

Teleram didn't invent The Future.

It just seems that way.

TELERAM
COMMUNICATIONS
CORPORATION

Innovations in Information Processing.

The Right Choice is Teleram. Today. And Tomorrow.

Teleram Communications Corp. has designs on your future. Because we have designed for it. With information processing technology so far ahead of its time that others cannot catch up.

Back in 1974, for example, Teleram developed the first truly-portable video text editor, at the request of the American Newspaper Publishers Association. And today, Teleram technology remains virtually unchallenged as the publishing industry's choice for the power and reliability that are critical in remote entry of information.

More recently, Teleram created an operate-anywhere computer that is the ultimate in portability. And the same design genius is offered in a comprehensive line of far-advanced equipment for just about every business application today. And tomorrow.

Out in The World

TELERAM'S 3000

It weighs less than 9 lbs. It is hardly bigger than a 3" notebook. Yet, Teleram's 3000 is a full-keyboard, CP/M*-compatible computer/word processor that stores up to 256Kbytes in its non-volatile bubble memory. It is the first truly-portable computer for operation literally anywhere business wants or has to be.

It operates on its internal, rechargeable battery or any standard power source. With an efficient Z80L-based processor. Self-diagnostics. And an incomparable flat-panel LCD that scrolls vertically through 24 lines to show 4 lines at a time, with 80 characters per line. Flip it up to your choice of five viewing positions.

Teleram's 3000. It fits easily into your briefcase. And perfectly into your office system.

Back in The Office

TELERAM 3500 OFFICE STATION

The Teleram 3500 creates the highly cost-effective home base for a computer office system that can take full advantage of Teleram 3000 capabilities.

One Teleram 3500 Office Station can serve many users "on the road" or within the office. Programs and files from the Teleram 3000s can be copied to floppy diskettes.

The Teleram 3500 complements the powers of the Teleram 3000. Providing interfaces for up to 4 floppy drives and an RS170 video monitor. Plus 4 additional slots for custom interfaces to other peripherals.

Portable and Versatile

THE PORTABUBBLE™/81

The 15-pounder with a giant memory! Designed for communications, time sharing, and word processing, it's the most advanced portable terminal of all. With the

revolutionary Bubble Memory, a permanent retention storage system, it rests in its own traveling cover and features microcomputer programming that facilitates many text editing capabilities. Allows you to add unique functions an application through a plug-in "personality module," which extends its amazing functions even further.

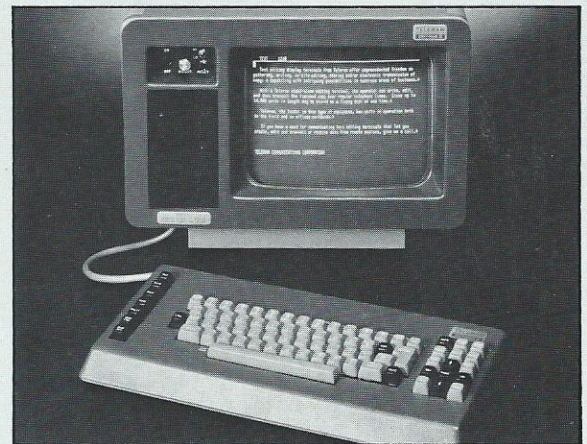

If your business keeps you on the go, one of our portable terminals should go with you!

PORTARAM™/91

This powerful and versatile terminal is a low cost version of the outstanding Teleram Portabubble/81. It has all the features and advantages of the more expensive unit, however in place of bubble memory storage, Portaram/91 utilizes a RAM storage system.

One Stands Alone

THE 2277 MKII

A stand-alone text editing display terminal that features a detached keyboard adjustable to any position. Incorporates

(continued)

(2277 continued)

a powerful microprocessor. With a built-in mini-floppy disk system that stores up to 84,000 characters, an acoustic coupled modem for transmission over telephone lines, and a comprehensive software package, it's one of the finest terminals on the market. An ideal remote entry device for business telecommunications networks. The favorite for: record, list, word, number, and document processing as well as other uses where text must be written, edited and transmitted to another location quickly, efficiently, economically, and yet still be maintained in the file of the originating terminal. An excellent Telex or TWX replacement.
