on the inside part of the form.

SH20

This is accomplished by the arrangement of carbons within the mailer envelope. The new password is visible only when it is separated from the envelope portion of the multipart form.

VS APL EXTENDED EDITOR AND FULL SCREEN MANAGER, IUP
5796-PLY, DESCRIPTION/OPERATIONS
This manual describes the functional capabilities of the VS APL Extended Editor and Full Screen Manager. It contains a general overview of the editor, detailed descriptions of the commands available, and illustrations of the usage of the commands. Also included are the instructions necessary to install and use the VS APL Extended Editor and Full Screen Manager.
The VS APL Extended Editor is written in S/370 Assembler and is a replacement for the standard APL del-editor. The Extended Editor supports the hardware editing features of the 3270 display station, and aids the APL programmer in the creation, modification, and testing of programs in a shorter amount of time.
The Full Screen Manager is an auxiliary processor that allows the APL programmer to manipulate the 3270 console in full screen mode. The auxiliary processor, AP124X, is similar to the AP124 auxiliary processor for VSPC and CICS. AP124X has some additional capabilities that are not available in the versions for VSPC and CICS.
Some of the major features of this IUP are:

- Full Screen Support for Editor
- Full Screen Support for APL programmer
- Multiple Function Parallel Editing
- Execution of APL expressions within the Editor
- Context Editing commands
- Ability to Edit Character Matrices and Vectors
- Compatibility with del-editor
- Similarity to CMS and TSC Editors

MVS PAGING SUBSYSTEM EXTENDED SWAP, IUP 5796-PNW, DESCRIPTION/OPERATIONS

This publication provides installation instructions and operational suggestions for the Extended Swap IUP, program number 5796-PNW. Extended Swap is a modification to the Real Storage Manager (RSM) of an MVS/SE or MVS/SP system which diverts local paging initiated by address space swapping operations from the local page data sets to swap data sets.

The expected audience for this publication includes installation managers, planners and performance specialists who may be evaluating the applicability of this product (primarily using the Introduction), and system programmers who will be responsible for installing and maintaining the product as well as establishing and altering system configurations.

INTRODUCTION TO THE DATA EXTRACTION PROCESSING AND RESTRUCTURING SYSTEM, IUP 5796-PLH, TEXTBOOK

This course is for individuals who need to use the Restructuring System to restructure and manipulate data. The course will be of particular interest to Application Programmers who must create and maintain files and databases. In addition, it is of value to Database Administrators and any other individuals who are confronted with the need to extract, restructure, or edit data files.

This course teaches the functions and architecture of the Restructuring System. It includes detailed instructions in the preparation of control statements used to generate tailor-made READER, CONVERT, and WRITER programs of this system. It also explains the operational procedures to follow in order to generate and to execute these programs.

PASCAL/VS, IUP 5796-PNQ, PROGRAMMERS GUIDE
Pascal/VS is a Pascal compiler operating in MVS and VM/CMS. Originally designed as a high level programming language to teach computer programming by N. Wirth (circa 1968), Pascal has emerged as an influential and well accepted user language in today's data processing environment. Pascal provides the user with the ability to produce very reliable code by performing many error detection checks automatically.
The compiler adheres to the currently proposed ISO standard and includes many important extensions. The language extensions include: separate compilation, dynamic character strings and extended I/O capabilities. The implementation features include: fast compilation, optimization and a symbolic terminal oriented debugger that allows the user to debug a program quickly and efficiently.

////5740-XX2

SH20-9147

IMS/VS VERSION 1, LIC FROG 5740-XX2, PRIMER MASTER TERMINAL OPERATOR'S GUIDE: VTAM

This publication is a guide for the master terminal operator to operate the online Information Management System/Virtual Storage (IMS/VS) as described in the IMS/VS Primer (SH20-9145) that uses the Virtual Telecommunications Access Method (VTAM), information on how to operate the master terminal, and a glossary of frequently used terms. Also included are descriptions of:

- The flowcharts, forms, and tables that are used with detailed IMS/VS operating instructions.
- The format and function of the IMS/VS and VTAM subset commands.
- The configuration of the online IMS/VS system.

This guide should be used together with the IMS/VS Primer, which describes a subset of IMS/VS. In addition, the IMS/VS Messages and Codes Reference Manual (SH20-9030) and the IMS/VS Primer Remote Terminal Operator's Guide (SH20-9148) should be used.

////5740-XX2

SH20-9148

IMS/VS VERSION 1, LIC FROG 5740-XX2, PRIMER REMOTE TERMINAL OPERATOR'S GUIDE

This publication is a guide for the remote terminal operator and the master terminal operator to operate a terminal connected to the online Information Management System/Virtual Storage (IMS/VS) system. Included is an introduction to IMS/VS and descriptions of some system concepts and terms. Also included are descriptions of the basic hardware operating procedures for terminals connected to IMS/VS; the interface to IMS/VS; IMS/VS commands; recovery and operating procedures.

In addition to this guide, refer to the Operator's Guide for the IBM 3270 Information Display System (GA27-2742) and the IBM 3270 Problem Determination Guide (GA27-2750) for information about the IBM 3270 Information Display System (IDS).

////5740-XX2

SH20-9149

IMS/VS VERSION 1, LIC FROG 5740-XX1, PRIMER SAMPLE LISTINGS

This publication is a companion to the IMS/VS Primer (SH20-9145) and the IMS/VS Primer Master Terminal Operator's Guide (SH20-9146 for BTAM and SH20-9147 for VTAM). It contains detailed documentation of the sample IMS/VS application system used throughout the manuals referenced above. Individual chapters contain:

- The source listings of all the programs used in the sample application system; listing of Data Base Descriptions (DBD), Program Communication Blocks (PCB), and message formats used in the sample; a listing of the sample data to be loaded into the sample data bases.

SH20

- The lists of all the JCL, utility control and macro statements used to generate IMS/VS, install the sample application and exercised the sample application.
 - The output from selected jobs of the sample application. Additionally, directions on how to obtain the machine readable version of the sample job and source statements is included.
- Manual, 8 1/2 x 11 inches, 500 pages, 9/78

SH20-9167

VS APL FOR CICS/VS, LIC PROG 5748-API, TERMINAL USER'S GUIDE
 Provides how-to and reference information about the VS APL program product when operated under the program product OS/VS1 CICS/VS, OS/VS2 CICS/VS, and DOS/VS CICS/VS. It contains detailed information on the terminals that support the product and the procedures that must be followed in starting a terminal session. This book also describes the system commands presented by VS APL and the auxiliary processors and workspaces distributed with the product.

This book is directed to general users of Vs APL. It assumes a familiarity with the APL language but assumes no experience with CICS/VS. Prerequisite manual: APL Language, GC26-3847.
 Manual, 8 1/2 x 11 inches, 150 pages, 7/78
 ////5748-API

SH20-9168

VS APL FOR CICS/VS: WRITING AUXILIARY PROCESSORS, LIC PROG 5748-API

This manual tells how to design and write auxiliary processors to be used with VS APL running under CICS/VS (which in turn runs on S/370 under either OS/VS1, OS/VS2 MVS, or DOS/VS). The reader is assumed to know Assembler Language and to be acquainted with CICS/VS facilities.

DB/DC DATA DICTIONARY, LIC PROG 5740-XXC ADMINISTRATION & CUSTOMIZATION GUIDE (CURRENT RELEASE)

This publication is addressed to data base administrators, and other administrative personnel who are responsible for establishing the DB/DC Data Dictionary at an installation. The book is also for system programmers who code user programs and validation routines in response to specifications defined by end users, system analysis personnel, or data base administrators.

This manual is a guide to the administration of the Dictionary, and is used for installation planning. This book is also a reference manual for Dictionary extensions to describe data resources not formally supported by the Dictionary standards categories, and to describe how user programs can be coded to access Dictionary data.

The prerequisite manual is the DB/DC Data Dictionary Terminal User's Guide and Command Reference, SH20-90083.

IMS/VS VERSION 1, LIC PROG 5740-XX2, SYSTEM ADMINISTRATION GUIDE (CURRENT RELEASE)

This publication is for administrators of IMS/VS systems and others responsible for establishing a Data Base/Data Communication system. It is also for system programmers who monitor the performance of the IMS/VS system, code IMS/VS execution JCL, and prepare IMS/VS system definition macros. It covers the control, protection and monitoring of online IMS/VS resources and presents guidelines for providing end-user services. (The major treatment of DL/I data base structure and design and implementation is contained in IMS/VS Version 1 Data Base Administration Guide, SH20-9025.)

SH20-9180

VS APL FOR TSO, LIC PROG 5748-API, TERMINAL USER'S GUIDE

Provides how-to and reference information about the IBM program product VS APL when operated under control of TSO (Time Sharing Option) of OS/VS2 MVS 3.8 or later. It contains detailed information on the terminals that support the product and the procedures that must be followed in starting a terminal session. Detailed information is provided to describe the MVS data access facilities available to the APL programmer on TSO.

This publication is directed to general users of VS APL. Introductory information on TSO is provided for the new users.

Prerequisite manuals: APL Language, GC26-3847; OS/VS2 TSO Terminal User's Guide, GC28-0645; and OS/VS2 TSO Command

Language Reference, GC28-0646.

SQL/DATA SYSTEM, LIC PROG 5748-XXJ, GENERAL INFORMATION

This manual provides a general overview of SQL/Data System (SQL/DS) and describes how SQL/DS can be used. It covers:

- General description of the functions provided by SQL/DS
- Relationships of SQL/DS to other IBM products, including those which SQL/DS requires
- Overview of planning for SQL/DS
- Documentation provided for SQL/DS

This manual is intended for those persons who will evaluate the applicability of this program product to their business.

STANDARDS MANUAL FOR DCS/VSE STUDENT TEXT
This manual is designed to serve as a Standards Manual for the new DOS/VSE installation and to save time and effort in developing the basic standards needed in every installation. The manual specifically addresses the DOS/VSE 4300 installation that is either new to IBM equipment, new to DOS/VSE, new to data processing, or any combination of the three. The manual is intended to serve as a set of standards after customization by the installation. The manual may also be locally reproduced for installation use. It assumes the user has basic data processing skills and understands how to use IBM software which is found in the DOS/VSE installation.
Manual, 324 pages, 1/80

INTRODUCTION TO IBM 4300 AND DOS/VSE FACILITIES STUDENT TEXT
This self-study course is designed for new data processing personnel who require an understanding of the hardware and software components of an IBM 4300 DOS/VSE data processing system. The course describes the hardware and functions and features of DOS/VSE, VSE/POWER, and VSE/ICCF. The student is also introduced to CICS/VS, DL/I DOS/VS, DB/DC Data Dictionary and DMS/CICS/VS. In addition, the facilities provided by DOS/VSE System IPO/E are described. Time required is 24 to 30 hours. Student exercises and solutions are provided.
Manual, 388 pages, 2/80

- GR20-4669
AN INTRODUCTION TO THE IBM SUPPORT CENTER STUDENT TEXT
This text introduces students to the IBM support center and describes access and use of the center. After an introduction students may select alternate paths for DOS/VSE, OS/VS1, VM/370 users or 8100 users. An audio cassette GR20-4671 is used with the text and the two parts may be ordered as GR20-4670.

SYSTEM/360-370 ASSEMBLER LANGUAGE (DOS)

This text has been designed for use in both introductory and advanced training. It teaches S/360-370 assembler language for the DOS and DOS/VS operating system. Chapters 1 through 5 provide an effective introduction to assembler language programming; chapters 6 through 16 provide greater detail on the language including magnetic tape programming and direct access programming. After the first five chapters students may continue with any of the other parts or modules. Students should have a basic familiarity with data processing components such as cards, tape or direct access system.

Manual, 407 pages, 1/80SLSS - ORDER NO. SUBSCRIPTION ONLY

SR20-4680

DL/I FUNCTIONS FOR APPLICATION DESIGN STUDENT TEXT

This text is written for the application analyst as a representative of the user to the data processing specialists. Objectives: What DL/I functions exist and their purposes, types of application processes these functions support, how to select options appropriate to a specific application, and what the benefits and costs are to the applications. The text is meant to be self-explanatory and is modular. Each chapter is devoted to a distinct area of discussion, divided internally into major sections. Each chapter includes a brief summary and the time required to complete it. Total estimated time for the text is eight hours, with possibly two hours for review.

Manual, 300 pages, 4/81

TCAM BSC/SS NETWORK DEFINITION STUDENT TEXT

This text is a coding guide for the system programmer who must generate or modify a TCAM Message Control Program (MCP) for a Start Stop (SS) and/or Binary Synchronous (BSC) communications terminals. It explains how the MCP is structured and how to use a variety of TCAM's functional and service facilities. The text familiarizes the reader with TCAM macros and facilities so that he will know how to code an MCP. Topics include: overview, MCP structure, buffer unit pool, resource definition, message queues, message handlers, message handler macros, switched devices, operator control, error recovery macros, checkpoint restart, initialization and termination, application program interface, TCAM service aids, time sharing option, TCAM logging facility, and Emulator to MCP migration.

ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM-ONE ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM-ONE/VM (ELIAS-I), LIC PROG 5746-XXV, 5748-XXR, REFERENCE CARD
ELIAS-I is the collective name for two related Licensed Programs, Entry Level Interactive Application System-One (Program Number 5746-XXV), and Entry Level Interactive Application System-One/Virtual Machine (Program Number 5748-XXR). These two licensed programs and their supporting documentation are designed to improve the productivity of users of CICS/VS and DL/I when run on a selected IBM System/370 or IBM 4300 Processors. The two products differ in the control program environment to which they relate. ELIAS-I is executed in the environment provided by the VSE/Interactive Computing and Control Facility, and is primarily intended to be used with DOS/VSE System IPO/E, (Program Number 5750-AAA, 5750-AAB, or 5750-AAC). ELIAS-I/VM is executed in the environment provided by the Conversational Monitoring System, and is primarily intended to be used with VM/DOS/VSE System IPO/E, (Program Number 5750-AAE or 5750-AAF). It can also be used with VM System IPO/E, (Program Number 5750-AAD) to provide the jobstream creation facility.
Both programs provide a series of interactive dialogs called "procedures", which prompt the user to specify the definitions of data bases and batch and online application programs. They also provide a set of predefined sequences of code called "bricks". Each brick performs a specific and frequently used program function, and can be incorporated into the user's application program to perform that function. This reference card is addressed to the managers responsible for the development of computer applications. It describes the process of implementing a data base/data communications system using the facilities and methods supplies by ELIAS-I.

MVS/INFORMATION DISTRIBUTION WORK STATION SUPPORT OPERATION, LIC PROG 5740-AMA WORK STATION CONTROLLER AND SYSTEM OWNER COMMAND REFERENCE SUMMARY

This card is published for MVS/Information Distribution Work Station Support (IWS) users who have work station controller and system owner command authority. It lists all IWS commands and their parameters, a brief description of their use, and the command authority required for each parameter. This information is also published as an appendix to MVS/Information Distribution Work Station Support Operation: Work State Controller and System Owner Guide, SC23-0033.

The IWS commands are explained in the guide. They enable the user to start, stop, and run IWS with the IBM 6670 Information Distributor and MVS. Users with system owner authority should be familiar with MVS, the job entry subsystem, and the SNA communications subsystem used in the installation. Users with work station controller authority should be familiar with the IBM 6670 Information Distributor and understand the concepts of networking and remote job processing.

GX33-9006

VSE/INTERACTIVE COMPUTING AND CONTROL FACILITY, LIC PROG 5746-TS1, REFERENCE SUMMARY
This booklet is intended as a convenient, pocket-sized guide to the most essential information needed by a terminal user of the VSE/Interactive Computing and Control Facility (VSE/ICCF). It contains a summary of information from the VSE/Interactive Computing and Control Facility Terminal User's Guide, SC33-6068.
The publication describes the following components of the VSE/ICCF command language: system commands, editor commands, job entry statements and procedures and macros. These commands, statements procedures and macros are listed alphabetically together with a description of their format, functions and operands.
VSE/ICCF is an interactive online computing facility that runs in a computing installation under the control of DOS/VSE with VSE/Advanced Functions. It allows users to conversationally enter and store data and programs from a terminal, to edit and format text data sets and to compile, run and test programs and have the results displayed back at the terminal and/or printed, either at a terminal-associated printer or at the central installation.
Reference Summary, 3 5/8 x 8 1/2 inches, 40 pages, 6/79

LY12-5028

VSE/POWER, LIC PROG 5746-XE3, FEATURES 6066-6071, 6075-6079 LOGIC, PART 2 (CURRENT RELEASE)
This publication provides information on the internal operation of VSE/POWER. It is intended for use by persons involved in program maintenance and by system programmers who intend to alter the program design.
VSE/POWER, a successor to POWER/VS of earlier DOS/VS releases, services input and output requests addressed to unit record devices at disk input/output speeds. The reading of data from, or the writing of data to, unit-record devices is carried out by VSE/POWER while other jobs are being executed.
This part of the VSE/POWER Program Logic Manual describes the method of operation. The method of operation of the optional Remote Job Entry Feature is described in Part 3 (LY12-5034). The remainder of the internal operation description of VSE/POWER is contained in Part 1 (LY12-5027).
Manual, 8 1/2 x 11 inches, 810 pages, 11/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY12-5031

SYSTEM/370 AND 4300 PROCESSORS JOB ENTRY PROGRAM, LIC PROG 5746-XE6, LOGIC
The Job Entry Program is a program product designed to assist in interconnecting one or more decentralized computing systems. With the Job Entry Program, jobs may be transferred for processing from one installation to another, thus enabling the user, for example, to utilize resources such as data bases, programs, or peripheral devices available only at the receiving location.
This manual provides information on the internal operation of the Job Entry Program. It is intended for use by persons involved in program maintenance.
The reader of this manual should be familiar with the Program Products and publications as shown in the Preface.
Manual, 8 1/2 x 11 inches, 196 pages, 03/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY12-5033

SYSTEM/370 AND 4300 PROCESSORS FILE TRANSFER PROGRAM LIC PROG 5748-XE6, LOGIC
The File Transfer Program is a program product designed to support the functions of the IBM Job Entry Program, Program Number 5746-XE6, enabling the transfer of files between one or more decentralized systems.
This manual provides information on the internal operation of the File Transfer Program. It is intended for use by persons involved in program maintenance.
The reader of this manual should be familiar with the Program Products and publications as shown in the Preface and the Bibliography.
Manual, 8 1/2 x 11 inches, 48 pages, 03/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY12-5034

VSE/POWER, LIC PROG 5746-XE3, LOGIC (PART 3) (CURRENT RELEASE)
This publication provides information on the internal operation of VSE/POWER. It is intended for use by persons involved in program maintenance and by system programmers who intend to alter the program design.
VSE/POWER, a successor to POWER/VS of earlier DOS/VS releases, services input and output requests addressed to unit record devices at disk input/output speeds. The reading of data from, or the writing of data to, unit-record devices is carried out by VSE/POWER while other jobs are being executed.
This part of the VSE/POWER Program Logic Manual describes the method of operation of the optional Remote Job Entry Feature. The method of operation of the remainder of VSE/POWER is described in Part 2 (LY12-5028). The internal operation of VSE/POWER, with the exception of its method of operation, is described in Part 1 (LY12-5027).
Readers of this manual should be thoroughly familiar with the use of DOS/VS.
Manual, 8 1/2 x 11 inches, 402 pages, 2/79

LY19-6060

SCREEN DEFINITION FACILITY/CUSTOMER INFORMATION CONTROL SYSTEM, LIC PROG 5740-XYF, 5746-XTT, LOGIC
Screen Definition Facility/Customer Information Control System is an interactive application development tool for the CICS/VS application programmer who wants to define or change map sets for the CICS/VS Basic Mapping Support (EMS). Screen Definition Facility/CICS provides the application programmer with a full screen editor and a library to maintain the maps and map sets.
This publication contains information for maintaining the Screen Definition Facility/CICS program product. It is intended to be used by customer and IBM System engineers and programmers.
Manual, 8 1/2 x 11 inches, 658 pages, 8/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY19-6061

VSE/DITTO, LIC PROG 5746-UT3, LOGIC (CURRENT RELEASE)
VSE/Data Interfile Transfer, Testing and Operations Utility is a general-purpose utility program for card, magnetic tape, and disk input/output devices. It provides an

LY19

efficient and easy-to-use tool for testing and file-handling in both batch and console operation.

This publication is intended primarily for use by persons responsible for servicing the program. It describes the logic and control flow of the program as well as the program structure and data areas, and provides diagnostic information.

Manual, 8 1/2 x 11 inches, 158 pages, 9/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY19-6121

ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM-ONE, LIC PROG 5746-XXV, ENTRY LEVEL INTERACTIVE APPLICATION SYSTEM-ONE/VIRTUAL MACHINE, LIC PROG 5748-XXK, LOGIC (CURRENT RELEASE)

ELIAS-I is the collective name for two related Licensed Programs, Entry Level Interactive Application System-One (Program Number 5746-XXV), and Entry Level Interactive Application System-One/Virtual Machine (Program Number 5748-XXK). These two Licensed Programs and their supporting documentation are designed to improve the productivity of users of CICS/VS and DL/I when run on a selected IBM System/370 or IBM 4300 Processors. The two products differ in the control program environment to which they relate. ELIAS-I is executed in the environment provided by the VSE/Interactive Computing and Control Facility, and is primarily intended to be used with DOS/VSE System IPO/E, (Program Number 5750-AAA, 5750-AAB, or 5750-AAC). ELIAS-I/VM is executed in the environment provided by the Conversational Monitoring System, and is primarily intended to be used with VM/DOS/VSE System IPO/E, (Program Number 5750-AAE or 5750-AAF). It can also be used with VM System IPO/E, (Program Number 5750-AAD) to provide the jobstream creation facility.

Both programs provide a series of interactive dialogs called "procedures", which prompt the user to specify the definitions of data bases and batch and online application programs. They also provide a set of predefined sequences of code called "bricks". Each brick performs a specific and frequently used program function, and can be incorporated into the user's application program to perform that function.

This manual provides a reference document for program support personnel. It describes the program organization of all relevant ELIAS-I facilities.

Manual, 8 1/2 x 11 inches, 274 pages, 01/80

LY19-6131

X25 PACKET SWITCHING ATTACHMENT WORKING WITHIN ACP/NCP/VS, LIC PROG 5799-BAK PRPQ ZA4239, XD2060, LOGIC

This publication describes the PRPQ required with ACP/NCP/VS, Version 2.0 or higher to connect the SNA Host systems to different types of network.
Manual, 8 1/2 x 11 inches, 374 pages, 12/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-0712

CUSTOMER INFORMATION CONTROL SYSTEM (DOS-ENTRY), LIC PROG 5736-XX6, LOGIC

The IBM Customer Information Control System (CICS) is a transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications: message switching, inquiry, data collection, order entry, and conversational data entry.

CICS is available in three systems - two for DOS users and one for OS users. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small DOS data base/data communication configuration and move up through DOS to OS.

The information contained in this manual is of interest to persons maintaining and modifying the operation of the CICS/DOS-ENTRY system.

Manual, 8 1/2 x 11 inches, 272 pages, 7/73
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-0713

CUSTOMER INFORMATION CONTROL SYSTEM (CICS) (DOS-STANDARD), LIC PROG 5736-XX7, LOGIC

The IBM Customer Information Control System (CICS) is a transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications: message switching, inquiry, data collection, order entry,

LY20

and conversational data entry.

CICS is available in three systems - two for DOS users and one for OS users. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small DOS data base/data communication configuration and move up through DOS to OS.

The information contained in this manual is of interest to persons maintaining and modifying the operation of the CICS/DOS-STANDARD system.

LY20-0714

CUSTOMER INFORMATION CONTROL SYSTEM VERSION 2 (CICS STANDARD V2), LIC PROG 5734-XX7, LOGIC

The IBM Customer Information Control System (CICS) is a transaction-oriented, multiapplication data base/data communication interface between a System/360 or System/370 operating system and user-written application programs. Applicable to most online systems, CICS provides many of the facilities necessary for standard terminal applications: message switching, inquiry, data collection, order entry, and conversational data entry.

CICS is available in three systems - two for DOS users and one for OS users. Because the two CICS/DOS systems are compatible with each other and with the CICS/OS system, it is possible to start with a small DOS data base/data communication configuration and move up through DOS to OS.

The information contained in this manual is of interest to persons maintaining and modifying the operation of the CICS/OS-STANDARD V2 system.

Manual, 8 1/2 x 11 inches, 324 pages, 1/73

VM/370 DATA AREAS AND CONTROL BLOCK LOGIC

This publication along with the IBM Virtual Machine Facility/370: System Logic and Problem Determination Guide, is intended for system programmers responsible for updating VM/370. This publication contains descriptions of the major data areas and control blocks used by three of the components of VM/370: the Control Program (CP), the Conversational Monitor System (CMS), and the Remote Spooling Communications Subsystem (RSCS).

Manual, 310 pages, 2/76
SLSS - ORDER NO. SUBSCRIPTION ONLY

LY20-0889

VM/DIRECTORY MAINTENANCE RELEASE 1.0, LIC PROG 5748-YE4 SYSTEM LOGIC (LY20-0889-0)

This publication describes the internal logic of the Directory Maintenance Program Product, 5748-YE4. The information presented here is directed to system programmers who are responsible for the maintenance of the CP directory. A prerequisite manual is GC20-1836, Directory Maintenance Program Product General Information.

Manual

LY20-0890

VM/SP, LIC PROG 5664-167, SERVICE ROUTINES PROGRAM LOGIC

This publication contains information about the IBM Virtual Machine/System Product (VM/SP Program No. 5664-167). In addition, it provides information about the prerequisite VM/370 Release 6 SCP (Program No. 5749-010).

This publication, describes the program logic for the VM/SP service routines (as used in conjunction with VM/370 Release 6). Each service routine (or group of routines) is described in its own chapter. Each chapter contains an introduction, a method of operation section, a program organization section, a directory, a data areas section, and a diagnostic aids section, if the section is applicable.

Manual, 8 1/2 x 11 inches,
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-0891

VM/SP LIC PROG 5664-167, DATA AREAS AND CONTROL BLOCK LOGIC

This publication contains information about the IBM Virtual Machine/System Product (VM/SP) Program No. 5664-167. In addition, it provides information about the prerequisite VM/370 Release 6 SCP Program No. 5749-010.

This publication, together with the VM/SP System Logic and Problem Determination Guide, Volumes 1, 2, and 3, is intended for use by system programmers responsible for updating VM/SP (as used in conjunction with VM/370 Release 6). This publication contains descriptions of the major data areas and control blocks used by the following components: The Control Program (CP), the Conversational Monitor System (CMS), and the Remote Spooling Communications Subsystem (RSCS).

Manual, 8 1/2 x 11 inches

LY20-0892

VM/SP LIC PROG 5664-167, SYSTEM LOGIC & PROBLEM DETERMINATION GUIDE VOL 1 - CP

This publication is intended for those responsible for the maintenance of the control program (CP) portion of the Virtual Machine/System Product (as used in conjunction with VM/370, Release 6). This publication provides:

- Descriptions of the major functions of CP

- A catalog of CP module entry points with brief descriptions
 - A module-to-label and label-to-module cross reference
- This publication requires the following corequisite publications Virtual Machine/System Product: Messages and Codes, Order no. SC19-6204 Data Areas and Control Blocks, Order no. LY20-0891 Manual, 8 1/2 x 11 inches, SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-0893

VM/SP, LIC PROG 5664-167, SYSTEM LOGIC & PROBLEM DETERMINATION GUIDE VOL 2-CMS
This publication is intended for the IBM system hardware and software support personnel. This manual may also be used to provide some technical education about the conversational monitor system (CMS). This book provides the following information for the CMS component of VM/SP:

- Description of program logic
- Module descriptions and cross-references
- Abend codes

TELECOMMUNICATIONS CONTROL SYSTEM-ADVANCED FUNCTION (TCS-AF) VERSION 4, LIC PROG 5740-XMD, LOGIC
This manual describes the internal program logic and operation of the Telecommunications Control System-Advanced Function (TCS-AF).
The TCS-AF Program Logic Manual is directed to the IBM program system representatives and system engineers who provide program maintenance and who need information on the internal organization and logic of TCS-AF.
The manual assumes that the reader is thoroughly familiar with external programming documentation of both TCAM and TCS-AF.
The purpose of the Telecommunications Control System-Advanced Function (TCS-AF) is to provide high function single or multi-computer teleprocessing/network control based on TCAM or VTAM through TCAM facilities.
Manual, 8 1/2 x 11 inches, 176 pages, 4/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2383

TELECOMMUNICATIONS CONTROL SYSTEM - ADVANCED COMMUNICATIONS FUNCTION (TCS-ACF), LIC PROG 5740-XY3, LOGIC
This manual describes the internal program logic and operation of the Telecommunications Control System-Advanced Communications Function (TCS-ACF).
The basic TCS-ACF concepts section contains the functional and logical concepts of TCS-ACF and places the program in perspective relative to the Operating System (OS/VS) and the Telecommunications Access Method (TCAM). The method of operation section describes functional flows of programs in the TCS-ACF environment and also points out those features that are major additions to the TCAM facilities or are deviations from TCAM.
The program organization section describes the TCS-ACF modules in the form of a table with the information necessary for an understanding of the function of each module and its place relative to other related modules. This section also discusses each TCS-ADV macro, with a figure of any created parameter list.
Note: This manual describes the Basic TCS-ACF program and does not apply to the multicomputer Networking Feature.
Manual, 8 1/2 x 11 inches, 140 pages, 10/77

JES3 MONITORING FACILITY II, IUP 5796-PLW, SYSTEMS GUIDE
JES3 Monitoring Facility II (JMF II) is a software monitor that provides the ability to measure and evaluate the

performance of an existing IBM system operating under JES3 Release 3.

This Systems Guide describes the logic of JMF II. It is intended for the system programmer(s) who support the JES3/MVS operating system.

An in-depth knowledge of JES3 internals is required for proper and effective use of this program. This document does not provide that knowledge.
Manual, 8 1/2 x 11 inches, 44 pages, 5/79

LY20-2424

VM/370 REALTIME MONITOR, IUP 5796-PNA, SYSTEMS GUIDE
The VM Realtime Monitor provides a comprehensive mechanism that can be used to detect realtime problems, analyze system performance, measure the effects of system changes and assist the operators in running and controlling the total system. It provides system statistics which are not available through any other means. The monitor is totally command, timer, and table driven and presents information in realtime on any terminal or display supported by the VM/370 control program. This IUP will simplify the entire process of performance analysis in a VM/370 environment and management of a VM/370 installation.
Manual

LY20-2426

VS APL EXTENDED EDITOR & FULL SCREEN MANAGER, IUP 5796-PLY, SYSTEMS GUIDE
This manual describes the operation and logic of the VS APL Extended Editor and Full Screen Manager. It contains a general overview of the editor components, the relationship of the editor to the VS APL system, and the overall flow of the VS APL Extended Editor.
The VS APL Extended Editor is written in S/370 Assembler and is a replacement for the standard APL del-editor. The Extended Editor supports the hardware editing features of the 3270 display station, and aids the APL programmer in the creation, modification, and testing of programs in a shorter amount of time.
The Full Screen Manager is an auxiliary processor that allows the APL programmer to manipulate the 3270 console in full screen mode. The auxiliary processor, AP124X, is similar to the AP1124 auxiliary processor for VSFC and CICS. AP124X has some additional capabilities that are not available in the versions for VSFC and CICS.
Some of the major features of this IUP are:

- Full Screen support for Editor
- Full Screen support for API Programmer
- Multiple Function Parallel Editing
- Execution of APL expressions within the Editor
- Context Editing commands
- Ability to Edit Character Matrices and Vectors
- Compatibility with del-editor
- Similarity to CMS and TSO Editors

Manual, 8 1/2 x 11 inches, 80 pages, 8/79

LY20-2429

APL WORKSPACE STRUCTURE ANALYZER, IUP 5796-PNE SYSTEMS GUIDE
This IUP consists of a collection of programs in a single workspace which gathers cross reference information about a collection of APL or FORTRAN programs. Additional programs display this information in a number of useful ways, and include output on terminal, system printer, or documentation file. Name manipulation functions help to group the names of functions and variables into functional groups for program partitioning, or for documentation displays, additional functions are provided that allow one to "browse" a workspace, looking for specific character patterns. A "revision" function helps make global changes to APL functions and character variables.

BATCH TERMINAL SIMULATOR II (BTS II), IUP 5796-PGT, SYSTEMS GUIDE
This publication describes in detail the Batch Terminal Simulator (BTS II). This includes an in-depth description of the component modules, a discussion of modification aids and error diagnosis, BTS II queues and tables, and macro instructions.
Manual, 8 1/2 x 11 inches, 112 pages, 8/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-2435

TELEPROCESSING VIRTUAL MACHINE, IUP 5796-PNC, SYSTEMS GUIDE
The Teleprocessing Virtual Machine (TPVM) is an application program designed to provide remote intelligent sub-systems (e.g. mini-computers, micro-computers) with the ability to access and utilize the facilities of the IBM VM/370 system via bisynchronous telecommunications links. TPVM is a VM/CMS machine whose primary function is to provide a link between two levels of a hierarchical distributed system.
This manual is intended for use by programmers who have the need to either maintain or modify the system components. This manual should also prove useful for error analysis and problem determination.

LY20-2496

VSE/3270 BISYNCHRONOUS PASS THROUGH, LIC PROG 5746-AM5 LOGIC

The VSE/3270 Bisync Pass Through product provides facilities to simulate a 3270 control unit from a CICS/VS partition of a DOS/VSE system.

The basic function of this program product is to provide an interface from which a terminal connected to a CICS/VS system can be used as a "remote" terminal to another operating system using bisynchronous line protocol. This interface maintains the physical teleprocessing line and all internal CICS message switching.

This manual covers the internal logic of the VSE/3270 Bisync Pass Through product.

LY20-8031

VSPC FORTRAN, LIC PROG 5748-FO2, LOGIC

This publication is intended for program support representatives and programmers who service the IBM VSPC FORTRAN program product. It describes the interface to the VS Personal Computing (VSPC) program product, the FORTRAN compiler, and the library routines. It also describes the data areas (called rolls) used by the compiler and diagnostic tools and techniques which can be used in servicing VSPC FORTRAN. To use this book, you must be familiar with the IBM System/360 and System/370 FORTRAN IV Language, GC28-6515, and VSPC FORTRAN Terminal User's Guide, SB20-9062.

Distribution is restricted to licensees with the above mentioned requirement since program logic is not required to use the VSPC FORTRAN product. For information about VSPC installation, see VS Personal Computing (VSPC) Installation Reference Material, SH20-9072.

IMS/VS V1, LIC PROG 5740-XX2, FAILURE ANALYSIS STRUCTURE TABLE (FAST) FOR DUMP ANALYSIS

This publication presents Failure Analysis Structure Tables (FAST) that associate abnormal termination conditions encountered in operation of IMS/VS with their causes. It is intended for both IMS/VS users and IEM Field Engineering programming support representatives who define and diagnose problems encountered in the operation of IMS/VS. Readers of this book should be able to use this book to precisely define a particular IMS/VS failure.

Manual, 900 pages, 12/76

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-8063

IMS/VS VERSION 1, LIC PROG 5740-XX2, DIAGNOSTIC AIDS (CURRENT RELEASE)

This book is designed to help IBM PSRs and customer system programmers do three things:

- Define programming failures systematically
- Find fixes in RETAIN/EWS for IMS/VS programming failures
- Find user-caused programming failures

The book is based on a concept of defining programming failures through the use of "keywords". Keywords are simply words that identify aspects of a programming failure, such as the subfunction that failed or the type of failure. The book tells how to construct a set of keywords to define a programming failure. Once keywords are constructed, they are used to search RETAIN/EWS for similarly defined programming failures.

Manual, 8 1/2 x 11 inches, 90 pgs, 11/77

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY20-8069

IMS/VS VERSION 1, LIC PROG 5740-XX2, LOGIC (CURRENT RELEASE)

This publication is intended for program systems representatives (PSRs) and system programmers who are involved in the service and/or modification of IMS/VS. Sufficient information is provided to enable a user to rapidly locate a pertinent point in the program code. The structure of the manual is based on an information organization linked to the IMS/VS function/subfunction breakdown as described in the IMS/VS Diagnostic Aids manual.

Prerequisite publications are: IMS/VS Diagnostic Aids, LY20-8063; IMS/VS System/Application Design Guide, SB20-9025; IMS/VS System Programming Reference Manual, SB20-9027; and IMS/VS Utilities Reference Manual, SB20-9029.

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, DIAGNOSIS
REFERENCE LIOCS VOLUME 1 GENERAL INFORMATION & IMPERATIVE
MACROS LOGIC (CURRENT RELEASE)

This reference publication is the first of four logic manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IEM Disk Operating System/Virtual Storage Extended. The four related Logic Manuals are:

1. VSE/Advanced Functions Diagnosis Reference: LIOCS Volume 1 General Information and Imperative Macros, LY24-5209
2. VSE/Advanced Functions Diagnosis Reference: LIOCS Volume 2 SAM, LY24-5210
3. VSE/Advanced Functions Diagnosis Reference: LIOCS Volume 3 DAM and ISAM, LY24-5211
4. VSE/Advanced Functions Diagnosis Reference: Direct and Sequential DASD, LY24-5212

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the programs described.

Effective use of this publication requires an understanding of IBM System/370 operations and the DOS/VSE Assembler language and its associated macro definition language.

Manual, 8 1/2 x 11 inches, 352 pages, 9/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5210

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, DIAGNOSIS
REFERENCE LIOCS VOLUME 2, SAM LOGIC (CURRENT RELEASE)

This reference publication is the second in a series of four manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs of VSE/Advanced Functions. The four related manuals are:

- Volume 1: General Information and Imperative Macros, LY24-5209
- Volume 2: SAM Logic, LY24-5210
- Volume 3: DAM and ISAM Logic, LY24-5211
- Direct and Sequential DASD, LY24-5212

This manual is intended for persons involved in program maintenance. It is not necessary for the operation of the programs described. Effective use of this manual requires an understanding of IBM VSE/Advanced Functions operation and of the Assembler language and its associated macro language. Reference publications for this information are listed in the front of the manual.

Manual, 8 1/2 x 11 inches, 388 pages, 9/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-5211

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, DIAGNOSIS
REFERENCE LIOCS VOLUME 3 DAM & ISAM LOGIC (CURRENT RELEASE)

This reference publication is the third in a series of four manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs of VSE/Advanced Functions. The four related manuals are: Volume 1: General Information and Imperative Macros, LY24-5209, Volume 2: SAM Logic, LY24-5210, Volume 3: DAM and ISAM Logic, LY24-5211, and Direct and Sequential DASD, LY24-5212.

This manual is intended for persons involved in program maintenance. It is not necessary for the operation of the program described. Effective use of this manual requires an understanding of IBM VSE/Advanced Functions operation and of the Assembler language and its associated macro language. Reference publications for this information are listed in the front of the manual.

LY24-5213

VSE/VSAM BACKUP/RESTORE FEATURE, LIC PROG 5746-AM2, LOGIC
This manual describes the internal logic of the VSE/VSAM Backup/Restore Feature and provides diagnostic information for maintenance personnel and development programmers who required an in-depth knowledge of the program's design and organization. It is not required for effective use of the Feature.

Manual, 8 1/2 x 11 inches, 52 pages, 2/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-6001

NETWORK JOB ENTRY FACILITY FOR JES2, LIC PROG 5740-XR8, LOGIC
This manual is for use by IBM PERS and Customer System Programmers for use in understanding the logic behind the operation of JES2 NJE. This manual is necessary for use in troubleshooting JES2 NJE, when used in conjunction with the program listings, and for designing user modifications to JES2 NJE.

Manual, 8 1/2 x 11 inches, 642 pgs, 1/78
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-6003

MVS/INFORMATION DISTRIBUTION WORK STATION SUPPORT, LIC PROG 5740-AMA, DIAGNOSIS

This manual is designed to help customer personnel and IBM Field Engineering Division program support representatives diagnose a problem in MVS/Information Distribution Work Station Support (IDWS). Before using this book, the diagnostician should complete problem determination and problem source identification to isolate the problem to IDWS. The diagnostician then follows the procedures in the Diagnosis Guide, Part 1 of this manual, to diagnose the problem to the level of an IDWS subfunction. The diagnostician uses the keywords selected in the diagnostic procedures to search the FE RETAIN/370 data base for a program fix to a similarly defined problem. If there is no applicable program fix, the diagnostician submits an APAR on the problem.

If a program fix is not available and the problem requires temporary repair, the diagnostician uses the Diagnosis Reference, Part 2 of this manual. Diagnosis Reference presents sufficient program logic to enable the diagnostician to discuss the problem with the FE Change Team and work with the team to develop a temporary program repair.

Manual, 8 1/2 x 11 inches, 2/80

LY24-6005

JES3, LIC PROG 5740-XYN, LOGIC

This publication describes the logic of JES3 and applies to MVS/SP-JES3 Release 2. It is designed primarily for those who maintain and modify the IBM-distributed JES3 System. This publication explains the JES3 functions and acts as a directory into the program listing.

Before reading this publication, you should be familiar with the concepts and terminology introduced in:

- JES3 Introduction, GC23-0039
- JES3 Overview, SC23-0040
- JES3 System Programming Library: Installation Planning and Tuning, SC23-0041

Manual, 8 1/2 x 11 inches,
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY24-6006

JES2 - LOGIC

This publication provides the Programming Service Representative and the using System Programmer with detailed information on the internal organization and logic of JES2 and its relationship to the MVS/System Product. It supplements the program listings and makes the information more accessible. This manual is intended to aid its users in determining the sources of errors within, or making changes to, the internal logic of JES2.

Manual, 8 1/2 x 11 inches,
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY25-0002

NETWORK PROBLEM DETERMINATION APPLICATION, LIC PROG 5735-XX8, LOGIC (CURRENT RELEASE)

This manual provides information about the program logic of the Network Problem Determination Application (NPDA) Program

Product.

It describes the structure of NPDA modules by grouping the modules into functional areas. It describes the operations used to access NPDA displays. The manual includes a brief description of every NPDA module, and shows the control flow used in executing the modules. It also includes descriptions of the data sets and control blocks used by NPDA.

The manual is primarily a reference manual. The manual enables a user to identify a failing NPDA component down to the module level. Then microfiche can be used to examine the module's code.

Readers should be familiar with the functions and capabilities of NPDA, as explained in: Network Problem Determination Application: General Information, GC34-2010, Network Problem Determination Application: Terminal Use, SC34-2013 and Network Problem Determination Application: Installation, SC34-2011.

Manual, 8 1/2 x 11 inches, 300 pages, 9/79

DATA FACILITY/DEVICE SUPPORT: DADSM AND COMMON VTOC ACCESS FACILITY DIAGNOSIS GUIDE, LIC PROG 5740-AM6, -AM7

This publication explains how to diagnose failures in the following components of Data Facility/Device Support:

- Direct Access Device Space Management (DADSM)
- Common VTOC Access Facility (CVAF)

To use this publication effectively, you should have a basic understanding of dump analysis and system control program diagnostic practices.

Prerequisite publications are:

- Data Facility/Device Support: User's Guide and Reference, SC26-3952
- OS/VS1 Data Management for System Programmers, GC26-3837
- OS/VS2 System Programming Library: Data Management, GC26-3830

DOS/VS BTAM LOGIC MANUAL

This publication describes the internal logic of the Basic Telecommunications Access Method (BTAM) in DOS/VS (Disk Operating System with Virtual Storage). It is intended for persons involved in program maintenance and for systems programmers who are altering the program design. It can be used to help locate ETAM application program errors. This publication contains:

- o An overview of BTAM logic
- o A guide to specific ETAM routines by alphabetic name of the routine and by function
- o Routine descriptions and flowcharts

This information is designed to be used with the program listings.

The user should be familiar with how BTAM is used; this is described in the SRL publication DOS/VS BTAM, GC27-6989. Manual, 456 pages

ADVANCED COMMUNICATIONS FUNCTIONS FOR VTAM (ACF/VTAM) TOLTEP LOGIC, PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)
Manual describes the internal logic of the Teleprocessing Online Test Executive Program (TOLTEP). TOLTEP operates as a subtask of ACF/VTAM and is the interface between ACF/VTAM and the online test programs (OLTS) that test the hardware characteristics of various terminals supported by ACF/VTAM. This manual is intended for IBM personnel who are responsible for program maintenance.
Manual, 8 1/2 x 11 inches, 60 pgs, 7/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY27-8014

INTRODUCTION TO ACF/VTAM LOGIC
PROG PROD 5746-RC3 (DOS/VS), 5735-RC2 (OS/VS)
This publication is one of a set that describes the logic of ACF/VTAM. This publication describes the high-level logic, which is similar in the DOS/VS and the OS/VS versions of ACF/VTAM. This publication should be read before reading the other logic manuals in the set to get a general understanding of ACF/VTAM logic. The ACF/VTAM logic manuals for DOS/VS and for OS/VS describe the lower-level, system-dependent logic. The intended audience is the IBM program support representative who maintain the access method.
This publication contains:
o An overview of ACF/VTAM operations
o A chapter describing the most important ACF/VTAM control blocks
o A chapter for each ACF/VTAM component that describes the functions performed by the component
o A list of abbreviations used in the publication
ACF/VTAM Concepts and Planning, GC38-0282, is a prerequisite publication.
Manual, 8 1/2 x 11 inches, 200 pgs, 7/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY27-8016

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) LOGIC, PROG PROD 5735-RC2 (OS/VS)
This manual is the second part of a two-part description of the logic of the Advanced Communications Function of the Virtual Telecommunication Access Method (ACF/VTAM) for OS/VS Systems. The first part is the Introduction to ACF/VTAM Logic, which describes the high level logic of ACF/VTAM. This manual describes the lower-level logic, which includes system-dependent logic. This manual is intended primarily to help IBM program systems representatives to quickly locate failures in the access method. The Introduction to ACF/VTAM Logic should be read first to get an understanding of the high-level logic, followed by this manual for more detailed information.

Included in this publication are HIPO diagrams that describe the Logic of ACF/VTAM components, control flow diagrams which show the flow of control between modules, and module synopsis information about each ACF/VTAM module. This information should enable the PSR to determine the module that performs a particular function and how control passes to and from that module.
Manual, 8 1/2 x 11 inches, 800 pgs, 12/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY27-8018

ACF/VTAM LOGIC, PROG PROD 5746-RC3 (DOS/VS)
This manual is the second part of a two-part description of the logic of the Advanced Communications Function of the Virtual Telecommunication Access Method (ACF/VTAM) for DOS/VS. The first part is the Introduction to ACF/VTAM

Logic, which describes the high level logic of ACF/VTAM. This manual describes the lower-level logic, which includes system-dependent logic. This manual is intended primarily to help IBM program systems representatives to quickly locate failures in the access method. The introduction to ACF/VTAM Logic should be read first to get an understanding of the high-level logic, followed by this manual for more detailed information.

Included in this publication are HIPO diagrams that describe the logic of ACF/VTAM components, control flow diagrams which show the flow of control between modules, and module synopsis information about each ACF/VTAM module. This information should enable the PSR to determine the module that performs a particular function and how control passes to and from that module.

LY27-8022

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), MULTISYSTEM NETWORKING FACILITY LOGIC, PROG PROD 5746-RC3 (OS/VS), 5735-RC2 (OS/VS)
This manual describes the logic of the Multisystem Networking Facility, a feature for ACF/VTAM. This manual supplements ACF/VTAM Logic, LY27-8018 (for DOS/VS) and LY27-8016 (for OS/VS). This manual describes the logic that is unique for the Multisystem Networking Facility, not the logic of ACF/VTAM. This manual is intended primarily to help IBM program systems representatives to locate failures in the Multisystem Networking Facility code. The Introduction to ACF/VTAM Logic, LY27-8014, should be read first to get an understanding of the high-level logic.
This manual contains detailed information which relates the components of the Multisystem Networking Facility to the components of ACF/VTAM, describes the function of each of the Multisystem Networking Facility components, and gives module details which should enable the reader to identify a particular module that performs a certain function.
Manual, 8 1/2 x 11 inches, 148 pgs, 7/77
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY27-8024

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM), LIC PROG 5735-RC2 ENCRYPT/DECRYPT FEATURE 6010, LOGIC

SY30-3024

IBM 3650 SUBSYSTEM PROGRAM PREPARATION SUPPORT TRANSFORMATION DEFINITION LANGUAGE TRANSLATOR LOGIC

This publication describes the logic of the Transformation Definition Language (TDL) of the IBM 3650 Subsystem Program Preparation Support (SPPS). The translator is the code by which TDL statements are converted into formatted output records. At a later time, certain output records from the translator are transmitted to the IBM 3650 for use in operating keyboard/displays and line printers.

This publication is a supplement to the program listings of the TDL translator portion of the SPPS. As a logic manual, it can be used to diagnose and maintain the existing TDL translator; it is not designed to alter the translator to perform other functions. The programming support representative using this publication should have a basic knowledge of the IBM System/370 OS/VS and DOS/VS and use the SPPS Programmer's Guide.

There are six sections which are useful in retrieving specific kinds of information:

- o Section 1: An Overview of the TDL Translator Logic is an introduction to the translator and its input, internal logic, output, and additional services.
- o Section 2: Method of Operation uses charts to illustrate functional relationships in the translator.
- o Section 3: Program Organization consists of a series of figures relating the basic modules types and their calling sequences.
- o Section 4: Directory contains a list of translator modules, their function, and their inputs and outputs.
- o Section 5: Data Areas has two parts: the first illustrates how the translator uses tables and table entries,

- o and the second gives a detailed layout of each table.
- o Section 6: Diagnostic Aids has three parts: the first suggests techniques for diagnosing troubles, the second illustrates dumps and how to read them, and the third contains a list of error messages and the modules which detect them.

In addition, each section can be cross-referenced to the other sections. As a result, you can use it in two ways: first, as a diagnostic aid in going from detail problem symptom up to the functional description, and second, as an aid to understanding internals by progressing from the introductory overview down to the details of modules and translated input text.

IBM 3705 ADVANCED COMMUNICATION FUNCTION FOR NETWORK CONTROL PROGRAM/VS (VERSION 6) HANDBOOK, NCP 5735-XX1;

EP OS 360E-TX-035; OS/VS 5744-AN1; DOS/VS 5747-AG1
This handbook contains detailed information about the Advanced Communications Function for Network Control Program/VS (ACF/NCP/VS) and Emulation Program (EP) data areas. It also contains debug and reference information such as command codes, abend codes, responses, MDR record formats, etc.

This handbook is meant to be a supplement to other related manuals listed in the preface.

Handbook, 6 3/4 x 3 3/4 inches, 312 pages 6/77

LY30-3030

IBM 3705 ADVANCED COMMUNICATIONS FUNCTION FOR NETWORK CONTROL PROGRAM/VS, NCP VER 6, LIC PROG 5735-XX1, XX3, LOGIC

This publication covers the internal logic of the IBM 3705 Communications Controller, Advanced Communications Function for Network Control Program/VS (ACF/NCP/VS), Version 6. Version 6 of the NCP operates under OS ACF/VTAM, DOS ACF/VTAM, and DOS ACF/TCAM. This PLM is designed to supplement the program listings for the NCP and to make access to the information in the listings easier.

The ACF/NCP/VS PLM is directed to the IBM support representatives and system engineers who provide program maintenance and who need information on the internal organization and logic of ACF/NCP.

Manual, 8 1/2 x 11 inches, 812 pgs, 7/77

ADVANCED COMMUNICATION FUNCTION FOR TCAM LOGIC PROG PROD 5735-RC1

Provides the information required for persons involved in keeping the program operational.

This publication is a reference manual for ACF/TCAM system control program and base program, feature number 9001.

It contains an introduction, a method of operation section, a program organization section, a diagnostic aids section, and various appendices.

PREREQUISITE PUBLICATIONS

Advanced Communication Function for TCAM Concepts and Planning, GC30-3049 for general information. Advanced Communication Function for TCAM Systems Programmer's Guide, SC30-3117, to learn how to construct and modify a TCAM MCP.

ADVANCED COMMUNICATION FUNCTION FOR TCAM, LIC PROG 5735-RC1, REFERENCE SUMMARY

Provides information required for persons involved in keeping the program operational.

This publication is a reference manual for ACF/TCAM system control program and base program, feature number 9001.

It contains a section on data area layouts, a section containing a list of ACF/TCAM modules by library, a section on ACF/TCAM FID0 and FID1 commands and modifiers, a section on system network architecture exception codes, a section on operator control commands and a section listing common ACF/TCAM acronyms and abbreviations.

ADVANCED COMMUNICATION FUNCTION FOR TCAM LOGIC

This publication is a reference manual for ACF/TCAM system control program base program feature number 9001, and multisystem networking facility feature number 6003. It is directed to the IBM program support representatives and the systems engineers who provide program maintenance and who need information on the internal organization and logic of ACF/TCAM. It is a licensed publication available only to holders of an ACF/TCAM license. This manual describes general ACF/TCAM concepts that should be understood before approaching the specifics of the internal logic. The internal logic documentation covers:

- Functional flow of ACF/TCAM operations
- Program organization and operation of ACF/TCAM
- Diagnostic aids

LY30

3705 GENERATION AND LOGIC MANUAL FOR PROGRAMMING RPO P85032, PARTITIONED EMULATION PROGRAM EXTENDED FEATURES LIC PROG 5799-EAF
This publication describes the changes to the current versions of the Emulation Program and Network Control Program (under PEP) that provide support for the Extended Features Program, PRPQ P85032. The 3705 PEP Extended Features Program and ACF/NCP/VS Release 2 (under PEP). These additional functions give the 3705 user new capabilities that make a total data communication system more flexible. The additional functions provided are: System Select (EP and NCP applications), Automatic Speed Selection (EP and NCP connections), Code Conversion (EP lines only), Operator Console Support, EP Multiple Host Support (maximum of four type 4 channel adapters), Statistics Gathering (EP lines only). The manual is intended for the systems programmer responsible for generating the Emulation Program and for the program support representative concerned with program logic information. The reader is assumed to have a conceptual knowledge of the current Emulation Program.

CUSTOMER INFORMATION CONTROL SYSTEM/VIRTUAL STORAGE (CICS/VS), LIC PROG 5746-XX3, LOGIC
The IBM Customer Information Control System/Virtual Storage (CICS/VS) is a data-base/data-communication system that provides an interface between a System/370 operating system and user-written application programs. Applicable in most online environments, CICS/VS provides many of the facilities for standard applications: message switching, inquiry, data collection, order entry, and conversational and batched data entry.

CICS/VS is available as two program products: CICS/DOS/VS, which is executed under control of the Disk operating System/Virtual Storage (DOS/VS), and CICS/OS/VS, which is executed under Operating System/Virtual Storage (OS/VS1 or OS/VS2). Both program products consist of modular components from which a user installation can select and tailor a CICS/VS system to meet particular application processing needs. Because the CICS/DOS/VS system is compatible with the CICS/OS/VS system, it is possible to start with a small DOS/VS data base/data communication configuration and move up through DOS/VS into OS/VS. This publication, together with its companion publication CICS/DOS/VS Program Logic: Data Areas, deals with CICS/DOS/VS.

The information contained in this manual is of interest to persons servicing CICS/DOS/VS.
Manual, 8 1/2 x 11 inches, 912 pages, 6/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY32-5045

3851 MASS STORAGE FACILITY: REFERENCE
This publication is intended to give its readers concise information about the topics mentioned below, some of which are not available elsewhere. It should be treated as a companion manual to the maintenance documentation for the Mass Storage System. Although this publication is mainly concerned with the 3851 Mass Storage Facility, we have incorporated information about the Staging Adapter wherever circumstances made such inclusions necessary.

The primary audience is the IBM customer engineer who maintains the 3851 Mass Storage Facility. Additional users are the program support representative and personnel in the 3850 Mass Storage System support center. It is expected that the users of this publication have a general understanding of the concepts and operation of both the 3850 Mass Storage System and the System/370.

DOS/VSE LIOCS VOLUME 2 SAM LOGIC

This reference publication is the second of four Logic Manuals that describe the internal logic of the Logical IOCS (Input/Output Control System) programs for the IBM Disk Operating System/Virtual Storage. The four related Logic Manuals are:

- Volume 1: General Information and Imperative Macros, SY33-8559
- Volume 2: SAM, SY33-8560
- Volume 3: DAM and ISAM, SY33-8561
- Volume 4: VSAM, SY33-8562

This manual is intended for use by persons involved in program maintenance and by system programmers who are altering the program design. Program logic information is not necessary for the operation of the program described. Effective use of this publication requires an understanding of IBM System/370 operation and the DOS/VS Assembler language and its associated macro definition language. Reference publications for this information are listed in the front of the manual.
Manual, 436 pages

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY33-9084

VSE/ADVANCED FUNCTIONS DIAGNOSIS REFERENCE, LIC PROG 5746-XE8, -XE9, INITIAL PROGRAM LOAD AND JOB CONTROL (CURRENT RELEASE)

This publication provides information needed for isolating errors, if any, in the component's code. It is designed to serve as a bridge into the component's program listings. The publication presents the information in sections as follows:

- The first section is an INTRODUCTION to the IPL and Job control programs summarizing their functions and those of the service programs and phases related to them.
- The next two sections show for each program the function-to-phase relationship, a verbal description of their sequence of operation, control flow and I/O flow graphs, and the storage layout.
- Then follows PROGRAM ORGANIZATION showing overview charts for each phase, some in pseudocode form, and detailed flowcharts for some.
- The next section, DATA AREAS, shows the layout of those data areas which have more than just a phase-internal significance.
- The last section, DIAGNOSTICS, contains label lists, phase-to-module and error-message cross references, LISTIO examples, and error codes.

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, -XE9, DIAGNOSIS REFERENCE: LINKAGE EDITOR (CURRENT RELEASE)

This publication provides information needed for isolating errors, if any, in the component's code. It is designed to serve as a bridge into the component's program listings. The publication presents the information in sections as follows:

- Introduction to the Linkage Editor.
- Method of operation, describing the function, the flow of the data and of control within the program, the storage layout, and certain features.
- Program Organization, describing in general and detailed charts the logic flow of the linkage editor program. General charts are identified by two-digit numbers, flowcharts by letters.
- Data Areas which include the formats of library records used by the program and of entries in the control dictionary and in the linkage table and the formats of the phase BULLLIST and of the LIPO module stack.
- Diagnostics which include label lists, a phase-to-module cross reference, and an error message list.

LY33-9090

VSE/FAST COPY DATA SET, LIC PROG 5746-AM4, DIAGNOSIS REFERENCE (CURRENT RELEASE)

This publication provides information needed for isolating errors, if any, in the component's code. It is designed to serve as a bridge into the component's program listings.

The publication presents the information in the form of HIPO charts along with a cross reference list for modules and messages issued by the program.

Effective use of this publication requires an understanding of the VSE/Fast Copy Data Set program as described in VSE/Fast Copy Data Set, Installation Reference, SC33-6082.

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, COMPONENT IDS 5745-SC-SUP, -AIT, -DKE, DIAGNOSIS REFERENCE SUPERVISOR (CURRENT RELEASE)

This logic manual is one of three detailed guides to the logic of the VSE/Advanced Functions Supervisor. It supplements the program listings by providing descriptive text and charts describing the organization of the supervisor area in real storage, the internal logic of the nucleus routines, the physical input/output control system, and the internal logic of the physical attention transient routines.

Titles and abstracts of other related publications are listed in the System/370 Bibliography, GC20-0001.

LY33-9092

VSE/ADVANCED FUNCTIONS, LIC PROG 5746-XE8, -XE9, DIAGNOSIS REFERENCE: ERROR RECOVERY AND RECORDING TRANSIENTS

This publication provides information needed for isolating errors, if any, in the components code. It is designed to serve as a bridge into the components program listings. The publication presents the information in sections as follows:

- Introduction - this section gives an overview of the physical transients documented in this manual.
- Device-dependent error recovery procedures - this section covers the transients that respond to device-dependent error situations.
- Machine check and channel check handling - this section covers the transients that respond to machine check interrupts.
- Recovery management support recorder - this section covers the transients that write records of environmental data on the recorder file for analysis.
- Charts - this section documents the organization and the functions of the various transients on a structural level by using flowcharts as a documentation method.
- Appendixes - this section provides supplementary information for the previous sections, such as label list and cross references.

LY33-9097

VSE/OPERATOR COMMUNICATION CONTROL FACILITY, LIC PROG 5746-XC5 DIAGNOSIS REFERENCE

This publication contains information on the design and organization of the VSE/Operator Communication Control Facility (VSE/OCCF); it supplements the program listings.

An overview discusses the VSE/OCCF functions and their relationship, shows the partition layout, and outlines the requirements for operation.

The design information gives an internal view of VSE/OCCF. It describes the communication between the various parts of the program and the interfaces to other programs; it explains in detail the functions of the VSE/OCCF modules, register and data area usage, and flow of control.

Organization information provides, for quick reference, a module-to-function cross-reference list. The publication includes various lists and tables, such as a message-to-module cross-reference, to aid in problem tracing. A detailed description of the VSE/OCCF internal macros is included.

Manual, 8 1/2 x 11 inches, 80 pages, 7/80

SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY33-9098

VSE/INTERACTIVE COMPUTING AND CONTROL FACILITY, LIC PROG 5746-TS1, DIAGNOSIS REFERENCE (CURRENT RELEASE)

This publication is intended for use by persons who have to do service or maintenance on the licensed program VSE/Interactive Computing and Control Facility (ICCF). The manual is basically a description of ICCF's program logic.

Program logic information is not needed for normal operation of ICCF; it is a supplement to the program listings.

This Diagnosis Reference manual expands on the information given in VSE/ICCF Diagnosis Guide, SC33-6119.

Manual, 8 1/2 x 11 inches, 400 pages, 7/80

NETWORK COMMUNICATIONS CONTROL FACILITY LIC PROG 5735-XX6 LOGIC (CURRENT RELEASE)

This manual describes the program logic of the Network Communications Control Facility, an IBM program product. Users should have a basic knowledge of OS/VS or DOS/VSE, VSAM, and VTAM or TCAM.

The manual describes the basic structures and functions of NCCF, method-of-operation, NCCF modules, major NCCF control blocks, and diagnostic aids. Three appendices discuss the NCCF macros, NCCF files, and logic differences for NCCF in DOS/VSE.

This manual is intended for IBM personnel who are responsible for program maintenance. System programmers may be interested in parts of the manual.

Manual, 8 1/2 x 11 inches, 280 pages, 9/80

SY38

LY38

SY38-3012

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM ENTRY LIC PROG 5746-RC7, DIAGNOSTIC TECHNIQUES (CURRENT RELEASE)
This publication describes approaches to debugging with an ACF/VTAME data communication system. It presents the guidelines, tools, and information needed to diagnose and correct problems in application programs and data communication networks that use ACF/VTAME. The publication provides information about ACF/VTAME diagnostic aids and summarizes some service aids that are described in other products' publications. Information useful for debugging I/O problems also is included. Appendixes contain additional information about correlated network component publications, summarize PIU formats, list states found in control-block finite state machines, and summarize the procedure for submitting an APAR. The final appendix contains an easily removed control block overview.
This publication is intended for use by anyone who needs to isolate, diagnose, and fix a problem in an ACF/VTAME domain.
Manual, 8 1/2 x 11 inches, 312 pages, 9/79

LY38-3013

ACF/VTAME, LIC PROG 5746-RC7, LOGIC OVERVIEW (CURRENT RELEASE)
This manual is intended for maintenance personnel to obtain an overview of ACF/VTAME Logic for purposes of maintaining the program product at an operation level.
8 1/2 x 11 inches, 125 pages, 6/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3014

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM ENTRY, LIC PROG 5746-RC7, LOGIC (CURRENT RELEASE)
This manual is the second part of a two-part description of the logic of the Advanced Communications Function for VTAM Entry. The first part is the ACF/VTAME Logic Overview, which describes the high level logic of ACF/VTAME. This manual describes the lower level logic, including system-dependent logic. This manual is primarily intended to help IBM program systems representatives quickly locate failures in the access method.
Included in this publication are BIPO diagrams that describe the logic of ACF/VTAME components, control flow diagrams which show the relationship between modules, and a synopsis of each ACF/VTAME module. With this information, a PSR can determine what module performs a particular function and how control passes to and from that module.
Manual, 8 1/2 x 11 inches, 7/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3016

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM ENTRY LIC PROG 5746-RC7, DATA AREAS (CURRENT RELEASE)
This manual describes the data areas used by ACF/VTAME. It is intended for IBM program system representatives and customer personnel who diagnose problems with ACF/VTAME. This publication contains data maps of all data areas used by ACF/VTAME.
Manual, 8 1/2 x 11 inches, 7/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3018

NETWORK TERMINAL OPTION, LIC PROG 5735-XX7, DIAGNOSIS & LOGIC
This manual describes the logic of the Network Terminal Option (NTO) Program Product. This program product resides in the ACF/NCP and is used to allow selected START/STOP terminals to look like SNA devices (PU Type 1/LU Type 1) to the rest of the network. This manual is to be used by PSRs and Customer System Programmers to locate and fix NTO problems.
Manual, 8 1/2 x 11 inches, 300 pages, 3/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

SY38-3020

ADVANCED COMMUNICATION FUNCTION FOR VTAM (ACF/VTAM) LIC PROG 5746-RC3, DIAGNOSTIC TECHNIQUES (CURRENT RELEASE)
This manual contains diagrams and other information about data areas, control blocks, parameter lists and work areas used by ACF/VTAM under OS/VS. This information is designed to be used with ACF/VTAM logic manuals, debugging guides, and microfiche listings to assist in diagnosing program malfunctions.
Manual, 8 1/2 x 11 inches, 800 pages, 9/79
////5746-RC3

LY38-3021

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) RELEASE 2, LIC PROG 5746-RC3, 5735-RC2 (OS) LOGIC: OVERVIEW (CURRENT RELEASE)
This manual is intended for maintenance personnel to obtain an overview of ACF/VTAM Logic for purposes of maintaining the program product at an operation level.
Manual, 8 1/2 x 11 inches, 125 pages, 3/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3022

ADVANCED COMMUNICATION FUNCTION FOR VTAM, LIC PROG 5746-RC3, DIAGNOSIS REFERENCE (CURRENT RELEASE)
For ACF/VTAM Release 3, this manual replaces the following manuals: ACF/VTAM Logic: Base System, Volume 1 (LY38-3022-0); ACF/VTAM Logic: Base System, Volume 2 (LY38-3024-0); ACF/VTAM Logic Overview (LY38-3021-1); ACF/VTAM Control Block Overview.
This manual contains a description of ACF/VTAM logic, control blocks, and components. It also contains control flow and method-of-operation diagrams (HIPOs and module flow diagrams).
A system programmer should use this manual in conjunction with the ACF/VTAM Diagnosis Guide to determine the failing function and module of the access method. The Diagnosis Reference does not support problem determination below the module level.
Manual, 8 1/2 x 11 inches, 1200 pages, 1/81
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3023

ADVANCED COMMUNICATIONS FUNCTION FOR BTAM (ACF/VTAM) LOGIC: MULTISYSTEM NETWORKING FACILITY, LIC PROG 5746-RC3, 5735-RC2, RELEASE 3
This manual describes the logic of the Multisystem Networking Facility, an optional feature of ACF/VTAM. It should be used in conjunction with ACF/VTAM Diagnosis Reference, LY38-3022 (VSE) or LY38-3027 (OS/VS), which describe the high-level logic of ACF/VTAM. This manual is intended to help IBM Program Support Representatives and customer system programmers to quickly locate failures in this feature of ACF/VTAM. Included in this publication are diagrams that describe the logic of components of this feature, the flow of control between modules, and module synopses.
Manual, 8 1/2 x 11 inches,

LY38-3024

ACF/VTAM, LIC PROG 5746-RC3, LOGIC VOLUME 2: PROGRAM ORGANIZATION AND MODULE DIRECTORY (CURRENT RELEASE)
This manual is the third part of a three part description of the logic of ACF/VTAM for OS/VSE. The first part is the manual ACF/VTAM Logic: Overview and the second part is the manual ACF/VTAM Logic: Base System Volume 1, Method of Operation. The three manuals are intended primarily to help IBM program systems representatives quickly locate failures in the access method. This manual contains program organization information consisting of control flow diagrams and module synopses and module directory, that is a cross reference table that lists every ACF/VTAM module, its phase name, entry point, and the numbers of the MO diagrams in which it appears.
Manual, 8 1/2 x 11 inches, 4/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3025

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM ACF/VTAM ENCRYPT/DECRYPT FEATURE, LIC PROG 5735-RC2, RELEASE 2
This manual describes the logic of the Encrypt/Decrypt Feature of the Advanced Communications Function for the Virtual Telecommunications Access Method (ACF/VTAM). This feature can be used in the OS/VS1 and OS/VS2 MVS verisons of ACF/VTAM and can be used with or without the Multisystem Networking Facility of ACF/VTAM.
This manual supplements ACF/VTAM Diagnosis Reference (OS), LY38-3027, which is a prerequisite to this manual.
This manual is intended primarily to help IBM program support representatives to locate failures in the Encrypt/Decrypt Feature code.
Manual, 8 1/2 x 11 inches, 80 pages, 9/80
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3026

ADVANCED COMMUNICATIONS FUNCTION FOR VTAM (ACF/VTAM) LIC PROG 5746-RC3, DATA AREAS (CURRENT RELEASE)
This manual is intended for maintenance personnel to diagnose or maintain ACF/VTAM Release 2 installed on a DOS/VSE operating system. The control blocks described are used to map areas of ACF/VTAM Release 2. This manual should be used in conjunction with the Logic Overview and Base System Logic manuals for the appropriate operating system (DOS/VSE).
Manual, 8 1/2 x 11 inches, 550 pages, 3/79
SLSS - IBM INTERNAL SUBSCRIPTION ONLY

LY38-3027

ADVANCED COMMUNICATION FUNCTION FOR VTAM, LIC PROG 5735-RC2, DIAGNOSIS REFERENCE
For ACF/VTAM Release 3, this manual replaces the following manuals: ACF/VTAM Logic: Base System, Volume 1 (LY38-3022-0); ACF/VTAM Logic: Base System, Volume 2 (LY38-3024-0); ACF/VTAM Logic Overview (LY38-3021-1); ACF/VTAM Control Block Overview (LY27-0013-0).
This manual contains a description of ACF/VTAM logic, control blocks, and components. It also contains control flow and method-of-operation diagrams (HIPOs and module flow diagrams).
A program systems representative should use this manual in conjunction with the Diagnosis Guide to determine the failing function and module of the access method. The Diagnosis Reference does not support problem determination

predecessor systems indicates that providing this type of query and reporting facility to the end user potentially constitutes a significant productivity enhancement and can permit a wide variety of applications to be implemented without traditional programming.

The key to IQRP's value in permitting the end user to generate interactively his own applications is a simple, flexible, non-procedural, powerful set of commands. Use of IQRP predecessor systems within IBM has demonstrated that clerks, managers, administrative personnel, technical staff and production workers can quickly learn to use the IQRP query terms.

MARKETING PUBLICATIONS KWIC INDEX (USA)

This catalog indexes the titles and lists the prices of customer publications, including all those for system libraries and many other marketing publications, such as application briefs, educational and promotional literature, cassettes, videotapes, periodicals and photographs.

All titles are KWIC (keyword in context) titles. KWIC is an abbreviating retrieval system in which titles are expressed in no more than 30 characters and each such title is indexed under each practical keyword.

Among such keywords is #SUP, which creates a numerically sorted listing of all System Library Supplements (applying to Selectable Units and certain licensed programs) released before the edition date.

Conversely, Supplements applying to a given base number and edition may be found under that base number, where it appears in the title index as a keyword.

Similarly, those requiring the pseudonumbers for specific back editions (supporting prior releases of programs) will find them listed in the title index under the actual base order number.

Materials for the maintenance of IEM products are in the Customer Engineering KWIC Index, GY20-0073. Index, 8 1/2 x 11 inches, 348 pages, 7/81

A GUIDE TO ESTABLISHING, ORGANIZING, AND MAINTAINING A SYSTEM LIBRARY

This booklet, written by the Publication Project of the GUIDE International Corporation, tells how to establish and supervise a data-processing reference library, starting with practical suggestions on staffing - such as placing custody of the library in the hands of an administrator acquainted with the needs of the installation and the special language of data processing.

Next it covers the problem of where to place the library or its sections, from a small sublibrary on the console to three distinct libraries (for system programming, application programming, and operations) to a main, general library and a large number of mini-libraries. The pros and cons for user vs. administrator time for each approach are mentioned.

Also included is how to control the library, from minimal supervision of a rack and a table to big libraries and elaborate controlled-checkout. And how to organize the manuals, stack the manuals, and let users know what is available.

Included also is policy for initial ordering, under which the librarian meets with selected users, each armed with bibliographies and copies of the SLSS form, to sketch out the initial library; and, thereafter, the system for practical maintenance of the library through pruning and adding and immediate updating, to alter the weekly flow of new and update materials through continual feedback due to changing needs.

VS1 PERFORMANCE TOOL, IUP 5796-PGL, NOTICE

VS1PT is a software monitor that measures the performance of a system running OS/VS1. It uses periodic statistical sampling, dynamic event tracing and event counting to record selected system status information. At requested intervals, the accumulated information is placed in a monitor output data set which can be EASE or magnetic tape. A database utility is also provided to allow the user to select and combine monitor output.

Subsequently, plots, detailed report, seek analysis, and load module usage reports can be generated from the monitor or database utility files. These reports can be used to

DISKETTE SORT PROGRAM, IUP 5796-PGJ, NOTICE
This document contains information on use of the Diskette Sort Installed User Program which enables users of the IEM DOS/VS Sort/Merge Program, 5746-SML, to sort diskette files without first having to copy them onto tape or disk.
Highlights:

- o It provides a generalized Sort/Merge E15 exit routine to DOS/VS diskette users.
- o It provides improved performance to those sort users that need to sort diskette files, since the copying pass from diskette to tape or disk is no longer required.
- o It will dynamically determine the record length of the diskette records to be sorted.
- o The programming symbolic unit number used in conjunction with this program is determined at installation time and can be chosen such that no conflicts occur with the particular installation's standards.

BATCH TERMINAL SIMULATOR II, IUP 5796-PGT, NOTICE
This document contains information on use of Batch Terminal Simulator II (BTS II), a Productivity Aid for Application Program Testing under IMS/VS Version 1.1.1 and subsequent releases. BTS II is a terminal simulator that allows online IMS/VS application programs to be tested in an IMS/VS batch environment without the use of teleprocessing hardware. Extensive debugging facilities enable the BTS II user to test batch applications as well as those intended to run in a teleprocessing environment. BTS II supplies information about each transaction or message as it progresses through the IMS/VS system. It provides IMS/VS users with a comprehensive means of checking and debugging:

- o application program logic
- o IMS/VS interfaces
- o teleprocessing activity
- o 3270 format control blocks
- o data base activity

BTS II is a new product based upon BTS/VS with the 3270 Formatting Feature and released with an extended support period and significant enhancements. It is fully upward-compatible with BTS/VS and the 3270 Formatting Feature.

APL COMPUTER AIDED INSTRUCTION COURSE, IUP 5796-PJW, NOTICE
This publication describes the course which combines the potential benefits of interactive instructional techniques with the efficiencies of the APL language to provide a training package for APL users. Its modular structure allows both novices and experienced APL users to select lessons that fit their individual needs and to proceed to complete the course at their own pace usually within 20 to 25 study hours.

3800 90 DEGREE PRINT PROGRAM, S/370 OS/VS, DOS/VE, IUP 5796-ARE, -AWX, NOTICE
These Installed User Programs were developed by the New York State Legislature in Albany. They provide printing at 90 degrees to normal printer output. Full pages are rotated at 90 degrees one at a time and printed using the the 90 degree characters provided.
Applications requiring printing at greater density than 60 or 80 lines per page can be run on the IBM 3800 printing subsystem utilizing the paper width rather than the paper depth for printing. Many 3800 installations can benefit from the flexibility of being able to use either 8 1/2 by 11 inch or 11 by 8 1/2 inch form sizes without changing the paper in the machine. Also, for 14 7/8 by 11 inch paper, using the width of the paper as the depth allows 36 percent more lines to be printed at 12 lines per inch and has the effect of reducing the resultant 3800 Monthly Use Charge by the same percentage. The IUP executes in an OS/VS environment.

DALLAS SYSTEMS CENTER 4300 PRE-INSTALLATION TEST ACTIVITIES
This publication may be used for planning pre-installation testing and supports the "Organizing for Pre-Installation Testing" seminar available in the Branch Support Center.
The purpose of the Activities guide is to assist customers in preparing, performing, and reviewing activities involved with the testing necessary for installing a 4300 system via the System IFO/E (although non-System IFO/E users may also find it useful).
The material in this document should be helpful no matter what test facilities are being used, an IBM Branch Support Center, an IBM Regional Datacenter, another installed system, or your own system.

DALLAS SYSTEMS CENTER RUNNING JOB ENTRY SUB-SYSTEM 2/NETWORK JOB ENTRY (JES2/NJE) ON AN ADVANCED COMMUNICATIONS FUNCTION/VIRTUAL TELECOMMUNICATIONS ACCESS METHOD (ACP/VTAM) NETWORK
Advanced Communications Function/Virtual Telecommunications Access Method (ACP/VTAM), a communication network, provides several advantages over a Bisync/Channel-to-Channel (BSC/CTC) network when running Job Entry Sub-System/Network Job Entry (JES/NJE), a batch networking application that transmits data within a Central Processing Unit (CPU) and between several CPUs. This report describes how several problems, such as excess use of CPU time, were alleviated by converting from BSC/CTC to ACP/VTAM.
Although the report centers on JES2/NJE, and its use at IBM's Santa Teresa Laboratory, in San Jose, the ideas discussed can be applied to other applications that require transfer of data between CPUs. The author assumes the reader has some knowledge of JES2/NJE. The appendix provides "how to" information for installing the communication function between JES2/NJE and ACP/VTAM. This information will be particularly useful to readers running JES2/NJE for networking.

DALLAS SYSTEMS CENTER TECHNICAL PULLFIR: DMS/CICS/VS PLANNING AND IMPLEMENTATION GUIDE
This document is intended to provide support for data processing installations about to install and implement DMS/CICS/VS systems. It is a collection of guidelines and recommendations taken from a variety of papers and documents, as well as from experiences of individuals who have implemented and used DMS/CICS/VS.
The experienced DMS application developer can use the document as a reference by following the Table of Contents

G320

to appropriate sections or recommendations. The new DMS user can begin with the section on Planning and proceed through the document in a step-by-step approach to installing and implementing DMS applications.

DALLAS SYSTEMS CENTER VIRTUAL STORAGE EXTENDED/INTERACTIVE COMPUTING AND CONTROL FACILITY (VSE/ICCF) FOR THE SOURCE PROGRAM MAINTENANCE ONLINE/II (SPMOL/II) USER
This bulletin defines a subset of the Interactive Computing and Control Facility (ICCF) that is functionally equivalent to the commands available in SPM. The material in this bulletin is based upon Version 1, Modification 5 (V1.5) of the CICS Source Program Maintenance Online II FDP (5798-CPT) and the VSE/Interactive Computing and Control Facility program product (5746-TS1) Releases 1 and 2. These two products are referred to as SPM and ICCF respectively in the remainder of this guide.

The Description/Operation manual, SB21-1700 and the Terminal User Guide, SC33-6068 were used in developing this bulletin.

DALLAS SYSTEMS CENTER APPLICATION DEVELOPMENT FACILITY (ADF) USAGE GUIDELINES

The purpose of this bulletin is to make comments and recommendations on the use of ADF on development projects, to examine the characteristics of development projects that used ADF successfully, to identify and appraise areas that are of importance when ADF is chosen as the application generator, and to document Application Development Facility (ADF) project experiences of many IBM Data Processing (DP) personnel.

It is not the intent of this bulletin to produce an absolute predictor or formula for the specific use or non-use of ADF on a particular project. The objective of using ADF is to reduce the time, cost, and risk when developing and maintaining Information Management System/Virtual Storage applications. It is assumed that the reader is familiar with the ADF product, at least at the General Information Manual level (GB21-9869).

DALLAS SYSTEMS CENTER TECHNICAL BULLETIN - DOS/VSE SYSTEMS MANAGEMENT STARTER KIT

The purpose of this bulletin is to provide a set of systems management documentation for DOS/VSE accounts. It contains a "starter kit" of forms and instructions that are easy to use, uncomplicated and could be implementable as a first step toward building a comprehensive systems management.

These forms are designed for an account with DOS/VSE, CICS/VS and DL/1. The CICS/VS and DL/1 reports are heavily dependent on the availability of daily statistics from the

G320

CICS/VS Performance Analyzer FDP.

The material presented here is provided for guidance only. The objective of the forms is to record descriptive information about processing objectives and performance histories with a minimum of effort involved.

DALLAS SYSTEMS CENTER TECHNICAL BULLETIN - 4300 PROJECT PLANNING METHOD

This guide is one of a set of publications to be used as part of a 4300 Planning Seminar. Other publications in this series include:

G320-6044 4300 Installation Activities

G320-6045 4300 Installation Reference

G320-5852 4300 Systems Management Activities and Reference

G320-5853 4300 Pre-Installation Test Activities

G320-5862 4300 Application Development Activities and Reference

This publication outlines the steps required to create a project plan. It discusses how to document the plan and how to use it effectively throughout the project.

The examples given in this guide are designed to illustrate different aspects of the planning method. Although many of them describe the DOS/VSE environment, the techniques described are equally applicable to any environment.

G320-6160

DATA EXTRACTION, PROCESSING AND RESTRUCTURING SYSTEM, IUP 5796-PLH, NOTICE
XPRS-OS is a generalized data restructuring and extraction program. It takes sequential files and/or DL/I data bases, and restructures them or extracts information from them, to form new sequential files or different DL/I data bases. During the process, validity checking and data translation are performed.
The program consists of three components; a reader, a restructurer, and a writer. The reader reads in the source file records, and checks the values and formats of the items (fields). The restructurer provides the following functions:

- Selection of items or sub-hierarchy from the source record to form new record
- Selection of record by value of an item
- Creation of flat record from hierarchical record, and vice versa
- Creation of new flat or hierarchical record by combining two or more records
- Addition and deletion of items
- Elimination of duplicate records
- File sort
- Merging of files

Finally, the writer outputs the new record to the target file on the specified medium.
XPRS-OS is written in PL/I and Assembler languages. It generates customized PL/I programs and requires PL/I compiler and libraries for execution. It operates under OS/VS1, SVS, and MVS.

G320-8089

CICS/COBOL CALL INTERFACE FOR CICS/OSS CICS/DOSS & CICS/DOSE: NATIONAL BANK OF DETROIT, IUP 5796-AEG NOTICE

Current users of the Customer Information Control System (CICS) who are writing application programs in ANS COBOL usually write Assembler Language macros in their application programs. This procedure requires the use of the CICS Preprocessor Program and two compilations of the program, one for the Assembler Language macros and one for the COBOL.

This program provides a COBOL/CICS interface technique which eliminates the use of the CICS Preprocessor Program and makes the writing and debugging of ANS COBOL/CICS application programs considerably easier. The system consists of 12 modules, one for each of the CICS management functions, and a Resident Interface Module. When the COBOL application programmer requires a CICS service, rather than write an Assembler Language macro, he simply codes a predefined COBOL CALL statement passing a list of parameters depending upon the service requested. The tested CICS macro is then issued in the subsequently called CICS Service Bandler and control is returned to the requesting COEOL program upon completion of the CICS service.

Technical Newsletter

This Newsletter No. GN20-0024
Date 31 July 1981
Base Publication No. GC20-0001-3
File No. S370-00
Prerequisite Newsletters GN20-0023
GN20-4381 (obsolete with this TNL)

IBM System/370 and 4300 Processor Bibliography

This Technical Newsletter provides replacement pages for the subject bibliography. Pages to be replaced and added are:

Front cover
v, vi
1 through 108
403 through 632

Summary of Changes

Parts 1 and 3 are replaced and new abstracts are added to Part 2. The front cover, table of contents, and acronym index are also revised and replaced.

In this TNL, the significant additions are as follows:

1. Listings provided for VSE System Productivity Option/Extended (VSE System IPO/E) Release 2.1 (page 45.8).
2. The majority of new items are listed under the following subject codes: MVS, DOS/VSE, VM, DB/DC ACF and Network Programs, IMS, System Support Licensed Programs, Other Supplementary Information and PTF (Program Temporary Fix) Listings.

Note: Please file this cover letter at the back of the bibliography to provide a record of changes.
