

DOCUMENT TITLE: KLA Dual Drive Floppy Copy

DOCUMENT NO. 2310-5001

DATE 7 December 1983

**1.0 SCOPE**

This ETM describes the first release of the KLA Dual Drive Floppy copy utility. This specialized utility is designed to enable customers that have KLA systems without keyboards to copy diskettes using the front panel.

Part Affected	Title	Base Version	Release Version
2310-6113-01-00	KLA2COPY Disk	----	1.0

**2.0 CHANGE SUMMARY**

New product.

**3.0 KNOWN PROBLEMS**

The program is slow. This is due to extensive error checking on both the format and copy operations. This was done because the KLA user has no way to recover from errors.

**4.0 HARDWARE AND SOFTWARE COMPATIBILITY REQUIREMENTS**

This program was created for Kontron Logic Analyzers (KLA's) that contain two 5 1/4" floppy drives (Standard Configuration).

This diskette contains the KLA2COPY program and a modified CP/M system to enable it to boot in a KLA.

## 5.0 Operation Summary

The user places the KLA2COPY disk in the top (or A) drive of the KLA and turns on the power, or if power is on pushes the reset button.

After approximately 20 seconds, the copy program will display a header and the following message:

Place diskette to be copied in drive A  
Place blank diskette in drive B

Press the EXECUTE key when you are ready.

The user must then remove the KLA2COPY diskette, place the diskette to be copied in drive A (the top drive) and the diskette to be copied onto in drive B (the bottom drive).

Once the diskettes are in place, the user then presses the execute button on the front panel of the KLA.

The program will format the diskette in drive B and then copy all tracks from drive A to drive B, this will take 5 1/2 minutes.

Once the copy is finished the user can change diskettes and repeat the copy process by pressing the execute key.

## 6.0 FUNCTIONAL CHANGES

None - first release.

## 7.0 INSTALLATION

No user installation is required.
