# Computer Literature Bibliography 1946 to 1963

W. W. Youden

Over 6,100 references are contained in this bibliography of computer literature published during the years 1946 through 1963. The Bibliography Section includes the full title and all of the authors of every article published in 9 journals, 21 books, and over 100 proceedings. No articles from other sources are included. The books selected are those that have chapters by individual authors, as such chapters are not normally indexed in most libraries.

The Title Word Index Section is used to find an article if any part of its title is known or to find all the articles whose titles include a particular word or phrase. The Author Index Section lists all authors of each article, but does not indicate whether an individual is the

sole author of the article.

The bibliography is intended not only to serve those in the computer field, but also to be an experiment in information retrieval to determine the value of cumulative KWIC and author indexes to published literature in a specific subject area.

#### INTRODUCTION

## How To Understand the Coden

All three sections of this computer literature bibliography use an 11-character (occasionally 12character) coden<sup>1</sup> to identify each article. The first four letters (sometimes three letters plus a space) are usually an acronym for the title of the book, journal, or proceeding. An effort has been made to choose acronyms of mnemonic value.

A list of the acronyms with their explanations is given on the inside of the front and back covers. The Bibliography Section is in the same sequence as the lists inside the covers. Sometimes an abbreviation is used instead of an acronym. For example, HARV is the four-letter abbreviation used for the proceedings of all conferences which took place at Harvard University.

Following the four-letter acronym are the last two digits of the year in which the article was first presented or published. For journals, the issue number is given immmediately following the two year-digits. The letters O, N, and D are used to indicate the 10th, 11th, and 12th issues of a monthly journal. For books and proceedings, this digit, if there is one, indicates the volume number. Last, separated by at least one space (with a few unavoidable exceptions), the starting page of the article is given.

Some examples of how coden expand to the full reference are as follows:

CACM63N 660=Communications of the ACM. 1963, November, page 660

DIP 62 67 = Digital Information Processors, 1962, page 67

ICSI 582 823=International Conference on Scientific Information, 1958 Volume 2, page 823

A few exceptions to the rules above occur when a book or proceedings does not number its pages from start to finish, but numbers the pages of each article or chapter independently. In such cases the article or chapter identification used in the book or proceedings is used in the coden. For example:

PACM61 12A5=Preprints of the ACM, 1961, Paper 12A5

Another exception is made for the two journals that have a volume year slightly out of phase with the calendar year. For these journals the volume number, which is redundant information, is given to the left of the two year-digits, immediately following the three-letter acronym. The issue number is still given to the right of the two year-digits. For example:

TCJ5634 349=The Computer Journal, Volume 5, 1963, Issue 4, page 349.

The coden scheme as used in this bibliography eliminates double lookups2 that are required by most other published computer-produced indexes. scheme is most useful for cumulative indexes to a reasonably small set of books, journals, and proceedings. A heterogeneous collection of articles from hundreds of sources does not usually lend itself to this sort of treatment, nor should it be used for literature citations.3

<sup>2</sup> W. W. Youden, Characteristics of programs for KWIC and other computer produced indexes, Automation and Scientific Communication, 332, (1963).

<sup>3</sup> Letters to the editor, Science 120, 1038-1040 (1954).

# How To Use the Bibliography Section

In the Bibliography Section the major publications of the Association for Computing Machinery, the Joint Computer Conferences, and the IEEE Computer Group are listed first. This special group, with the acronyms CACM, JACM, PACM, EJCC, FJCC, WJCC, SJCC, and PGEC, constitutes almost half of all the references in this bibliography. All of the remaining acronyms follow in alphabetical sequence. Within each acronym the references are in year, issue number, and page number sequence.

Bibliographic information similar to that given on a library catalog card is given at the beginning of the listing for each book, journal, proceedings, or series of proceedings. The first line of this bibliographic information is almost always the title of the book, journal, etc. If the main entry on the Library of Congress catalog card differs, it follows the title in parentheses. An ellipsis within the parentheses indicates omission of repeated words. For proceedings, the second line gives the location and date of the meeting. Usually, the second line also gives the name of the publisher and the year of publication. The Library of Congress classification and catalog card number are on the following line if they have been ascertained. Occasionally additional miscellaneous information is given.

## How To Use the Title Word Index

The Title Word Index is a permuted title or KWIC (Keyword-in-Context) <sup>4</sup> index. It is not a subject index and can best be used by those who are knowledgeable in the field of computers.

Each title can be found under all of the significant words that it contains. The title is shifted to aline each successive significant word with a column near the middle of the page. After sorting from this column to its right, it becomes very easy to locate all titles that contain a given word or phrase. Since each line in the index is a separate unit, titles longer than one line must be chopped. This is indicated by a virgule (/) next to the chopped portion if the title either begins or ends on the line.

The proper point to begin reading a line is at the longest white space. The line is read to its right-

<sup>4</sup> H. P. Luhn, Keyword-in-context index for technical literature (KWIC index), American Documentation, 11, 288-295 (Oct. 1960).

<sup>5</sup> R. A. Kennedy, Mechanized title word indexing of internal reports, Machine Indexing, Progress and Problems, 112-132, American University (1961).

hand end and then, continuing at the left end of the line, it is read to the longest white space where the reading began. This longest space will never be less than three character spaces except in the rare case of a title longer than the line which has been positioned so that both ends of the title are off the line. In this case, there will be only a single space between each word on the line, and the line is read from left to right.

The title is the title of the article or book chapter. Titles of foreign language articles have been translated (sometimes roughly) into English and then followed with the name of the foreign language in parentheses. Over 30 words such as AND, FOR OF, and THE have been prevented from indexing, and they are identified in their alphabetical place in the Title Word Index.

The wide format which results in less than 3 percent of the titles being chopped is based on the format of the Bell Telephone Laboratories permuted title index <sup>5</sup> rather than on the narrower format of earlier KWIC indexes. This format does not have the disadvantage of the KWOC or Keyword-out-of-context index, which makes the finding of a phrase or multiword entry difficult.

# How to Use the Author Index

All authors of each article are listed in the Author Index with their names followed by as much of the title as will fit on one line. No indication is given as to whether an individual is the sole author or one of several coauthors. Reference should be made to the Bibliography Section for this information.

Authors will be found under the prefix when their last name is preceded by any of the following prefixes: DE, DEL, DEN, DER, DES, DI, LA, LE, ST, VAN, and VON. Authors may be listed with their given names in full and with one or more of their given names shortened to initials. This, plus the fact that authors whose names are followed by suffixes, such as JR, SR, II, and III, sometimes publish with the suffix dropped, means that occasionally several listings for the same author may become slightly separated.

Since the sorting of names was done on a computer, the sequence of names is in order word-byword rather than letter-by-letter. Also note that MC... and MAC... are not interfiled.

SYMPOSIUM, THE DESIGN OF MACHINES TO SIMULATE THE BEHAVIOR OF THE HUMAN BRAIN * M. S. MCCULLOCH,
A. G. CETTINGER, N. ROCHESTER, O. H. SCHMITT
THE LOGIC OF BIDIRECTIONAL BINARY COUNTERS * MARCEL J. E. GOLAY
THE LOGICAL DESIGN OF A SIMPLE GENERAL PURPOSE COMPUTER * STANLEY P. FRANKEL
A TRANSISTOR-ORIVEN MAGRETIC-CORE MEMORY * E. LERGY YOUNKER
CURRENT STEERING IN MAGNETIC-CORE MEMORY * E. LERGY YOUNKER
CURRENT STEERING IN MAGNETIC-CORE MEMORY * E. LERGY YOUNKER
CURRENT STEERING IN MAGNETIC CIRCUITS * J. A. RAJCHMAN, H. D. CRANE
AN ELECTRONIC ANALOG MULTIPLIER USING CARRIERS * ERICH S. WEIBEL
MAYS OF DEVELOPING SOVIET COMPUTER REMODUCTION, ABSTRACTS OF THE 1956 MOSCOW CONFERENCE
POEC MEMBERSHIP SURVEY * M. L. MARTIN, S. R. OLSON
REVIEW OF ELECTRONIC COMPUTER PROGRESS DURING 1956
THE IRE AFFILLATE PLAN, A NEW VENTURE IN ENGINEERING SOCIETY STRUCTURE AND SERVICE * M. R. G. BAKER
A TIME-SCOUNTIAL ITABULAR MANLYSIS OF FLIP-FLED LOGICAL OPERATION * GENE M. ARANT
DYNAMIC ACCURACY AS A DESIGN CRITERION OF LINEAR ELECTRONIC-ANALOG DIFFERENTIAL ANALYZERS * AMOS NATHAN
TRIGONOMETRIC RESQUICTION IN ANALOG COMPUTERS BY MEANS OF MULTIPLIER ELMENTS * R. M. HOWE, E. G. GILBERI
MINIMIZATION OF THE PARTIALLY-DEVELOPED TRANSFER TREE * MITCHELL P. MARCUS
A NEW DIODE FUNCTION GENERATIOR * T. MIURA, H. AMEMIYA, T. NUMAKURA
AN ELECTRONIC ANALOG MULTIPLIER * DAVID C. KARBFELL
AN ALGORITHM FOR DETERMINIMEN MINHAL REPRESENTATIONS OF A LOGIC FUNCTION * BERNARD HARRIS
COMPUTING TECHNIQUES FOR THE SAMPLING PARAMETRIC COMPUTER * C. J. HIRSCH, F. C. HALLDEN
ANALOG COMPUTER APPLICATIONS IN PREDICTOR DESIGN * M. R. BATES, D. H. BOCK, F. D. POMELL
THE THEORY OF NETS * F. E. HOHN, S. SESHO, D. D. AUFENKAMY
A NET BETHOUR FOR GENERATION AF FUNCTION OF TWO INDEPENDENT VARIABLES * LAZARUS G. POLIMEROU
AN ANALOG COMPUTERS * F. E. HOHN, S. SESHO, D. O. AUFENKAMY

```
INTRODUCTION TO THE COURSE ON ELECTRONIC DIGITAL COMPUTERS * GEORGE STIBITZ
THE HISTORY OF COMPUTING DEVICES * IRVEN TRAVIS
DIGITAL AND ANALOGY COMPUTING MACHINES * JOHN W. MAUCHLY
COMPUTING MACHINES FOR PURE MATHEMATICS * D. H. LEHMER
SOME GENERAL CONSIDERATIONS IN THE SOLUTION OF PROBLEMS IN APPLIED MATHEMATICS * D. R. HARTREE
NUMERICAL MATHEMATICAL METHODS, II * HERMAN H. GOLDSTINE
NUMERICAL MATHEMATICAL METHODS, II * HERMAN H. GOLDSTINE
DIGITAL MACHINE FUNCTIONS * ARTHUR W. BURKS
THE USE OF FUNCTION TABLES WITH COMPUTING MACHINES * JOHN W. MAUCHLY
A PREVIEW OF A DIGITAL COMPUTING MACHINE * J. P. ECKERT JR
ELEMENTS OF A COMPLETE COMPUTING SYSTEM * C. B. SHEPPARD
NUMERICAL MATHEMATICAL METHODS, III * HERMAN H. GOLDSTINE
THE AUTOMATIC SEQUENCE CONTROLLED CALCULATOR * HOWARD H. AIKEN
ELECTRO-MECHANICAL TABLES OF THE ELEMENTARY FUNCTIONS * HOWARD H. AIKEN
ELECTRO-MECHANICAL TABLES OF THE ELEMENTARY FUNCTIONS * HOWARD H. AIKEN
ELECTRO-MECHANICAL TABLES OF THE ELEMENTARY FUNCTIONS * HOWARD H. AIKEN
ELECTRO-MECHANICAL TABLES OF THE ELEMENTARY FUNCTIONS * HOWARD H. AIKEN
TYPES OF CIRCUITS, GENERAL * J. PRESPER ECKERT JR
SWITCHING AND COUPLING CIRCUITS * T. K. SHARPLESS
NUMERICAL MATHEMATICAL METHODS, V * HERMAN H. BOURS
NUMERICAL MATHEMATICAL THOODS, V * HERMAN H. BOURS
ONTING AND COLLATION OF ERRORS IN NUMERICAL INTEGRATION ON THE ENIAC * HANS RADEMACHER
RELIABILITY OF PARTS * J. P. RESPER ECKERT JR
MEMORY DEVICES * C. BRADFORD SHEPPARD
SORTING AND COLLATING * JOHN M. MAUCHLY
ADDERS * J. P. ECKERT JR, C. B. SHEPPARD
MULTIPLIERS * J. P. ECKERT JR, C. B. SHEPPARD
MULTIPLIERS * J. P. ECKERT JR
A REVIEW OF GOVERNMENT REQUIREMENTS AND ACTIVITIES IN THE FIELD OF AUTOMATIC DIGITAL COMPUTING MACHINERY *
J. H. CURTISS

SOME ELEMENTS OF OPTICAL SCANNING * CLYDE C. HEASLY JR, GEORGE L. FISCHER JR

DEVELOPMENTS IN CHARACTER RECOGNITION MACHINES AT RABINOW ENGINEERING COMPANY * J. RABINOW

CHARACTER RECOGNITION TECHNIQUES FOR ADDRESS READING * J. B. CHATTEN, C. F. TEACHER

READING RUSSIAN SCIENTIFIC LITERATURE * JOHN A. FITZMAURICE

AN OPTICAL CHARACTER RECOGNITION SYSTEM USING A VIDICON SCANNER * EUGENE GRIFFIN

A TYPED PAGE READER * LEON J. MINTZ, KENNETH R. BROOKS

MIDE-TOLERANCE OPTICAL CHARACTER RECOGNITION FOR EXISTING PRINTING MECHANISMS * R. K. GERLACH

DESIGN CONSIDERATIONS FOR STYLIZED FONT CHARACTER READERS * W. T. BOOTH, G. M. MILLER, O. A. SCHLEICH

SOME IMPORTANT FACTORS IN THE PRACTICAL UTILIZATION OF OPTICAL CHARACTER READERS * E. C. GREANIAS

CHARACTER RECOGNITION AS SIGNAL DETECTION IN NOISE * A. B. NOVIKOFF

AUTOMATIC READING OF CURSIVE SCRIPT * L. D. HARMON

DIGITAL PATTERN RECOGNITION BY MOMENTS * FRANZ L. ALT

ANALYTIC APPROXIMATION AND TRANSLATIONAL INVARIANCE IN CHARACTER RECOGNITION * R. F. MEYER,

V. E. GIULIANO, P. E. JONES

WEIGHTED AREA SCANNING TECHNIQUES FOR CHARACTER RECOGNITION * D. M. BAUMANN

RECENT DEVELOPMENT IN OPTICAL CHARACTER RECOGNITION AT M.I.T. * LAWRENCE G. ROBERTS

RECOGNITION OF MIXED-FONT IMPERFECT CHARACTERS * W. S. HOLMES, H. R. LELAND, J. L. MUERLE

A SCHEME FOR RECOGNIZING PATTERNS FROM AN UNSPECIFIED CLASS * CARL BARUS

LINEAR DECISION FUNCTIONS WITH APPLICATION TO PATTERN RECOGNITION * M. H. HIGHLEYMAN

MULTIFONT PRINT RECOGNIZING * A. C. ANDREWS

THE USE OF MULTIPLE AUTO-CORRELATION IN CHARACTER RECOGNITION * M. B. CLOWES

THE SEARCH TO RECOGNIZING * CORRELATION IN CHARACTER RECOGNITION * M. B. CLOWES

SOME NOTES ON THE TECHNOLOGY OF RECOGNITION * OLIVER G. SELFRIDGE
